A. I recommend the Public Utility Commission of Texas ("PUCT" or the "Commission") authorize the Company the opportunity to earn an overall rate of return of 10.60% based on a hypothetical capital structure, which consists of 47.00% long-term debt at an embedded cost rate of 3.90%, and 53.00% common equity at my recommended return on common equity ("ROE") of 10.60%. The overall rate of return is summarized on page 1 of Schedule DWD-1 and in Table 1 below:

**Table 1: Summary of Overall Rate of Return**

| Type of Capital | Ratios | Cost Rate | Weighted Cost Rate |
|---|---|---|---|
| Long-Term Debt | 47.00% | 3.90% | 1.83% |
| Common Equity | 53.00% | 10.60% | 5.62% |
| Total | 100.00% | | 7.45% |

## III. SUMMARY

**Q. PLEASE SUMMARIZE YOUR RECOMMENDED COMMON EQUITY COST RATE.**

A. My recommended common equity cost rate of 10.60% is summarized on page 2 of Schedule DWD-1. I have assessed the market-based common equity cost rates of companies of relatively similar, but not necessarily identical, risk to Aqua Texas. Using companies of relatively comparable risk as proxies is consistent with the principles of fair rate of return established in the *Hope*[1] and *Bluefield*[2] Supreme Court cases. No proxy group can be identical in risk to any single company, so there must be an evaluation of relative risk between the company and the proxy group to see if it is appropriate to make adjustments to the proxy group's indicated rate of return.

[1] *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591 (1944). *("Hope")*
[2] *Bluefield Water Works Improvement Co. v. Public Serv. Comm'n*, 262 U.S. 679 (1922). ("*Bluefield*")

My recommendation results from the application of several cost of common equity models, specifically the Discounted Cash Flow ("DCF") model, the Risk Premium Model ("RPM"), and the Capital Asset Pricing Model ("CAPM"), to the market data of a proxy group of six water companies ("Utility Proxy Group") whose selection criteria will be discussed below. In addition, I also applied the DCF, RPM, and CAPM to a proxy group of domestic, non-price regulated companies comparable in total risk to the Utility Proxy Group ("Non-Price Regulated Proxy Group"). In order to remain conservative, however, I did not consider the ROE model results of the Non-Price Regulated Proxy Group in the determination of my recommended range.

The results derived from each are as follows:

**Table 2: Summary of Common Equity Cost Rate**

| | |
|---|---|
| Discounted Cash Flow Model | 10.33% |
| Risk Premium Model | 10.78% |
| Capital Asset Pricing Model | 10.84% |
| Market Models Applied to Comparable Risk, Non-Price Regulated Companies | 11.42% |
| Indicated Range of Common Equity Cost Rates Before Adjustments for Company-Specific Risk | 10.33%- 10.84% |
| Business Risk Adjustment | 0.10% |
| Indicated Range of Common Equity Cost Rates after Adjustment | 10.43% – 10.94% |
| Recommended Cost of Common Equity | 10.60% |

After analyzing the indicated common equity cost rates derived through these models, the indicated range of common equity cost rates applicable to the Utility Proxy Group is between 10.33% and 10.84%.

The indicated range of common equity cost rates applicable to the Utility Proxy Group was then adjusted upward by 0.10% to reflect Aqua Texas' greater business risk due to its substantially smaller size relative to the Utility Proxy Group. This adjustment results in a Company-specific range of common equity cost rates between 10.43% and 10.94%. From this range of results, I recommend the Commission consider a common equity cost rate of 10.60% for use in setting rates for the Company.

## IV. GENERAL PRINCIPLES

**Q. WHAT GENERAL PRINCIPLES HAVE YOU CONSIDERED IN ARRIVING AT YOUR RECOMMENDED COMMON EQUITY COST RATE OF 10.60%?**

A. In unregulated industries, the competition of the marketplace is the principal determinant of the price of products or services. For regulated public utilities, regulation must act as a substitute for marketplace competition. Assuring that the utility can provide safe and reliable service at all times to their customers requires a level of earnings sufficient to maintain the integrity of presently invested capital. Sufficient earnings also permit the attraction of needed new capital at a reasonable cost, for which the utility must compete with other firms of comparable risk, consistent with the fair rate of return standards established by the U.S. Supreme Court in the previously cited *Hope* and *Bluefield* decisions. The U.S. Supreme Court affirmed the fair rate of return standards in *Hope*, when it stated:

> The rate-making process under the Act, i.e., the fixing of 'just and reasonable' rates, involves a balancing of the investor and the consumer interests. Thus we stated in the Natural Gas Pipeline Co. case that 'regulation does not insure [sic] that the business shall produce net revenues.' 315 U.S. at page 590, 62 S.Ct. at page 745. But such considerations aside, the investor interest has a legitimate concern with the financial integrity of the company whose rates are being regulated. From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include

> service on the debt and dividends on the stock. Cf. Chicago & Grand Trunk R. Co. v. Wellman, 143 U.S. 339, 345, 346 12 S.Ct. 400, 402. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital. [3]

In summary, the U.S. Supreme Court has found a return that is adequate to attract capital at reasonable terms enables the utility to provide service while maintaining its financial integrity. As discussed above, and in keeping with established regulatory standards, that return should be commensurate with the returns expected elsewhere for investments of corresponding risk. The Commission's decision in this proceeding, therefore, should provide the Company with the opportunity to earn a return that is: 1) adequate to attract capital at reasonable cost and terms; 2) sufficient to ensure its financial integrity; and 3) commensurate with returns on investments in enterprises having corresponding risks.

In addition, the required return for a regulated public utility is established on a stand-alone basis, *i.e.*, for the utility operating company at issue in a rate case. Parent entities, like other investors, have capital constraints and must look at the attractiveness of the expected risk-adjusted return of each investment alternative in their capital budgeting process. That is, utility holding companies that own many utility operating companies have choices as to where they will invest their limited capital within the holding company family. Therefore, the opportunity cost concept applies regardless of whether the funding source is public or corporate.

When funding is provided by a parent entity, the return still must be sufficient to provide an incentive to allocate equity capital to the subsidiary or business unit rather than

[3] *Hope*, 320 U.S. 591 (1944), at 603.

other internal or external investment opportunities. That is, the regulated subsidiary must compete for capital with all the parent company's affiliates, and with other similar risk companies, which may include non-utilities. In that regard, investors value corporate entities on a sum-of-the-parts basis and expect each division within the parent company to provide an appropriate risk-adjusted return.

It, therefore, is important that the authorized ROE for the Company reflects the risks and prospects of its operations and supports its financial integrity from a stand-alone perspective.

**Q. WITHIN THAT BROAD FRAMEWORK, HOW IS THE COST OF CAPITAL ESTIMATED IN REGULATORY PROCEEDINGS?**

A. Regulated utilities primarily use common stock and long-term debt to finance their permanent property, plant, and equipment (*i.e.*, rate base). The fair rate of return for a regulated utility is based on its weighted average cost of capital, in which, as noted earlier, the costs of the individual sources of capital are weighted by their respective book values.

The cost of capital is the return investors require to make an investment in a firm. Investors will provide funds to a firm only if the return that they *expect* is equal to, or greater than, the return that they *require* to accept the risk of providing funds to the firm.

The cost of capital (that is, the combination of the costs of debt and equity) is based on the economic principle of "opportunity costs." The principle of opportunity costs recognizes that investing in any asset (whether debt or equity securities) represents a forgone opportunity to invest in alternative assets. For any investment to be sensible, its expected return must be at least equal to the return expected on alternative investment opportunities with comparable risks. Because investments with like risks should offer

similar returns, the opportunity cost of an investment should equal the return available on an investment of comparable risk.

The cost of debt is contractually defined and can be directly observed as the interest rate or yield on debt securities. However, the cost of equity must be estimated based on market data and various financial models. Because the cost of equity is premised on opportunity costs, the models used to determine it are typically applied to a group of "comparable" or "proxy" companies.

In the end, the estimated cost of capital should reflect the return that investors require in light of the subject company's business and financial risks, and the returns available on comparable investments.

## A. BUSINESS RISK

**Q. PLEASE DEFINE BUSINESS RISK AND EXPLAIN WHY IT IS IMPORTANT TO THE DETERMINATION OF A FAIR RATE OF RETURN.**

A. Business risk is the riskiness of a company's common stock without the use of debt and/or preferred capital. Examples of such general business risks faced by all utilities (*i.e.*, electric, natural gas distribution, and water) include size, the quality of management, the regulatory environment in which utilities operate, customer mix and concentration of customers, service territory growth, and capital intensity. All of these have a direct bearing on earnings.

Consistent with the basic financial principle of risk and return, business risk is important to the determination of a fair rate of return, because the higher the level of risk, the higher the rate of return investors demand.

**Q. WHAT BUSINESS RISKS DO THE WATER AND WASTEWATER INDUSTRIES FACE IN GENERAL?**

A. Water and wastewater utilities have an ever-increasing responsibility to be stewards of the environment from which water supplies are drawn in order to preserve and protect essential natural resources of the United States. Water utilities also produce the only commodity that is ingested. Because of this, water utilities are subject to continuous monitoring by the Environmental Protection Agency and state and local governments for potential contaminants. Furthermore, emergence of new contaminants exposes water utilities to litigation.

In addition, water utilities have significant capital needs due to its aging infrastructure, exacerbating the pressure on free cash flows arising from increased capital expenditures for infrastructure repair and replacement. The significant amount of capital investment is another major risk factor for the water and wastewater utility industry.

*Value Line Investment Survey* ("*Value Line*") observes the following about the water utility industry:

> The water infrastructure in the United States remains in subpar condition despite increased investment in this sector over the past decade or so.
>
> Every water company we cover is in the midst of a large construction program. Many pipelines are corroding or leaking, and they need to be replaced.
>
> Since the Industry is spending heavily on capital expenditures, the typical balance sheet in this space is overleveraged.[4]

The water and wastewater industry also experiences low depreciation rates. Depreciation rates are one of the principal sources of internal cash flows for all utilities

[4] *Value Line Investment Survey*, January 3, 2025.

(through a utility's depreciation expense) and are vital for a company to fund ongoing replacements and repairs of water and wastewater systems. Water/wastewater utility assets have long lives, and therefore have long capital recovery periods. As such, they face greater risk due to inflation, which results in a higher replacement cost per dollar of net plant. Simply, capital that is retiring today will need to be replaced with capital which is significantly more expensive.

Substantial capital expenditures, as noted by *Value Line,* require significant financing. The three sources of financing typically used are debt, equity (common and preferred), and cash flow. All three are intricately linked to the opportunity to earn a sufficient rate of return as well as the ability to achieve that return. Consistent with *Hope* and *Bluefield*, the return must be sufficient to maintain credit quality as well as enable the attraction of necessary new capital, be it debt or equity capital. If unable to raise debt or equity capital, the utility must turn to either retained earnings or free cash flow,[5] both of which are directly linked to earning a sufficient rate of return. The level of free cash flow represents a utility's ability to meet the needs of its debt and equity holders. If either retained earnings or free cash flow is inadequate, it will be nearly impossible for the utility to attract the needed capital for new infrastructure investment necessary to ensure quality service to its customers. An insufficient rate of return can be financially devastating for utilities as well as a public safety issue for their customers.

The water and wastewater utility industry's high degree of capital intensity and low depreciation rates, coupled with the need for substantial infrastructure capital spending and growing exposure to legal risks from emerging contaminants and public health concerns, require regulatory support in the form of adequate and timely rate relief, and in particular,

[5] Free Cash Flow = Operating Cash Flow (Funds From Operations) minus Capital Expenditures.

a sufficient authorized return on common equity, so that the industry can successfully meet the challenges it faces.

## B. FINANCIAL RISK

**Q. PLEASE DEFINE FINANCIAL RISK AND EXPLAIN WHY IT IS IMPORTANT TO THE DETERMINATION OF A FAIR RATE OF RETURN.**

A. Financial risk is the additional risk created by the introduction of debt and preferred stock into the capital structure. The higher the proportion of debt and preferred stock in the capital structure, the higher the financial risk (*i.e.,* likelihood of default). Therefore, consistent with the basic financial principle of risk and return, investors demand a higher common equity return as compensation for bearing higher default risk.

**Q. CAN BOND AND CREDIT RATINGS BE A PROXY FOR THE COMBINED BUSINESS AND FINANCIAL RISK (*I.E.*, INVESTMENT RISK OF AN ENTERPRISE)?**

A. Yes, similar bond ratings/issuer credit ratings reflect, and are representative of, similar combined business and financial risks (*i.e.*, total risk) faced by bond investors.[6] Although specific business or financial risks may differ between companies, the same bond/credit rating indicates that the combined risks are roughly similar, albeit not necessarily equal, as the purpose of the bond/credit rating process is to assess credit quality or credit risk (i.e., the risk of the company not paying its outstanding debt), and not common equity risk (i.e., the risk of the company not paying its outstanding debt, nor compensating its equity investors).

[6] Risk distinctions within S&P's bond rating categories are recognized by a plus or minus, i.e., within the A category, an S&P rating can be at A+, A, or A-. Similarly, risk distinctions for Moody's ratings are distinguished by numerical rating gradations, i.e., within the A category, a Moody's rating can be A1, A2 and A3.

**Q. THAT BEING SAID, DO RATING AGENCIES REFLECT COMPANY SIZE IN THEIR BOND RATINGS?**

A. No. Neither S&P nor Moody's have minimum company size requirements for any given rating level. This means, all else equal, a relative size analysis needs to be conducted for companies with similar bond ratings.

## V. AQUA TEXAS AND THE UTILITY PROXY GROUP

**Q. ARE YOU FAMILIAR WITH THE OPERATIONS OF AQUA TEXAS?**

A. Yes. Aqua Texas, a subsidiary of Essential Utilities, Inc., provides water and wastewater services to approximately 285,000 people throughout North, Central, and Southeast Texas. While Aqua TX is a Class A utility based on EPA classifications of a total size greater than 10,000 connections, Aqua TX is made up of 380 water systems ranging in size from a population of 25 to 8,442 customers. As a wholly-owned subsidiary of Essential Utilities, Inc., the Company's common stock is not publicly traded. The parent company, Essential Utilities, is traded on NYSE under the ticker symbol "WTRG".

**Q. WHY IS IT NECESSARY TO DEVELOP A PROXY GROUP WHEN ESTIMATING THE ROE FOR THE COMPANY?**

A. Because the Company is not publicly traded and does not have publicly traded equity securities, it is necessary to develop groups of publicly traded, comparable companies to serve as "proxies" for the Company. In addition to the analytical necessity of doing so, the use of proxy companies is consistent with the *Hope* and *Bluefield* comparable risk standards, as discussed above. I have selected a proxy group that, in my view, is fundamentally risk-comparable to the Company.

Even when proxy groups are carefully selected, it is common for analytical results to vary from company to company. Despite the care taken to ensure comparability, because

no two companies are identical, market expectations regarding future risks and prospects will vary within the proxy group. It therefore is common for analytical results to reflect a seemingly wide range, even for a group of similarly situated companies. At issue is how to estimate the ROE for the target company from within that range. That determination will be best informed by employing a variety of sound analyses and necessarily must consider the sort of quantitative and qualitative information discussed throughout my Direct Testimony. Additionally, a relative risk analysis between the Company and the Utility Proxy Group must be made to determine whether explicit Company-specific adjustments need to be made to the Utility Proxy Group's indicated results.

My analyses are based on the Utility Proxy Group, containing U.S. water utilities. As discussed earlier, utilities must compete for capital with other companies with commensurate risk (including non-utilities) and, to do so, must be provided the opportunity to earn a comparable return to these companies having a commensurate risk. Consequently, it is appropriate to consider the Utility Proxy Group's market data in determining the Company's ROE.

**Q. PLEASE EXPLAIN HOW YOU CHOSE YOUR UTILITY PROXY GROUP.**

A. The basis of selection for the Utility Proxy Group was to select those companies which meet the following criteria:

(i) They are included in the Water Utility Group of *Value Line's Standard Edition* (January 3, 2025);

(ii) They have 60% or greater of 2024 total operating income or 60% or greater of 2024 total assets attributable to regulated water operations;

(iii) At the time of preparation of this testimony, they had not publicly announced that they were involved in any major merger or acquisition activity (*i.e.*, one publicly traded utility merging with or acquiring another);

(iv) They have not cut or omitted their common dividends during the five years ending 2024 or through the time of the preparation of this testimony;

(v) They have *Value Line* and Bloomberg Professional Services ("Bloomberg") adjusted Beta coefficients ("beta");

(vi) They have a positive *Value Line* five-year dividends per share ("DPS") growth rate projection; and

(vii) They have *Value Line*, Zacks or S&P Capital IQ five-year earnings per share ("EPS") growth rate projections.

The following six companies met these criteria: American States Water Company, American Water Works Company, Inc., California Water Service Group, Essential Utilities Inc., Middlesex Water Company, and SJW Group.

**Q. PLEASE DESCRIBE SCHEDULE DWD-2, PAGE 1.**

A. Page 1 of Schedule DWD-2 contains comparative capitalization and financial statistics for the Utility Proxy Group identified above for the years 2020 to 2024. During the five-year period ending 2024, the historically achieved earnings rate on book common equity for the group averaged 10.16%. The average common equity ratio based on total permanent capital (excluding short-term debt) was 50.06%, and the average dividend payout ratio was 55.95%.

Total debt to earnings before interest, taxes, depreciation, and amortization for the years 2020 to 2024 ranges between 4.84x and 5.61x, with an average of 5.30x. Funds from operations to total debt range from 11.18% to 13.26%, with an average of 12.02%.

## VI. CAPITAL STRUCTURE AND COST OF LONG-TERM DEBT

**Q. WHAT CAPITAL STRUCTURE RATIO DO YOU RECOMMEND BE EMPLOYED IN DEVELOPING AN OVERALL FAIR RATE OF RETURN APPROPRIATE FOR THE COMPANY IN THIS PROCEEDING?**

A. I recommend the use of a ratemaking capital structure consisting of 47.00% long-term debt and 53.00% common equity as shown on page 1 of Schedule DWD-1. Aqua Texas's actual capital structure at the close of the historical test year consisted of 44.8% debt and 55.2% equity. While this reflects the historical reality, the company actively manages its capital program by initially utilizing short-term funding, which is subsequently converted to permanent capital through long-term debt and equity issuances. Aqua Texas targets a capital structure of approximately 47% debt and 53% equity, with a rebalancing occurring at least annually to achieve this long-term objective.

**Q. WHAT ARE THE TYPICAL SOURCES OF CAPITAL COMMONLY CONSIDERED IN ESTABLISHING A UTILITY'S CAPITAL STRUCTURE?**

A. Common equity and long-term debt are commonly considered in establishing a utility's capital structure because they are the typical sources of capital financing a utility's rate base.

**Q. PLEASE EXPLAIN.**

A. Long-lived assets are typically financed with long-lived securities, so that the overall term structure of the utility's long-term liabilities (both debt and equity) closely match the life of the assets being financed. As stated by Brigham and Houston:

> In practice, firms don't finance each specific asset with a type of capital that has a maturity equal to the asset's life. However, academic studies do show that most firms tend to finance short-term

assets from short-term sources and long-term assets from long-term sources.[7]

Whereas short-term debt has a maturity of one year or less, long-term debt may have maturities of 30 years or longer. Although there are practical financing constraints, such as the need to "stagger" long-term debt maturities, the general objective is to extend the average life of long-term debt. Still, long-term debt has a finite life, which is likely to be less than the life of the assets included in rate base. Common equity, on the other hand, is outstanding into perpetuity. Thus, common equity more accurately matches the life of the going concern of the utility, which is also assumed to operate in perpetuity. Consequently, it is both typical and important for utilities to have significant proportions of common equity in their capital structures.

**Q. HOW DOES THE COMPANY'S RATEMAKING COMMON EQUITY RATIO OF 53.00% FOR AQUA TEXAS COMPARE WITH THE TOTAL EQUITY RATIOS MAINTAINED BY THE UTILITY PROXY GROUP?**

A. The Company's ratemaking common equity ratio of 53.00% for Aqua Texas is reasonable and consistent with the range of common equity ratios maintained by the Utility Proxy Group on which I base my recommended common equity cost rate. As shown on Schedule DWD-2, page 2, the range of common equity ratios maintained by the Utility Proxy Group is between 43.98% and 58.95%. Regarding expected equity ratios, as shown on pages 2 through 7 on Schedule DWD-3, *Value Line* projects a range of equity ratios between 45.00% and 65.50% for the years 2027-2029. In my opinion, a capital structure consisting of 47.00% long-term debt and 53.00% total equity is appropriate for ratemaking purposes for Aqua Texas in the current proceeding because it is both its projected actual capital

[7] Eugene F. Brigham and Joel F. Houston, Fundamentals of Financial Management, Concise 4th Ed., Thomson South-Western, 2004, at 574.

structure used to finance operations and is comparable with the capital structure ratios maintained by and projected for the water companies in the Utility Proxy Group on whose market data I base my recommended common equity cost rate.

## VII. COMMON EQUITY COST RATE MODELS

**Q. IS IT IMPORTANT THAT COST OF COMMON EQUITY MODELS BE MARKET-BASED?**

A. Yes. A public utility must compete for equity in capital markets along with all other companies of comparable risk, which includes non-utilities. The cost of common equity is thus determined based on equity market expectations for the returns of those comparable risk companies. If individual investors are choosing to invest their capital among companies of comparable risk, they will choose a company providing a higher return over a company providing a lower return.

**Q. ARE YOUR COST OF COMMON EQUITY MODELS MARKET-BASED MODELS?**

A. Yes. The DCF model is market-based because market prices are used in developing the dividend yield component of the model. The RPM is market-based because the bond ratings and expected bond yields used in the application of the RPM reflect the market's assessment of bond/credit risk. In addition, the use of beta (β) to determine the equity risk premium reflects the market's assessment of market/systematic risk, since betas are derived from regression analyses of market prices. The Predictive Risk Premium Model ("PRPM") uses monthly market returns in addition to expectations of the risk-free rate. The CAPM is market-based for many of the same reasons that the RPM is market-based (*i.e.*, the use of expected bond yields and beta). Selection of the comparable risk non-price regulated

companies is market-based because it is based on statistics which result from regression analyses of market prices and reflect the market's assessment of total risk.

**Q. WHAT ANALYTICAL APPROACHES DID YOU USE TO DETERMINE THE COMPANY'S ROE?**

A. As discussed earlier, I have relied on the DCF model, the RPM, and the CAPM, which I apply to the Utility Proxy Group described above. I also applied these same models to a Non-Price Regulated Proxy Group described later in this section.

I rely on multiple models because reasonable investors use a variety of tools and do not rely exclusively on a single source of information or single model. Moreover, the specific models on which I rely focus on different aspects of return requirements and provide different insights to investors' views of risk and return. The DCF model, for example, estimates the investor-required return assuming a constant expected dividend yield and growth rate in perpetuity, while Risk Premium-based methods (i.e., the RPM and CAPM approaches) provide the ability to reflect investors' views of risk, future market returns, and the relationship between interest rates and the ROE. Just as the use of market data for the Utility Proxy Group adds the reliability necessary to inform expert judgment in arriving at a recommended common equity cost rate, the use of multiple generally accepted common equity cost rate models also adds reliability and accuracy when arriving at a recommended common equity cost rate.

## A. DISCOUNTED CASH FLOW MODEL

**Q. WHAT IS THE THEORETICAL BASIS OF THE DCF MODEL?**

A. The DCF model is based on the theory that the present value of an expected future stream of net cash flows during the investment holding period can be determined by discounting

those cash flows at the cost of capital, or the investors' capitalization rate. Mathematically this is shown as:

$$P_0 = \frac{D_1}{(1+KE)} + \frac{D_2}{(1+KE)^2} + \ldots + \frac{D_T}{(1+KE)^T}$$

WHERE:

$K$ = THE REQUIRED RETURN ON COMMON EQUITY;

$D_{1 \ldots} D_T$ = THE FUTURE EXPECTED DIVIDENDS; AND

$P_0$ = THE CURRENT STOCK PRICE.

THE ABOVE EQUATION CAN BE REARRANGED TO FORM THE SINGLE-STAGE CONSTANT GROWTH DCF MODEL AS SUCH:

$$K_E = (D_0 (1+G))/P + G$$

WHERE:

$K_E$ = THE REQUIRED RETURN ON COMMON EQUITY;

$D_0$ = THE ANNUALIZED DIVIDEND PER SHARE;

$P$ = THE CURRENT STOCK PRICE; AND

$G$ = THE GROWTH RATE.

IN THIS FORM, THE REQUIRED ROE IS EQUAL TO THE EXPECTED DIVIDEND YIELD PLUS AN EXPECTED LONG-TERM GROWTH RATE. THE CONSTANT GROWTH DCF FORMULA IS DERIVED FROM THE PRESENT VALUE DCF FORMULA.

Under the model's strict assumptions, the growth rate equals the rate of capital appreciation (that is, the growth in the stock price). Given that assumption, it does not matter whether the investor holds the stock in perpetuity, or whether they hold the stock for some period of time, collect the dividends, then sell at the prevailing market price.

**Q. WHICH VERSION OF THE DCF MODEL DID YOU USE?**

A. I used the single-stage constant growth DCF model.

**Q. PLEASE DESCRIBE THE DIVIDEND YIELD YOU USED IN YOUR APPLICATION OF THE DCF MODEL.**

A. The unadjusted dividend yields are based on the proxy companies' dividends as of March 14, 2025, divided by the average of closing market prices for the 60 trading days ending March 14, 2025.[8]

**Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE DIVIDEND YIELD.**

A. Because dividends are paid periodically (quarterly), as opposed to continuously (daily), an adjustment must be made to the dividend yield. This is often referred to as the discrete, or the Gordon Periodic, version of the DCF model.

DCF theory calls for the use of the full growth rate, or $D_1$, in calculating the dividend yield component of the model. Since the various companies in the Utility Proxy Group increase their quarterly dividend at various times during the year, a reasonable assumption is to reflect one-half the annual dividend growth rate in the dividend yield component, or $D_{1/2}$. Because the dividend should be representative of the next 12-month period, my adjustment is a conservative approach that does not overstate the dividend yield. Therefore, the actual average dividend yields in Column 1 on page 1 of Schedule DWD-3 have been adjusted upward to reflect one-half the average projected growth rate shown in Column 5.

[8] *See,* Schedule DWD-3, page 1, Column 1.

**Q. PLEASE EXPLAIN THE BASIS OF THE GROWTH RATES YOU APPLIED TO THE UTILITY PROXY GROUP IN YOUR DCF MODEL.**

A. Investors with more limited resources than institutional investors are likely to rely on widely available financial information services, such as *Value Line*, Zacks, and S&P Capital IQ. Investors realize that analysts have significant insight into the dynamics of the industries and individual companies they analyze, as well as companies' abilities to effectively manage the effects of changing laws and regulations, and ever-changing economic and market conditions. For these reasons, I used analysts' five-year forecasts of EPS growth in my DCF analysis.

Over the long run, there can be no growth in DPS without growth in EPS. Security analysts' earnings expectations have a more significant influence on market prices than dividend expectations. Thus, the use of earnings growth rates in a DCF analysis provides a better match between investors' market price appreciation expectations and the growth rate component of the DCF.

**Q. PLEASE SUMMARIZE THE DCF MODEL RESULTS.**

A. As shown on page 1 of Schedule DWD-3, the application of the constant growth DCF model to the Utility Proxy Group results in a wide range of indicated ROEs from 5.84% to 15.82%. The mean of those results is 10.76%, the median result is 9.90%, and the average of the two is 10.33%.

**B. <u>THE RISK PREMIUM MODEL</u>**

**Q. PLEASE DESCRIBE THE THEORETICAL BASIS OF THE RPM.**

A. The RPM is based on the fundamental financial principle of risk and return, namely, that investors require greater returns for bearing greater risk. The RPM recognizes that common equity capital has greater investment risk than debt capital, as common equity

shareholders are behind debt holders in any claim on a company's assets and earnings. As a result, investors require higher returns from common stocks than from investment in bonds, to compensate them for bearing the additional risk.

While it is possible to directly observe bond returns and yields, investors' required common equity return cannot be directly determined or observed. According to RPM theory, one can estimate a common equity risk premium over bonds (either historically or prospectively) and use that premium to derive a cost rate of common equity. The cost of common equity equals the expected cost rate for long-term debt capital, plus a risk premium over that cost rate, to compensate common shareholders for the added risk of being unsecured and last-in-line for any claim on the corporation's assets and earnings in the event of a liquidation.

**Q. PLEASE EXPLAIN THE TOTAL MARKET APPROACH RPM.**

A. The total market approach RPM adds a prospective public utility bond yield to an average of: 1) an equity risk premium that is derived from a beta-adjusted total market equity risk premium; and 2) an equity risk premium based on the S&P Utilities Index.

**Q. PLEASE EXPLAIN THE BASIS OF THE EXPECTED BOND YIELD OF 5.80% APPLICABLE TO THE UTILITY PROXY GROUP.**

A. The first step in the total market approach RPM analysis is to determine the expected bond yield. Because both ratemaking and the cost of capital, including common equity cost rate, are prospective in nature, a prospective yield on similarly-rated long-term debt is essential. I rely on a consensus forecast of about 50 economists of the expected yield on Aaa rated corporate bonds for the six calendar quarters ending with the second calendar quarter of 2026, and the long-term projections for 2026 to 2030, and 2031 to 2035 from *Blue Chip*. As shown on line 1 of page 1 of Schedule DWD-4, the average expected yield on Moody's

Aaa rated corporate bonds is 5.35%. In order to derive an expected yield on A2 rated public utility bonds, I make an upward adjustment of 0.38%, which represents a recent spread between Aaa rated corporate bonds and A2 rated public utility bonds, in order to adjust the expected Aaa rated corporate bond yield to an equivalent Moody's A2 rated public utility bond.[9] Adding that recent 0.38% spread to the expected Aaa rated corporate bond yield of 5.35% results in an expected A2 rated public utility bond of 5.73%.

Since the Utility Proxy Group's average Moody's long-term issuer rating is A3, another adjustment to the expected A2 rated public utility bond yield is needed to reflect the difference in bond ratings. An upward adjustment of 0.07%, which represents one-third of a recent spread between A2 and Baa2 rated public utility bond yields, is necessary to make the A2 rated prospective bond yield applicable to an A3 rated public utility bond.[10] Adding the 0.07% to the 5.73% prospective A2 rated public utility bond yield results in a 5.80% expected bond yield for the Utility Proxy Group.

[9] As shown on line 2 and explained in note 2 of page 1 of Schedule DWD-4.

[10] As shown on line 4 and explained in note 3, page 1 of Schedule DWD-4. Moody's does not provide public utility bond yields for A3 rated bonds. As such, it was necessary to estimate the difference between A2 rated and A3 rated public utility bonds. Because there are three steps between Baa2 and A2 (Baa2 to Baa1, Baa1 to A3, and A3 to A2) I assumed an adjustment of one-third of the difference between the A2 rated and Baa2 rated public utility bond yield was appropriate.

**Table 3: Summary of the Calculation of the Utility Proxy Group Projected Bond Yield[11]**

| | |
|---|---|
| Prospective Yield on Moody's Aaa Rated Corporate Bonds (*Blue Chip)* | 5.35% |
| Adjustment to Reflect Yield Spread Between Moody's Aaa Rated Corporate Bonds and Moody's A2 Rated Utility Bonds | 0.38% |
| Adjustment to Reflect the Utility Proxy Group's Average Moody's Bond Rating of A3 | 0.07% |
| Prospective Bond Yield Applicable to the Utility Proxy Group | 5.80% |

To develop the indicated ROE using the total market approach RPM, this prospective bond yield is then added to the average of the three different equity risk premiums described below.

**Q. PLEASE EXPLAIN HOW THE BETA-DERIVED EQUITY RISK PREMIUM IS DETERMINED.**

A. The components of the beta-derived risk premium model are: 1) an expected market equity risk premium over corporate bonds, and 2) beta. The derivation of the beta-derived equity risk premium that I applied to the Utility Proxy Group is shown on lines 1 through 8 of page 6 of Schedule DWD-4. The total beta-derived equity risk premium I applied was based on an average of three historical market data-based equity risk premiums, a *Value Line*-based equity risk premium, and combined *Value Line*, Bloomberg, and S&P Capital IQ-based equity risk premium. Each of these is described in turn.

**Q. HOW DID YOU DERIVE A MARKET EQUITY RISK PREMIUM BASED ON LONG-TERM HISTORICAL DATA?**

A. To derive a historical market equity risk premium, I used the most recent holding period returns for the large company common stocks less the average historical yield on Moody's Aaa/Aa rated corporate bonds for the period 1928 to 2024. The use of holding period

[11] As shown on page 1 of Schedule DWD-4.

returns over a very long period of time is appropriate because it is consistent with the long-term investment horizon presumed by investing in a going concern, *i.e.*, a company expected to operate in perpetuity.

The long-term arithmetic mean monthly total return rate on large company common stocks was 12.05% and the long-term arithmetic mean monthly yield on Moody's Aaa/Aa rated corporate bonds was 5.95% from 1928 to 2024. As shown on line 1 of page 6 of Schedule DWD-4, subtracting the mean monthly bond yield from the total return on large company stocks results in a long-term historical equity risk premium of 6.10%.

I used the arithmetic mean monthly total return rates for the large company stocks and yields (income returns) for the Moody's Aaa/Aa rated corporate bonds, because they are appropriate for the purpose of estimating the cost of capital as noted in Kroll's Stocks, Bonds, Bills, and Inflation ("SBBI") Yearbook 2023 ("SBBI - 2023"). The use of the arithmetic mean return rates and yields is appropriate because historical total returns and equity risk premiums provide insight into the variance and standard deviation of returns needed by investors in estimating future risk when making a current investment. If investors relied on the geometric mean of historical equity risk premiums, they would have no insight into the potential variance of future returns because the geometric mean relates to the change over many periods to a constant rate of change, thereby obviating the year-to-year fluctuations, or variance, which is critical to risk analysis.

**Q. PLEASE EXPLAIN THE DERIVATION OF THE REGRESSION-BASED MARKET EQUITY RISK PREMIUM.**

A. To derive the regression analysis-derived market equity risk premium of 6.82%, shown on line 2 of page 6 of Schedule DWD-4, I used the same monthly annualized total returns on large company common stocks relative to the monthly annualized yields on Moody's

Aaa/Aa rated corporate bonds as mentioned above. The relationship between interest rates and the market equity risk premium was modeled using the observed monthly market equity risk premium as the dependent variable, and the monthly yield on Moody's Aaa/Aa rated corporate bonds as the independent variable. I used a linear Ordinary Least Squares ("OLS") regression, in which the market equity risk premium is expressed as a function of the Moody's Aaa/Aa rated corporate bond yield:

$$RP = \alpha + \beta\ (R_{Aaa/Aa})$$

where:

*RP* = the market equity risk premium;

$\alpha$ = the regression intercept coefficient;

$\beta$ = the regression slope coefficient; and

$R_{Aaa/Aa}$ = the Moody's Aaa/Aa rated corporate bond yield.

Using the equation generated by the regression, an expected equity risk premium of 6.82% is calculated using the average forecast of Aaa corporate bond yield of 5.35%, as discussed above.

**Q. PLEASE EXPLAIN THE DERIVATION OF A PRPM EQUITY RISK PREMIUM.**

A. The PRPM, published in the *Journal of Regulatory Economics,*[12] was developed from the work of Robert F. Engle, who shared the Nobel Prize in Economics in 2003 "for methods of analyzing economic time series with time-varying volatility ("ARCH")".[13] Engle found that volatility changes over time and is related from one period to the next, especially in financial markets. Engle discovered that volatility of prices and returns clusters over time

[12] Autoregressive conditional heteroscedasticity. *See* "A New Approach for Estimating the Equity Risk Premium for Public Utilities", Pauline M. Ahern, Frank J. Hanley and Richard A. Michelfelder, Ph.D. *The Journal of Regulatory Economics* (December 2011), 40:261-278.

[13] www.nobelprize.org.

and is therefore highly predictable and can be used to predict future levels of risk and risk premiums.

The PRPM estimates the risk-return relationship directly, as the predicted equity risk premium is generated by predicting volatility or risk. The PRPM is not based on an estimate of investor behavior, but rather on an evaluation of the results of that behavior (i.e., the variance of historical equity risk premiums). The inputs to the model are the historical monthly returns on large company common stocks minus the monthly yields on Moody's Aaa/Aa-rated corporate bonds during the period from January 1928 through February 2025.[14] Using a generalized form of ARCH, known as GARCH, I calculated each Proxy Groups' company's projected equity risk premium using Eviews© statistical software. When the GARCH model is applied to the historical return data, it produces a predicted GARCH variance series and a GARCH coefficient. Multiplying the predicted monthly variance by the GARCH coefficient and then annualizing it[15] produces the predicted annual equity risk premium. The resulting PRPM predicted a market equity risk premium of 7.32%.[16]

**Q. PLEASE EXPLAIN THE DERIVATION OF A PROJECTED EQUITY RISK PREMIUM BASED ON *VALUE LINE* SUMMARY AND INDEX DATA FOR YOUR RPM ANALYSIS.**

A. As noted previously, because both ratemaking and the cost of capital are prospective, a prospective market equity risk premium is needed. The derivation of the forecasted or prospective market equity risk premium can be found in note 4 on page 6 of Schedule DWD-4. Consistent with the premise that total returns are the sum of capital appreciation

[14] Data from January 1928 to December 2022 is from SBBI - 2023. Data from January 2023 to February 2025 is from Bloomberg.
[15] Annualized Return = (1 + Monthly Return) ^12 - 1.
[16] Shown on line 3, page 6 of Schedule DWD-4.

and income returns, this prospective market return is derived from an average of the three- to five-year median market price appreciation potential by *Value Line* Summary and Index for the 13 weeks ending March 14, 2025, plus an average of the median estimated dividend yield for the common stocks of the 1,700 firms covered in *Value Line*'s Standard Edition.[17]

The average median expected price appreciation is 45.00%, which translates to an 9.73% annual appreciation, and when added to the average of *Value Line's* median expected dividend yields of 2.08%, equates to a forecasted annual total return rate on the market of 11.81%. The forecasted Aaa rated bond yield of 5.35% is deducted from the total market return of 11.81%, resulting in an equity risk premium of 6.46%, shown on page 6, line 4 of Schedule DWD-4.

**Q. PLEASE EXPLAIN THE DERIVATION OF AN EQUITY RISK PREMIUM BASED ON THE S&P 500 COMPANIES.**

A. Using data from *Value Line*, Bloomberg, and S&P Capital IQ, I calculated an expected total return on the S&P 500 using expected dividend yields and long-term growth estimates as a proxy for capital appreciation. The expected total return for the S&P 500 is 15.02%. Subtracting the prospective yield on Aaa-rated corporate bonds of 5.35% results in a 9.67% projected equity risk premium as shown on page 6, line 5 of Schedule DWD-4.

**Q. WHAT IS YOUR CONCLUSION OF A BETA-DERIVED EQUITY RISK PREMIUM FOR USE IN YOUR RPM ANALYSIS?**

A. I gave equal weight to the five equity risk premiums in arriving at my conclusion of 7.27%.[18]

[17] As explained in detail in page 2, note 1 of Schedule DWD-5.
[18] *See,* line 6 on page 6 of Schedule DWD-4.

**Table 4: Summary of the Calculation of the Equity Risk Premium Using Total Market Returns[19]**

| | |
|---|---|
| Historical Spread Between Total Returns of Large Stocks and Aaa and Aa2 Rated Corporate Bond Yields (1928 – 2024) | 6.10% |
| Regression Analysis on Historical Data | 6.82% |
| PRPM Analysis on Historical Data | 7.32% |
| Prospective Equity Risk Premium using Total Market Returns from *Value Line* Summary & Index less Projected Aaa Corporate Bond Yields | 6.46% |
| Prospective Equity Risk Premium using Measures of Capital Appreciation and Income Returns for the S&P 500 less Projected Aaa Corporate Bond Yields | 9.67% |
| **Average** | 7.27% |

After calculating the average market equity risk premium of 7.27%, I adjusted it by beta to account for the risk of the Utility Proxy Group. As discussed below, the beta is a meaningful measure of prospective relative risk to the market as a whole and is a logical means by which to allocate a Company's, or proxy group's, share of the market's total equity risk premium relative to corporate bond yields. As shown on page 1 of Schedule DWD-5, the average of the mean and median beta for the Utility Proxy Group is 0.73. Multiplying the beta of the Utility Proxy Group of 0.73 by the market equity risk premium of 7.27% resulted in a beta-adjusted equity risk premium of 5.31% for the Utility Proxy Group.

**Q. HOW DID YOU DERIVE THE EQUITY RISK PREMIUM BASED ON THE S&P UTILITY INDEX AND MOODY'S A RATED PUBLIC UTILITY BONDS?**

A. I estimated three equity risk premiums based on S&P Utility Index holding returns, and one equity risk premium based on the expected returns of the S&P Utilities Index, using data from *Value Line*, Bloomberg, and S&P Capital IQ. Turning first to the S&P Utility Index holding period returns, I derived a long-term monthly arithmetic mean equity risk premium between the S&P Utility Index total returns of 10.59% and monthly A rated

[19] As shown on page 8 of Schedule DWD-4.

public utility bond yields of 6.42% from 1928 to 2024, to arrive at an equity risk premium of 4.16%.[20] I then used the same historical data to derive an equity risk premium of 4.80% based on a regression of the monthly equity risk premiums. The final S&P Utility Index holding period equity risk premium involved applying the PRPM using the historical monthly equity risk premiums from January 1928 to February 2025 to arrive at a PRPM-derived equity risk premium of 5.07% for the S&P Utility Index.

I then derived expected total returns on the S&P Utilities Index of 10.31% using data from *Value Line,* Bloomberg, and S&P Capital IQ and subtracted the prospective A2 rated public utility bond yield (5.73%),[21] which resulted in a risk premium of 4.58%. As with the market equity risk premiums, I averaged each risk premium to arrive at my utility-specific equity risk premium of 4.65%.

**Table 5: Summary of the Calculation of the Equity Risk Premium Using S&P Utility Index Holding Returns[22]**

| | |
|---|---|
| Historical Spread Between Total Returns of the S&P Utilities Index and A2 Rated Utility Bond Yields (1928 – 2024) | 4.16% |
| Regression Analysis on Historical Data | 4.80% |
| PRPM Analysis on Historical Data | 5.07% |
| Prospective Equity Risk Premium using Measures of Capital Appreciation and Income Returns for the S&P Utilities Index less Projected A2 Utility Bond Yields | 4.58% |
| **Average** | 4.65% |

**Q. WHAT IS YOUR CONCLUSION OF AN EQUITY RISK PREMIUM FOR USE IN YOUR TOTAL MARKET APPROACH RPM ANALYSIS?**

A. The equity risk premium I applied to the Utility Proxy Group is 4.98%, which is the average of the beta-derived and the S&P utility equity risk premiums of 5.31% and 4.65%, respectively.[23]

[20] As shown on line 1 on page 9 of Schedule DWD-4.
[21] Derived on line 3 of page 1 of Schedule DWD-4.
[22] As shown on page 9 of Schedule DWD-4.
[23] As shown on page 5 of Schedule DWD-4.

**Q. WHAT IS THE INDICATED RPM COMMON EQUITY COST RATE BASED ON THE TOTAL MARKET APPROACH?**

A. As shown on line 7 of Schedule DWD-4, page 1, I calculated a common equity cost rate of 10.78% for the Utility Proxy Group based on the total market approach of the RPM.

**Table 6: Summary of the Total Market Return Risk Premium Model[24]**

| | |
|---|---|
| Prospective Moody's A3 Rated Utility Bond Applicable to the Utility Proxy Group | 5.80% |
| Prospective Equity Risk Premium | 4.98% |
| Indicated Cost of Common Equity | 10.78% |

## C. THE CAPITAL ASSET PRICING MODEL

**Q. PLEASE EXPLAIN THE THEORETICAL BASIS OF THE CAPM.**

A. CAPM theory defines risk as the co-variability of a security's returns with the market's returns as measured by beta (β). A beta of less than 1.0 indicates lower variability than the market as a whole, while a beta greater than 1.0 indicates greater variability than the market.

The CAPM assumes that all other risk (*i.e.*, all non-market or unsystematic risk) can be eliminated through diversification. The risk that cannot be eliminated through diversification is called market, or systematic, risk. In addition, the CAPM presumes that investors require compensation only for systematic risk, which is the result of macroeconomic and other events that affect the returns on all assets. The model is applied by adding a risk-free rate of return to a market risk premium, which is adjusted proportionately to reflect the systematic risk of the individual security relative to the total market, as measured by beta. The traditional CAPM model is expressed as:

[24] As shown on page 1 of Schedule DWD-4.

$$R_s = R_f + \beta(R_m - R_f)$$

Where: $R_s$ = Return rate on the common stock;

$R_f$ = Risk-free rate of return;

$R_m$ = Return rate on the market as a whole; and

$\beta$ = Adjusted beta (volatility of the security relative to the market as a whole).

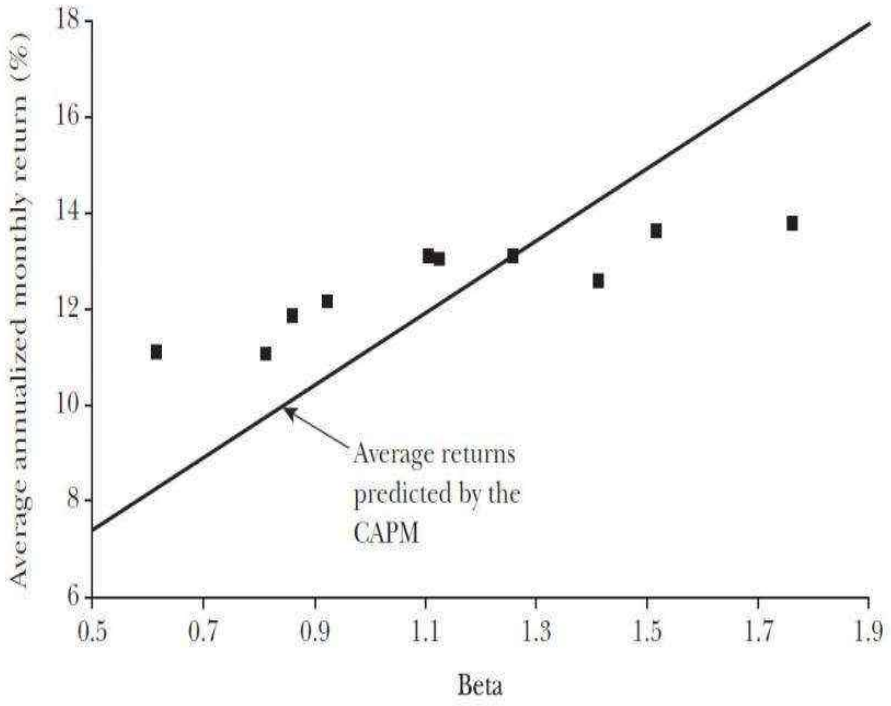
Numerous tests of the CAPM have measured the extent to which security returns and beta are related as predicted by the CAPM, confirming its validity. The empirical CAPM ("ECAPM") reflects the reality that while the results of these tests support the notion that beta is related to security returns, the empirical Security Market Line ("SML") described by the CAPM formula is not as steeply sloped as the predicted SML.[25] The ECAPM reflects this empirical reality. Fama and French clearly state regarding Figure 2, below, that "[t]he returns on the low beta portfolios are too high, and the returns on the high beta portfolios are too low." [26]

[25] Roger A. Morin, Modern Regulatory Finance, (PUR Books, 2021) at 221. ("Morin")

[26] Eugene F. Fama and Kenneth R. French, "The Capital Asset Pricing Model: Theory and Evidence", *Journal of Economic Perspectives*, Vol. 18, No. 3, Summer 2004 at 33 ("Fama & French"). http://pubs.aeaweb.org/doi/pdfplus/10.1257/0895330042162430.

*Figure 2* http://pubs.aeaweb.org/doi/pdfplus/10.1257/0895330042162430

**Average Annualized Monthly Return versus Beta for Value Weight Portfolios Formed on Prior Beta, 1928–2003**



In addition, Morin observes that while the results of these tests support the notion that beta is related to security returns, the empirical SML described by the CAPM formula is not as steeply sloped as the predicted SML. Morin states:

> With few exceptions, the empirical studies agree that … low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted.[27]
>
> * * *
>
> Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:
>
> $$K = R_F + x\,\beta(R_M - R_F) + (1-x)\,\beta(R_M - R_F)$$
>
> where x is a fraction to be determined empirically. The value of x that best explains the observed relationship [is] Return = 0.0829 + 0.0520 β is between 0.25 and 0.30. If x = 0.25, the equation becomes:

[27] Morin, at 207.

$$K = R_F + 0.25(R_M - R_F) + 0.75\ \beta(R_M - R_F)$$[28]

Fama and French provide similar support for the ECAPM when they state:

> The early tests firmly reject the Sharpe-Lintner version of the CAPM. There is a positive relation between beta and average return, but it is too 'flat.'… The regressions consistently find that the intercept is greater than the average risk-free rate… and the coefficient on beta is less than the average excess market return… This is true in the early tests… as well as in more recent cross-section regressions tests, like Fama and French (1992).[29]

Finally, Fama and French further note:

> Confirming earlier evidence, the relation between beta and average return for the ten portfolios is much flatter than the Sharpe-Linter CAPM predicts. The returns on low beta portfolios are too high, and the returns on the high beta portfolios are too low. For example, the predicted return on the portfolio with the lowest beta is 8.3 percent per year; the actual return as 11.1 percent. The predicted return on the portfolio with the highest beta is 16.8 percent per year; the actual is 13.7 percent.[30]

Clearly, the justification from Morin, Fama, and French along with their reviews of other academic research on the CAPM, validate the use of the ECAPM. In view of theory and practical research, I have applied both the traditional CAPM and the ECAPM to the companies in the Utility Proxy Group and averaged the results.

**Q. WHAT BETA DID YOU USE IN YOUR CAPM ANALYSIS?**

*A.* With respect to beta, I considered two methods of calculation: 1) the average beta of the Utility Proxy Group companies reported by Bloomberg Professional Services; and 2) the average beta of the Utility Proxy Group companies as reported by *Value Line*. While both of those services adjust their calculated (or "raw") betas to reflect the tendency of beta to regress to the market mean of 1.00, *Value Line* calculates beta over a five-year period, while Bloomberg's calculation is based on two years of data.

[28] Morin, at 221.
[29] Fama & French, at 32.
[30] Fama & French, at 33.

**Q. PLEASE DESCRIBE YOUR SELECTION OF A RISK-FREE RATE OF RETURN.**

A. As shown in column 5 on page 1 of Schedule DWD-5, the risk-free rate adopted for both applications of the CAPM is 4.55%. This risk-free rate is based on the average of the *Blue Chip* consensus forecast of the expected yields on 30-year U.S. Treasury bonds for the six quarters ending with the second calendar quarter of 2026, and long-term projections for the years 2026 to 2030 and 2031 to 2035.

**Q. WHY IS THE YIELD ON LONG-TERM U.S. TREASURY BONDS APPROPRIATE FOR USE AS THE RISK-FREE RATE?**

A. The yield on long-term U.S. Treasury Bonds is almost risk-free, and its term is consistent with the long-term cost of capital to public utilities measured by the yields on A2-rated public utility bonds, the long-term investment horizon inherent in utilities' common stocks, and the long-term life of the jurisdictional rate base to which the allowed fair rate of return (i.e., cost of capital) will be applied. In contrast, short-term U.S. Treasury yields are more volatile and largely a function of Federal Reserve monetary policy.

**Q. PLEASE EXPLAIN THE ESTIMATION OF THE EXPECTED RISK PREMIUM FOR THE MARKET USED IN YOUR CAPM ANALYSES.**

A. The basis of the market risk premium is explained in detail in note 1 on page 2 of Schedule DWD-5. As discussed previously, the market risk premium is derived from an average of two historical data-based market risk premiums, one *Value Line* data-based market risk premium and one Bloomberg, *Value Line*, and S&P Capital IQ data-based market risk premium.

The long-term income return on U.S. Government Securities of 4.99% was deducted from the monthly historical total market return of 12.29%, which results in an

historical market equity risk premium of 7.31%.[31] I applied a linear OLS regression to the monthly annualized historical returns on the S&P 500 relative to historical yields on long-term U.S. Government Securities. That regression analysis yielded a market equity risk premium of 7.94%. The PRPM market equity risk premium is 8.18% and is derived using the PRPM relative to the yields on long-term U.S. Treasury securities from January 1926 through February 2025.

The *Value Line*-derived forecasted total market equity risk premium is derived by deducting the forecasted risk-free rate of 4.55%, discussed above, from the *Value Line* Summary and Index projected total annual market return of 11.81%, resulting in a forecasted total market equity risk premium of 7.26%.

The S&P 500 projected market equity risk premium using *Value Line,* Bloomberg, and S&P Capital IQ data is derived by subtracting the projected risk-free rate of 4.55% from the projected total return of the S&P 500 of 15.02%. The resulting market equity risk premium is 10.47%.

These five market risk premiums, when averaged, resulted in an average total market equity risk premium of 8.23%.

[31] SBBI - 2023, at Appendix A-1 (1) through A-1 (3) and Appendix A-7 (19) through A-7 (21); Bloomberg Professional.

**Table 7: Summary of the Calculation of the Market Risk Premium for Use in the CAPM[32]**

| | |
|---|---|
| Historical Spread Between Total Returns of Large Stocks and Long-Term Government Bond Yields (1926 – 2024) | 7.31% |
| Regression Analysis on Historical Data | 7.94% |
| PRPM Analysis on Historical Data | 8.18% |
| Prospective Equity Risk Premium using Total Market Returns from *Value Line* Summary & Index less Projected 30-Year Treasury Bond Yields | 7.26% |
| Prospective Equity Risk Premium using Measures of Capital Appreciation and Income Returns for the S&P 500 less Projected 30-Year Treasury Bond Yields | 10.47% |
| **Average** | 8.23% |

**Q. WHAT ARE THE RESULTS OF YOUR APPLICATION OF THE TRADITIONAL AND EMPIRICAL CAPM TO THE UTILITY PROXY GROUP?**

A. As shown on page 1 of Schedule DWD-5, the mean result of my CAPM/ECAPM analysis is 10.90%, the median is 10.77%, and the average of the two is 10.84%. Consistent with my reliance on the average of mean and median DCF results discussed above, the indicated common equity cost rate using the CAPM/ECAPM is 10.84%.

## D. COMMON EQUITY COST RATES FOR A PROXY GROUP OF DOMESTIC, NON-PRICE REGULATED COMPANIES BASED ON THE DCF, RPM, AND CAPM

**Q. WHY DID YOU ALSO CONSIDER A PROXY GROUP OF DOMESTIC, NON-PRICE REGULATED COMPANIES?**

A. In the *Hope* and *Bluefield* cases, the U.S. Supreme Court did not specify that comparable risk companies had to be utilities. Since the purpose of rate regulation is to be a substitute for the competition of the marketplace, non-price regulated firms operating in the competitive marketplace make an excellent proxy if they are comparable in total risk to the Utility Proxy Group being used to estimate the cost of common equity. The selection of

[32] As shown on page 2 of Schedule DWD-5.

such domestic, non-price regulated competitive firms theoretically and empirically results in a proxy group which is comparable in total risk to the Utility Proxy Group.

**Q. HOW DID YOU SELECT NON-PRICE REGULATED COMPANIES THAT ARE COMPARABLE IN TOTAL RISK TO THE UTILITY PROXY GROUP?**

A. In order to select a proxy group of domestic, non-price regulated companies similar in total risk to the Utility Proxy Group, I relied on beta and related statistics derived from *Value Line* regression analyses of weekly market prices over the most recent 260 weeks (*i.e.*, five years). Using these selection criteria resulted in a proxy group of 47 domestic, non-price regulated firms comparable in total risk to the Utility Proxy Group. Total risk is the sum of non-diversifiable market risk and diversifiable company-specific risks. The following criteria were used in the selection of the domestic, non-price regulated firms:

(i) They must be covered by *Value Line Investment Survey* (Standard Edition);

(ii) They must be domestic, non-price regulated companies, *i.e.*, non-utilities;

(iii) Their beta must lie within plus or minus two standard deviations of the average unadjusted beta of the Utility Proxy Group; and

(iv) The residual standard errors of the *Value Line* regressions which gave rise to the unadjusted betas must lie within plus or minus two standard deviations of the average residual standard error of the Utility Proxy Group.

Betas are a measure of market or systematic risk, which is not diversifiable. The residual standard errors of the regressions were used to measure each firm's company-specific, diversifiable risk. Companies that have similar betas and similar residual standard errors resulting from the same regression analyses have similar total investment risk.

**Q. HAVE YOU PREPARED A SCHEDULE WHICH SHOWS THE DATA FROM WHICH YOU SELECTED THE 47 DOMESTIC, NON-PRICE REGULATED COMPANIES THAT ARE COMPARABLE IN TOTAL RISK TO THE UTILITY PROXY GROUP?**

A. Yes, the basis of my selection, and both proxy groups' regression statistics, are shown in Schedule DWD-6.

**Q. DID YOU CALCULATE COMMON EQUITY COST RATES USING THE DCF, RPM, AND CAPM FOR THE NON-PRICE REGULATED PROXY GROUP?**

A. Yes. Because the DCF, RPM, and CAPM have been applied in an identical manner as described above, I will not repeat the details of the rationale and application of each model. One exception is in the application of the RPM, where I did not use public utility-specific equity risk premiums.

Page 2 of Schedule DWD-7 contains the derivation of the DCF cost rates. As shown, the indicated common equity cost rate using the DCF for the Non-Price Regulated Proxy Group comparable in total risk to the Utility Proxy Group, is 11.34%.

Pages 3 through 5 of DWD-7 contain the data and calculations that support the 11.94% RPM cost rate. As shown on line 1 of page 3 of Schedule DWD-7, the consensus prospective yield on Moody's Baa2-rated corporate bonds for the six quarters ending in the second quarter of 2026, and for the years 2026 to 2030 and 2031 to 2035, is 6.14%.[33] Since the Non-Price Regulated Proxy Group has an average Moody's long-term issuer rating of Baa1, a 0.09% downward adjustment of the prospective Baa2 rated corporate

[33] *Blue Chip Financial Forecasts*, February 28, 2025, at p. 2, and November 27, 2024, at p. 14.

bond yield is necessary to reflect a difference in ratings which results in a projected Baa1-rated corporate bond yield of 6.05% for the non-price regulated proxy group.[34]

When the beta-adjusted risk premium of 5.89%[35] relative to the Non-Price Regulated Proxy Group is added to the adjusted prospective Baa1 rated corporate bond yield of 6.05%, the indicated RPM cost rate is 11.94%.

Page 6 contains the inputs and calculations that support my indicated CAPM/ECAPM cost rate of 11.19%.

**Q. WHAT IS THE COST RATE OF COMMON EQUITY BASED ON THE NON-PRICE REGULATED PROXY GROUP COMPARABLE IN TOTAL RISK TO THE UTILITY PROXY GROUP?**

A. As shown on page 1 of Schedule DWD-7, the results of the DCF, RPM, and CAPM applied to the Non-Price Regulated Proxy Group comparable in total risk to the Utility Proxy Group are 11.34%, 11.94%, and 11.19%, respectively. The average of the mean and median of these models is 11.42%, which I used as the indicated common equity cost rate for the Non-Price Regulated Proxy Group.

## VIII. CONCLUSION OF COMMON EQUITY COST RATE BEFORE ADJUSTMENT

**Q. WHAT IS THE INDICATED RANGE OF COMMON EQUITY COST RATES BEFORE ADJUSTMENTS?**

A. Based on the results of the application of multiple cost of common equity models to the Utility Proxy Group, my recommended range of ROEs attributable to the Utility Proxy Group is between 10.33% and 10.84%. The indicated range of ROEs gives emphasis to the DCF and CAPM results.

---

[34] The 0.09% downward adjustment is equal to one-third of the spread between A2 and Baa2 corporate bond yields, as illustrated in note 2 on page 3 of Schedule DWD-7.

[35] Derived on page 5 of Schedule DWD-7.

I used multiple cost of common equity models as primary tools in arriving at my recommended common equity cost rate, because no single model is so inherently precise that it can be relied on solely to the exclusion of other theoretically sound models. The use of multiple models adds reliability to the estimation of the common equity cost rate, and the prudence of using multiple cost of common equity models is supported in both the financial literature and regulatory precedent.

Based on these common equity cost rate results, I conclude that a range of common equity cost rates between 10.33% and 10.84% is reasonable and appropriate before any adjustments for relative risk differences between the Company and the Proxy Group are made.

## IX. ADJUSTMENTS TO THE COMMON EQUITY COST RATE

### A. BUSINESS RISK ADJUSTMENT

**Q. DOES AQUA TEXAS' SMALLER SIZE RELATIVE TO THE UTILITY PROXY GROUP COMPANIES INCREASE ITS BUSINESS RISK?**

A. Yes. Aqua Texas' smaller size relative to the Utility Proxy Group companies indicates greater relative business risk for the Company because, all else being equal, size has a material bearing on risk.

Size affects business risk because smaller companies generally are less able to cope with significant events that affect sales, revenues, and earnings. For example, smaller companies face more risk exposure to business cycles and economic conditions, both nationally and locally. Additionally, the loss of revenues from a few larger customers would have a greater effect on a small company than on a bigger company with a larger, more diverse, customer base.

As further evidence illustrates that smaller firms are riskier, investors generally demand greater returns from smaller firms to compensate for less marketability and liquidity of their securities. Kroll's Cost of Capital Navigator: U.S. Cost of Capital Module ("Kroll") discusses the nature of the small-size phenomenon, providing an indication of the magnitude of the size premium based on several measures of size. In discussing "Size as a Predictor of Equity Premiums," Kroll states:

> The size effect is based on the empirical observation that companies of smaller size are associated with greater risk and, therefore, have greater cost of capital [sic]. The "size" of a company is one of the most important risk elements to consider when developing cost of equity capital estimates for use in valuing a business simply because size has been shown to be a *predictor* of equity returns. In other words, there is a significant (negative) relationship between size and historical equity returns - as size *decreases*, returns tend to *increase*, and vice versa. (footnote omitted) (emphasis in original)[36]

Furthermore, in "The Capital Asset Pricing Model: Theory and Evidence," Fama and French note size is indeed a risk factor which must be reflected when estimating the cost of common equity. On page 38, they note:

> . . . the higher average returns on small stocks and high book-to-market stocks reflect unidentified state variables that produce undiversifiable risks (covariances) in returns not captured in the market return and are priced separately from market betas.[37]

Based on this evidence, Fama and French proposed their three-factor model which includes a size variable in recognition of the effect size has on the cost of common equity.

Also, it is a basic financial principle that the use of funds invested, and not the source of funds, is what gives rise to the risk of any investment.[38] Eugene Brigham, a well-known authority, states:

---

[36] Kroll: Cost of Capital Navigator: U.S. Cost of Capital Module, "Size as a Predictor of Equity Returns," at 1

[37] Fama & French, at 25-43.

[38] Richard A. Brealey and Stewart C. Myers, Principles of Corporate Finance (McGraw-Hill Book Company, 1996), at 204-205, 229.

> A number of researchers have observed that portfolios of small-firms (sic) have earned consistently higher average returns than those of large-firm stocks; this is called the "small-firm effect." On the surface, it would seem to be advantageous to the small firms to provide average returns in a stock market that are higher than those of larger firms. In reality, it is bad news for the small firm; **what the small-firm effect means is that the capital market demands higher returns on stocks of small firms than on otherwise similar stocks of the large firms.** (emphasis added)[39]

Consistent with the financial principle of risk and return discussed above, increased relative risk due to small size must be considered in the allowed rate of return on common equity. Therefore, the Commission's authorization of a cost rate of common equity in this proceeding must appropriately reflect the unique risks of Aqua Texas, including its small size, which is justified and supported above by evidence in the financial literature.

**Q. IS THERE A WAY TO QUANTIFY A RELATIVE RISK ADJUSTMENT DUE TO AQUA TEXAS' GREATER BUSINESS RISK RELATIVE TO THE UTILITY PROXY GROUP?**

A. Yes. In the absence of other empirical methods, I compared Aqua Texas and the Utility Proxy Group's relative size, as measured by an estimated market capitalization of common equity for Aqua Texas.

**Table 8: Size as Measured by Market Capitalization for the Company and the Utility Proxy Group**

| | Market Capitalization* ($ Millions) | Times Greater Than the Company |
|---|---|---|
| Aqua Texas | $686.047 | |
| Utility Proxy Group Median | $ 2,923.907 | 4.3x |
| *From page 1 of Schedule DWD-8. | | |

The Company's estimated market capitalization was at $686.047 million as of March 14, 2025, compared with the median market capitalization of the Utility Proxy

[39] Eugene F. Brigham, Fundamentals of Financial Management, Fifth Edition (The Dryden Press, 1989), at 623.

Group of $2.92 billion as of March 14, 2025. The Utility Proxy Group's market capitalization is 4.3 times the size of Aqua Texas' estimated market capitalization.

As a result, it is necessary to upwardly adjust the indicated range of common equity cost rates to reflect Aqua Texas' greater risk due to its smaller relative size. The determination is based on the size premiums for portfolios of New York Stock Exchange, American Stock Exchange, and NASDAQ listed companies ranked by deciles for the 1926 to 2024 period. The average size premium for the Utility Proxy Group with a market capitalization of $2.92 billion falls in the 6th decile, while Aqua Texas' market capitalization of $686.047 million places the Company in the 9th decile. The size premium spread between the 6th decile and the 9th decile is 0.73%. Even though a 0.73% upward size adjustment is indicated, I conservatively applied a size premium of 0.10% to Aqua Texas' indicated range of common equity cost rates.

## B. FLOTATION COST ADJUSTMENT

**Q. WHAT ARE FLOTATION COSTS?**

A. Flotation costs are those costs associated with the sale of new issuances of common stock. They include market pressure and the mandatory unavoidable costs of issuance (e.g., underwriting fees and out-of-pocket costs for printing, legal, registration, etc.). For every dollar raised through debt or equity offerings, the Company receives less than one full dollar in financing.

**Q. WHY IS IT IMPORTANT TO RECOGNIZE FLOTATION COSTS IN THE ALLOWED COMMON EQUITY COST RATE?**

A. It is important because there is no other mechanism in the ratemaking paradigm through which such costs can be recognized and recovered. Because these costs are real, necessary, and legitimate, recovery of these costs should be permitted. As noted by Morin:

> The costs of issuing these securities are just as real as operating and maintenance expenses or costs incurred to build utility plants, and fair regulatory treatment must permit the recovery of these costs….
>
> The simple fact of the matter is that common equity capital is not free…[Flotation costs] must be recovered through a rate of return adjustment.[40]

**Q. SHOULD FLOTATION COSTS BE RECOGNIZED ONLY IF THERE WAS AN ISSUANCE DURING THE TEST YEAR OR THERE IS AN IMMINENT POST-TEST YEAR ISSUANCE OF ADDITIONAL COMMON STOCK?**

A. No. As noted above, there is no mechanism to recapture such costs in the ratemaking paradigm other than an adjustment to the allowed common equity cost rate. Flotation costs are charged to capital accounts and are not expensed on a utility's income statement. As such, flotation costs are analogous to capital investments, albeit negative, reflected on the balance sheet. Recovery of capital investments relates to the expected useful lives of the investment. Since common equity has a very long and indefinite life (assumed to be infinity in the standard regulatory DCF model), flotation costs should be recovered through an adjustment to common equity cost rate, even when there has not been an issuance during the test year, or in the absence of an expected imminent issuance of additional shares of common stock.

Historical flotation costs are a permanent loss of investment to the utility and should be taken into account. When any company, including a utility, issues common stock, flotation costs are incurred for legal, accounting, printing fees and the like. For each dollar of issuing market price, a small percentage is expensed and is permanently unavailable for investment in utility rate base. Since these expenses are charged to capital accounts and not expensed on the income statement, the only way to restore the full value of that dollar

[40] Morin, at 329.

of issuing price with an assumed investor required return of 10% is for the net investment, $0.95, to earn more than 10% to net back to the investor a fair return on that dollar. In other words, if a company issues stock at $1.00 with 5% in flotation costs, it will net $0.95 in investment. Assuming the investor in that stock requires a 10% return on their invested $1.00 (i.e., a return of $0.10), the company needs to earn approximately 10.5% on its invested $0.95 to receive a $0.10 return.

**Q. DO THE COMMON EQUITY COST RATE MODELS YOU HAVE USED ALREADY REFLECT INVESTORS' ANTICIPATION OF FLOTATION COSTS?**

A. No. All of these models assume no transaction costs. The literature is quite clear that these costs are not reflected in the market prices paid for common stocks. For example, Brigham and Daves confirm this and provide the methodology utilized to calculate the flotation adjustment.[41] In addition, Morin confirms the need for such an adjustment even when no new equity issuance is imminent.[42] Consequently, it is proper to include a flotation cost adjustment when using cost of common equity models to estimate the common equity cost rate.

**Q. HOW DID YOU CALCULATE THE FLOTATION COST ALLOWANCE?**

A. I modified the DCF calculation to provide a dividend yield that would reimburse investors for issuance costs in accordance with the method cited in literature by Brigham and Daves, as well as by Morin. The flotation cost adjustment recognizes the actual costs of issuing equity that were incurred by Essential Utilities, Inc. Based on the issuance costs shown on page 1 of Schedule DWD-9, an adjustment of 0.07% is required to reflect the flotation costs applicable to the Utility Proxy Group.

---

41 Eugene F. Brigham and Phillip R. Daves, Intermediate Financial Management, 9th Edition, Thomson/Southwestern, at p. 342.

42 Morin, at 337-339.

**Q. WHAT IS THE INDICATED COST OF COMMON EQUITY AFTER YOUR COMPANY-SPECIFIC ADJUSTMENTS?**

A. Applying the 0.10% size adjustment to the indicated range of common equity cost rates between 10.33% and 10.84% results in a range of common equity cost rates between 10.43% and 10.94%

**Q. DID YOU INCLUDE A 7-BASIS POINT ADJUSTMENT TO YOUR RECOMMENDED RANGE TO REFLECT FLOTATION COSTS?**

A. No, I did not. Although I believe a flotation cost adjustment is warranted in this proceeding, I have not reflected it in my recommended range, because I recognize the Commission has typically not made such an adjustment in prior cases. Given that, I believe my recommendation is a conservative estimate of the Company's required return.

## X. CONCLUSION

**Q. GIVEN THE ABOVE, WHAT IS YOUR RECOMMENDED ROE FOR THE COMPANY?**

A. Given the discussion above and the results of my analytical models, I recommend an ROE of 10.60% to be used in setting rates for the Company at this time.

**Q. IN YOUR OPINION, ARE THE COMPANY'S REQUESTED CAPITAL STRUCTURE AND LONG-TERM DEBT COST RATE REASONABLE?**

A. Yes, they are.

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

A. Yes, it does.

**STATE OF NEW JERSEY** §

**AFFIDAVIT OF DYLAN W. D'ASCENDIS**

BEFORE ME, the undersigned authority, on this day personally appeared Dylan W. D'Ascendis who having been placed under oath by me did depose as follows:

1. "My name is Dylan W. D'Ascendis. I am of sound mind and capable of making this affidavit. The facts stated herein are true and correct based upon my personal knowledge. My current position is Partner at ScottMadden, Inc.

2. I have prepared the foregoing Direct Testimony and accompanying exhibits and the information contained in those documents is true and correct to the best of my knowledge."

Further affiant sayeth not.

Dylan W. D'Ascendis

SUBSCRIBED AND SWORN TO BEFORE ME by Dylan W. D'Ascendis on this 7th day of May 2025.

Notary Public in and for the State of New Jersey

Joyce E Kelly
NOTARY PUBLIC
State of New Jersey
ID # 2416714
My Commission Expires 2/1/2027

### *Summary*

Dylan is an experienced consultant and a Certified Rate of Return Analyst (CRRA) and Certified Valuation Analyst (CVA). Dylan joined ScottMadden in 2016 and is a leading expert witness with respect to cost of capital, capital structure, and valuation. He has served as a consultant for investor-owned and municipal utilities and authorities for 16 years. Dylan has testified as an expert witness on over 150 occasions regarding rate of return, cost of service, rate design, and valuation before more than 40 regulatory jurisdictions in the United States and Canada, an American Arbitration Association panel, and the Superior Court of Rhode Island. He also maintains the benchmark index against which the Hennessy Gas Utility Mutual Fund performance is measured. Dylan holds a B.A. in economic history from the University of Pennsylvania and an M.B.A. with concentrations in finance and international business from Rutgers University.

### *Areas of Specialization*

- Expert Witness Testimony
- Rates and Regulation
- Return on Equity
- Valuation
- Utility Regulations
- Rate Case Planning, Management, and Support
- Utility Benchmarking

### *Recent Articles and Speeches*

Notes:
(1) All capitalization and financial statistics for the group are the arithmetic average of the achieved results for each individual company in the group, and are based upon financial statements as originally reported in each year.
(2) Computed by relating actual total debt interest or preferred stock dividends booked to average of beginning and ending total debt or preferred stock reported to be outstanding.
(3) Total debt relative to EBITDA (Earnings before Interest, Income Taxes, Depreciation and Amortization).
(4) Funds from operations (sum of net income, depreciation, amortization, net deferred income tax and investment tax credits, less total AFUDC) plus interest charges as a percentage of total debt.

NA= Not Available

Notes:

(1) Indicated dividend at 3/14/2025 divided by the average closing price of the last 60 trading days ending 3/14/2025 for each company.

(2) From pages 2 through 7 of this Schedule.

(3) Average of columns 2 through 4 excluding negative growth rates.

(4) This reflects a growth rate component equal to one-half the conclusion of growth rate (from column 5) x column 1 to reflect the periodic payment of dividends (Gordon Model) as opposed to the continuous payment. Thus, for American States Water Company, 2.45% x (1+( 1/2 x 3.35%) ) = 2.49%.

(5) Column 5 + Column 6.

**BUSINESS:** American States Water Co. operates as a holding company. Through its principal subsidiary, Golden State Water Co., it supplies water to 264,093 customers in 10 California counties. Service areas include the metropolitan areas of Los Angeles and Orange Counties. The company also provides electricity to 24,777 customers in Big Bear Lake and San Bernardino Cnty. Provides water & wastewater services to U.S. military bases through its ASUS subsidiary. Sold Chaparral City Wtr. of AZ. (6/11). Employs 815. BlackRock, Inc. owns 18.2% of out. shares; Vanguard, 12.4%; off. & dir., 0.8% (4/24 Proxy). Chair.: Anne M. Holloway. Pres. & CEO: Robert Sprowls. Inc: CA. Address: 630 East Foothill Blvd., San Dimas, CA 91773. Tel.: 909-394-3600. Int.: www.aswater.com.

**American States Water's main utility subsidiary has moved closer to reaching a final settlement on a major rate case.** Golden State Water (GSW) announced in mid-November that it had received a proposed decision from the administrative law judge at the California Public Utility Commission (CPUC). This response regards the company's pending rate case that will determine what GSW's rates are for the three-year period from 2025 to 2027. The proposed decision accepts in its entirety a deal reached between GSW and the Public Advocates Office, which was made last July. According to the settlement, the water utility will invest $573 million in capital expenditures to upgrade its existing infrastructure through 2027. The recovery of capital expenditures made in 2023 and, more importantly, additional rate increases for 2025-2027 will be allowed. Parts of the agreement are favorable to GSW, in that any rate hikes will be calculated based on an inflation index. Final approval of the deal by the CPUC can come at any time and will be retroactive to January 1, 2025.

**Regulatory risk has been reduced significantly.** Utilities are permitted to operate as monopolies, but what they can charge their customers is determined by state authorities. In the United States, California has long been among the lowest rated for its regulatory climate. In any case, assuming the CPUC allows these new rates to be implemented, GSW should be in solid shape for the next three-year period.

**Earnings prospects remain solid.** Due to a delay in implementing higher rates in the utility's last rate case, 2023's bottom line was boosted by the deferred recognition of rate increases until the first quarter of that year. In any case, we estimate that American Water's share earnings were $3.05 in 2024 and will be $3.30 in 2025. Please note that we are assuming the rates go into effect early in the first quarter of 2025. If the decision is delayed, some profits could be pushed back.

**These shares are ranked to perform in line with the market in the year ahead.** AWR's 18-month prospects are worthwhile, while its 3- to 5-year total return potential does not stand out.

*James A. Flood* *January 3, 2025*

**(A)** Primary earnings. Excludes nonrecurring gains/(losses):; '08, (14¢); '10, (23¢); '11, 10¢. Next earnings report due mid-February.

**BUSINESS:** American Water Works Company, Inc. is the largest investor-owned water and wastewater utility in the U.S., providing services to approximately 14 million people in 24 states. Nonregulated business assists municipalities and military bases with the maintenance and upkeep as well. Regulated operations made up 93% of 2023 revenues. New Jersey and Pennsylvania are its largest markets accounting for 24.6% of regulated revenues; Missouri, 10.5%. Has 6,500 employees. Vanguard owns 12.3% of outstanding shares; BlackRock, 9.5%; State St., 5.7%; officers & directors, less than 1.0% (3/24 Proxy). President & Chief Executive Officer: M. Susan Hardwick. . Address: 1 Water Street, Camden, NJ 08102. Telephone: 856-346-8200. Internet: www.amwater.com.

**American Water Works most likely completed another successful year.** Through the first nine months of 2024, the water utility's share earnings totalled $4.17, a decent 4% increase over the year-ago period. During the fourth quarter, however, we estimate that the bottom line climbed a robust 19%, due in part to rate relief, which resulted in a healthy 7% full-year increase.

**We think 2025 ought to be good, too.** The company's water utilities operations are spread across many different states. To recover increased costs, American Water is constantly filing for rates hikes. In 2024, $256 million in higher revenues were permitted. These should flow into this year and enable America Water's share earnings to rise 8%, to $5.65.

**The company boasts the largest construction program in the industry.** Last year, American Water probably spent over $3 billion on upgrading its infrastructure. Leadership expects that $16 billion to $17 billion will required for this purpose out to 2027-2029.

**The company's acquisition program is a key driver of profit growth.** The water industry in the United States is fragmented, as it consists of thousands of small municipally run water districts. These entities are typically undercapitalized. American Water has budgeted $4 billion to $5 billion to buy such operations over the next decade. Due to the large amount of redundancies in the water group, when these acquisitions are merged into the company's assets, operating costs can be reduced significantly.

**Finances are in good shape.** Even with the massive amounts being spent on modernizing its assets and pursuing new purchases, American Water has managed to prevent its balance sheet from becoming overleveraged. As of last September 30th, long-term debt represented just 55% of total capital.

**These shares are untimely.** The stock has performed poorly over the past three months, declining 16% in value. AWK's appreciation potential in the next 18-month period is above average, though. Over the pull to 2027-2029, its total return potential is worthwhile, thanks to strong dividend growth prospects.

**Similar to industry peers, California Water Service Group stock has moved lower in price over the past three months.** Shares of the regulated water utility are down nearly 15% in value since our last review in early October. Although the company delivered solid financial results in the third quarter of 2024 (discussed below), the equity has pulled back sharply, with the decline likely stemming from a shift in broader market sentiment toward riskier asset classes. At this juncture, shares of California Water have slipped one notch on our Timeliness Ranking scale, to 4, and are now an unfavorable selection for relative year-ahead price performance.

**The company probably ended 2024 with impressive top- and bottom-line growth.** Revenues rose more than 15% in the September period, to $300 million, driven largely by benefits from increased customer water rates across all operating regions. Higher customer water usage and a growing customer base were also positives. Similarly, net income increased sharply versus the previous-year tally, to $1.03, as greater revenues helped offset rising operating expenses. Moreover, fourth-quarter results were probably solid, too. For 2025, our model suggests that moderate revenue expansion is likely on tap. Meanwhile, earnings per share may well take a modest step back, to $3.00.

**We think California Water is well positioned for the long haul.** In addition to sustained customer growth and prospects for higher water consumption amidst improved economic conditions, customer water rates are likely to increase as well. Several rate case approvals will probably be filed in the years ahead, as leadership seeks to recoup funds from capital investments. On point, the company plans to invest more than $1.5 billion on infrastructure upgrades by 2027.

**Investors with an eye to late decade may want to have a closer look here.** At the recent quotation, total return potential over both the intermediate and long terms is above average. This is supported partly by a decent dividend yield. What's more, the stock's defensive characteristics should pique the interest of conservative accounts.

**BUSINESS:** Essential Utilities, Inc. became the new name for Aqua America on Feb. 3, 2020, to reflect the acquisition of Peoples, a natural gas utility, which occurred in 3/20. In 2023, Aqua Amer. provided water and wastewater services in the states of PA, OH, TX, IL, NC, NJ, IN, VA, NS, WS. Acquired AquaSource, 7/13; N. Maine Util., 7/15; and others. Water respn. for 56% of revenues in 2023; residential, 31%; commercial, 9%; industrial, wastewater & other, 16%. Gas 42%; other, 2%. Employs 3,258. Off. & dir. own less than 1% of the common stock; BlackRock, 11.3%; Vanguard, 10.2%; Can. Pen. Plan 7.9% (3/24 proxy). Pres. & CEO: Christopher Franklin. Inc.: PA Addr.: 762 W Lancaster Ave., Bryn Mawr, PA 19010. Tel.: 610-525-1400. Int.: www.essential.co.

**Essential Utilities' 2024 results will not be as good as they appear.** The company, which is split between a number of water utilities and one natural gas utility, probably finished 2024 with a flat fourth-quarter earnings comparison. For the full year, it likely recorded a hefty 8% bottom-line increase. However, the company was aided by an unusual gain of $0.24 a share in the first quarter. Without this contribution, share earnings would have likely fallen by 6%.

**The water business is holding up the bottom line.** In the third quarter, revenues here rose 8% while expenses decreased 2%. One problem was Hurricane Helene in North Carolina, but Essential got its systems back in service quickly. Indeed, this segment performed well, as the company's year-over-year share earnings decline was due to a subpar performance by the natural gas operations.

**Management has reestablished a positive earnings forecast following some regulatory rulings.** When rate relief was not fully established for the gas business, the company withdrew previous financial forecasts. With the ruling now settled, leadership estimates that its annual share earnings ought to increase in the range of 5%-7% from 2025 to 2027.

**The company plans to spend heavily on construction.** Aging pipelines and other assets in the water utility segment need to be modernized and will require large amounts of capital expenditures. (This is the case with all companies in this group.) Essential estimates that it will have to spend $8 billion over the next five years when improving the gas systems is taken into account. Financing these outlays will require a rise in debt levels, but they ought to remain manageable.

**These shares are ranked to perform in line with the broader market averages in the coming year.** Prospects over the next 18-month period do not stand out either. Long-term income-oriented investors may want to take a closer look at these shares, however. In addition to its healthy 3.7% dividend yield, the company has attractive growth potential for its annual payout. Furthermore, total return prospects out to 2027-2029 are above the *Value Line* median.

*James A. Flood* *January 3, 2025*

**BUSINESS:** Middlesex Water Company engages in the ownership and operation of regulated water utility systems in New Jersey, Delaware, and Pennsylvania. It also operates water and wastewater systems under contract on behalf of municipal and private clients in NJ and DE. Its Middlesex System provides water services to 61,000 retail customers, primarily in Middlesex County, New Jersey. In 2023, the Middlesex System accounted for 66% of operating revenues. At 12/31/23, the company had 355 employees. Incorporated: NJ. President, CEO, and Chairman: Dennis W. Doll. Officers & directors own 1.8% of the com. stock; BlackRock Inst. Trust Co., 14.6% (4/24 proxy). Add.: 485 C Route 1 South, Suite 400, Iselin, NJ 08830. Tele.: 732-634-1500. Int.: www.middlesexwater.com.

**Middlesex Water delivered solid top- and bottom-line results in the third quarter of 2024.** The regulated water utility posted revenues of $55 million and earnings of $0.80 per share for the September period, handily topping consensus expectations. Moreover, both figures improved significantly on a year-over-year basis. The notable gains can be attributed largely to a combination of the recently approved base rate increase from the New Jersey Board of Public Utilities, as well as greater customer demand of late. Similarly, in the Delaware System, revenues were supported by strong customer demand and an uptick in the residential customer count.

**We are upping our financial projections accordingly.** For 2024, we think Middlesex ended the year with revenues of $190 million (up $5 million from our previous call) and profits of $2.60 per share (up $0.15). Next year, our model suggests that mid-single-digit top- and bottom-line expansion is probably in the cards. A similar annual growth rate is likely on tap over the 3- to 5-year horizon.

**Capital spending ought to remain steady in the years ahead.** As the company's water infrastructure continues to age, management is apt to ramp up investments to critical operating components, including water treatment plants, water mains and service pipelines, and wastewater facilities. In addition, rate hike approvals are of paramount importance for recouping investment spending, and thus, we look for increased rate activity to support these capital initiatives further out.

**The stock price has taken a breather of late.** Since our last full-page review in early October, MSEX shares have contracted roughly 10% in value. The sell-off may well have stemmed from a broader rotation into riskier asset classes. Meanwhile, the stock is ranked as a year-ahead market performer (Timeliness: 3). That said, at the recent quotation, total return potential over the pull to 2027-2029 is now attractive. The quarterly dividend payment was recently raised 5%, to $0.34 per share. All in all, the equity is a solid selection for conservative investors with a long-term view.

*Nicholas Patrikis* *January 3, 2025*

**BUSINESS:** SJW Group engages in the production, purchase, storage, purification, distribution, and retail sale of water. It provides water service to approximately 231,000 connections with a total population of roughly one million people in the San Jose area and 16,000 connections that reach about 49,000 residents in the region between San Antonio and Austin, Texas. The company merged with Connecticut Water (10/19) which provides service to approx. 138,000 connections with a total population of 450,000 people. Has 808 employees. Officers and directors own less than 1.0% of outstanding shares (3/24 proxy). Chairman & CEO: Eric Thornburg. Incorporated: California. Address: 110 West Taylor Street, San Jose, CA 95110. Telephone: (408) 279-7800. Internet: www.sjwater.com.

**SJW Group performed well in the third quarter of 2024.** Revenues rose 10% year over year, to $225 million, driven by recent rate increases, most notably in California and Connecticut, as well as higher customer water usage and an expanding client base. Meanwhile, earnings of $1.17 per share improved modestly versus the previous-year figure, coming in roughly on par with consensus expectations. A jump in water production expenses during the period kept a lid on growth, to an extent. Nevertheless, we are upping our 2024 top-line estimate by $15 million, to $730 million, while keeping intact our bottom-line call, at $2.95 per share.

**But, the stock price has taken a breather of late.** Over the past three months, shares of the regulated water utility have declined almost 15% in value, despite a respectable third-quarter financial showing. It's possible, however, that a broader shift in investor sentiment toward riskier asset classes contributed to the sell off. At this time, SJW shares are ranked to trail the broader market averages over the coming six to 12 months (Timeliness: 4).

**The company's long-term capital spending budget, supported by additional rate increases and regulatory approvals, is encouraging.** Management likely completed about $335 million worth of infrastructure upgrades in 2024, with improvements spanning water delivery systems, treatment plants, metering systems, and aging pipelines. Most recently, SJW filed settlements with California regulators and infrastructure improvement charges in Maine and Texas. These filings ought to bear fruit further down the road in terms of higher customer rates. On balance, SJW is poised to invest more than $1.5 billion on infrastructure upgrades and wastewater operations by the end of this decade.

**We like these shares primarily for subscribers with a holding period of longer than one year.** Supported by a healthy dividend yield, the equity offers attractive total return potential over both the 18-month and 3- to 5-year horizons. An above-average Safety rank (2) and solid score for Price Stability ought to appeal to conservative investors, too.

*Nicholas Patrikis* *January 3, 2025*

**(A)** Diluted earnings. Excludes nonrecurring losses: '08, $1.22; '10, $0.46. GAAP accounting as of 2013. Next earnings report due early February. Quarterly egs. may not add due to rounding.
**(B)** Dividends historically paid in early March, June, September, and December. ■ Div'd reinvestment plan available.
**(C)** In millions.
**(D)** Paid special dividend of $0.17 per share on 11/17.

Judgment of Equity Risk Premium for the
Proxy Group of Six Water Companies

| Line No. | | Proxy Group of Six Water Companies |
|---|---|---|
| 1. | Calculated equity risk premium based on the total market using the beta approach (1) | 5.31 % |
| 2. | Mean equity risk premium based on a study using the holding period returns of public utilities with A2 rated bonds (2) | 4.65 |
| 3. | Average equity risk premium | 4.98 % |

Notes: (1) From page 6 of this Schedule.
(2) From page 9 of this Schedule.

Aqua Texas, Inc.
Derivation of Equity Risk Premium Based on the Total Market Approach
Using the Beta for the
Proxy Group of Six Water Companies

| Line No. | Equity Risk Premium Measure | Proxy Group of Six Water Companies |
|---|---|---|
| 1. | Kroll Equity Risk Premium (1) | 6.10 % |
| 2. | Regression on Kroll Risk Premium Data (2) | 6.82 |
| 3. | Kroll Equity Risk Premium based on PRPM (3) | 7.32 |
| 4 | Equity Risk Premium Based on Value Line Summary and Index (4) | 6.46 |
| 5. | Equity Risk Premium Based on Bloomberg, Value Line, and S&P Global Market Intelligence S&P 500 Companies (5) | 9.67 |
| 6. | Conclusion of Equity Risk Premium | 7.27 % |
| 7. | Adjusted Beta (6) | 0.73 |
| 8. | Forecasted Equity Risk Premium | 5.31 % |

Notes:

(1) Based on the arithmetic mean historical monthly returns on large company common stocks from Kroll Cost of Capital Navigator and Bloomberg Professional Services minus the arithmetic mean monthly yield of Moody's average Aaa and Aa2 corporate bonds from 1928-2024.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of large company common stocks relative to Moody's average Aaa and Aa2 rated corporate bond yields from 1928-2024 referenced in Note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the average consensus forecast of Aaa corporate bonds of 5.35% (from page 1 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is discussed in the accompanying direct testimony. The Ibbotson equity risk premium based on the PRPM is derived by applying the PRPM to the monthly risk premiums between Ibbotson large company common stock monthly returns and average Aaa and Aa corporate monthly bond yields, from January 1928 through February 2025.

(4) The equity risk premium based on the Value Line Summary and Index is derived by subtracting the average consensus forecast of Aaa corporate bonds of 5.35% (from page 1 of this Schedule) from the projected 3-5 year total annual market return of 11.81% (described fully in note 1 on page 2 of Schedule DWD-5).

(5) Using data from the Bloomberg Professional Services, Value Line, and S&P Capital IQ for the S&P 500, an expected total return of 15.02% was derived based upon expected dividend yields as a proxy for income returns and long-term earnings growth estimates as a proxy for capital appreciation. Subtracting the average consensus forecast of Aaa corporate bonds of 5.35% results in an expected equity risk premium of 9.67%.

(6) Average of mean and median beta from Schedule DWD-5.

# Long-Range Survey:

The table below contains the results of our twice-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are consensus estimates for the years 2026 through 2030 and averages for the five-year periods 2026-2030 and 2031-2035. Apply these projections cautiously. Few if any economic, demographic and political forces can be evaluated accurately over such long time spans.

| | | Average For The Year | | | | | Five-Year Averages | |
|---|---|---|---|---|---|---|---|---|
| | | 2026 | 2027 | 2028 | 2029 | 2030 | 2026-2030 | 2031-2035 |

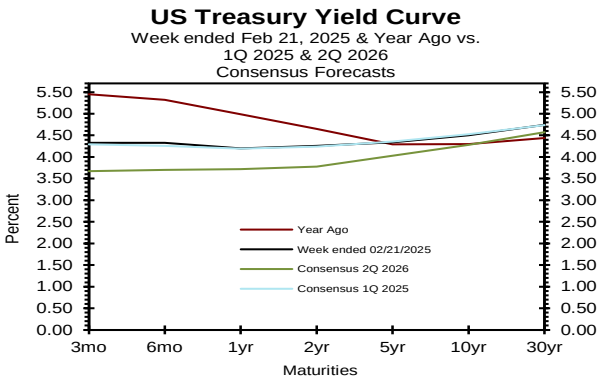
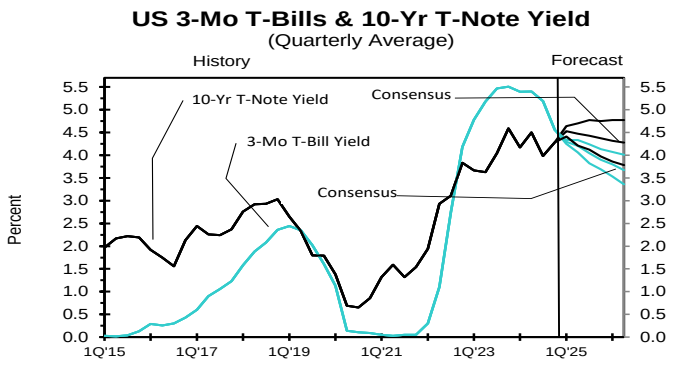
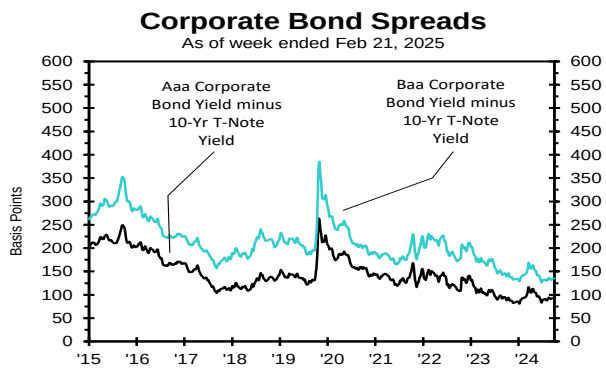
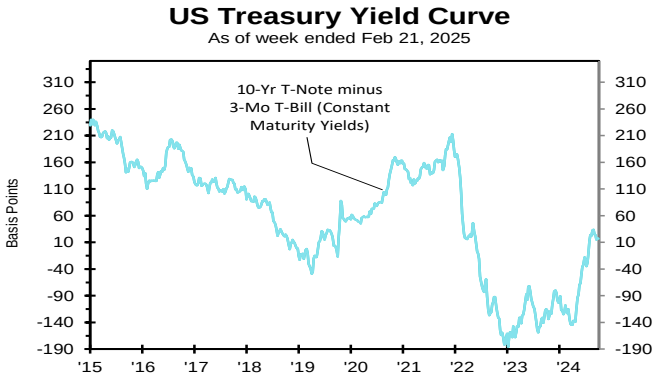
Forecasts for interest rates and the Federal Reserve's Advanced Foreign Economies Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index, CPI and PCE Price Index are seasonally adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; SOFR from the New York Fed. All interest rate data are sourced from Haver Analytics. Historical data for Fed's Major Currency Index are from FRSR H.10. Historical data for Real GDP, GDP Price Index and PCE Price Index are from the Bureau of Economic Analysis (BEA). Consumer Price Index history is from the Department of Labor's Bureau of Labor Statistics (BLS).









Aqua Texas, Inc.
Derivation of Mean Equity Risk Premium Based Studies
Using Holding Period Returns and
Projected Market Appreciation of the S&P Utility Index

| Line No. | | Implied Equity Risk Premium |
|---|---|---|
| 1. | Historical Equity Risk Premium (1) | 4.16 % |
| 2. | Regression of Historical Equity Risk Premium (2) | 4.80 |
| 3 | Forecasted Equity Risk Premium Based on PRPM (3) | 5.07 |
| 4. | Forecasted Equity Risk Premium based on Projected Total Return on the S&P Utilities Index (Bloomberg, Value Line, and S&P Capital IQ Data) (4) | 4.58 |
| 5. | Average Equity Risk Premium (5) | 4.65 % |

Notes:
(1) Based on S&P Public Utility Index monthly total returns and Moody's Public Utility Bond average monthly yields from 1928-2024. Holding period returns are calculated based upon income received (dividends and interest) plus the relative change in the market value of a security over a one-year holding period.
(2) This equity risk premium is based on a regression of the monthly equity risk premiums of the S&P Utility Index relative to Moody's A2 rated public utility bond yields from 1928 - 2024 referenced in note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the prospective A2 rated public utility bond yield of 5.73% (from line 3, page 1 of this Schedule).
(3) The Predictive Risk Premium Model (PRPM) is applied to the risk premium of the monthly total returns of the S&P Utility Index and the monthly yields on Moody's A2 rated public utility bonds from January 1928 - February 2025.
(4) Using data from Bloomberg, Value Line, and S&P Capital IQ for the S&P Utilities Index, an expected return of 10.31% was derived based on expected dividend yields as a proxy for income returns and long-term growth estimates as a proxy for market appreciation. Subtracting the expected A2 rated public utility bond yield of 5.73%, calculated on line 3 of page 1 of this Schedule results in an equity risk premium of 4.58% (10.31% - 5.73% = 4.58%).
(5) Average of lines 1 through 4.

Aqua Texas, Inc.
Indicated Common Equity Cost Rate Through Use
of the Traditional Capital Asset Pricing Model (CAPM) and Empirical Capital Asset Pricing Model (ECAPM)

Notes on page 2 of this Schedule.

Aqua Texas, Inc.
Notes to Accompany the Application of the CAPM and ECAPM

Notes:

(1) The market risk premium (MRP) is derived by using five different measures from four sources: Kroll, Value Line, Bloomberg, and S&P Capital IQ as illustrated below:

**Measure 1: Kroll Arithmetic Mean MRP (1926-2024)**

| | |
|---|---|
| Arithmetic Mean Monthly Returns for Large Stocks 1926-2024: | 12.29 % |
| Arithmetic Mean Income Returns on Long-Term Government Bonds: | 4.99 |
| MRP based on Kroll Historical Data: | 7.31 % |

**Measure 2: Application of a Regression Analysis to Kroll Historical Data**

| | |
|---|---|
| (1926-2024) | 7.94 % |

**Measure 3: Application of the PRPM to Kroll Historical Data**

| | |
|---|---|
| (January 1926 - February 2025) | 8.18 % |

**Measure 4: Value Line Projected MRP (Thirteen weeks ending March 14, 2025)**

| | |
|---|---|
| Total projected return on the market 3-5 years hence*: | 11.81 % |
| Risk-Free Rate (see note 2): | 4.55 |
| MRP based on Value Line Summary & Index: | 7.26 % |

*Forcasted 3-5 year capital appreciation plus expected dividend yield

**Measure 5: Bloomberg, Value Line, and S&P Capital IQ Projected Return on the Market based on the S&P 500**

| | |
|---|---|
| Total return on the Market based on the S&P 500: | 15.02 % |
| Risk-Free Rate (see note 2): | 4.55 |
| MRP based on Bloomberg, Value Line, and S&P Capital IQ data | 10.47 % |

| | |
|---|---|
| Average of all MRP Measures: | 8.23 % |

(2) For reasons explained in the Direct Testimony, the appropriate risk-free rate for cost of capital purposes is the average forecast of 30 year Treasury Bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts. (See pages 7 and 8 of Schedule DWD-4.) The projection of the risk-free rate is illustrated below:

| | |
|---|---|
| First Quarter 2025 | 4.70 % |
| Second Quarter 2025 | 4.70 |
| Third Quarter 2025 | 4.70 |
| Fourth Quarter 2025 | 4.60 |
| First Quarter 2026 | 4.60 |
| Second Quarter 2026 | 4.60 |
| 2026-2030 | 4.30 |
| 2031-2035 | 4.20 |
| | 4.55 % |

(3) Average of Column 6 and Column 7.

Aqua Texas, Inc.
Basis of Selection of the Group of Non-Price Regulated Companies
Comparable in Total Risk to the Proxy Group of Six Water Companies

The criteria for selection of the proxy group of non-price regulated companies comparable in total risk to the proxy group of six water companies was that the non-price regulated companies be domestic and reported in Value Line Investment Survey (Standard Edition).

The proxy group of non-price regulated companies was selected based on the unadjusted beta range of 0.57 - 0.85 and residual standard error of the regression range of 2.8510 - 3.4002 of the proxy group of six water companies.

These ranges are based upon plus or minus two standard deviations of the unadjusted beta and standard error of the regression. Plus or minus three standard deviations captures 95.50% of the distribution of unadjusted betas and residual standard errors of the regression.

The standard deviation of the Utility Proxy Group's residual standard error of the regression is 0.1373. The standard deviation of the standard error of the regression is calculated as follows:

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{\sqrt{2N}}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus,} \quad 0.1373 = \frac{3.1256}{\sqrt{518}} = \frac{3.1256}{22.7596}$$

NA= Not Available
NMF=Not Meaningful Figure

Notes:

(1) Average of columns 2 through 4 excluding negative growth rates.
(2) The application of the DCF model to the domestic, non-price regulated comparable risk companies is identical to the application of the DCF to the Utility Proxy Group. The dividend yield is derived by using the 60 day average price and the spot indicated dividend as of 3/14/2025. The dividend yield is then adjusted by 1/2 the average projected growth rate in EPS, which is calculated by averaging the 5 year projected growth in EPS provided by Value Line, www.zacks.com, and S&P Capital IQ (excluding any negative growth rates) and then adding that growth rate to the adjusted dividend yield.
(3) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

Aqua Texas, Inc.
Indicated Common Equity Cost Rate
Through Use of a Risk Premium Model
Using an Adjusted Total Market Approach

| Line No. | | Proxy Group of Forty-Seven Non-Price Regulated Companies |
|---|---|---|
| 1. | Prospective Yield on Baa2 Rated Corporate Bonds (1) | 6.14 % |
| 2. | Adjustment to Reflect Bond rating Difference of Non-Price Regulated Companies (2) | (0.09) |
| 3. | Adjusted Bond Yield | 6.05 |
| 4. | Equity Risk Premium (3) | 5.89 |
| 5. | Risk Premium Derived Common Equity Cost Rate | 11.94 % |

Notes: (1) Average forecast of Baa corporate bonds based upon the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts dated November 27, 2024 and February 28, 2025 (see pages 7 and 8 of Schedule DWD-4). The estimates are detailed below.

| | |
|---|---|
| First Quarter 2025 | 6.20 % |
| Second Quarter 2025 | 6.20 |
| Third Quarter 2025 | 6.20 |
| Fourth Quarter 2025 | 6.20 |
| First Quarter 2026 | 6.20 |
| Second Quarter 2026 | 6.20 |
| 2026-2030 | 6.00 |
| 2031-2035 | 5.90 |
| Average | 6.14 % |

(2) The average yield spread of Baa2 rated corporate bonds over A2 corporate bonds for the three months ending February 2025. To reflect the Baa1 average rating of the Non-Price Regulated Proxy Group comparable in total risk to the Proxy Group, the yield on Baa corporate bonds must be adjusted by 1/3 of the spread between A2 and Baa2 corporate bond yields as shown below:

| | A2 Corp. Bond Yield | Baa2 Corp. Bond Yield | Spread |
|---|---|---|---|
| Feb-25 | 5.66 % | 5.92 % | 0.26 % |
| Jan-25 | 5.80 | 6.08 | 0.28 |
| Dec-24 | 5.53 | 5.80 | 0.27 |
| | | Average yield spread | 0.27 |
| | | 1/3 of spread | 0.09 |

# DIRECT TESTIMONY OF JOHN J. SPANOS

## I. INTRODUCTION

**Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

A. My name is John J. Spanos. My business address is 300 Sterling Parkway, Mechanicsburg, Pennsylvania 17050 (formerly 207 Senate Avenue, Camp Hill, Pennsylvania 17011).

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC (Gannett Fleming) as President.

**Q. HOW LONG HAVE YOU BEEN ASSOCIATED WITH GANNETT FLEMING?**

A. I have been associated with the firm since June 1986.

**Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS CASE?**

A. I am testifying on behalf of Aqua Texas, Inc. (Aqua Texas or the Company).

**Q. WHAT IS YOUR EDUCATIONAL, PROFESSIONAL, AND BUSINESS BACKGROUND AND EXPERIENCE?**

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College. I have over 38 years of depreciation experience, which includes giving expert testimony in more than 490 cases before 47 regulatory commissions, including this Commission. These cases have included depreciation studies in the electric, gas, water, wastewater and pipeline industries. In addition to cases where I have submitted testimony, I have also supervised over 900 other depreciation or valuation assignments. Please refer to Appendix A for my qualifications statement, which includes further information with respect to my work history, case experience, and leadership in the Society of Depreciation Professionals.

## II. SCOPE OF TESTIMONY

**Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?**

A. The purpose of my testimony is to set forth the results of my review and analyses of the plant in service of Aqua Texas, which was conducted in the process of preparing depreciation studies of the Company's water and wastewater plant assets as of December 31, 2024. Reports of my review and analyses are contained in Exhibit JJS-1, titled "2024 Depreciation Study – Calculated Annual Depreciation Accruals Related to Water Plant as of December 31, 2024" and in Exhibit JJS-2, "2024 Depreciation Study – Calculated Annual Depreciation Accruals Related to Wastewater Plant as of December 31, 2024". The total original cost includes contributions in aid of construction.

**Q. HAVE YOU PREPARED AN EXHIBIT PRESENTING THE RESULTS OF YOUR STUDIES?**

A. Yes. I am sponsoring the Depreciation Studies as Exhibit JJS-1 (Water) and Exhibit JJS-2 (Wastewater). Exhibits JJS-1 and JJS-2 are true and accurate copies of the report setting forth the results of my depreciation studies for Aqua Texas.

## III. DEPRECIATION STUDY

**Q. PLEASE DEFINE THE CONCEPT OF DEPRECIATION.**

A. Depreciation refers to the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation, against which the Company is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, obsolescence, changes in the art, changes in demand and the requirements of public authorities.

**Q. ARE EXHIBITS JJS-1 AND JJS-2 TRUE AND ACCURATE COPIES OF YOUR DEPRECIATION STUDIES?**

A. Yes.

**Q. DO EXHIBITS JJS-1 AND JJS-2 ACCURATELY PORTRAY THE RESULTS OF YOUR DEPRECIATION STUDIES AS OF DECEMBER 31, 2024?**

A. Yes.

**Q. WHAT WAS THE PURPOSE OF YOUR DEPRECIATION STUDIES?**

A. The purpose of the Depreciation Studies was to estimate the annual depreciation accruals related to water and wastewater common plant in service for ratemaking purposes and determine appropriate average service lives and net salvage percents for each plant account.

**Q. PLEASE DESCRIBE THE CONTENTS OF YOUR REPORTS.**

A. Each Depreciation Study is presented in nine parts. Part I, Introduction, presents the scope and basis for the Depreciation Study. Part II, Estimation of Survivor Curves, includes descriptions of the methodology of estimating survivor curves. Parts III and IV set forth the analysis for determining service life and net salvage estimates. Part V, Calculation of Annual and Accrued Depreciation, includes the concepts of depreciation and amortization using the remaining life technique. Part VI, Results of Study, presents a description of the results of my analysis and a summary of the depreciation calculations. Parts VII, VIII and IX include graphs and tables that relate to the service life and net salvage analyses, and the detailed depreciation calculations by account.

Each Depreciation Study also includes several tables and tabulations of data and calculations. Table 1 on page VI-4 of the Water Depreciation Study presents the estimated survivor curve, the net salvage percent, the original cost as of December 31, 2024, the book

depreciation reserve, and the calculated annual depreciation accrual amount and rate for each account or subaccount. The section beginning on page VII-2 presents the results of the retirement rate analyses prepared as the historical bases for the service life estimates. The section beginning on page VIII-2 presents the results of the net salvage analysis. The section beginning on page IX-2 presents the depreciation calculations related to surviving original cost as of December 31, 2024. The Wastewater Depreciation Study is presented in the same fashion.

**Q. PLEASE EXPLAIN HOW YOU PERFORMED YOUR DEPRECIATION STUDIES.**

A. I used the straight line remaining life method of depreciation, with the average service life procedure for all plant assets except some general plant accounts. The annual depreciation is based on a method of depreciation accounting that seeks to distribute the unrecovered cost of fixed capital assets over the estimated remaining useful life of each unit, or group of assets, in a systematic and rational manner.

For Water General Plant Accounts 340.00, 343.00, 344.00, 346.00 and 348.00 and for Wastewater General Plant Accounts 390.00, 393.00, 394.00, 396.00 and 398.00, I used the straight line remaining life method of amortization. The annual amortization is based on amortization accounting that distributes the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account and vintage.

**Q. HOW DID YOU DETERMINE THE RECOMMENDED ANNUAL DEPRECIATION ACCRUAL RATES?**

A. I did this in two phases. In the first phase, I estimated the service life and net salvage characteristics for each depreciable group, that is, each plant account or subaccount

identified as having similar characteristics. In the second phase, I calculated the composite remaining lives and annual depreciation accrual rates based on the service life and net salvage estimates determined in the first phase.

**Q. PLEASE DESCRIBE THE FIRST PHASE OF THE DEPRECIATION STUDY, IN WHICH YOU ESTIMATED THE SERVICE LIFE AND NET SALVAGE CHARACTERISTICS FOR EACH DEPRECIABLE GROUP.**

A. The service life and net salvage studies consisted of compiling historical data from records related to Aqua Texas' plant; analyzing this data to obtain historical trends of survivor and net salvage characteristics; obtaining supplementary information from Aqua Texas' management, and operating personnel concerning practices and plans as they relate to plant operations; and interpreting the above data and the estimates used by other water and wastewater utilities to form judgments of average service life and net salvage characteristics.

**Q. WHAT HISTORICAL DATA DID YOU ANALYZE FOR THE PURPOSE OF ESTIMATING SERVICE LIFE CHARACTERISTICS?**

A. For both water and wastewater accounts, I analyzed the Company's accounting entries that record plant transactions during the period 1998 through 2024. The transactions included additions, retirements, transfers and the related balances. The Company records also included surviving dollar value by year installed for each plant account as of December 31, 2024.

**Q. WHAT METHOD DID YOU USE TO ANALYZE THESE SERVICE LIFE DATA?**

A. I used the retirement rate method. This is the most appropriate method when aged retirement data are available, because this method determines the average rates of

retirement actually experienced by the Company during the period of time covered by the study.

**Q. PLEASE DESCRIBE HOW YOU USED THE RETIREMENT RATE METHOD TO ANALYZE AQUA TEXAS' SERVICE LIFE DATA.**

A. I applied the retirement rate method to each different group of property in the study. For each property group, I used the retirement rate method to form a life table which, when plotted, shows an original survivor curve for that property group. Each original survivor curve represents the average survivor pattern experienced by the several vintage groups during the experience band studied. The survivor patterns do not necessarily describe the life characteristics of the property group; therefore, interpretation of the original survivor curves is required in order to use them as valid considerations in estimating service life. The Iowa-type survivor curves were used to perform these interpretations.

**Q. WHAT IS AN "IOWA-TYPE SURVIVOR CURVE" AND HOW DID YOU USE SUCH CURVES TO ESTIMATE THE SERVICE LIFE CHARACTERISTICS FOR EACH PROPERTY GROUP?**

A. Iowa type curves are a widely used group of generalized survivor curves that contain the range of survivor characteristics usually experienced by utilities and other industrial companies. The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observing and classifying the ages at which various types of property used by utilities and other industrial companies had been retired.

Iowa type curves are used to smooth and extrapolate original survivor curves determined by the retirement rate method. The Iowa curves were used in this study to

describe the forecasted rates of retirement based on the observed rates of retirement and the outlook for future retirements.

The estimated survivor curve designations for each depreciable property group indicate the average service life, the family within the Iowa system to which the property group belongs, and the relative height of the mode. For example, the Iowa 50-R2 indicates an average service life of 50 years; a right-moded, or R, type curve (the mode occurs after average life for right-moded curves); and a moderate height, 2, for the mode (possible modes for R type curves range from 0.5 to 5).

**Q. ARE THE FACTORS CONSIDERED IN YOUR ESTIMATES OF SERVICE LIFE AND NET SALVAGE PERCENTS PRESENTED IN EXHIBITS JJS-1 AND JJS-2?**

A. Yes. A discussion of the factors considered in the estimation of service lives and net salvage percents are presented in Part III and Part IV of each study.

**Q. WAS THERE A CONSIDERABLE AMOUNT OF INFORMED JUDGMENT INCORPORATED INTO THE LIFE ANALYSIS?**

A. Yes. The life parameters for both water and wastewater assets have changed considerably in recent years and are expected to change even further into the immediate future. The Aqua Texas water assets are an accumulation of many small community water systems and therefore are much more likely subject to the rural water system guidelines. This will drive the need to replace water mains much more often than major water systems. The Texas Rural Water Association (TRWA) water line infrastructure survey supports poor overall condition of water mains and the expectation that water main life cycles will continue to decrease. Consequently, the life estimate for water mains in the study incorporates the

expectation of increased replacements particularly of plastic mains and an overall shorter life than others in the industry.

**Q. HAVE YOU PHYSICALLY OBSERVED AQUA TEXAS' PLANT AND EQUIPMENT AS PART OF YOUR DEPRECIATION STUDIES?**

A. Yes. Field reviews were made of Aqua Texas' water and wastewater property during April 2025 to observe representative portions of plant. Additionally, I have conducted field visits in prior studies in 2011 and 2020. Field reviews are conducted to become familiar with Company operations and obtain an understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements. This knowledge was incorporated in the interpretation and extrapolation of the statistical analyses.

**Q. WOULD YOU PLEASE EXPLAIN THE CONCEPT OF "NET SALVAGE"?**

A. Net salvage is a component of the service value of capital assets that is recovered through depreciation rates. The service value of an asset is its original cost less its net salvage. Net salvage is the gross salvage value received for the asset upon retirement less the cost to retire the asset. When the cost to retire exceeds the gross salvage value, the result is negative net salvage.

Inasmuch as depreciation expense is the loss in service value of an asset during a defined period, e.g., one year, it must include a ratable portion of both the original cost and the net salvage. That is, the net salvage related to an asset should be incorporated in the cost of service during the same period as its original cost so that customers receiving service from the asset pay rates that include a portion of both elements of the asset's service value, the original cost, and the net salvage value.

For example, the full recovery of the service value of a $2,000 pump will include not only the $2,000 of original cost, but also, on average, $150 to remove the pump at the end of its life and $50 in salvage value. In this example, the net salvage component is negative $100 ($50 - $150), and the net salvage percent is negative 5% (($50 - $150)/$2,000).

**Q. PLEASE DESCRIBE HOW YOU ESTIMATED NET SALVAGE PERCENTAGES.**

A. The net salvage percentages estimated in the Depreciation Study were based on informed judgment that incorporated factors such as the statistical analyses of historical net salvage data; information provided to me by the Company's operating personnel, general knowledge and experience of the industry practices; and trends in the industry in general. There was limited statistical net salvage analyses available as the Company's future practices are intended to record cost of removal and gross salvage by project. The past statistical analyses of historical cost of removal and gross salvage data for the period 2005 through 2024 is presented for both water and wastewater accounts as ratios to the associated retirements during the 20-year period. Trends of these data are also measured based on three-year moving averages and the most recent five-year indications. However, the future practices for recording cost of removal will be implemented as part of this case so future net salvage levels will be more statistically supportive of the future estimates.

**Q. SHOULD NET SALVAGE BE RECOVERED IN TODAY'S COST (THAT IS, THE COST IN TODAY'S DOLLARS)?**

A. No. In order to recover the service value of the Company's assets, net salvage must be determined at the cost that will be incurred in the future. When using the straight line method of depreciation, these costs are recovered ratably, or in equal amounts each year,

over the life of the Company's plant. This is an important concept as the expected future cost of removal will be established in the years to come as better practices for recording these costs will be assigned at the project level.

**Q. IS RECOVERING THE FUTURE COST OF NET SALVAGE CONSISTENT WITH THE FEDERAL ENERGY REGULATORY COMMISSION'S UNIFORM SYSTEM OF ACCOUNTS (FERC USOA)?**

A. Yes. The FERC USOA specifically defines net salvage as follows:

> 19. Net salvage value means the salvage value of property retired less the cost of removal.

Cost of removal is defined as:

> 10. Cost of removal means the cost of demolishing, dismantling, tearing down or otherwise removing electric plant, including the cost of transportation and handling incidental thereto. It does not include the cost of removal activities associated with asset retirement obligations that are capitalized as part of the tangible long-lived assets that give rise to the obligation. (See General Instruction 25).

Finally, cost is defined as (emphasis added):

> 9. Cost means the <u>amount of money actually paid</u> for property or services. When the consideration given is other than cash in a purchase and sale transaction, as distinguished from a transaction involving the issuance of common stock in a merger or a pooling of interest, the value of such consideration shall be determined on a cash basis.

Read together, it should be clear from these definitions that the USOA specifies cost of removal, as part of net salvage, must be recovered through depreciation expense and is the actual amount paid at the time of the transaction. Because net salvage will occur in the future, it is an estimate of the future cost that must be included in depreciation rates.

**Q. DO GENERALLY ACCEPTED DEPRECIATION CONCEPTS SUPPORT THE CONCEPT THAT THE NET SALVAGE IN DEPRECIATION SHOULD BE INCLUDED AT THE COST THAT WILL BE INCURRED?**

A. Yes. Including the future cost of net salvage for plant accounts is consistent with established depreciation concepts. Depreciation is a cost allocation concept, in which the full cost of an asset (original cost less net salvage) is allocated on a straight line basis over the period of time an asset will be in service.

**Q. DO ANY AUTHORITATIVE DEPRECIATION TEXTS SUPPORT THAT THE NET SALVAGE AMOUNT SHOULD REPRESENT THE FUTURE COST?**

A. Yes. Two preeminent depreciation texts are the National Association of Regulatory Utility Commissioners' *Public Utility Depreciation Practices* (typically referred to as "NARUC") and *Depreciation Systems* by Wolf and Fitch (Wolf and Fitch). Both texts are clear that net salvage should be included in depreciation as a future cost. NARUC states the following:

> [U]nder presently accepted concepts, the amount of depreciation to be accrued over the life of an asset is its original cost less net salvage. Net salvage is the difference between the gross salvage that will be realized when the asset is disposed of and the cost of retiring it.[1] (Emphasis added)

NARUC also explains that:

> The goal of accounting for net salvage is to allocate the net cost of an asset to accounting periods, making due allowance for the net salvage, positive or negative, that will be obtained when the asset is retired. This concept carries with it the premise that property ownership includes the responsibility for the property's ultimate abandonment or removal. Hence, if users benefit from its use, they should pay their pro rata share of the costs involved in the abandonment or removal of the property and also receive

[1] NARUC Manual at 18.

> their pro rata share of the benefits of the proceeds received.[2] (Emphasis added)

Wolf and Fitch explain that:

> The matching principle specifies that all cost incurred to produce a service should be matched against the revenue produced. Estimated future costs of retiring an asset currently in service must be accrued and allocated as part of the current expenses.[3]

**Q. PLEASE DESCRIBE THE SECOND PHASE OF THE PROCESS THAT YOU USED IN THE DEPRECIATION STUDY IN WHICH YOU CALCULATED COMPOSITE REMAINING LIVES AND ANNUAL DEPRECIATION ACCRUAL RATES.**

A. After I estimated the service life and net salvage characteristics for each depreciable property group, I calculated the annual depreciation accrual rates for each depreciable group based on the straight line remaining life method, using remaining lives weighted consistent with the average service life procedure. The calculation of annual depreciation accrual rates was developed as of December 31, 2024.

**Q. PLEASE DESCRIBE THE STRAIGHT LINE REMAINING LIFE METHOD OF DEPRECIATION.**

A. The straight line remaining life method of depreciation allocates the original cost of the property, less accumulated depreciation, less future net salvage, in equal amounts to each year of remaining service life.

[2] NARUC Manual at 18.

[3] Wolf and Fitch, p. 7.

**Q. PLEASE DESCRIBE THE AVERAGE SERVICE LIFE PROCEDURE FOR CALCULATING REMAINING LIFE ACCRUAL RATES.**

A. The average service life procedure defines the group or account for which the remaining life annual accrual is determined. Under this procedure, the annual accrual rate is determined for the entire group or account based on its average remaining life and the rate is then applied to the surviving balance of the group's cost. The average remaining life of the group is calculated by first dividing the future book accruals (original cost less allocated book reserve less future net salvage) by the average remaining life for each vintage. The average remaining life for each vintage is derived from the area under the survivor curve between the attained age of the vintage and the maximum age. The sum of the future book accruals is then divided by the sum of the annual accruals to determine the average remaining life of the entire group for use in calculating the annual depreciation accrual rate. This calculation is further detailed in Part V of each exhibit.

**Q. PLEASE DESCRIBE AMORTIZATION ACCOUNTING.**

A. Amortization accounting is used for accounts with a large number of units, but small asset values. In amortization accounting, units of property are capitalized in the same manner as they are in depreciation accounting. However, depreciation accounting is difficult for these assets because periodic inventories are required to properly reflect plant in service. Consequently, retirements are recorded when a vintage is fully amortized rather than as the units are removed from service. That is, there is no dispersion of retirement. All units are retired when the age of the vintage reaches the amortization period. Each plant account or group of assets is assigned a fixed period which represents an anticipated life during which the asset will render service. For example, in amortization accounting, assets that have a

15-year amortization period will be fully recovered after 15 years of service and taken off the Company books, but not necessarily removed from service. In contrast, assets that are taken out of service before 15 years remain on the books until the amortization period for that vintage has expired.

**Q. TO WHICH PLANT ACCOUNTS IS AMORTIZATION ACCOUNTING BEING IMPLEMENTED FOR?**

A. Amortization accounting is only appropriate for certain General Plant accounts. These accounts are 340.00, 343.00, 344.00, 346.00 and 348.00 for water assets and General Plant Accounts 390.00, 393.00, 394.00, 396.00 and 398.00 for wastewater assets which represent slightly more than five percent of depreciable water plant and less than one percent of depreciable wastewater plant.

**Q. PLEASE USE AN EXAMPLE TO ILLUSTRATE THE DEVELOPMENT OF THE ANNUAL DEPRECIATION ACCRUAL RATE FOR A PARTICULAR GROUP OF PROPERTY IN YOUR DEPRECIATION STUDIES.**

A. I will use Water Account 331.00, Transmission and Distribution Mains, as an example because it is one of the largest depreciable groups and represents an easily understood asset.

The retirement rate method was used to analyze the survivor characteristics of this property group. Aged plant accounting data were compiled from 1998 through 2024 and analyzed in periods that best represent the overall service life of this property. The life tables for the 1998-2024 and 2015-2024 experience bands are presented in the Water Depreciation Study on pages VII-52 through VII-57. Each life table displays the retirement and surviving ratios of the aged plant data exposed to retirement by age interval. For example, page VII-52 of Exhibit JJS-1, shows $132,928 retired during age interval 0.5-1.5

with $123,193,486 exposed to retirement at the beginning of the interval. Consequently, the retirement ratio is 0.0011 ($132928/$123,193,486) and the survivor ratio is 0.9989 (1-0.0011). The life tables, or original survivor curve, are plotted along with the estimated smooth survivor curve, the 50-R2, on page VII-51 of Exhibit JJS-1.

The net salvage percent is presented on pages VIII-24 and VIII-25. The percentage is based on the result of annual gross salvage minus the cost to remove plant assets as compared to the original cost of plant retired during the period 2005 through 2024. Past practice has not included the cost of removal and gross salvage for most projects, therefore, there is no statistical analyses available. This practice is expected to change going forward so an estimate for the assets is recommended. It was determined that based on industry ranges, historical indications and Company expectations, that negative 10 percent was the most appropriate estimate for the future recovery. The negative 10 percent estimate is a conservative estimate for cost of removal expected in the future and at the lower end of the industry and below the estimate for other Aqua entities.

My calculation of the annual depreciation related to original cost of water utility plant as of December 31, 2024 for Account 331.00 is presented on pages IX-23 and IX-24 of Exhibit JJS-1. The calculation is based on the 50-R2 survivor curve, 10% negative net salvage, the attained age, and the allocated book reserve. The tabulation sets forth the installation year, the original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual. These totals are brought forward to Table 1 on page VI-4.

**Q. HAVE YOU DEVELOPED RATES FOR FUTURE ASSETS?**

A. Yes. Wastewater Account 397.00, Miscellaneous Equipment, currently does not have any plant investment, however, there are plans that new assets will be added prior to the next rate case. This is an amortized account so a 15 year life and 6.67 percent rate is forecasted. The rate for these assets is presented on page VI-5 of Exhibit JJS-2.

## IV. CONCLUSION

**Q. WERE EXHIBITS JJS-1 AND JJS-2 PREPARED UNDER YOUR DIRECTION AND CONTROL?**

A. Yes.

**Q. WHAT IS YOUR RECOMMENDATION REGARDING ANNUAL DEPRECIATION ACCRUAL RATES FOR THE COMPANY?**

A. I recommend that the proposed annual depreciation accrual rate for each account or subaccount set forth in Exhibit JJS-1 and Exhibit JJS-2 be adopted by the Commission for regulatory purposes as well as by the Company for accounting purposes. My recommended depreciation accrual rates, based on the depreciation studies, are set forth for each account in column 8 of Table 1 on page VI-4 of Exhibit JJS-1 and column 8 of Table 1 on page VI-4 and VI-5 of Exhibit JJS-2. In my opinion, these are reasonable and appropriate depreciation accrual rates for the Company.

**Q. ARE YOUR RECOMMENDED DEPRECIATION ACCRUAL RATES REASONABLE FOR PLANT ADDED SUBSEQUENT TO DECEMBER 31, 2024?**

A. Yes. The annual depreciation accrual rates calculated as of December 31, 2024, can reasonably be applied to the total balance including new plant additions during the next several years.

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

A. Yes.

**COUNTY OF CUMBERLAND §**

## AFFIDAVIT OF JOHN J. SPANOS

BEFORE ME, the undersigned authority, on this day personally appeared John J. Spanos who having been placed under oath by me did depose as follows:

1. "My name is John J. Spanos. I am of sound mind and capable of making this affidavit. The facts stated herein are true and correct based upon my personal knowledge. I am President of Gannett Fleming Valuation and Rate Consultants, LLC.

2. I have prepared the foregoing Direct Testimony and I swear or affirm that I have personal knowledge of the facts in the testimony, schedules, and exhibits that I am sponsoring in this application, and that I am competent to testify to them and that the information contained therein is true and correct to the best of knowledge."

Further affiant sayeth not.

John J. Spanos

SUBSCRIBED AND SWORN TO BEFORE ME by John J. Spanos on this 5th day of May 2025.

Notary Public in and for the Commonwealth of Pennsylvania

Commonwealth of Pennsylvania - Notary Seal
Cheryl Ann Rutter, Notary Public
Cumberland County
My commission expires February 20, 2027
Commission number 1143028
Member, Pennsylvania Association of Notaries

My Commission Expires: February 20, 2027

Appendix A

**JOHN SPANOS**

**DEPRECIATION EXPERIENCE**

**Q. Please state your name.**

A. My name is John J. Spanos.

**Q. What is your educational background?**

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College.

**Q. Do you belong to any professional societies?**

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

**Q. Do you hold any special certification as a depreciation expert?**

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

**Q. Please outline your experience in the field of depreciation.**

A. In June 1986, I was employed by Gannett Fleming Valuation and Rate Consultants, Inc. as a Depreciation Analyst. During the period from June 1986 through December 1995, I helped prepare numerous depreciation and original cost studies for utility companies in various industries. I helped perform depreciation studies for the following telephone companies: United Telephone of Pennsylvania, United Telephone of New Jersey, and Anchorage Telephone Utility. I helped perform depreciation studies for the following companies in

the railroad industry: Union Pacific Railroad, Burlington Northern Railroad, and Wisconsin Central Transportation Corporation.

I helped perform depreciation studies for the following organizations in the electric utility industry: Chugach Electric Association, The Cincinnati Gas and Electric Company (CG&E), The Union Light, Heat and Power Company (ULH&P), Northwest Territories Power Corporation, and the City of Calgary - Electric System.

I helped perform depreciation studies for the following pipeline companies: TransCanada Pipelines Limited, Trans Mountain Pipe Line Company Ltd., Interprovincial Pipe Line Inc., Nova Gas Transmission Limited and Lakehead Pipeline Company.

I helped perform depreciation studies for the following gas utility companies: Columbia Gas of Pennsylvania, Columbia Gas of Maryland, The Peoples Natural Gas Company, T. W. Phillips Gas & Oil Company, CG&E, ULH&P, Lawrenceburg Gas Company and Penn Fuel Gas, Inc.

I helped perform depreciation studies for the following water utility companies: Indiana-American Water Company, Consumers Pennsylvania Water Company and The York Water Company; and depreciation and original cost studies for Philadelphia Suburban Water Company and Pennsylvania-American Water Company.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service life and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies. I performed these studies under the general direction of William M. Stout, P.E.

In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In July 1999, I was promoted to the position of Manager, Depreciation and

Valuation Studies. In December 2000, I was promoted to the position as Vice-President of Gannett Fleming Valuation and Rate Consultants, Inc., in April 2012, I was promoted to the position as Senior Vice President of the Valuation and Rate Division of Gannett Fleming Inc. (now doing business as Gannett Fleming Valuation and Rate Consultants, LLC) and in January of 2019, I was promoted to my present position of President of Gannett Fleming Valuation and Rate Consultants, LLC. In my current position I am responsible for conducting all depreciation, valuation and original cost studies, including the preparation of final exhibits and responses to data requests for submission to the appropriate regulatory bodies.

Since January 1996, I have conducted depreciation studies similar to those previously listed including assignments for Pennsylvania-American Water Company; Aqua Pennsylvania; Kentucky-American Water Company; Virginia-American Water Company; Indiana-American Water Company; Iowa-American Water Company; New Jersey-American Water Company; Hampton Water Works Company; Omaha Public Power District; Enbridge Pipe Line Company; Inc.; Columbia Gas of Virginia, Inc.; Virginia Natural Gas Company National Fuel Gas Distribution Corporation - New York and Pennsylvania Divisions; The City of Bethlehem - Bureau of Water; The City of Coatesville Authority; The City of Lancaster - Bureau of Water; Peoples Energy Corporation; The York Water Company; Public Service Company of Colorado; Enbridge Pipelines; Enbridge Gas Distribution, Inc.; Reliant Energy-HLP; Massachusetts-American Water Company; St. Louis County Water Company; Missouri-American Water Company; Chugach Electric Association; Alliant Energy; Oklahoma Gas & Electric Company; Nevada Power Company; Dominion Virginia Power; NUI-Virginia Gas Companies; Pacific Gas & Electric Company; PSI Energy; NUI - Elizabethtown Gas Company; Cinergy Corporation – CG&E; Cinergy

Corporation – ULH&P; Columbia Gas of Kentucky; South Carolina Electric & Gas Company; Idaho Power Company; El Paso Electric Company; Aqua North Carolina; Aqua Ohio; Aqua Texas, Inc.; Aqua Illinois, Inc.; Ameren Missouri; Central Hudson Gas & Electric; Centennial Pipeline Company; CenterPoint Energy-Arkansas; CenterPoint Energy – Oklahoma; CenterPoint Energy – Entex; CenterPoint Energy - Louisiana; NSTAR – Boston Edison Company; Westar Energy, Inc.; United Water Pennsylvania; PPL Electric Utilities; PPL Gas Utilities; Wisconsin Power & Light Company; TransAlaska Pipeline; Avista Corporation; Northwest Natural Gas; Allegheny Energy Supply, Inc.; Public Service Company of North Carolina; South Jersey Gas Company; Duquesne Light Company; MidAmerican Energy Company; Laclede Gas; Duke Energy Company; E.ON U.S. Services Inc.; Elkton Gas Services; Anchorage Water and Wastewater Utility; Kansas City Power and Light; Duke Energy North Carolina; Duke Energy South Carolina; Monongahela Power Company; Potomac Edison Company; Duke Energy Ohio Gas; Duke Energy Kentucky; Duke Energy Indiana; Duke Energy Progress; Northern Indiana Public Service Company; Tennessee- American Water Company; Columbia Gas of Maryland; Maryland-American Water Company; Bonneville Power Administration; NSTAR Electric and Gas Company; EPCOR Distribution, Inc.; B. C. Gas Utility, Ltd; Entergy Arkansas; Entergy Texas; Entergy Mississippi; Entergy Louisiana; Entergy Gulf States Louisiana; the Borough of Hanover; Louisville Gas and Electric Company; Kentucky Utilities Company; Madison Gas and Electric; Central Maine Power; PEPCO; PacifiCorp; Minnesota Energy Resource Group; Jersey Central Power & Light Company; Cheyenne Light, Fuel and Power Company; United Water Arkansas; Central Vermont Public Service Corporation; Green Mountain Power; Portland General Electric Company; Atlantic City Electric; Nicor Gas Company; Black Hills Power; Black Hills Colorado Gas; Black Hills Energy Arkansas, Inc.; Black Hills Kansas

Gas; Black Hills Service Company; Black Hills Utility Holdings; Public Service Company of Oklahoma; City of Dubois; Peoples Gas Light and Coke Company; North Shore Gas Company; Connecticut Light and Power; New York State Electric and Gas Corporation; Rochester Gas and Electric Corporation; Greater Missouri Operations; Tennessee Valley Authority; Omaha Public Power District; Indianapolis Power & Light Company; Vermont Gas Systems, Inc.; Metropolitan Edison; Pennsylvania Electric; West Penn Power; Pennsylvania Power; PHI Service Company - Delmarva Power and Light; Atmos Energy Corporation; Citizens Energy Group; PSE&G Company; Berkshire Gas Company; Alabama Gas Corporation; Mid-Atlantic Interstate Transmission, LLC; SUEZ Water; WEC Energy Group; Rocky Mountain Natural Gas, LLC; Illinois-American Water Company; Northern Illinois Gas Company; Public Service of New Hampshire; FirstEnergy Service Corporation; Northeast Ohio Natural Gas Corporation; Blue Granite Water Company; Spire Missouri, Inc.; Dominion Energy South Carolina, Inc.; South FirstEnergy Operating Companies; Dayton Power and Light Company; Liberty Utilities; East Kentucky Power Cooperative; Bangor Natural Gas; Hanover Borough Municipal Water Works; West Virginia American Water Company; Evergy Metro; Evergy Missouri West; Granite State Electric; Bluegrass Water; The Borough of Ambler; Newtown Artesian Water Company and Connecticut Water Company.

My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended depreciation rates to management for its consideration and supporting such rates before regulatory bodies.

**Q. Have you submitted testimony to any state utility commission on the subject of utility plant depreciation?**

A. Yes. I have submitted testimony to the Pennsylvania Public Utility Commission; the

Commonwealth of Kentucky Public Service Commission; the Public Utilities Commission of Ohio; the Nevada Public Utility Commission; the Public Utilities Board of New Jersey; the Missouri Public Service Commission; the Massachusetts Department of Telecommunications and Energy; the Alberta Energy & Utility Board; the Idaho Public Utility Commission; the Louisiana Public Service Commission; the State Corporation Commission of Kansas; the Oklahoma Corporate Commission; the Public Service Commission of South Carolina; Railroad Commission of Texas – Gas Services Division; the New York Public Service Commission; Illinois Commerce Commission; the Indiana Utility Regulatory Commission; the California Public Utilities Commission; the Federal Energy Regulatory Commission ("FERC"); the Arkansas Public Service Commission; the Public Utility Commission of Texas; Maryland Public Service Commission; Washington Utilities and Transportation Commission; The Tennessee Regulatory Commission; the Regulatory Commission of Alaska; Minnesota Public Utility Commission; Utah Public Service Commission; District of Columbia Public Service Commission; the Mississippi Public Service Commission; Delaware Public Service Commission; Virginia State Corporation Commission; Colorado Public Utility Commission; Oregon Public Utility Commission; South Dakota Public Utilities Commission; Wisconsin Public Service Commission; Wyoming Public Service Commission; the Public Service Commission of West Virginia; Maine Public Utility Commission; Iowa Utility Board; Connecticut Public Utilities Regulatory Authority; New Mexico Public Regulation Commission; Commonwealth of Massachusetts Department of Public Utilities; Rhode Island Public Utilities Commission and the North Carolina Utilities Commission.

**Q. Have you had any additional education relating to utility plant depreciation?**

A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.:

"Techniques of Life Analysis," "Techniques of Salvage and Depreciation Analysis," "Forecasting Life and Salvage," "Modeling and Life Analysis Using Simulation," and "Managing a Depreciation Study." I have also completed the "Introduction to Public Utility Accounting" program conducted by the American Gas Association.

**Q. Does this conclude your qualification statement?**

A. Yes.

Austin, TX 78723

Attention Trey V. Reginelli
Aqua Texas Controller

Ladies and Gentlemen:

Pursuant to your request, we have conducted a depreciation study related to the water plant of Aqua Texas, Inc. as of December 31, 2024. The attached report presents a description of the methods used in the estimation of depreciation, the summary of annual depreciation accrual rates, the statistical support for the life and net salvage estimates and the detailed tabulations of annual depreciation.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

JOHN J. SPANOS
President

GLEN A. FRIEL
Assistant Project Manager

# TABLE OF CONTENTS

**EXECUTIVE SUMMARY** ..... iii

**PART I. INTRODUCTION** ..... I-1
Scope ..... I-2
Plan of Report ..... I-2
Basis of the Study ..... I-3
Depreciation ..... I-3
Service Life and Net Salvage Estimates ..... I-4

**PART II. ESTIMATION OF SURVIVOR CURVES** ..... II-1
Survivor Curves ..... II-2
Iowa Type Curves ..... II-3
Retirement Rate Method of Analysis ..... II-9
Schedules of Annual Transactions in Plant Records ..... II-10
Schedule of Plant Exposed to Retirement ..... II-13
Original Life Table ..... II-15
Smoothing the Original Survivor Curve ..... II-17

**PART III. SERVICE LIFE CONSIDERATIONS** ..... III-1
Field Trips ..... III-2
Service Life Analysis ..... III-3

**PART IV. NET SALVAGE CONSIDERATIONS** ..... IV-1
Net Salvage Analysis ..... IV-2
Net Salvage Considerations ..... IV-2

**PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION** ..... V-1
Group Depreciation Procedures ..... V-2
Single Unit of Property ..... V-2
Group Depreciation Procedures ..... V-3
Remaining Life Annual Accruals ..... V-3
Average Service Life Procedure ..... V-3
Calculation of Annual and Accrued Amortization ..... V-4

**PART VI. RESULTS OF STUDY** ..... VI-1
Qualification of Results ..... VI-2
Description of Detailed Tabulations ..... VI-2

**TABLE OF CONTENTS,** cont.

Table 1. Summary of Estimated Survivor Curve, Net Salvage Percent, Original Cost, Book Depreciation Reserve and Calculated Annual Depreciation Rates Related to Water Plant as of December 31, 2024 ..... VI-4

**PART VII. SERVICE LIFE STATISTICS** ..... VII-1

**PART VIII. NET SALVAGE STATISTICS** ..... VIII-1

**PART IX. DETAILED DEPRECIATION CALCULATIONS** ..... IX-1

## EXECUTIVE SUMMARY

Pursuant to Aqua Texas, Inc.'s ("Aqua") request, Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") has conducted a depreciation study related to Aqua plant as of December 31, 2024. The purpose of this study was to determine the annual depreciation accrual rates and amounts for book and ratemaking purposes.

The depreciation rates are based on the straight line method using the average service life ("ASL") procedure and were applied on a remaining life basis. The calculations were based on attained ages and estimated average service life as well as forecasted net salvage characteristics for each depreciable group of assets.

Aqua's accounting policy has not changed since the previous depreciation study was prepared, nor were there any significant policy changes that might affect the results of the study presented here. However, some net salvage and average service life estimates proposed in this study have changed from the currently approved estimates. The overall depreciation accrual rate has increased slightly since the currently approved rates that were established in the study as of December 31, 2010. The depreciation rates continued to increase since the depreciation review as of December 31, 2019.

Gannett Fleming recommends the calculated annual depreciation accrual rates proposed herein apply specifically to Aqua's plant in service as of December 31, 2024 as summarized in Table 1 of the study. The study sets forth a total annual depreciation expense of $16.7 million as applied to the depreciable original cost of $586.8 million as of December 31, 2024.

# PART I. INTRODUCTION

# AQUA TEXAS, INC.
# DEPRECIATION STUDY
# PART I. INTRODUCTION

## SCOPE

This report presents the results of the depreciation study prepared for the Aqua Texas, Inc. as applied to water plant in service as of December 31, 2024. It relates to the concepts, methods, and basic judgments which underlie recommended annual depreciation accrual rates related to current utility plant in service.

The service life and net salvage estimates resulting from the study were based on informed judgment which incorporated analyses of historical plant retirement data as recorded through 2024; a review of Company practice and outlook as they relate to plant operation and retirement; and consideration of current practice in the water industry, including knowledge of service life and net salvage estimates used for other water properties.

## PLAN OF REPORT

Part I, Introduction, contains statements with respect to the plan of the report, and the basis of the study. Part II, Estimation of Survivor Curves, presents descriptions of the considerations and the methods used in the service life and net salvage studies. Part III, Service Life Considerations, presents the factors and judgment utilized in the average service life analysis. Part IV, Net Salvage Considerations, presents the judgment utilized of the net salvage study. Part V, Calculation of Annual and Accrued Depreciation, describes the procedures used in the calculation of group depreciation. Part VI, Results of Study, presents summaries by depreciable group of annual depreciation accrual rates and amounts, as well as composite remaining lives. Part VII, Service Life Statistics presents the statistical analysis of service life estimates, Part VIII, Net Salvage Statistics sets forth the statistical indications of net salvage percents, and Part IX, Detailed Depreciation Calculations presents the detailed tabulations of annual depreciation.

## BASIS OF THE STUDY

### Depreciation

Depreciation, in public utility regulation, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among causes to be given consideration are wear and tear, deterioration, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and the requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs, less net salvage, over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing water utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straightline method of depreciation.

For most accounts, the annual depreciation was calculated by the straight line method using the average service life procedure and the remaining life basis. For certain General Plant accounts, the annual depreciation is based on amortization accounting. Both types of calculations were based on original cost, attained ages, and estimates of service lives and net salvage.

The straight line method, average service life procedure is a commonly used depreciation calculation procedure that has been widely accepted in jurisdictions throughout North America. Gannett Fleming recommends its continued use. Amortization accounting is used for certain General Plant accounts because of the disproportionate

plant accounting effort required when compared to the minimal original cost of the large number of items in these accounts. An explanation of the calculation of annual and accrued amortization is presented beginning on page V-4 of the report.

**Service Life and Net Salvage Estimates**

The service life and net salvage estimates used in the depreciation and amortization calculations were based on informed judgment which incorporated a review of management's plans, policies and outlook, a general knowledge of the water utility industry, and comparisons of the service life and net salvage estimates from our studies of other water utilities. The use of survivor curves to reflect the expected dispersion of retirement provides a consistent method of estimating depreciation for water plant. Iowa type survivor curves were used to depict the estimated survivor curves for the plant accounts not subject to amortization accounting.

The procedure for estimating service lives consisted of compiling historical data for the plant accounts or depreciable groups, analyzing this history through the use of widely accepted techniques, and forecasting the survivor characteristics for each depreciable group on the basis of interpretations of the historical data analyses and the probable future. The combination of the historical experience and the estimated future yielded estimated survivor curves from which the average service lives were derived.

# PART II. ESTIMATION OF SURVIVOR CURVES

# PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below, and the development of net salvage is discussed in later sections of this report.

## SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

**Iowa Type Curves**

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

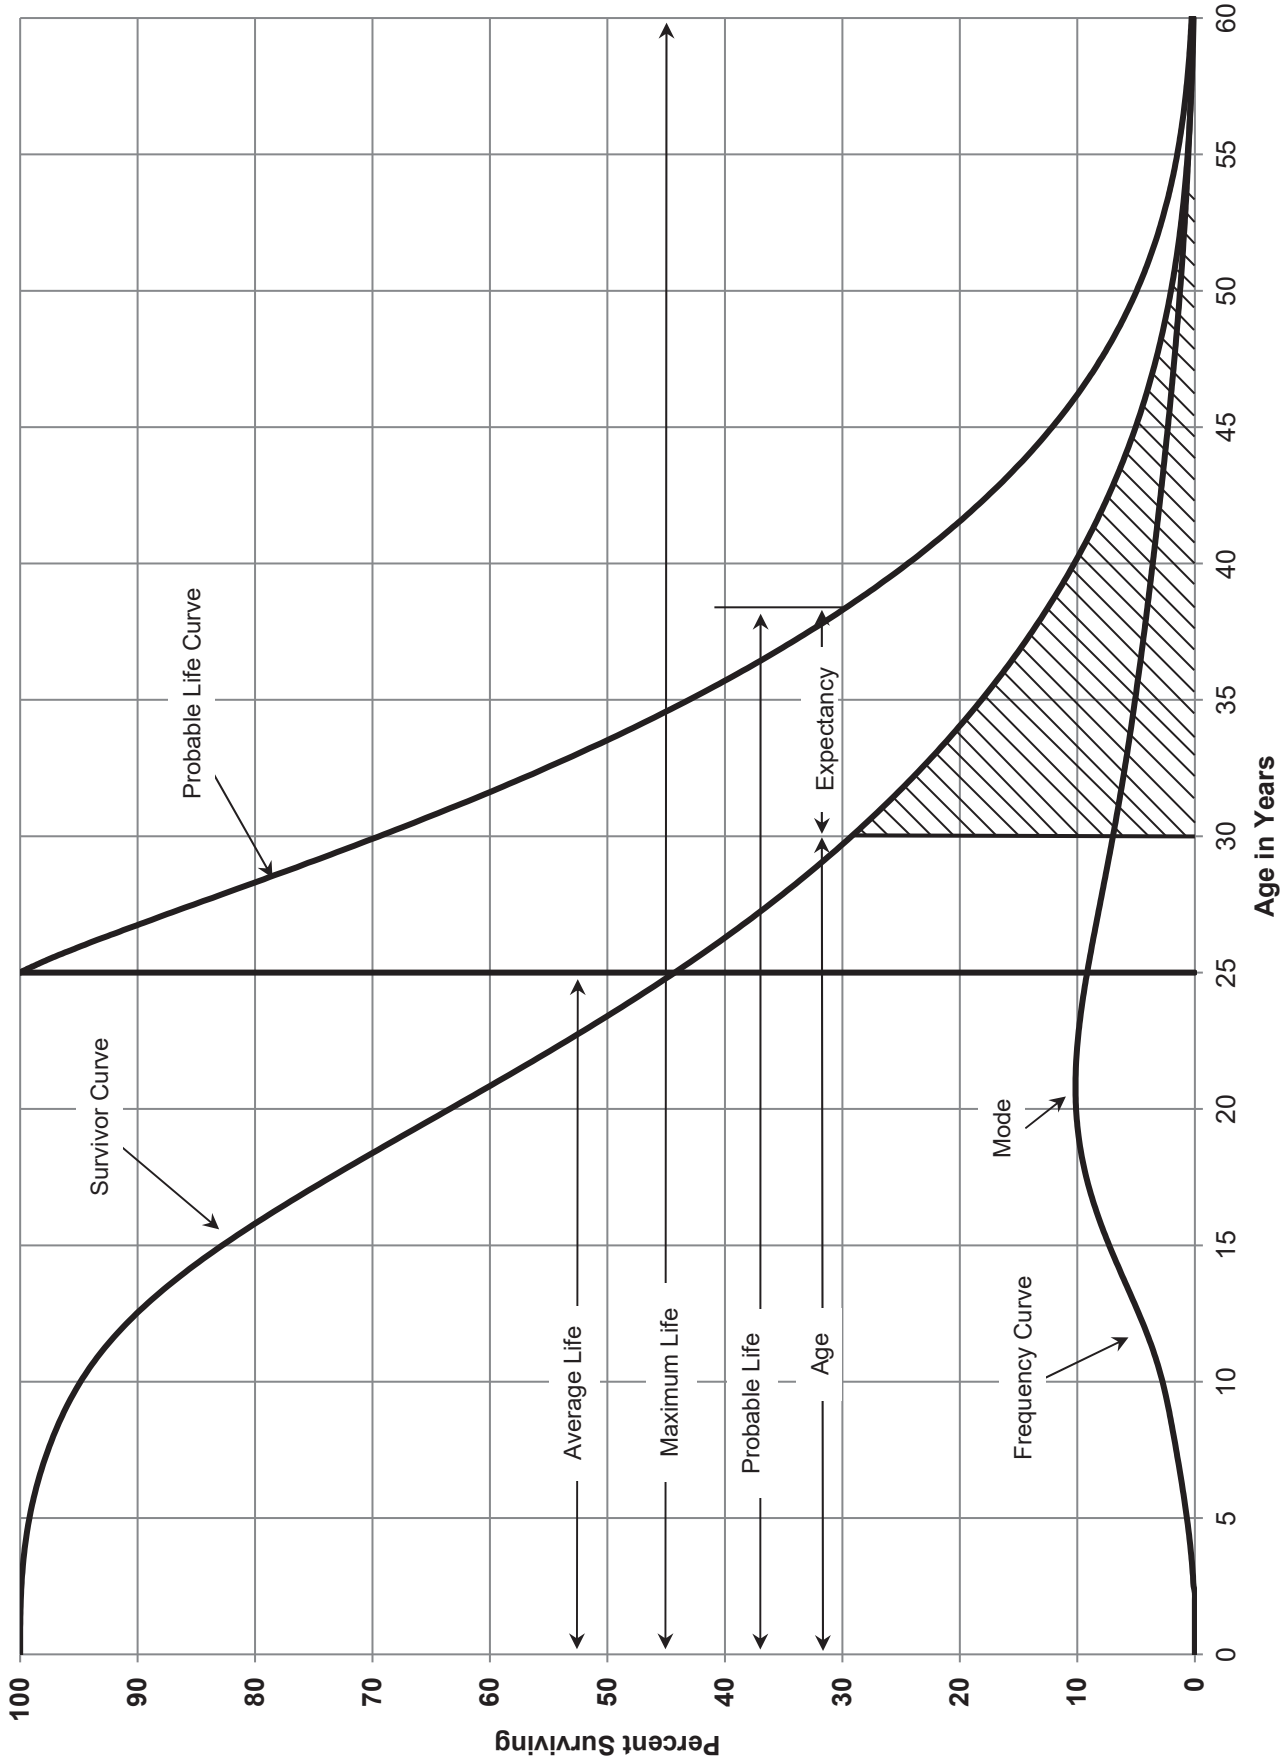

**FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES**

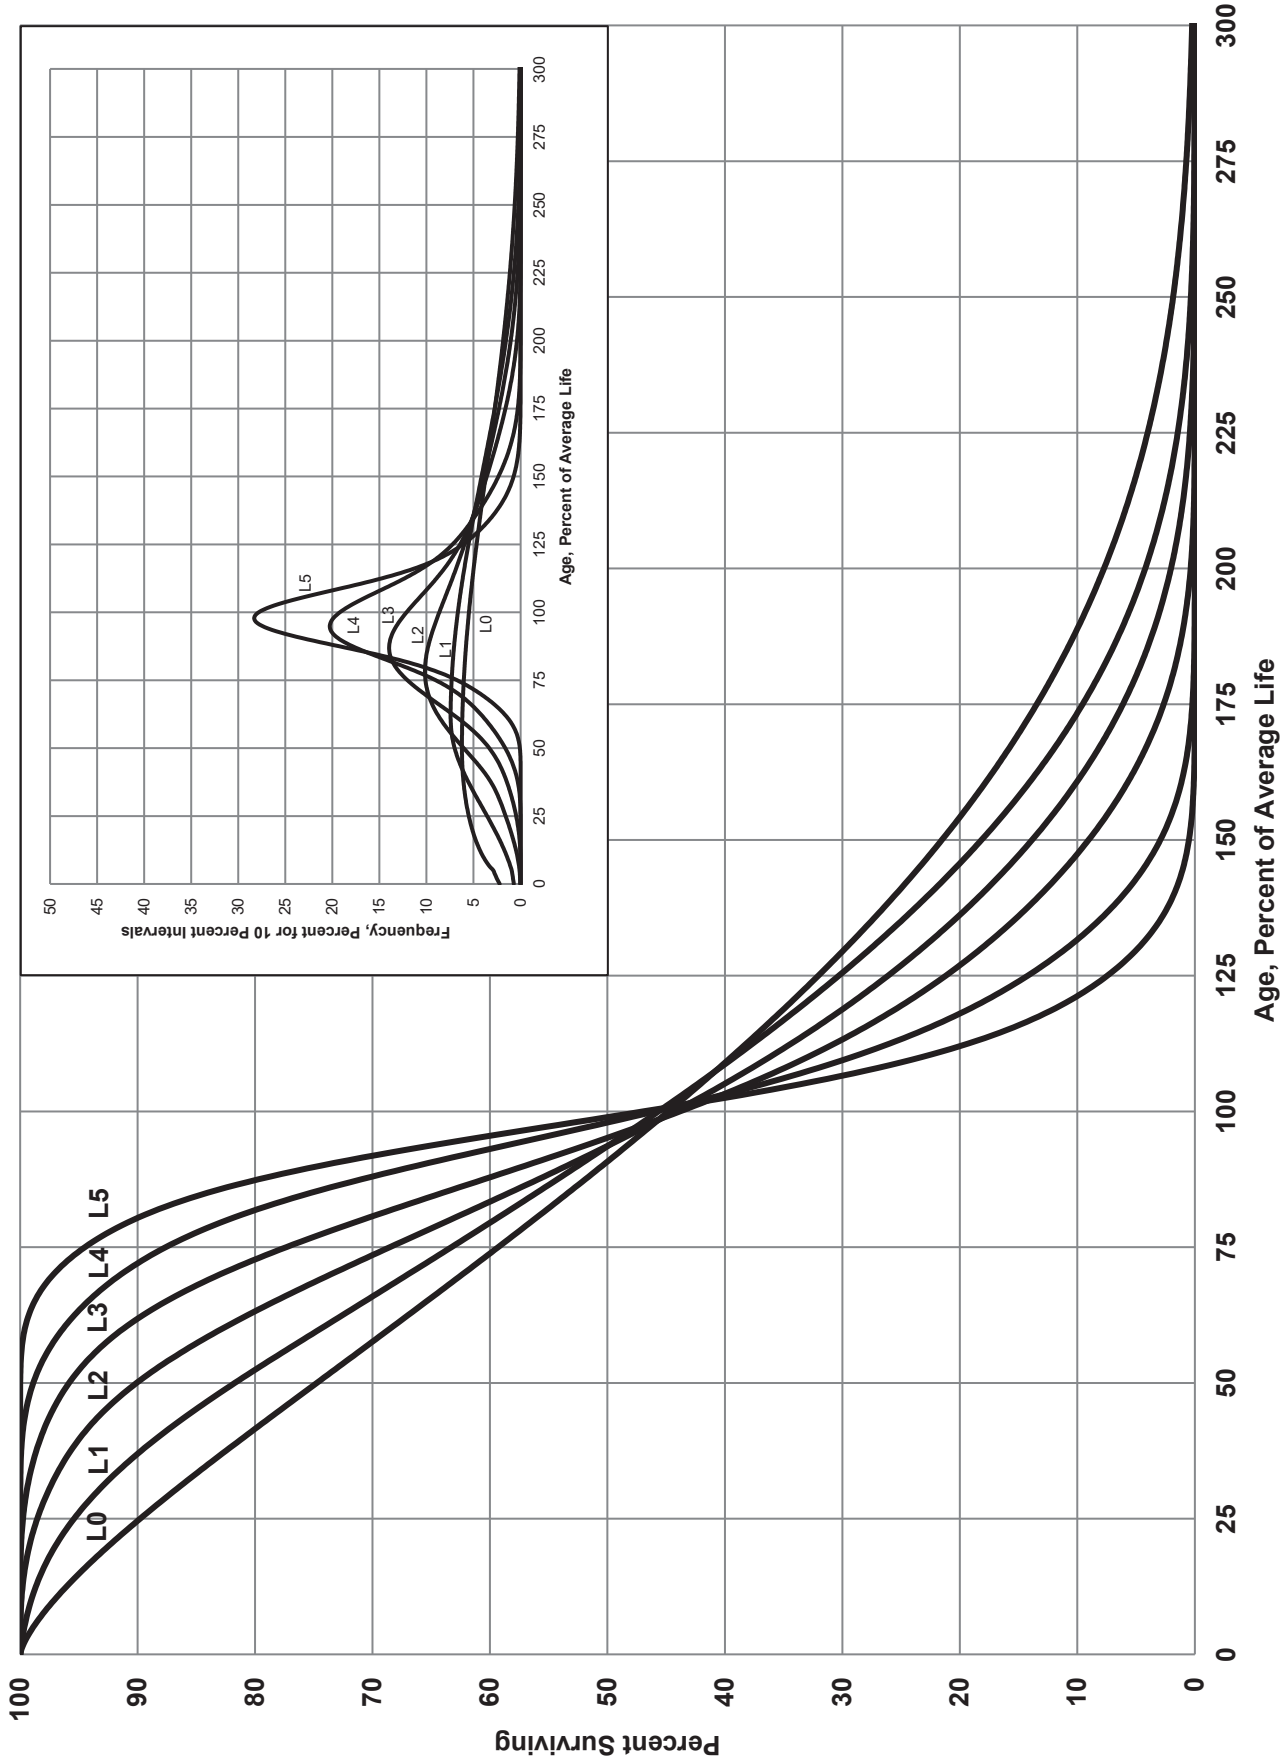

FIGURE 2.. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

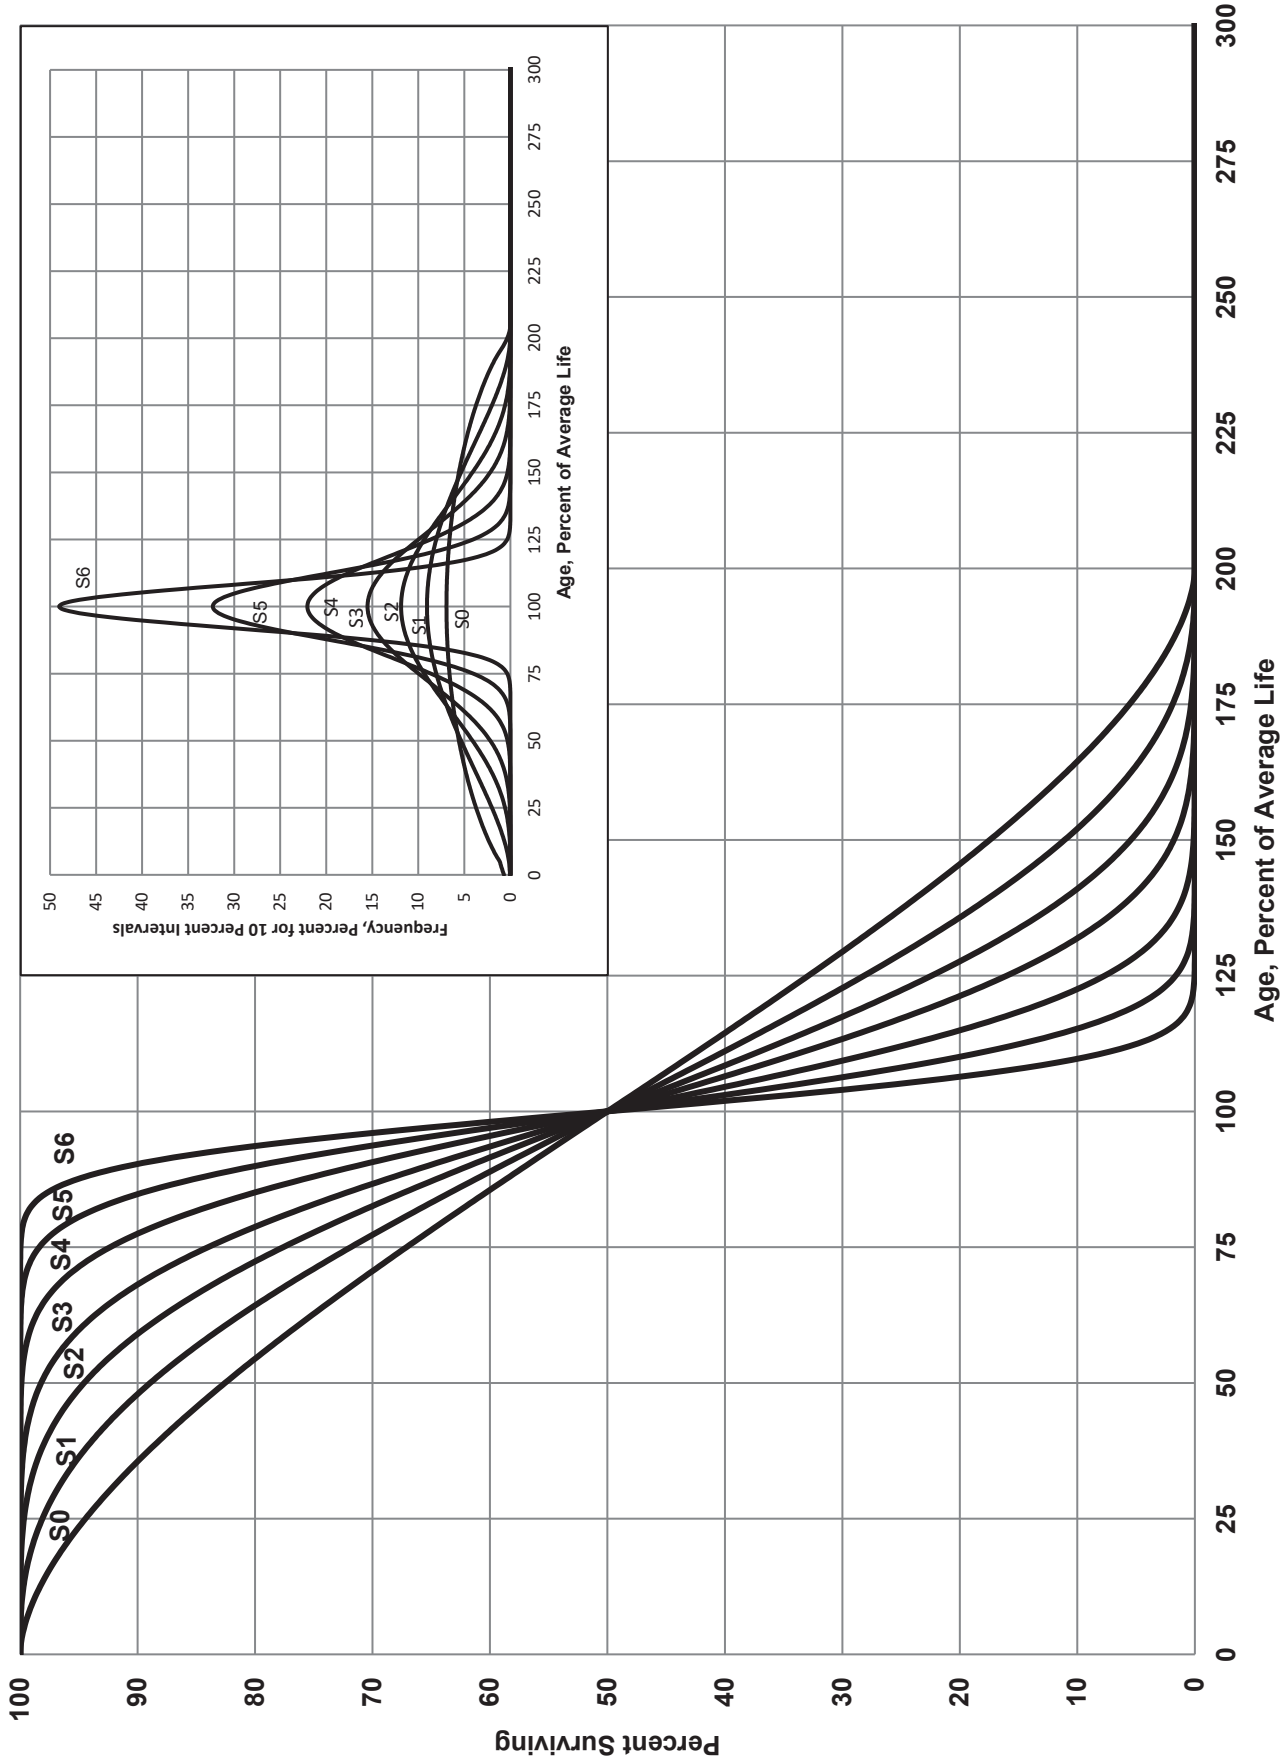

**FIGURE 3.. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES**

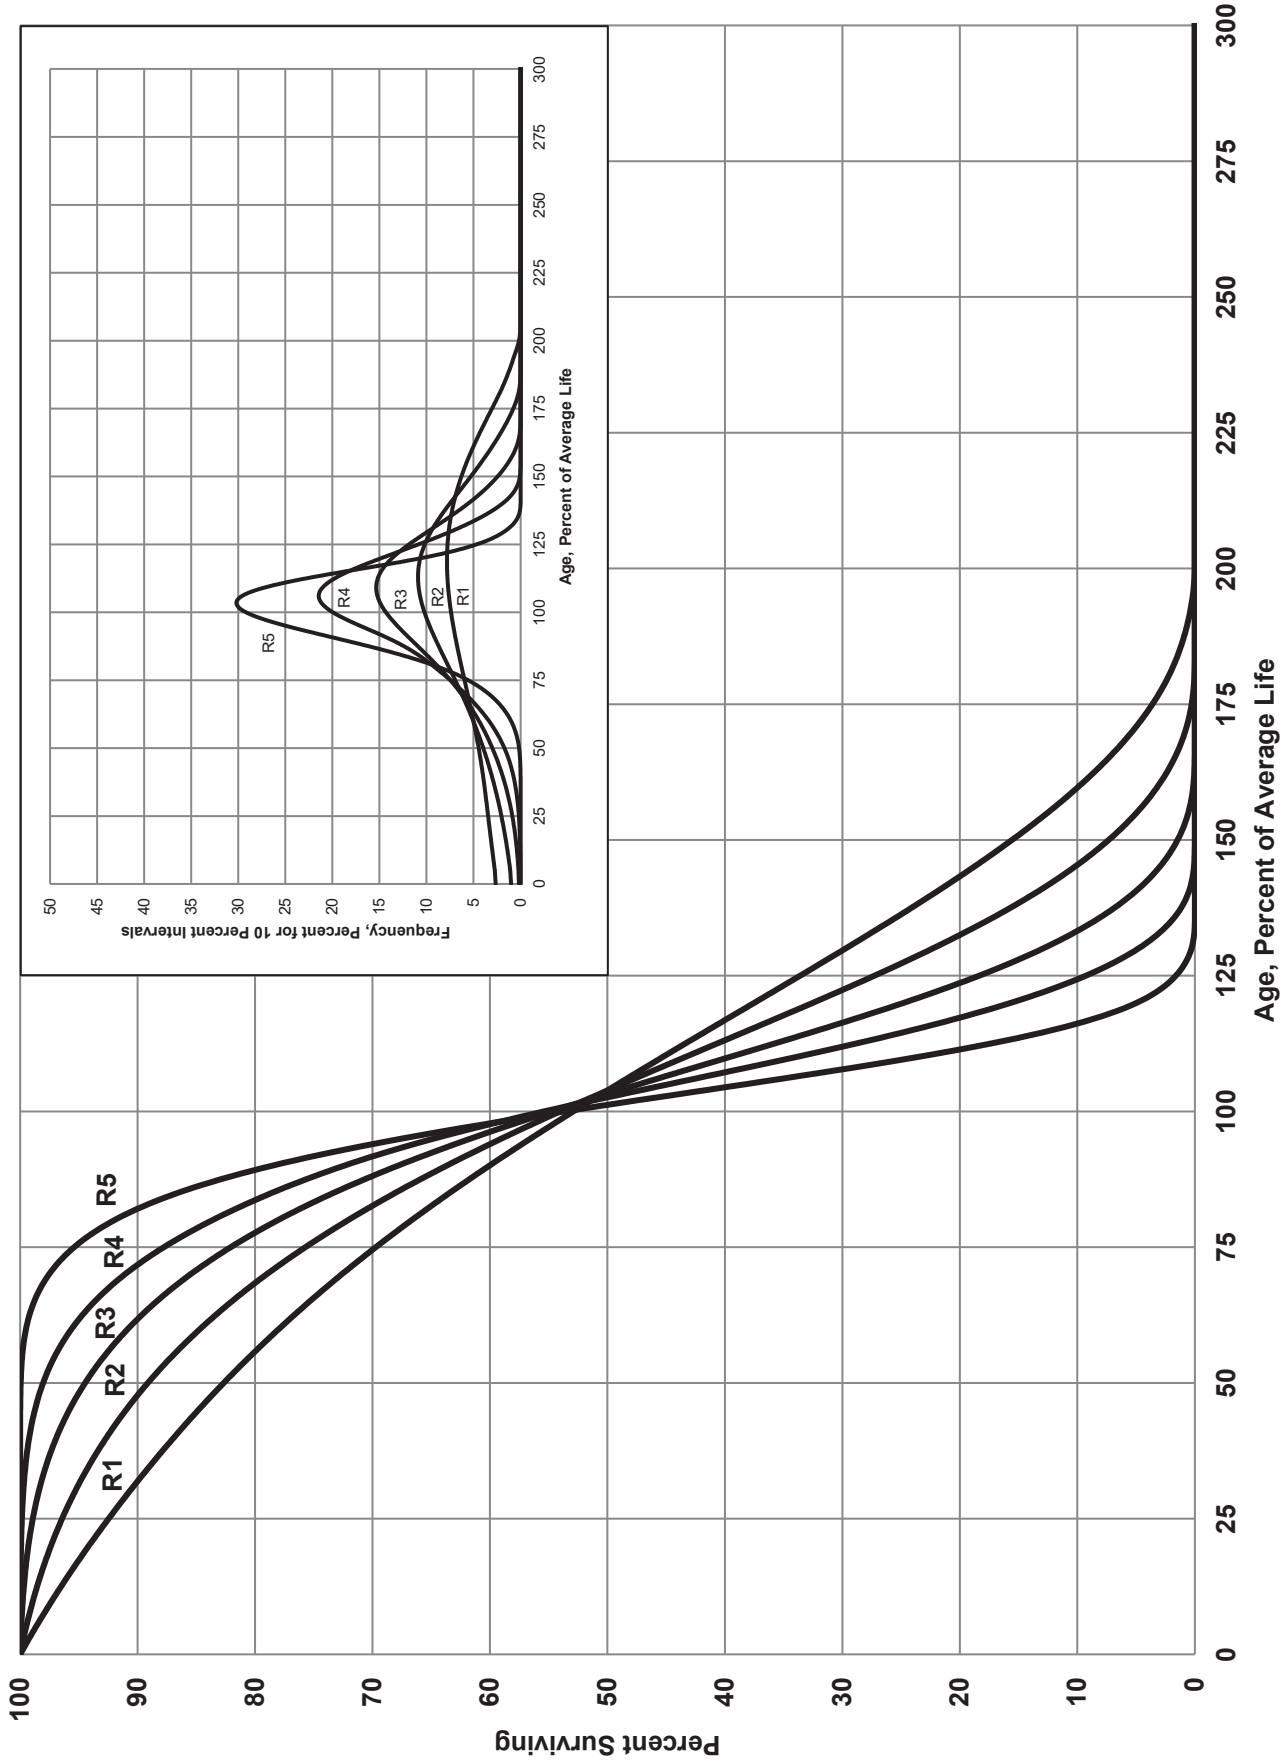

FIGURE 4.. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

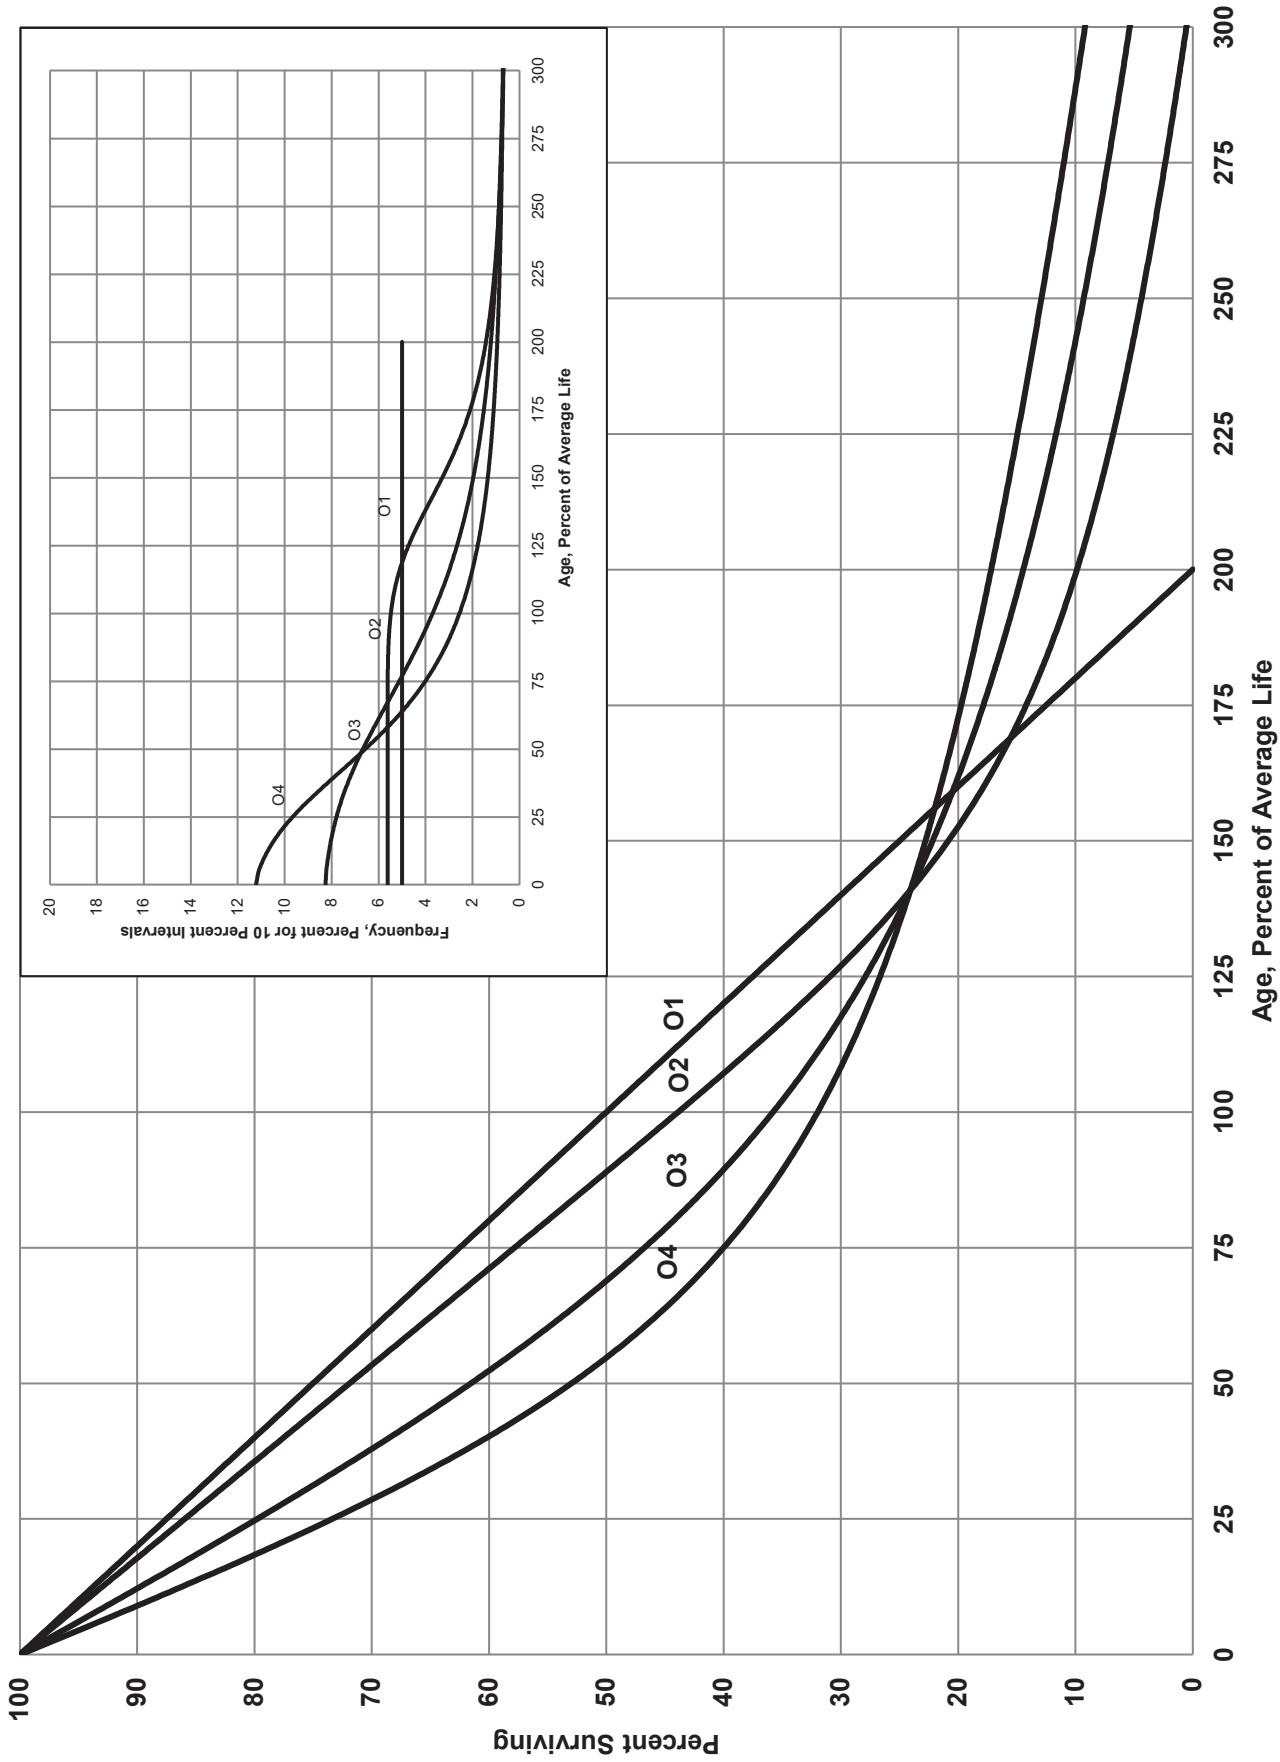

**FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES**

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

**Retirement Rate Method of Analysis**

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

**Schedules of Annual Transactions in Plant Records**

The property group used to illustrate the retirement rate method is observed for the experience band 2015-2024 for which there were placements during the years 2010-2024. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2010 were retired in 2015. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2015 retirements of 2010 installations and ending with the 2024 retirements of the 2019 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.

SCHEDULE 1. RETIREMENTS FOR EACH YEAR 2015-2024
SUMMARIZED BY AGE INTERVAL

Experience Band 2015-2024 Placement Band 2010-2024

| 2018 | | | | - | - | - | - | (12)[b] | - | - | - | 5½-6½ |
| 2019 | | | | | - | - | - | - | 22[a] | - | - | 4½-5½ |
| 2020 | | | | | | - | - | (19)[b] | - | - | 10 | 3½-4½ |
| 2021 | | | | | | | - | - | - | - | - | 2½-3½ |
| 2022 | | | | | | | | - | - | (102)[c] | (121) | 1½-2½ |
| 2023 | | | | | | | | | - | - | - | ½-1½ |
| 2024 | | | | | | | | | | | - | 0-½ |
| Total | - | - | - | - | - | - | 60 | (30) | 22 | (102) | (50) | |

[a] Transfer Affecting Exposures at Beginning of Year
[b] Transfer Affecting Exposures at End of Year
[c] Sale with Continued Use
Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

**Schedule of Plant Exposed to Retirement**

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2015 through 2024 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2020 are calculated in the following manner:

| | | |
|---|---|---|
| Exposures at age 0 | = amount of addition | = $750,000 |
| Exposures at age ½ | = $750,000 - $ 8,000 | = $742,000 |
| Exposures at age 1½ | = $742,000 - $18,000 | = $724,000 |
| Exposures at age 2½ | = $724,000 - $20,000 - $19,000 | = $685,000 |
| Exposures at age 3½ | = $685,000 - $22,000 | = $663,000 |

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2015-2024
SUMMARIZED BY AGE INTERVAL

Experience Band 2015-2024 Placement Band 2010-2024

| Year Placed | Exposures, Thousands of Dollars — Annual Survivors at the Beginning of the Year | | | | | | | | | | Total at Beginning of Age Interval | Age Interval |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 | | |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) | (8) | (9) | (10) | (11) | (12) | (13) |
| 2010 | 255 | 245 | 234 | 222 | 209 | 195 | 239 | 216 | 192 | 167 | 167 | 13½-14½ |

| 2015 | 420[a] | 416 | 407 | 397 | 386 | 374 | 361 | 347 | 332 | 316 | 1,503 | 8½-9½ |
| 2016 | | 460[a] | 455 | 444 | 432 | 419 | 405 | 390 | 374 | 356 | 1,952 | 7½-8½ |
| 2017 | | | 510[a] | 504 | 492 | 479 | 464 | 448 | 431 | 412 | 2,463 | 6½-7½ |
| 2018 | | | | 580[a] | 574 | 561 | 546 | 530 | 501 | 482 | 3,057 | 5½-6½ |
| 2019 | | | | | 660[a] | 653 | 639 | 623 | 628 | 609 | 3,789 | 4½-5½ |
| 2020 | | | | | | 750[a] | 742 | 724 | 685 | 663 | 4,332 | 3½-4½ |
| 2021 | | | | | | | 850[a] | 841 | 821 | 799 | 4,955 | 2½-3½ |
| 2022 | | | | | | | | 960[a] | 949 | 926 | 5,719 | 1½-2½ |
| 2023 | | | | | | | | | 1,080[a] | 1,069 | 6,579 | ½-1½ |
| 2024 | | | | | | | | | | 1,220[a] | 7,490 | 0-½ |
| Total | 1,975 | 2,382 | 2,824 | 3,318 | 3,872 | 4,494 | 5,247 | 6,017 | 6,852 | 7,799 | 44,780 | |

[a]Additions during the year

For the entire experience band 2015-2024, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

**Original Life Table**

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

| | | | | | | |
|---|---|---|---|---|---|---|
| Percent surviving at age 4½ | = | 88.15 | | | | |
| Exposures at age 4½ | = | 3,789,000 | | | | |
| Retirements from age 4½ to 5½ | = | 143,000 | | | | |
| Retirement Ratio | = | 143,000 | ÷ | 3,789,000 | = | 0.0377 |
| Survivor Ratio | = | 1.000 | - | 0.0377 | = | 0.9623 |
| Percent surviving at age 5½ | = | (88.15) | x | (0.9623) | = | 84.83 |

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2015-2024 Placement Band 2010-2024

(Exposure and Retirement Amounts are in Thousands of Dollars)

| Age at Beginning of Interval | Exposures at Beginning of Age Interval | Retirements During Age Interval | Retirement Ratio | Survivor Ratio | Percent Surviving at Beginning of Age Interval |
|---|---|---|---|---|---|
| (1) | (2) | (3) | (4) | (5) | (6) |

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

**Smoothing the Original Survivor Curve**

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

# PART III. SERVICE LIFE CONSIDERATIONS

## FIELD TRIPS

In order to be familiar with the operation of the Company and observe representative portions of the plant, field trips were conducted for the study. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

The following is a list of the locations visited during the most recent and prior field trips.

April 7-8, 2024

Round Mountain Water Plant
Big Sandy Water Plant
Chapparral Water Plant
Summit View Water Plant
Rock Cliff Water Plant
Cherry Hollow Water Plant #1
Cherry Hollow Water Plant #2
Cherry Hollow Standpipe and Booster Station
Barton Creek Surface Water Plant
Barton Creek Ground Water Plant
Quail Point Storage
Woodcreek Water Plant #1
Doolittle Drive Water Plant
Woodcreek Water Plant #2
Hanby Acres Water Plant
Foxbane Water Plant #1
Foxbane Water Plant #3
Shale Creek Water Plant
Shale Creek Remote Wells #3 and #4
Trail Creek Water Plant #3
Chisholm Springs Water Plant #1
The Resort Water Plant #2
Eagles Nest Water Plant
Granbury Operations Center
Canyon Creek Water Plant
Mountain View Water Plant #2

Mountain View Water Plant #1
Mountain View Wells #2, #3, and #4
Whippoorwill Bay Water Plant #2
Lake Country Acres Water Plant #1
North Fork Creek Water Plant #1
Boynton Water Plant #1
Blue Water Shores Water Plant

March 10-12, 2020

Golf Crest Well #1 and Tank
Mountain Crest Tank
Woodcreek #12 Tank
Chapparal Water Plant #1
Chapparal Water Plant #2
Chapparal Water Plant #3
Southwest Territory Water Plant
Bear Creek Water Plant #1
Leisure Woods Water Plant
Imperial Water Plant
Candlelight Water Plant
Shadow Bay Water Plant
Cedar Hill Water Plant
Woodmont Water Plant
Brittmoore Water Plant #2

## Service Life Analysis

The service life estimates were based on judgment which considered a number of factors. The primary factors were the statistical analyses of data; current company policies and outlook as determined during field reviews of the property and other conversations with management; and the survivor curve estimates from previous studies of this company and other water companies.

For some of the plant accounts and subaccounts, the statistical analyses resulted in good to excellent indications of a significant portion of the survivor pattern. Generally, the information external to the statistics led to little or no significant departure from the indicated survivor curves for the accounts listed on the following page.

| Account No. | Account Description |
|---|---|
| 304.20 | Structures and Improvements – Source of Supply and Pumping |
| 304.30 | Structures and Improvements – Water Treatment |
| 304.40 | Structures and Improvements – Transmission and Distribution |
| 304.50 | Structures and Improvements – General |
| 307.00 | Wells and Springs |
| 310.20 | Power Generation Equipment |
| 320.00 | Water Treatment Equipment |
| 330.00 | Distribution Reservoirs and Standpipes |
| 331.00 | Transmission and Distribution Mains |
| 334.00 | Meters and Meter Installations |
| 335.00 | Hydrants |
| 341.00 | Transportation Equipment |
| 345.00 | Power Operated Equipment |

The analysis for Account 330.00, Distribution Reservoirs and Standpipes, is used to illustrate the manner in which the study was conducted for the accounts in the preceding list. Aged plant accounting data have been compiled for the years 1998 through 2024. These data have been coded according to account or property group, type of transaction, year in which the transaction took place, and year in which the utility plant was placed in service. The retirements, other plant transactions and plant additions were analyzed by the retirement rate method.

The survivor curve estimate for this account is the 45-R1.5 and is based on the statistical indications for the periods, 1998-2024 and 2015-2024. The 45-R1.5 is a good fit of the significant portion of the original survivor curve as set forth on page VII-44, is consistent with management outlook for a continuation of the historical experience and is slightly shorter than the typical service life range of 50 to 70 years for reservoirs and standpipes.

Amortization accounting is proposed for certain General Plant accounts that represent numerous units of property, but a small portion of the depreciable plant in service. These accounts represent approximately 5 percent of total depreciable water

plant. A discussion of the basis for the amortization periods is presented in the section "Calculation of Annual and Accrued Amortization".

Generally, the estimates for the remaining accounts of the total depreciable plant in service were based on judgments which considered the nature of the plant and equipment, the previous estimate for this company and a general knowledge of service lives for similar equipment in other water companies.

# PART IV. NET SALVAGE CONSIDERATIONS

# PART IV. NET SALVAGE CONSIDERATIONS

## NET SALVAGE ANALYSIS

The estimates of net salvage by account were based in part on historical data compiled for the years 2005 through 2024. Cost of removal and gross salvage were expressed as percents of the original cost of plant retired, both on annual and three-year moving average bases. The most recent five-year average also was calculated for consideration. The net salvage estimates by account are expressed as a percent of the original cost of plant retired.

### Net Salvage Considerations

The estimates of net salvage were based primarily on judgment which considered a number of factors. The primary factors were the analyses of historical data; a knowledge of management's plans and operating policies; and net salvage estimates from previous studies of this company and other water companies.

The analyses for Account 333.00, Services, is used to illustrate the manner in which the study was conducted. Depreciation reserve accounting data were compiled for the years 2005 through 2024. These data include the retirements, cost of removal and gross salvage, however, past practice was not to record cost of removal for replacement projects which was the primary cause of retirements.

The net salvage estimate for this account is negative 20 percent and is based on expected plans for cost of removal and gross salvage in the future with new Company practices. The statistical analysis on pages VIII-26 and VIII-27 just presents the past retirements. Cost of removal as a percent of the original cost retired has been zero throughout the period as cost of removal has not been recorded to date based on past practices as new accounting practices have not been fully implemented. Gross salvage has been minimal, averaging 0 percent for the period. The negative 20 percent net salvage estimate is based on the overall cost of removal and gross salvage percent with a focus on how the amounts will be recorded in the future.

Amortization accounting is proposed for certain General Plant accounts which represent approximately 5 percent of depreciable property. Inasmuch as there will be no depreciation reserve entries related to net salvage; the estimate of net salvage for accounts subject to amortization is zero percent.

Generally, the net salvage estimates for the remaining accounts of the total depreciable plant in service, were based on judgments which considered the nature of the plant and equipment, reviews of available historical data, and a general knowledge of net salvage percents for similar equipment in other water companies.

# PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

# PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

## GROUP DEPRECIATION PROCEDURES

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group. In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

### Single Unit of Property

The calculation of straight line depreciation for a single unit of property is straightforward. For example, if a $1,000 unit of property attains an age of four years and has a life expectancy of six years, the annual accrual over the total life is:

$$\frac{\$1{,}000}{(4 + 6)} = \$100 \text{ per year.}$$

The accrued depreciation is:

$$\$1{,}000\left(1 - \frac{6}{10}\right) = \$400.$$

## Group Depreciation Procedures

When more than a single item of property is under consideration, a group procedure for depreciation is appropriate because normally all of the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

## Remaining Life Annual Accruals

For the purpose of calculating remaining life accruals as of December 31, 2024, the depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation follow. The detailed calculations as of December 31, 2024, are set forth in the Results of Study section of the report.

## Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future depreciation accruals, if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each

account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$\text{Ratio} = 1 - \frac{\text{Average Remaining Life}}{\text{Average Service Life}}.$$

## CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization period and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is proposed for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable utility plant in service. The accounts and their amortization periods are as follows:

| Account | | Amortization Period, Years |
|---|---|---|
| 340.00 | Office Furniture and Equipment | 15 |
| 343.00 | Tools, Shop and Garage Equipment | 20 |
| 344.00 | Laboratory Equipment | 15 |
| 346.00 | Communication Equipment | 15 |
| 347.00 | Miscellaneous Equipment | 15 |

The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the original cost by the period of amortization for the account.

# PART VI. RESULTS OF STUDY

# PART VI. RESULTS OF STUDY

## QUALIFICATION OF RESULTS

The calculated annual and accrued depreciation are the principal results of the study. Continued surveillance and periodic revisions are normally required to maintain continued use of appropriate annual depreciation accrual rates. An assumption that accrual rates can remain unchanged over a long period of time implies a disregard for the inherent variability in service lives and net salvage and for the change of the composition of property in service. The annual accrual rates were calculated in accordance with the straight line remaining life method of depreciation, using the average service life procedure based on estimates which reflect considerations of current historical evidence and expected future conditions.

The annual depreciation accrual rates are applicable specifically to the water plant in service as of December 31, 2024. For most plant accounts, the application of such rates to future balances that reflect additions subsequent to December 31, 2024, is reasonable for a period of three to five years.

## DESCRIPTION OF DETAILED TABULATIONS

A summary of the results of the study, as applied to the original cost of water plant in service as of December 31, 2024, is presented on page VI-4 of this report. The table sets forth the original cost, the book depreciation reserve, future accruals, the calculated annual depreciation amount and rate, and the composite remaining life related to water plant.

The service life estimates were based on judgment that incorporated statistical analysis of retirement data, discussions with management and consideration of estimates made for other water utilities. The results of the statistical analysis of service life are

presented in the section beginning on page VII-2, within the supporting documents of this report.

For each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. The survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the curve type designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. The titles of the chart indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which where plotted. The experience band indicates the range of years for which retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The analyses of net salvage data are presented in the section titled, “Net Salvage Statistics”. The tabulations present annual cost of removal and gross salvage data, three-year moving averages and the most recent five-year average. Data are shown in dollars and as percentages of original costs retired.

The tables of the calculated annual depreciation applicable to depreciable assets as of December 31, 2024 are presented in account sequence starting on page IX-2 of the supporting documents. The tables indicate the estimated survivor curve and net salvage percent for the account and set forth, for each installation year, the original cost, the calculated accrued depreciation, the allocated book reserve, future accruals, the remaining life, and the calculated annual accrual amount.

Attention Trey V. Reginelli
Aqua Texas Controller

Ladies and Gentlemen:

Pursuant to your request, we have conducted a depreciation study related to the wastewater plant of Aqua Texas, Inc. as of December 31, 2024. The attached report presents a description of the methods used in the estimation of depreciation, the summary of annual depreciation accrual rates, the statistical support for the service life and net salvage estimates and the detailed tabulations of annual depreciation.

Respectfully submitted,

GANNETT FLEMING VALUATION

## EXECUTIVE SUMMARY

Pursuant to Aqua Texas, Inc.'s ("Aqua") request, Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") has conducted a depreciation study related to Aqua plant as of December 31, 2024. The purpose of this study was to determine the annual depreciation accrual rates and amounts for book and ratemaking purposes.

The depreciation rates are based on the straight line method using the average service life ("ASL") procedure and were applied on a remaining life basis. The calculations were based on attained ages and estimated average service life as well as forecasted net salvage characteristics for each depreciable group of assets.

Aqua's accounting policy has not changed since the previous depreciation study was prepared, nor were there any significant policy changes that might affect the results of the study. However, the net salvage and average service life estimates have changed which have caused an overall increase in depreciation expense as compared to the currently approved rates.

Gannett Fleming recommends the calculated annual depreciation accrual rates proposed herein apply specifically to Aqua's plant in service as of December 31, 2024 as summarized in Table 1 of the study. The study sets forth a total annual depreciation expense of $6.03 million as applied to the depreciable original cost of $209.6 million as of December 31, 2024.

# PART I. INTRODUCTION

# AQUA TEXAS, INC.
# DEPRECIATION STUDY
# PART I. INTRODUCTION

## SCOPE

This report presents the results of the depreciation study prepared for the Aqua Texas, Inc. It relates to the concepts, methods, and basic judgments which underlie recommended annual depreciation accrual rates related to current utility plant in service.

The service life and net salvage estimates resulting from the study were based on informed judgment which incorporated analyses of historical plant retirement data as recorded through 2024; a review of Company practice and outlook as they relate to plant operation and retirement; and consideration of current practice in the wastewater industries, including knowledge of service life and net salvage estimates used for other water and wastewater properties.

## PLAN OF REPORT

Part I, Introduction, contains statements with respect to the plan of the report, and the basis of the study. Part II, Estimation of Survivor Curves, presents descriptions of the considerations and the methods used in the service life and net salvage studies. Part III, Service Life Considerations, presents the factors and judgment utilized in the average service life analysis. Part IV, Net Salvage Considerations, presents the judgment utilized of the net salvage study. Part V, Calculation of Annual and Accrued Depreciation, describes the procedures used in the calculation of group depreciation. Part VI, Results of Study, presents summaries by depreciable group of annual depreciation accrual rates and amounts, as well as composite remaining lives. Part VII, Service Life Statistics presents the statistical analysis of service life estimates, Part VIII, Net Salvage Statistics sets forth the statistical indications of net salvage percents, and Part IX, Detailed Depreciation Calculations presents the detailed tabulations of annual depreciation.

## BASIS OF THE STUDY

### Depreciation

Depreciation, in public utility regulation, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among causes to be given consideration are wear and tear, deterioration, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and the requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs, less net salvage, over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing water utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

For most accounts, the annual depreciation was calculated by the straight line method using the average service life procedure and the remaining life basis. For certain General Plant accounts, the annual depreciation is based on amortization accounting. Both types of calculations were based on original cost, attained ages, and estimates of service lives and net salvage.

The straight line method, average service life procedure is a commonly used depreciation calculation procedure that has been widely accepted in jurisdictions throughout North America. Gannett Fleming recommends its continued use. Amortization accounting is used for certain General Plant accounts because of the disproportionate

plant accounting effort required when compared to the minimal original cost of the large number of items in these accounts. An explanation of the calculation of annual and accrued amortization is presented beginning on page V-4 of the report.

**Service Life and Net Salvage Estimates**

The service life and net salvage estimates used in the depreciation and amortization calculations were based on informed judgment which incorporated a review of management's plans, policies and outlook, a general knowledge of the water and wastewater industries, and comparisons of the service life and net salvage estimates from our studies of other wastewater utilities. The use of survivor curves to reflect the expected dispersion of retirement provides a consistent method of estimating depreciation for wastewater plant. Iowa type survivor curves were used to depict the estimated survivor curves for the plant accounts not subject to amortization accounting.

The procedure for estimating service lives consisted of compiling historical data for the plant accounts or depreciable groups, analyzing this history through the use of widely accepted techniques, and forecasting the survivor characteristics for each depreciable group on the basis of interpretations of the historical data analyses and the probable future. The combination of the historical experience and the estimated future yielded estimated survivor curves from which the average service lives were derived.

# PART II. ESTIMATION OF SURVIVOR CURVES

# PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below, and the development of net salvage is discussed in later sections of this report.

## SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

**Iowa Type Curves**

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

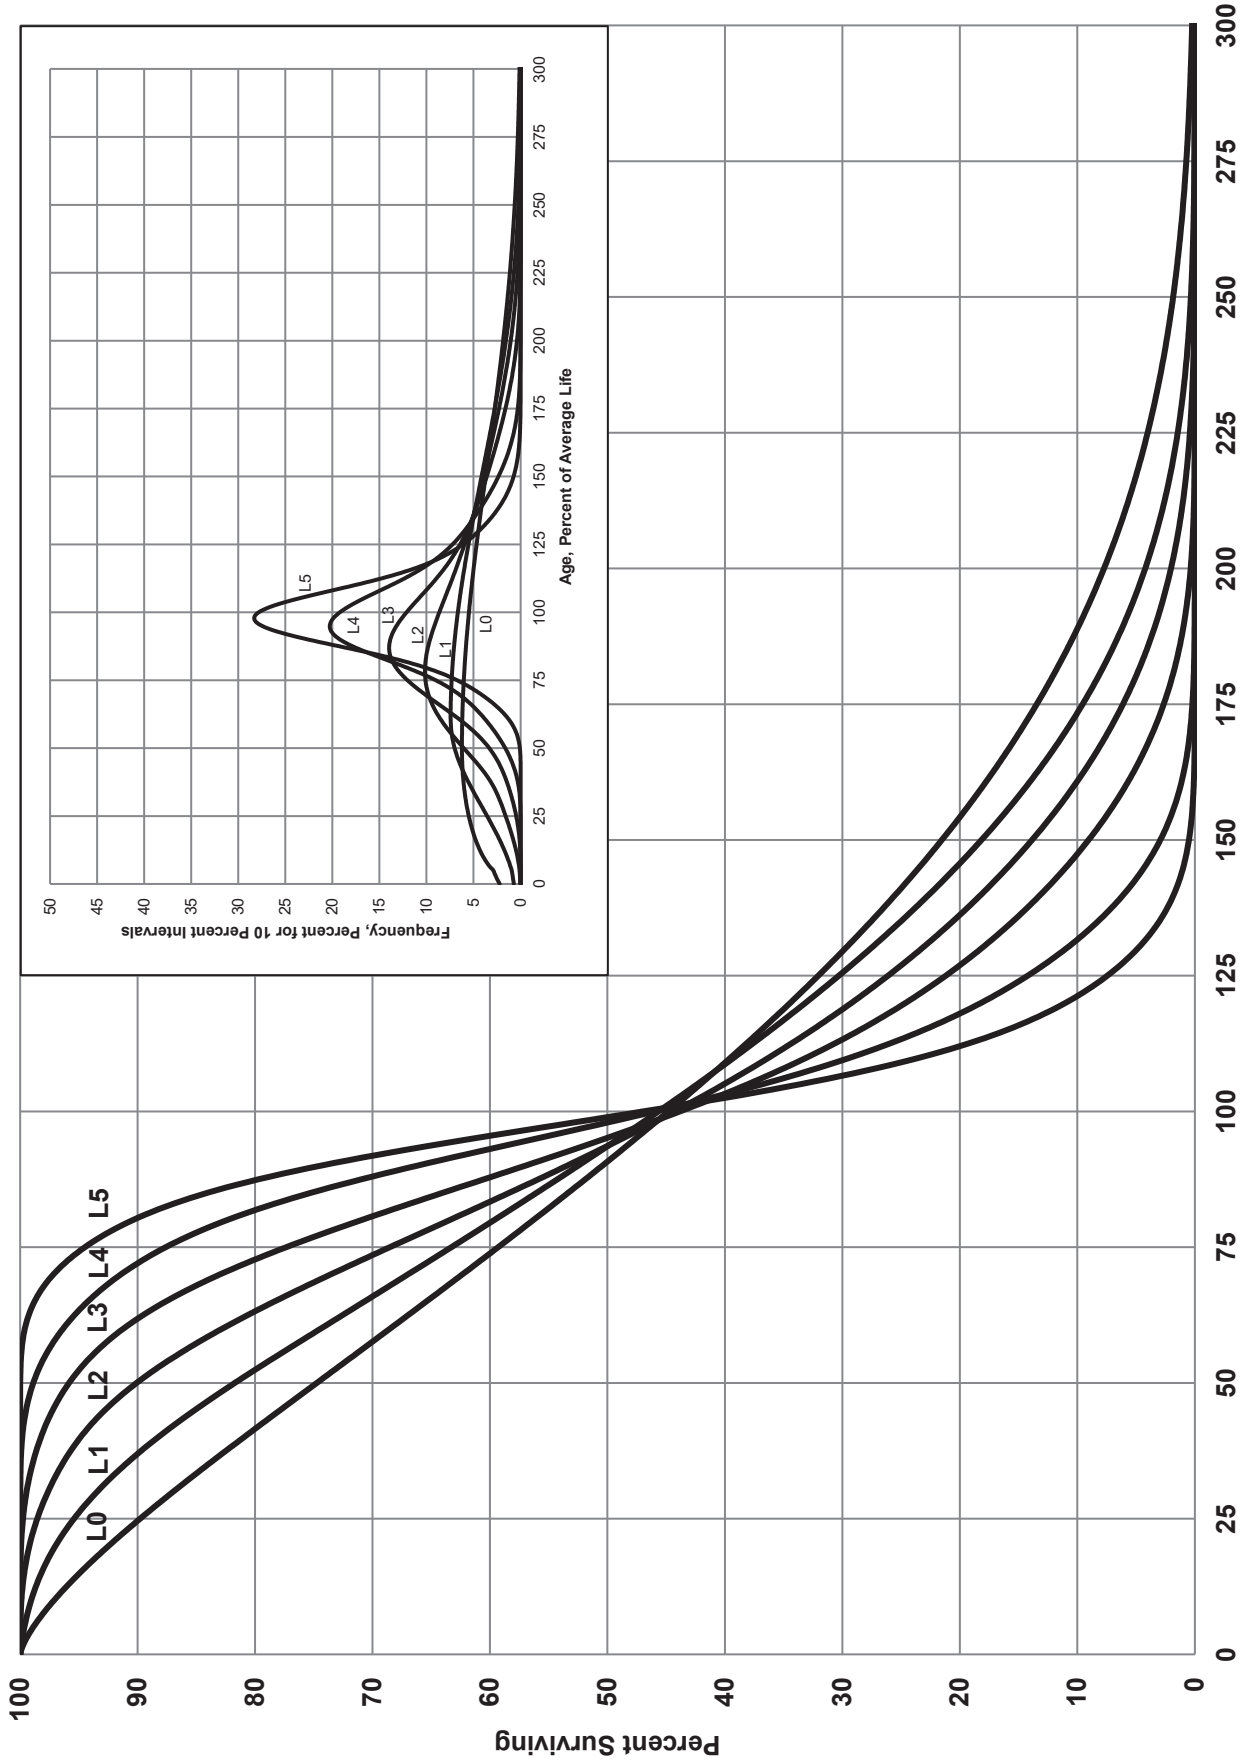

FIGURE 2. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

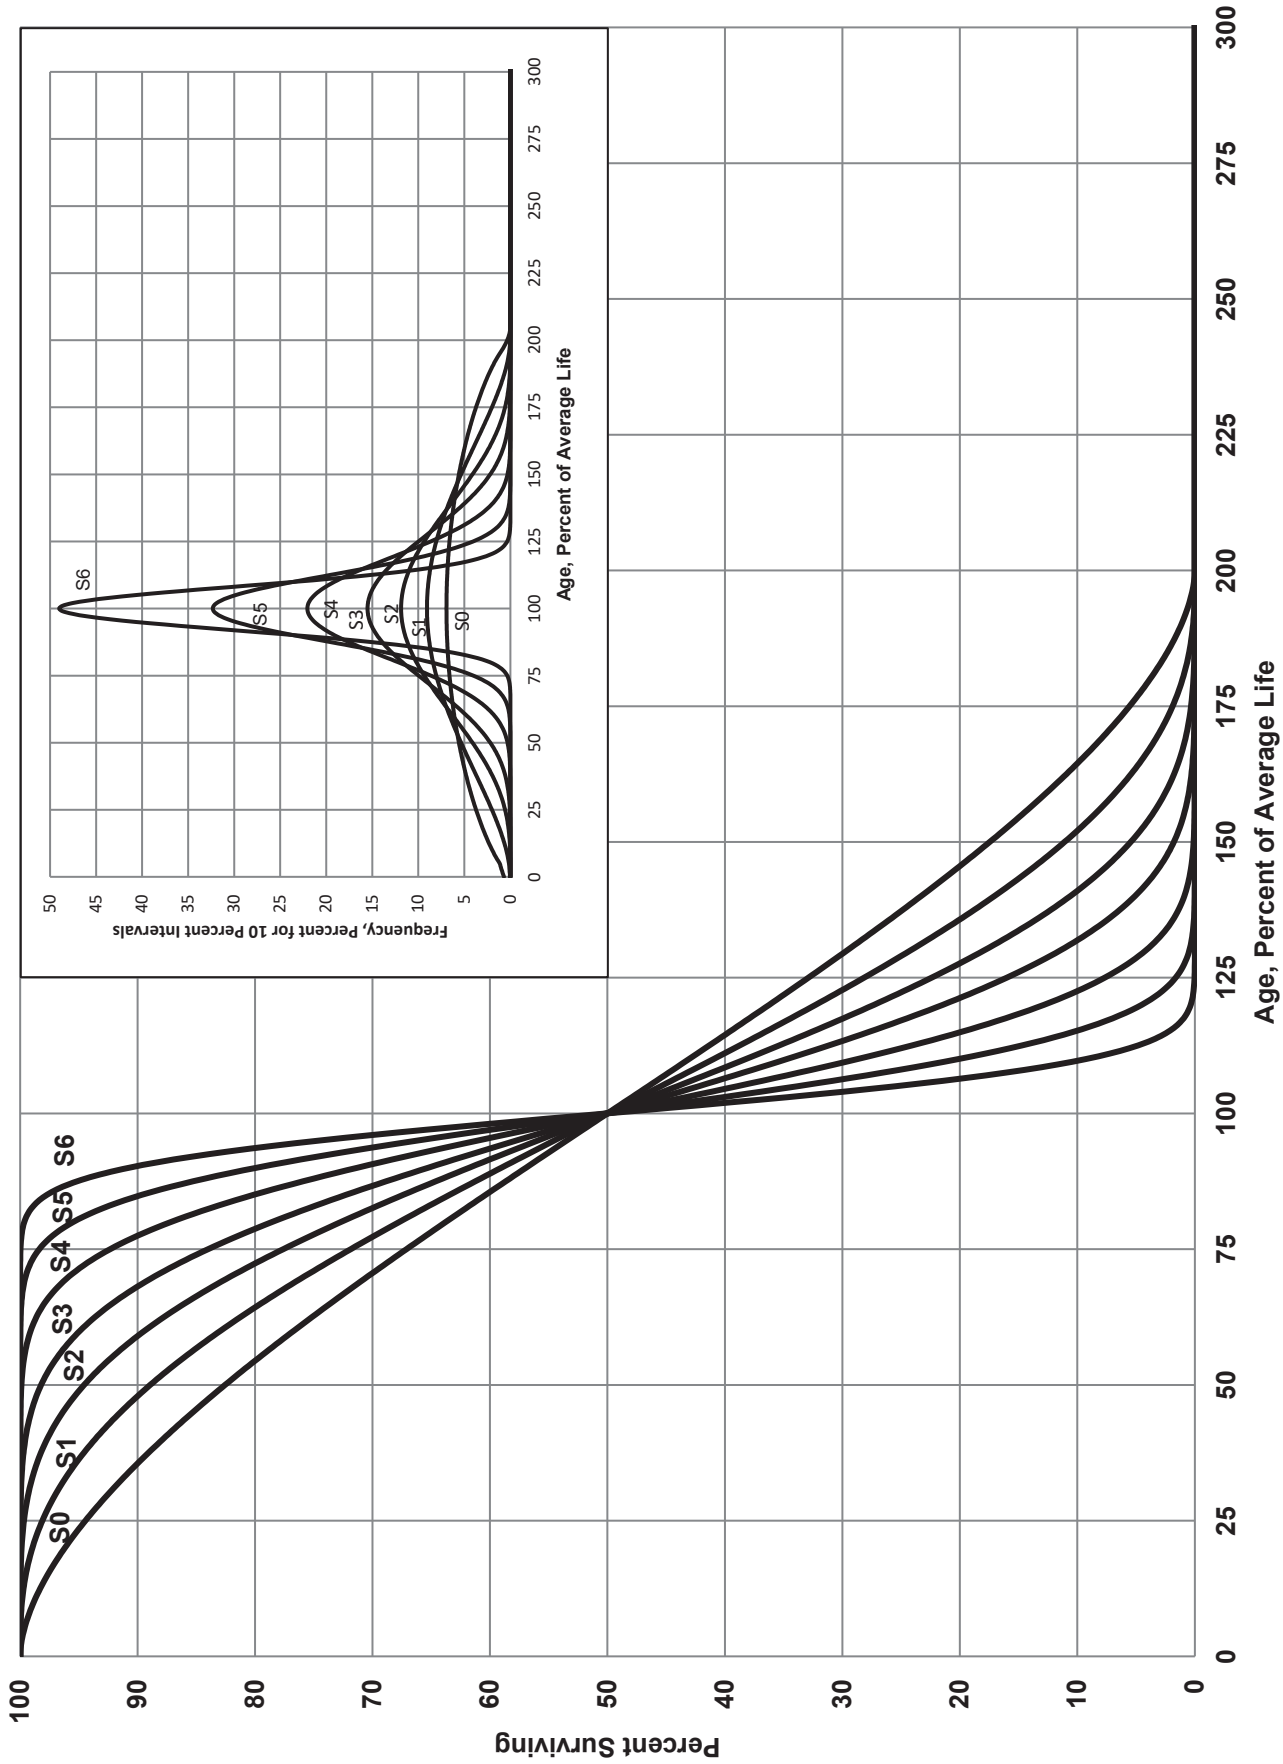

**FIGURE 3. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES**

GANNETT FLEMING

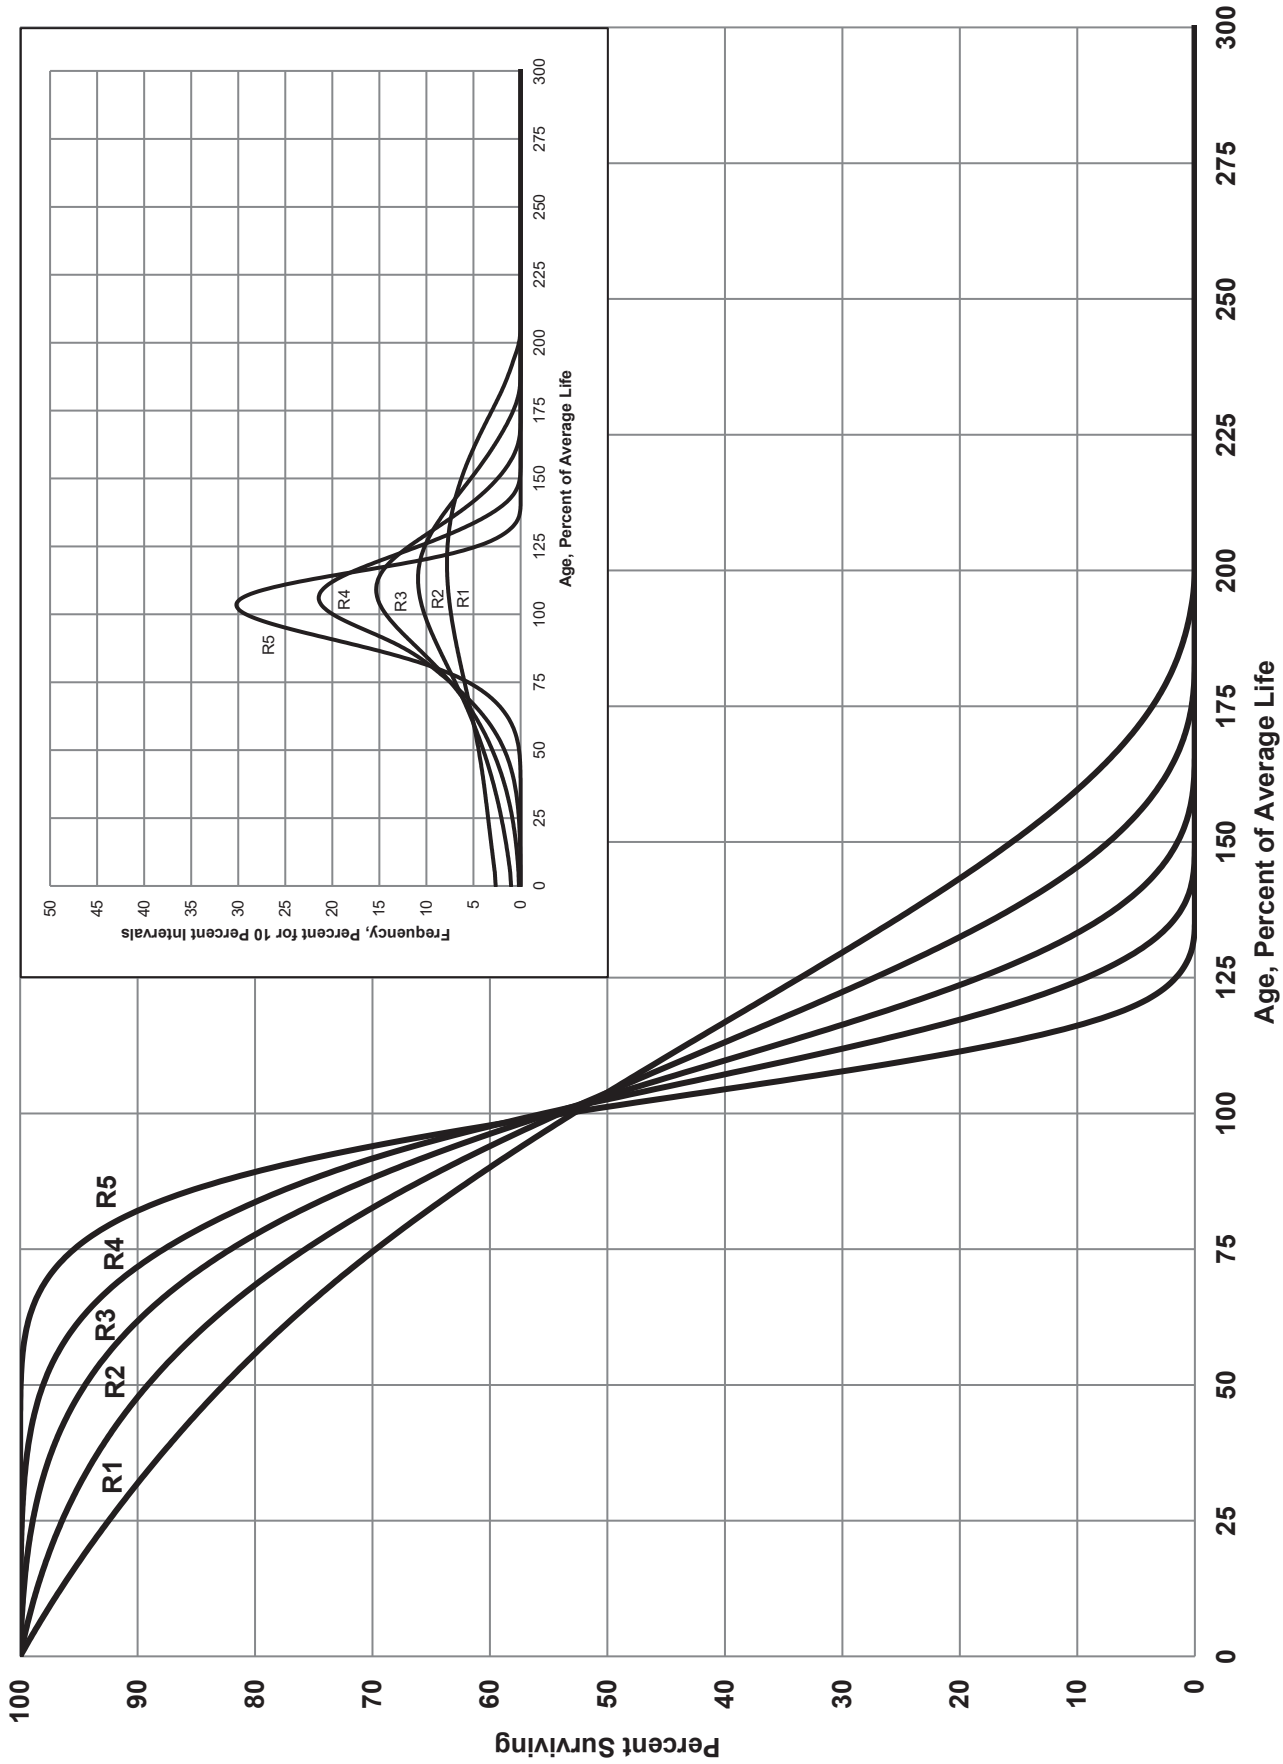

**FIGURE 4. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES**

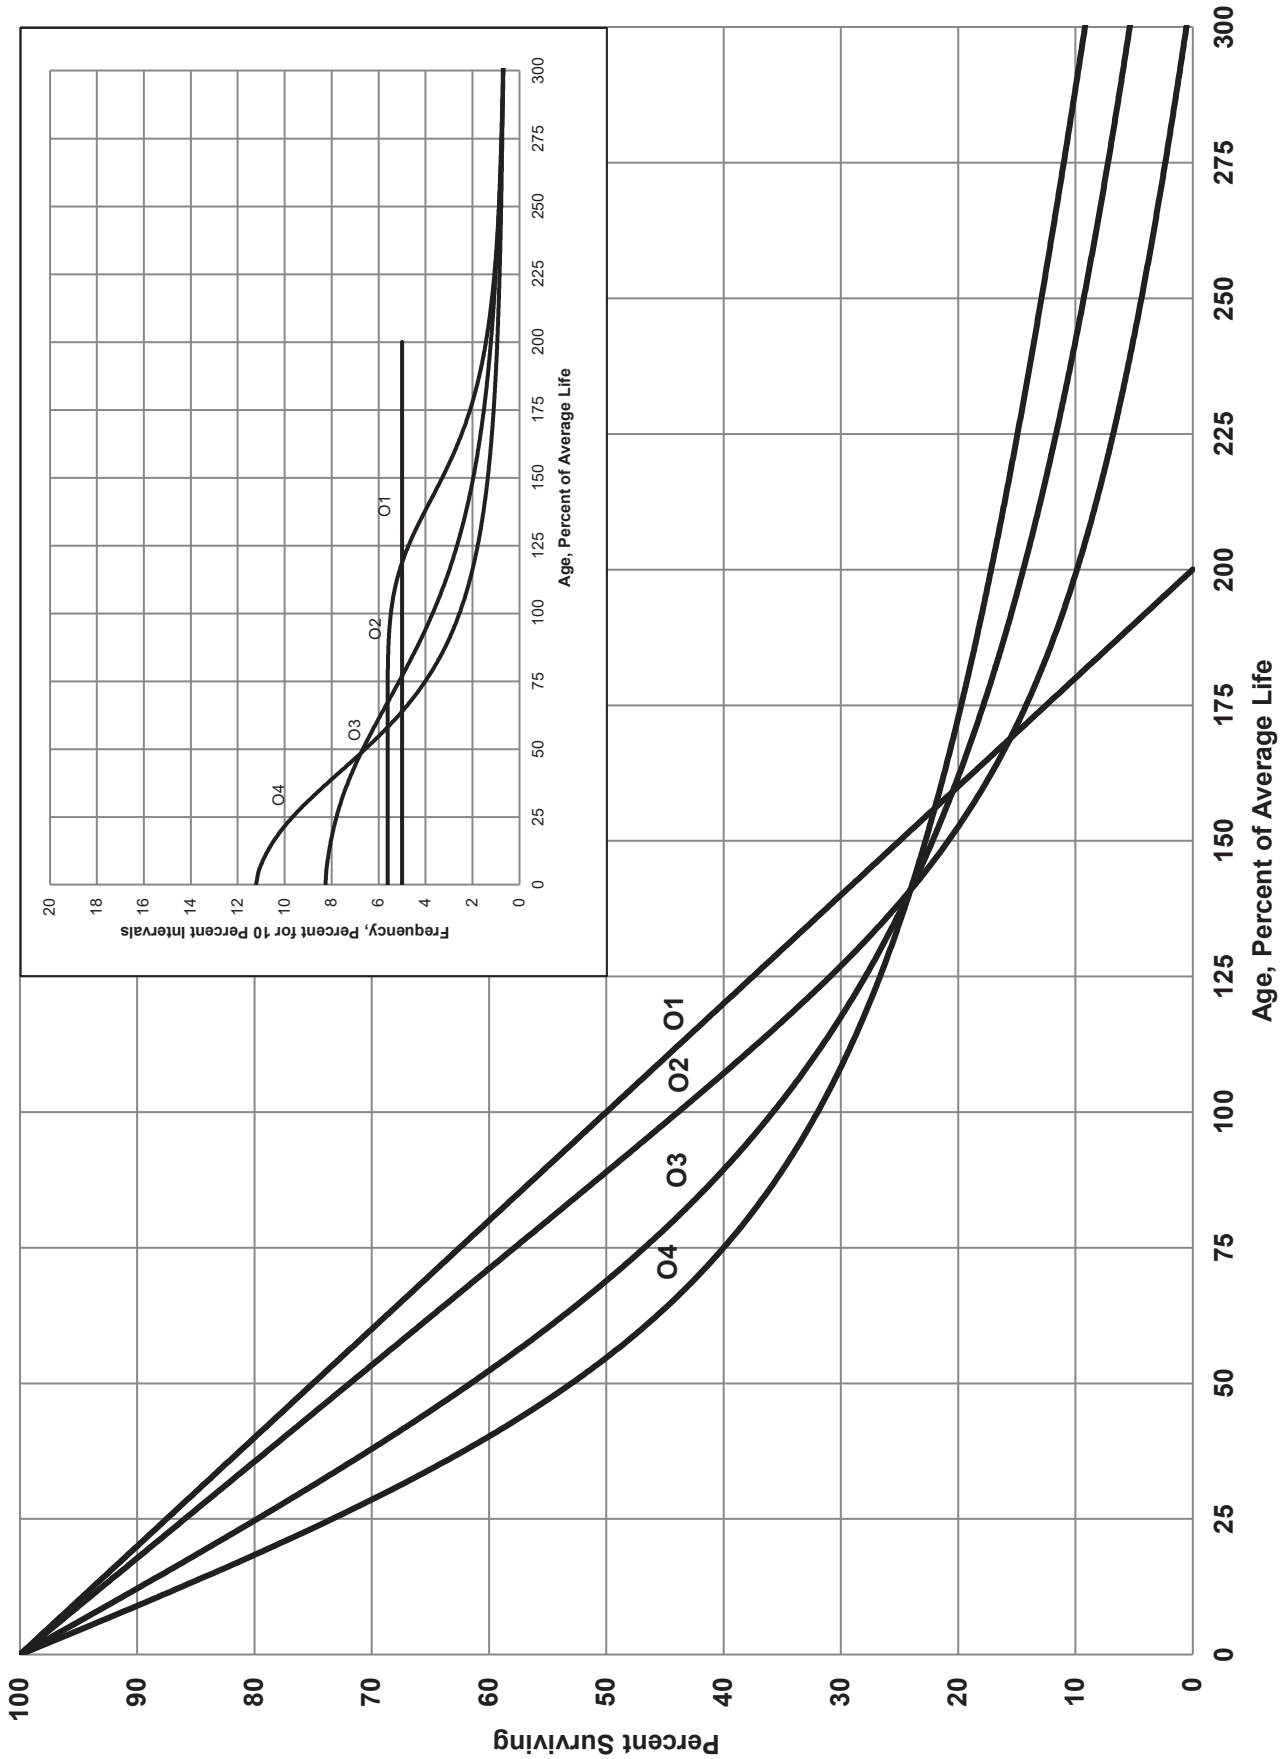

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

**Retirement Rate Method of Analysis**

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

[4]Wolf, Frank K. and W. Chester Fitch. Depreciation Systems. Iowa State University Press. 1994.

**Schedules of Annual Transactions in Plant Records**

The property group used to illustrate the retirement rate method is observed for the experience band 2015-2024 for which there were placements during the years 2010-2024. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2010 were retired in 2015. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2015 retirements of 2010 installations and ending with the 2024 retirements of the 2019 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.

[a] Transfer Affecting Exposures at Beginning of Year
[b] Transfer Affecting Exposures at End of Year
[c] Sale with Continued Use
Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

**Schedule of Plant Exposed to Retirement**

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2015 through 2024 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2020 are calculated in the following manner:

| | | |
|---|---|---|
| Exposures at age 0 | = amount of addition | = $750,000 |
| Exposures at age ½ | = $750,000 - $ 8,000 | = $742,000 |
| Exposures at age 1½ | = $742,000 - $18,000 | = $724,000 |
| Exposures at age 2½ | = $724,000 - $20,000 - $19,000 | = $685,000 |
| Exposures at age 3½ | = $685,000 - $22,000 | = $663,000 |

GANNETT FLEMING

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2015-2024
SUMMARIZED BY AGE INTERVAL

Experience Band 2015-2024 Placement Band 2010-2024

| Year Placed | Exposures, Thousands of Dollars — Annual Survivors at the Beginning of the Year | | | | | | | | | | Total at Beginning of Age Interval | Age Interval |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 | | |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) | (8) | (9) | (10) | (11) | (12) | (13) |
| 2010 | 255 | 245 | 234 | 222 | 209 | 195 | 239 | 216 | 192 | 167 | 167 | 13½-14½ |
| 2011 | 279 | 268 | 256 | 243 | 228 | 212 | 194 | 174 | 153 | 131 | 323 | 12½-13½ |
| 2012 | 307 | 296 | 284 | 271 | 257 | 241 | 224 | 205 | 184 | 162 | 531 | 11½-12½ |
| 2013 | 338 | 330 | 321 | 311 | 300 | 289 | 276 | 262 | 242 | 226 | 823 | 10½-11½ |
| 2014 | 376 | 367 | 357 | 346 | 334 | 321 | 307 | 297 | 280 | 261 | 1,097 | 9½-10½ |
| 2015 | 420[a] | 416 | 407 | 397 | 386 | 374 | 361 | 347 | 332 | 316 | 1,503 | 8½-9½ |
| 2016 | | 460[a] | 455 | 444 | 432 | 419 | 405 | 390 | 374 | 356 | 1,952 | 7½-8½ |
| 2017 | | | 510[a] | 504 | 492 | 479 | 464 | 448 | 431 | 412 | 2,463 | 6½-7½ |
| 2018 | | | | 580[a] | 574 | 561 | 546 | 530 | 501 | 482 | 3,057 | 5½-6½ |
| 2019 | | | | | 660[a] | 653 | 639 | 623 | 628 | 609 | 3,789 | 4½-5½ |
| 2020 | | | | | | 750[a] | 742 | 724 | 685 | 663 | 4,332 | 3½-4½ |
| 2021 | | | | | | | 850[a] | 841 | 821 | 799 | 4,955 | 2½-3½ |
| 2022 | | | | | | | | 960[a] | 949 | 926 | 5,719 | 1½-2½ |
| 2023 | | | | | | | | | 1,080[a] | 1,069 | 6,579 | ½-1½ |
| 2024 | | | | | | | | | | 1,220[a] | 7,490 | 0-½ |
| Total | 1,975 | 2,382 | 2,824 | 3,318 | 3,872 | 4,494 | 5,247 | 6,017 | 6,852 | 7,799 | 44,780 | |

[a]Additions during the year

For the entire experience band 2015-2024, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

**Original Life Table**

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

| | | | | | | |
|---|---|---|---|---|---|---|
| Percent surviving at age 4½ | = | 88.15 | | | | |
| Exposures at age 4½ | = | 3,789,000 | | | | |
| Retirements from age 4½ to 5½ | = | 143,000 | | | | |
| Retirement Ratio | = | 143,000 | ÷ | 3,789,000 | = | 0.0377 |
| Survivor Ratio | = | 1.000 | - | 0.0377 | = | 0.9623 |
| Percent surviving at age 5½ | = | (88.15) | x | (0.9623) | = | 84.83 |

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2015-2024 Placement Band 2010-2024

(Exposure and Retirement Amounts are in Thousands of Dollars)

| Age at Beginning of Interval | Exposures at Beginning of Age Interval | Retirements During Age Interval | Retirement Ratio | Survivor Ratio | Percent Surviving at Beginning of Age Interval |
|---|---|---|---|---|---|
| (1) | (2) | (3) | (4) | (5) | (6) |
| 0.0 | 7,490 | 80 | 0.0107 | 0.9893 | 100.00 |
| 0.5 | 6,579 | 153 | 0.0233 | 0.9767 | 98.93 |
| 1.5 | 5,719 | 151 | 0.0264 | 0.9736 | 96.62 |
| 2.5 | 4,955 | 150 | 0.0303 | 0.9697 | 94.07 |
| 3.5 | 4,332 | 146 | 0.0337 | 0.9663 | 91.22 |
| 4.5 | 3,789 | 143 | 0.0377 | 0.9623 | 88.15 |
| 5.5 | 3,057 | 131 | 0.0429 | 0.9571 | 84.83 |
| 6.5 | 2,463 | 124 | 0.0503 | 0.9497 | 81.19 |
| 7.5 | 1,952 | 113 | 0.0579 | 0.9421 | 77.11 |
| 8.5 | 1,503 | 105 | 0.0699 | 0.9301 | 72.65 |
| 9.5 | 1,097 | 93 | 0.0848 | 0.9152 | 67.57 |
| 10.5 | 823 | 83 | 0.1009 | 0.8991 | 61.84 |
| 11.5 | 531 | 64 | 0.1205 | 0.8795 | 55.60 |
| 12.5 | 323 | 44 | 0.1362 | 0.8638 | 48.90 |
| 13.5 | 167 | 26 | 0.1557 | 0.8443 | 42.24 |
| | | | | | 35.66 |
| Total | 44,780 | 1,606 | | | |

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

**Smoothing the Original Survivor Curve**

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

# PART III. SERVICE LIFE CONSIDERATIONS

# PART III. SERVICE LIFE CONSIDERATIONS

## FIELD TRIPS

In order to be familiar with the operation of the Company and observe representative portions of the plant, field trips were conducted for the study. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

The following is a list of the locations visited during the most recent and prior field trips.

April 7-8, 2025

Shale Creek Wastewater Treatment Plant #1
Shale Creek Wastewater Lift Station
Chisholm Springs Wastewater Treatment Plant
The Resort Wastewater Treatment Plant
Canyon Creek Wastewater Treatment Plant
Blue Water Shores Wastewater Treatment Plant
Briarcreek Wastewater Treatment Plant
Barton Creek Lakeside Wastewater Treatment Plant
Wimberly Wastewater Treatment Plant
Sunset Oaks Wastewater Treatment Plant

March 10-12, 2020

Wood Creek Wastewater Treatment Plant
Go Fourth Wastewater Treatment Plant
Imperial Wastewater Treatment Plant
Candlelight Wastewater Treatment Plant
Shadow Bay Wastewater Treatment Plant
Greenwood Village Wastewater Treatment Plant
Brittmoore Wastewater Treatment Plant #1 and #2
Brittmoore Wastewater Treatment Plant #3

## Service Life Analysis

The service life estimates were based on judgment which considered a number of factors. The primary factors were the statistical analyses of data; current company

policies and outlook as determined during field reviews of the property and other conversations with management; and the survivor curve estimates from previous studies of this company and other water and wastewater companies.

For some of the plant accounts and subaccounts, the statistical analyses resulted in good to excellent indications of significant survivor patterns. Generally, the information external to the statistics led to little or no significant departure from the indicated survivor curves for the accounts listed below.

| Account No. | Account Description |
|---|---|
| 354.20 | Structures and Improvements – Collection |
| 354.30 | Structures and Improvements – Pumping |
| 354.40 | Structures and Improvements – Transmission and Distribution Plant |
| 354.70 | Structures and Improvements – General |
| 360.00 | Collection Sewers – Force |
| 363.00 | Services to Customers |
| 364.00 | Flow Measuring Devices |
| 365.00 | Flow Measuring Installations |
| 370.00 | Receiving Wells |
| 371.30 | Pumping Equipment – Pumping |
| 371.50 | Pumping Equipment – Raw Water Treatment |
| 371.60 | Pumping Equipment – Raw Water Distribution |
| 380.40 | Treatment and Disposal Equipment –Treatment and Disposal |
| 380.50 | Treatment and Disposal Equipment – Raw Water Treatment |
| 381.40 | Plant Sewers – Transmission and Distribution Plant |
| 381.50 | Plant Sewers – Raw Water Treatment |
| 391.00 | Transportation Equipment |

The combined analysis for Accounts 380.40 and 380.50, Treatment and Disposal Equipment, is used to illustrate the manner in which the study was conducted for the accounts in the preceding list. Aged plant accounting data have been compiled for the years through 2024. These data have been coded according to account or property group, type of transaction, year in which the transaction took place, and year in which the utility plant was placed in service. The retirements, other plant transactions and plant additions were analyzed by the retirement rate method.

The survivor curve estimate for these accounts is the 45-R1.5 and is based on the statistical indication for the periods 1998-2024 and 2015-2024. The 45-R1.5 is a good fit of the overall survivor curve as set forth on page VII-75, is consistent with management outlook for a continuation of the historical experience and is at the upper end of the range of 30 to 45 years for treatment equipment. There is a trend in the more recent band of a shorter average life, however, many of the retirements relate to the Company's extensive program to upgrade facilities that are not expected to continue at that level in the future.

Amortization accounting is proposed for certain General Plant accounts that represent numerous units of property, but a small portion of the depreciable plant in service. These accounts represent less than 1 percent of total wastewater plant. A discussion of the basis for the amortization periods is presented in the section "Calculation of Annual and Accrued Amortization."

Generally, the estimates for the remaining accounts of depreciable plant in service were based on judgments which considered the nature of the plant and equipment, the previous estimate for this company and a general knowledge of service lives for similar equipment in other water and wastewater companies.

# PART IV. NET SALVAGE CONSIDERATIONS

# PART IV. NET SALVAGE CONSIDERATIONS

## SALVAGE ANALYSIS

The estimates of net salvage by account were based in part on historical data compiled for the years 2005 through 2024. Cost of removal and gross salvage were expressed as percents of the original cost of plant retired, both on annual and three-year moving average bases. The most recent five-year average also was calculated for consideration. The net salvage estimates by account are expressed as a percent of the original cost of plant retired.

### Net Salvage Considerations

The estimates of net salvage were based primarily on judgment which considered a number of factors. The primary factors were the analyses of historical data; a knowledge of management's plans and operating policies; and net salvage estimates from previous studies of this company and other water and wastewater companies.

The analysis for Account 361.00, Collection Sewers - Gravity, is used to illustrate the manner in which the study was conducted for the accounts in the preceding list. Depreciation reserve accounting data were compiled for the years 2005 through 2024. These data include the retirements, cost of removal and gross salvage, however, past practice was not to record cost of removal for replacement projects.

The net salvage estimate for this account is negative 10 percent and is based on the statistical analyses of in cost of removal and gross salvage percents as shown in the tabulation on pages VIII-13 and VIII-14 and informed judgment. Cost of removal as a percent of the original cost retired has been zero in the past however, accounting practices for recording cost of removal are planned to change similar to other Aqua entities. Gross salvage has been minimal averaging 0 percent for the period. The negative 10 percent net salvage estimate is based primarily on informed judgment and

future plans of the Company for recording these amounts and the percentages used by other wastewater companies.

Amortization accounting is proposed for certain General Plant accounts which represent less than 1 percent of depreciable property. Future gross salvage and removal cost for these accounts will be recorded as revenue and expense, respectively. Inasmuch as there will be no depreciation reserve entries related to net salvage; the estimate of net salvage for accounts subject to amortization is zero percent.

Generally, the net salvage estimates for the remaining accounts were based on judgments which considered the nature of the plant and equipment, reviews of available historical data, and a general knowledge of net salvage percents for similar equipment in other water and wastewater companies.

# PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

# PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

## GROUP DEPRECIATION PROCEDURES

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group. In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

### Single Unit of Property

The calculation of straight line depreciation for a single unit of property is straightforward. For example, if a $1,000 unit of property attains an age of four years and has a life expectancy of six years, the annual accrual over the total life is:

$$\frac{\$1{,}000}{(4 + 6)} = \$100 \text{ per year.}$$

The accrued depreciation is:

$$\$1{,}000\left(1 - \frac{6}{10}\right) = \$400.$$

**Group Depreciation Procedures**

When more than a single item of property is under consideration, a group procedure for depreciation is appropriate because normally all of the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

**Remaining Life Annual Accruals**

For the purpose of calculating remaining life accruals as of December 31, 2024, the depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation follow. The detailed calculations as of December 31, 2024, are set forth in the Results of Study section of the report.

**Average Service Life Procedure**

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future depreciation accruals, if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each

account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$\text{Ratio} = 1 - \frac{\text{Average Remaining Life}}{\text{Average Service Life}}.$$

## CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization period and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is proposed for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable utility plant in service. The accounts and their amortization periods are as follows:

| Account | | Amortization Period, Years |
|---|---|---|
| 390.00 | Office Furniture and Equipment | 20 |
| 393.00 | Tools, Shop and Garage Equipment | 20 |
| 394.00 | Laboratory Equipment | 15 |
| 396.00 | Communication Equipment | 15 |
| 398.00 | Other Tangible Plant | 20 |

The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage age to its amortization period. The annual amortization amount is determined by dividing the original cost by the period of amortization for the account.

# PART VI. RESULTS OF STUDY

# PART VI. RESULTS OF STUDY

## QUALIFICATION OF RESULTS

The calculated annual and accrued depreciation are the principal results of the study. Continued surveillance and periodic revisions are normally required to maintain continued use of appropriate annual depreciation accrual rates. An assumption that accrual rates can remain unchanged over a long period of time implies a disregard for the inherent variability in service lives and net salvage and for the change of the composition of property in service. The annual accrual rates were calculated in accordance with the straight line remaining life method of depreciation, using the average service life procedure based on estimates which reflect considerations of current historical evidence and expected future conditions.

The annual depreciation accrual rates are applicable specifically to the wastewater plant in service as of December 31, 2024. For most plant accounts, the application of such rates to future balances that reflect additions subsequent to December 31, 2024, is reasonable for a period of three to five years.

## DESCRIPTION OF DETAILED TABULATIONS

A summary of the results of the study, as applied to the original cost of wastewater plant in service as of December 31, 2024, is presented on pages VI-4 and VI-5 of this report. The table sets forth the original cost, the book depreciation reserve, future accruals, the calculated annual depreciation rate and amount, and the composite remaining life related to wastewater plant.

The service life estimates were based on judgment that incorporated statistical analysis of retirement data, discussions with management and consideration of estimates made for other water and wastewater utilities. The results of the statistical analysis of

service life are presented in the section beginning on page VII-2, within the supporting documents of this report.

For each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. The survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the curve type designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. The titles of the chart indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The analyses of net salvage data are presented in the section titled, “Net Salvage Statistics.” The tabulations present annual cost of removal and gross salvage data, three-year moving averages and the most recent five-year average. Data are shown in dollars and as percentages of original costs retired.

The tables of the calculated annual depreciation applicable to depreciable assets as of December 31, 2024 are presented in account sequence starting on page IX-2 of the supporting documents. The tables indicate the estimated survivor curve and net salvage percent for the account and set forth, for each installation year, the original cost, the calculated accrued depreciation, the allocated book reserve, future accruals, the remaining life, and the calculated annual accrual amount.

# DIRECT TESTIMONY OF GREGORY R. HERBERT

## I. INTRODUCTION AND QUALIFICATION

**Q. PLEASE STATE YOUR NAME AND ADDRESS.**

A. My name is Gregory R. Herbert. My business address is 300 Sterling Parkway, Suite 200, Mechanicsburg, Pennsylvania (formerly 207 Senate Avenue, Camp Hill, Pennsylvania.).

**Q. BY WHOM ARE YOU EMPLOYED?**

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

**Q. PLEASE DESCRIBE YOUR POSITION WITH GANNETT FLEMING VALUATION AND RATE CONSULTANTS, LLC, AND BRIEFLY STATE YOUR GENERAL DUTIES AND RESPONSIBILITIES.**

A. My title is Assistant Project Manager, Rate Studies. My duties and responsibilities include the preparation of accounting and financial data for revenue requirement and cash working capital requests, the allocation of cost of service to customer classifications, and the design of customer rates in support of public utility rate filings.

**Q. HAVE YOU PRESENTED TESTIMONY IN RATE PROCEEDINGS BEFORE A REGULATORY AGENCY?**

A. Yes. I have testified before the Pennsylvania Public Utility Commission, the Virginia State Corporation Commission, the New Jersey Board of Public Utilities, and the Illinois Commerce Commission concerning revenue requirements, cost of service allocation, and rate design. A list of cases in which I have testified or assisted former Gannett Fleming staff is attached to my testimony as Exhibit GRH-5.

**Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?**

A. I have a Bachelor of Science in Economics from the Pennsylvania State University, University Park, Pennsylvania.

**Q. WOULD YOU PLEASE DESCRIBE YOUR PROFESSIONAL AFFILIATIONS?**

A. I am a member of the National Association of Water Companies and the Pennsylvania Municipal Authorities Association.

**Q. BRIEFLY DESCRIBE YOUR WORK EXPERIENCE.**

A. I joined the Gannett Fleming Valuation and Rate Consultants, LLC in May 2017, as a Rate Analyst. In December 2023 I was promoted to my current position as Assistant Project Manager, Rate Studies, where I assist utilities with the preparation of accounting and financial data regarding revenues under present and proposed rates, including pro forma adjustments to the historic test year ("HTY"), Future Test Year ("FTY") and Fully Projected Future Test Year ("FPFTY") revenues, and the design of customer rates. I also develop pro forma revenue requirements, and conduct cost allocations by customer class, capital recovery fee, lead-lag, and depreciation studies for investor-owned and municipal-owned utilities. Prior to my employment at Gannett Fleming, I was a Senior Analyst, in the Performance Reporting Group of Cambridge Associates, LLC where I oversaw the financial preparation of monthly and annual performance and benchmarking reports for public and private endowment clients.

**Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?**

A. My testimony supports the bill analysis or proof of revenue, cost of service allocation and rate design studies conducted under my direction and supervision for the combined water and wastewater utility plants of Aqua Texas, Inc. (collectively "Aqua" or the "Company").

**Q. HAVE YOU PREPARED EXHIBITS PRESENTING THE RESULTS OF YOUR STUDIES?**

A. Yes. Exhibit GRH-1, presents the results of the water allocation of the pro forma cost of service as of December 31, 2024, for water operations. Exhibit GRH-2, presents the results of the wastewater allocation of the pro forma cost of service as of December 31, 2024, for wastewater operations. Exhibit GRH-3, presents the water operations bill analysis and the pro forma revenue adjustments as of December 31, 2024, and Exhibit GRH-4, presents the wastewater operations bill analysis and the pro forma revenue adjustments as of December 31, 2024.

**Q. ARE YOU SPONSORING ANY OF THE COST OF SERVICE SCHEDULES PROVIDED WITH THE COMPANY'S APPLICATION?**

A. Yes, the cost of service study schedules are presented in Exhibit GRH-1 and Exhibit GRH-2.

**Q. WERE YOUR TESTIMONY, EXHIBITS, AND SCHEDULES PREPARED BY YOU OR UNDER YOUR DIRECT SUPERVISION?**

A. Yes, they were.

## II. WATER BILL ANALYSIS

**Q. PLEASE PROVIDE A BRIEF BACKGROUND OF THE COMPANY'S RATE PROCEEDINGS AND SERVICE TERRITORIES.**

A. Aqua has not requested a rate increase since 2004, and over the course of the last two decades, Aqua's service territory has expanded due to organic growth and acquisitions. The Company is proposing to organize its current tariff service territories by the following three regions: Central Texas Region (currently Southwest Region in tariff), East Texas

Region (formerly Southeast Region in tariff) and North Texas Region. Exhibits GRH-3 and GRH-4 (bill analysis) is organized by the Central, East and North regions.

**Q. HOW IS EXHIBIT GRH-3 ORGANIZED BASED ON AQUA'S CURRENT SERVICE TERRITORIES?**

A. Exhibit GRH-3 (water bill analysis) is presented by the Combined Water Operations, made up of the Central, East and North Regions. The exhibit is then further broken down by revenues and billing determinants of each region. The rate application schedules of Exhibit GRH-3 shown on Schedule 5 are organized by Aqua's current tariff pages, which are presented in Table 1. below.

**Table 1. Summary of Water Tariff Areas (or Rate Zones) of Aqua Texas**

| Region | Tariff Areas (Exh. GRH-3, Sch 5) | Rate Zone Code |
|---|---|---|
| Central Texas Region | SW / Main | C-W1 |
| Central Texas Region | SW / Recently Acquired | C-W2 |
| Central Texas Region | SW / Ingram | C-W3 |
| Central Texas Region | SW / Woodcreek 1 | C-W4 |
| Central Texas Region | SW / Wingert | C-W5 |
| Central Texas Region | SW / Cities | C-W6 |
| Central Texas Region | SW / Brushy Bend Park | C-W7 |
| Central Texas Region | SW / Dancing Bear | C-W8 |
| Central Texas Region | SW / LCRA | C-W9 |
| Central Texas Region | SW / Nighthawk | C-WX |
| Central Texas Region | SW / Royal Oaks | C-WY |
| East Texas Region | SE / Main | E-W1 |

| | | |
|---|---|---|
| East Texas Region | SE / TXAM | E-W2 |
| East Texas Region | SE / Gray | E-W3 |
| East Texas Region | SE / Commons | E-W4 |
| East Texas Region | SE / Cities | E-W5 |
| East Texas Region | SW / Brentwood | C-Brntwd |
| North Texas Region | North / Main | N-W1 |
| North Texas Region | North / Texas H2O | N-W2 |
| North Texas Region | North / Southern Oaks | N-W3 |
| North Texas Region | North / Stockton Bend | N-W4 |
| North Texas Region | North / Cities | N-W5 |
| North Texas Region | North / Carrizo | N-W6 |

**Q. WHAT IS THE PURPOSE OF BILL ANALYSIS?**

A. The purpose of the analysis was to establish the level of revenues to be derived from each customer classification under present and proposed rates based on the billing determinants for the twelve months ended December 31, 2024.

**Q. PLEASE EXPLAIN THE CONTENTS OF EXHIBIT GRH-3.**

A. Exhibit GRH-3 includes the organization of the exhibit, an explanation of the bill analysis procedures to develop pro forma billing determinants, summaries of revenues under the application of present and proposed rates calculated from the pro forma billing determinants within the multiple bill analyses of the tariff areas.

Schedules 1, 1-C, 1-E, and 1-N present the summary of pro forma revenue for the Combined Water Operations and each of the three regions under present and proposed rates for the twelve months ended December 31, 2024, and the proposed revenue increase.

Schedules 2, 2-C, 2-E and 2-N present a summary of the application of proposed rates for the twelve months ended December 31, 2024, under proposed rates for the Combined Water Operations and each of the three regions.

Schedules 3, 3-C, 3-E and 3-N present a summary of the historic test year revenue, bill analysis revenue, pro forma revenue and revenue adjustments for the Combined Water Operations and each of the three regions under present rates, for the twelve months ended December 31, 2024.

Schedule 4, 4-C, 4-E and 4-N presents a summary of the application of pro forma revenues under present rates for the twelve months ended December 31, 2024, for the Combined Water Operations and each of the three regions.

Schedule 5 presents the application of present and proposed rates to the bill analysis for each of the tariff areas, which are also referenced in my testimony as rate zones.

Schedule 6 presents the adjustments to the application of present and proposed rates to each rate zone.

Schedule 7 presents the summary of present and proposed rates by each rate zone.

Schedule 8. presents the comparison of monthly customer bills at various usage levels under present and proposed rates by each rate zone. The bill comparisons reflect customer bills, excluding the Regional Pass Through Charges (RPTC) for rate zones where customers are billed a RPTC.

**Q. PLEASE EXPLAIN THE CALCULATIONS ASSOCIATED WITH THE APPLICATION OF THE RATES TO THE BILLING DETERMINANTS.**

A. An analysis summarizing the customer billing determinants for the twelve months ended December 31, 2024, was provided by the Company. The Company's analysis was summarized by monthly billing determinants, and the results are presented in Schedule 5. The present rates for each rate zone were applied to the billing data, including the pro forma revenue adjustments and summarized in Schedule 3, 3-C, 3-E, and 3-N.

Column 11 of Schedule 3 brings forth the annualized System Improvement Charge (SIC) surcharge to the bill analysis revenue to determine revenues under present rates in column 12. The revenues are adjusted for pro forma revenue adjustments shown in columns 7 and 8 to develop the total revenues in column 12.

The development of pro forma revenues under present and proposed rates for each division is presented in Schedule 5. A comparison of customer bills is provided on Schedule 8 in response to Minimum Filing Requirement II-G-1.3.

**Q. PLEASE LIST THE VARIOUS WATER REVENUE ADJUSTMENTS.**

A. The following adjustments were made for water operations: (1) Customer Count Adjustment; (2) Declining Usage Adjustment; (3) Change in Customers; (4) Change in Volumetric Rate Blocks; (5) SIC Annualization Adjustment; (6) Corrections to Customer Rates; and (7) Unbilled Revenue.

**Q. PLEASE DESCRIBE THE NUMBER OF CUSTOMERS COUNT ADJUSTMENT.**

A. The first adjustment for the derivation of pro forma billing determinants is to normalize the twelve months of the historic test year's number of bills . This adjustment is made to reflect the total number of historic test year bills rounded to the nearest whole number.

**Q. PLEASE DESCRIBE THE DECLINING USAGE ADJUSTMENT.**

A. Three years of historical usage was analyzed for the declining usage adjustment. Aqua explained that 2022 and 2023 were drought years in Texas, and the Company experienced higher usage and average monthly usage, which is shown in Table 2 below. In 2024, which was not a drought year, the Company experienced a much lower system-wide average monthly average usage. The Company determined it would be a conservative approach to

calculate the declining usage based off the two drought years, which was determined to be a 1.69% decline in usage.

**Table 2. Calculation of System-Wide Average Usage**

| Billing Determinants | 2022 | 2023 | 2024 |
|---|---|---|---|
| **Usage (kGals.)** | **6,917,630** | **6,936,017** | **6,428,750** |
| **No. of Bills** | **850,179** | **866,027** | **888,027** |
| **Average (kGals.)** | **8.136** | **8.001** | **7.240** |
| **Declining Usage %** | | **-1.69%** | **-9.51%** |

**Q. PLEASE DESCRIBE THE CHANGE IN CUSTOMERS ADJUSTMENT.**

A. Schedule 6 calculates the adjustment to revenues for the change in customers due to organic growth to the residential class. The customer growth was determined by evaluating the change in customers from the years 2021 to 2022, 2022 to 2023, and from 2023 to 2024 and taking the average growth of these three time periods to determine the projected growth in customers. Schedule 6 includes an annualized HTY adjustment to revenues and pro forma adjustments to revenues for the change in customers and is then brought forward to Schedule 5.

**Q. PLEASE DESCRIBE THE CHANGE IN VOLUMETRIC RATE BLOCKS.**

A. Multiple rate zones currently have an inclining rate block structure with Block 1 charging customers at the lowest rate for the first 5,000 gallons of usage, Block 2 is charged at a higher rate than Block 1 for the next 5,000 gallons of usage, Block 3 is charged at a higher rate than Blocks 1 and 2 for the next 10,000 gallons of usage, and Block 4, which is the highest rate, is charged to customers with usage over 20,000 gallons of water per month.

Based on the bill frequency reports provided in minimum filing requirement II-G-1.4, this block structure was reasonable to apply to all water rate zones as a pro forma revenue adjustment under present rates.

**Q. PLEASE DESCRIBE THE ANNUALIZATION OF SIC REVENUES ADJUSTMENT.**

A. Schedule 3 and 5 reflects a revenue adjustment to annualize the SIC revenues for the year ended December 31, 2024, which is based on the Company's pro forma billing determinants at the end of the December 31, 2024.

**Q. PLEASE DESCRIBE THE CORRECTIONS TO CURRENT CUSTOMER RATES.**

A. There were several tariff areas in which customers reside but are charged a different rate zone's rate. I will highlight Brentwood as an example because this rate zone had the greatest revenue impact related to the adjustment made for the correction of current customer rates. Brentwood is currently charged the Central – Main Division rate (C-W1), however it is located and operated under Aqua's East Region. Therefore, a pro forma revenue adjustment was made to move these customers from being charged the Central – Main Division Rates to the East – Main Division rates (E-W1) under present rates and is reflected on Schedule 5.

**Q. PLEASE DESCRIBE THE ADJUSTMENT TO ELIMINATE UNBILLED REVENUE.**

A. The Company records booked revenue on an accrual basis and therefore requires an adjustment to be made to eliminate the effect of revenue that was accrued in booked revenue but was not billed during the twelve months ended December 31, 2024.

## III. WATER - COST OF SERVICE ALLOCATION STUDIES

**Q. BRIEFLY DESCRIBE THE PURPOSE OF YOUR COST ALLOCATION STUDIES IN EXHIBIT GRH-1.**

A. Exhibit GRH-1, presents a water cost of service study for the combined water operations. The purpose of the study was to allocate the water cost of service, which is the total revenue requirement, to the customer classifications. In the study, the total costs were allocated to the residential, commercial, public, other water utilities, and public fire protection classifications in accordance with generally-accepted principles and procedures. The cost of service allocation reflects the relative cost responsibilities of each class of customers. The allocated cost of service is one of several criteria appropriate for consideration in designing customer rates to produce the required revenues.

**Q. HAVE YOU PREPARED AN EXHIBIT PRESENTING THE RESULTS OF YOUR STUDY?**

A. Yes. As previously noted, the results of my allocation of the pro forma cost of service as of December 31, 2024, are presented in Exhibit GRH-1.

**Q. PLEASE DESCRIBE THE METHOD OF COST ALLOCATION THAT WAS USED IN YOUR STUDY.**

A. The base-extra capacity method, as described in the 2017 and prior Water Rates Manuals published by the American Water Works Association ("AWWA"), was used to allocate the pro forma costs. This method is a recognized method for allocating the cost of providing water service to customer classifications in proportion to the classifications' use of the commodity, facilities, and services. It is generally accepted as a sound method for allocating the cost of water service.

**Q. IS THE METHOD DESCRIBED IN EXHIBIT GRH-1?**

A. Yes. It is described on pages 3 and 4 of the exhibit.

**Q. PLEASE DESCRIBE THE PROCEDURE FOLLOWED IN THE COST ALLOCATION STUDIES.**

A. Each identified classification of cost in the pro forma cost of service was allocated to the customer classifications using appropriate allocation factors. This allocation is presented in Schedule D of Exhibit GRH-1. The account numbers and associated items of cost, which include operation and maintenance expenses, depreciation expense, taxes and income available for return, are identified in columns 1 and 2 of Schedule D. The cost of each item, shown in column 4, is allocated to the several customer classifications based on allocation factors referenced in column 3. The development of the allocation factors is presented in Schedule E of the exhibit.

I will use some of the larger cost items to illustrate the principles and considerations used in the cost allocation methodology. Water purchased for resale, purchased electric power and treatment chemicals are examples of costs that tend to vary with the amount of water consumed and are thus considered base costs. They are allocated to the several customer classifications in direct proportion to the average daily consumption of those classifications using Factor 1. The development of Factor 1 is shown in Schedule E of Exhibit GRH-1.

Other sources of supply, pumping, purification, and transmission costs are associated with meeting usage requirements in excess of the average; these costs are generally incurred to meet maximum day requirements. Costs of this nature were allocated to customer classifications partially as base costs, proportional to average daily

consumption, partially as maximum day extra capacity costs, in proportion to maximum day extra capacity, and, in the case of certain pumping stations and transmission mains, partially as fire protection costs, through the use of Factors 2 and 3. The development of the allocation factors, referenced as Factors 2 and 3, is shown in Schedule E of Exhibit GRH-1. Costs associated with distribution mains and storage facilities were allocated partly on the basis of average consumption and partly on the basis of maximum hour extra demand, including the demand for fire protection service, because these facilities are designed to meet maximum hour and fire demand requirements. The development of the factors, referenced as Factors 4 and 5, used for these allocations is shown in Schedule E of Exhibit GRH-1. Fire demand costs were allocated to public fire protection service and general service in proportion to the relative potential demands on the system by hydrants and fire services to provide both fire protection and general service, as presented in Schedules G of Exhibit GRH-1.

Costs associated with pumping facilities were allocated on combined bases of maximum day, maximum day including fire and maximum hour extra capacity because these facilities serve these functions. The relative weightings of Factor 2 (maximum day), Factor 3 (maximum day with fire) and Factor 4 (maximum hour) for pumping facilities were based on the functional use of pumps and footage of mains, serving maximum day and maximum hour functions.

Costs associated with meters and services facilities were allocated to customer classifications in proportion to the capital costs of the sizes and quantities of meters and services serving each classification. The development of factors for meters and services, referenced as Factor 7 and Factor 8, is presented in Exhibit GRH-1.

Costs for customer accounting, billing and collecting were allocated based on the number of bills for each classification, and costs for meter reading were allocated on the basis of the number of bills rendered to metered customers. The development of these factors, referenced as Factor 9 and Factor 10, is presented in Exhibit GRH-1.

Administrative and general costs were allocated based on allocated direct costs excluding those costs such as purchased water, power and chemicals which require little administrative and general expense. The development of factors for this allocation, referenced as Factor 14, is presented in Exhibit GRH-1.

Annual depreciation accruals were allocated based on the function of the facilities represented by the depreciation expense for each depreciable plant account. The original cost less accrued depreciation of utility plant in service was similarly allocated for the purpose of developing factors, referenced as Factor 18, for allocating items such as income taxes and return. The development of Factor 18 is presented in Exhibit GRH-1.

**Q. WHAT WAS THE SOURCE OF THE TOTAL COST OF SERVICE DATA SET FORTH IN COLUMN 4 OF SCHEDULES D OF EXHIBIT GRH-1?**

A. The pro forma costs of service were furnished by Company Witness Haddad.

**Q. REFER TO SCHEDULE E OF EXHIBIT GRH-1, AND EXPLAIN THE SOURCE OF THE SYSTEM MAXIMUM DAY AND MAXIMUM HOUR RATIOS USED IN THE DEVELOPMENT OF FACTORS REFERENCED AS FACTORS 2, 3, 4 AND 5.**

A. The ratios were based on my review of experienced Company data and judgement. Monthly and average daily sendout data was provided by the Company, however, the tracking system is unable to determine the coincident, system-wide max day and max hour

sendout. I took into consideration that the majority of Aqua's customer base is residential, and typically, the residential class peaks more often (during the mornings, evenings and weekends) than non-residential classes. Therefore, the maximum day ratio of 2.0 times the average day approximates the ratio of maximum daily send-out experienced by the Company.

**Q. WHAT FACTORS WERE CONSIDERED IN ESTIMATING THE MAXIMUM DAY EXTRA CAPACITY AND MAXIMUM HOUR EXTRA CAPACITY DEMANDS USED FOR THE CUSTOMER CLASSIFICATIONS IN THE DEVELOPMENT OF FACTORS 2, 3, 4 AND 5?**

A. The estimated demands were based on judgment, my review of historical usage by the customer classes, description and customer class makeup of the service area of the Company, and generally accepted customer class maximum day and maximum hour demand ratios.

**Q. PLEASE DESCRIBE WHY THE UNRECOVERED PORTION OF PUBLIC FIRE PROTECTION IS ALLOCATED TO OTHER CLASSES.**

A. The study allocates costs attributed to fire protection and then reallocates the unrecovered portion of public fire protection to the residential, commercial, and public classifications. Effectively, the method has reassigned the unrecovered fire protection costs to other classes, as fire departments provide service to the Company's other classes during a fire.

**Q. HOW DID YOU ALLOCATE THE UNRECOVERED PORTION OF PUBLIC FIRE SERVICE?**

A. Based on the requirement that these costs are to be recovered in fixed charges, I allocated the unrecovered public fire costs using Factor 21, which is based on the meter equivalents of the residential, commercial, and public classifications.

**Q. HAVE YOU SUMMARIZED THE RESULTS OF YOUR COST ALLOCATION STUDY?**

A. Yes. The results are summarized in columns 1, 2 and 3 of Schedule A in Exhibit GRH-1. Column 2 sets forth the total allocated pro forma cost of service as of December 31, 2024, for each customer classification identified in column 1. Column 5 presents each customer classification's cost responsibility as a percent of the total cost.

**Q. HAVE YOU COMPARED THESE COST RESPONSIBILITIES WITH THE PROPORTIONATE REVENUE UNDER EXISTING RATES FOR EACH CUSTOMER CLASSIFICATION?**

A. Yes. A comparison of the allocated cost responsibilities and the percentage revenue under existing rates can be made by comparing columns 6 and 8 of Schedule A of Exhibit GRH-1.

## IV. WATER RATE DESIGN

**Q. IS THE PROPOSED RATE STRUCTURE PRESENTED IN AN EXHIBIT?**

A. Yes. A comparison of the present and proposed rate schedules is presented in Schedule 7 of Exhibit GRH-3.

**Q. WHAT ARE THE APPROPRIATE FACTORS TO BE CONSIDERED IN THE DESIGN OF THE RATE STRUCTURE?**

A. In preparing a rate structure, one should consider the allocated costs of service, the impact of radical changes from the present rate structure, the understandability and ease of application of the rate structure, community and social influences, and the value of service, particularly competitive concerns. I worked with the Company's management to determine the extent to which each of these criteria should be incorporated in the rate structure to be designed.

**Q. PLEASE ELABORATE ON THE GUIDELINES YOU USED TO DESIGN THE PROPOSED RATES.**

A. The guidelines were: (1) consolidate the various rate divisions into one state-wide water rate; (2) set the usage breakpoints of the volumetric blocks to be the same across all rate zones; (3) gradually reduce the customer charges and offset the reduction in revenues by increasing volumetric rates; and (4) where applicable, eliminate any allowance or minimum usage rate structures to promote conservation and a more equitable rate structure (customers pay for actual water amounts used).

**Q. DO THE PROPOSED RATES COMPLY WITH THESE GUIDELINES?**

A. Yes, they do. However, based on the results of the cost of service study, the volumetric rates for the non-residential customer classes (Commercial and Public classes) had to be differentiated from the residential volumetric rates under the proposed rate design in order to move the customer classes proposed revenues toward their respective cost allocations presented in Exhibit GRH-1.

**Q. HAS THE GOAL OF RATE EQUALIZATION BEEN THE COMPANY'S HIGHEST PRIORITY?**

A. Yes. The Company's last rate case was over 20 years ago, and since 2004, the Company's service area has expanded through growth and acquisitions, and it has adopted various rate structures within its service territory. The Company is advocating for single tariff pricing for the following reasons: (1) Single tariff pricing benefits all Aqua Texas customers by promoting affordability as a result of achieving economies of scale and spreading costs of numerous systems over larger customer bases; (2) consolidation mitigates rate impacts to customers over the short-term and long-term; (3) rate equalization is necessary to provide sage, compliant water service at reasonable costs to customers in rural communities; (4) rate equalization reduces the need for more frequent rate cases, thus reducing the burdens on customers, the Commission and the utility; (5) consolidation can emphasize growth and acquisition of smaller, distressed systems; and (6) the consolidated rate design is designed to promote conservation.

**Q. WHAT IS RATE EQUALIZATION?**

A. Rate equalization or single tariff pricing is the use of the same rates for the same service rendered by a water company regardless of the customer's location.

**Q. WHAT IS THE BASIS FOR RATE EQUALIZATION?**

A. Rate equalization is based on the long-term rate stability which results from a single tariff, the operating characteristics of the tariff groups, the equivalent services offered, the cost of service on a tariff group basis, and the principle of gradualism.

**Q. PLEASE EXPLAIN HOW RATE EQUALIZATION PROMOTES AFFORDABILITY AS A RESULT OF ACHIEVING ECONOMIES OF SCALE AND PROVIDES LONG-TERM RATE STABILITY FOR THE MULTIPLE TARIFF AREAS.**

A. Utility customer rates are dependent on the total expenses and rate base of the utility and the amount of the commodity which the utility sells. Changes in rate base, particularly as a result of the Safe Drinking Water Act, have a significant potential for adversely impacting the rates for certain areas within a utility.

The ability to absorb the cost of such projects over a larger customer base is a compelling argument in support of rate equalization. Capital programs will never be uniform in the multiple operating areas, even over periods of five to ten years. The cost of specific programs should be shared by all customers rather than burdening those of the affected areas. Rate increases will be more gradual and major increases in specific tariff groups will be avoided.

**Q. IN WHAT MANNER DO THE OPERATING CHARACTERISTICS OF THE SEVERAL AREAS SUPPORT RATE EQUALIZATION?**

A. There are many similarities in the manner in which the several areas are operated. All of the systems pump their treated water through transmission lines to distribution areas that include mains, booster pump stations and storage facilities. All of the areas provide water to individual customers through a service line and meter. All of the areas rely on a centralized work for billing, accounting, engineering, administration, and regulatory matters. All of the areas rely on a common source of funds for financing working capital

and plant construction. Inasmuch as the costs of operation are related to functions in which the operating characteristics are the same, the use of equal rates is supported.

**Q. DO THE VARIANCES BETWEEN ALLOCATED COSTS OF THE RATE ZONES WARRANT A USE OF SEPARATE RATE SCHEDULES?**

A. No, they do not. Charging one group of customers higher rates because they may be served by a newer plant whose original cost exceeds that of other plants as the result of inflation is not logical. The concepts previously discussed outweigh this consideration and justify the goal of moving toward a single tariff. The electric industry reflects such concepts when it serves customers in geographically dispersed areas. A kilowatt-hour delivered in one area has the same price as a kilowatt-hour delivered in another area despite the fact that cost of service studies could be performed to identify differences in the cost of providing service to customer classes in different regions.

**Q. ARE THERE OTHER COSTS OF SERVICE CONSIDERATIONS THAT SUPPORT RATE EQUALIZATION?**

A. Yes. The Company has consolidated and centralized its operations. Common costs which must be assigned or allocated to each operating area to establish regional, or tariff group revenue requirements include management fees, office costs, customer service costs, depreciation expense developed on the basis of Company-wide depreciation rates, and income tax expense based on total Company financing and tax provisions. The allocation of common costs, while a reasonable practice, are subject to judgement and may not result in the development of tariff group revenue requirements which reflect precisely the cost of serving each area.

**Q. HOW DOES RATE EQUALIZATION PROMOTE CONSERVATION?**

A. Proposing a single, state-wide rate structure provides consistency for all customers. Allowances or minimum usages were eliminated from monthly minimum charges that were applicable to several rate zones, and base facilities charges were reduced for several rate zones. As a result, inclining volumetric rate blocks were applied to all customers and the volumetric rates were increased to offset any loss of revenue from eliminating minimum usage charges and lowering the customer charges, which is a rate structure that promotes conservation equitably for all customers. The state-wide, conservation based rate structure will also promote affordability, as the customer has more responsibility to lower a monthly bill due to the amount of water used has greater impacts to the total bill under proposed rates.

**Q. IS THE PROPOSED RATE DESIGN A JUST AND REASONABLE RESULT IN THIS CASE?**

A. Yes. For all the reasons described above, the proposed rate design consolidates the water rate zones to a single, state-wide water rate that is just and reasonable.

## V. WASTEWATER – BILL ANALYSIS

**Q. HOW IS EXHIBIT GRH-4 ORGANIZED BASED ON AQUA'S CURRENT WASTEWATER SERVICE TERRITORIES?**

A. Exhibit GRH-4 (wastewater bill analysis) is presented by Combined Wastewater Operations, made up of the Central, East and North Regions. The exhibit is then further broken down by revenues and billing determinants of each region. The rate application schedules of Exhibit GRH-4 shown on Schedule 5 are organized by Aqua's current wastewater tariff pages, which are presented in Table 1. below.

**Table 1. Summary of Water Tariff Areas (or Rate Zones) of Aqua Texas**

| Region | Tariff Areas (Exh. GRH-3 & GRH-4, Sch 5) | Rate Zone Code |
|---|---|---|
| Central Texas Region | SW / Main | C-S1 |
| Central Texas Region | SW / Briarcreek | C-S2 |
| Central Texas Region | SW / Woodcreek 1 | C-S3 |
| East Texas Region | SE / Main | E-S1 |
| East Texas Region | SE / Gray | E-S2 |
| East Texas Region | SE / Pinetrails | E-S3 |
| East Texas Region | SE / TXAM | E-S4 |
| East Texas Region | SE / Houston | E-S5 |
| East Texas Region | SW / Brentwood | C-Brntwd |
| North Texas Region | North / Main | N-S1 |
| North Texas Region | North / Texas H2O | N-S2 |
| North Texas Region | North / Hood County | N-S3 |
| North Texas Region | North / Eagle's Bluff | N-S4 |

**Q. WHAT IS THE PURPOSE OF BILL ANALYSIS?**

A. The purpose of the rate application was to establish the level of revenues to be derived from each customer classification under present and proposed rates based on the billing determinants for the twelve months ended December 31, 2024.

**Q. PLEASE EXPLAIN THE CONTENTS OF EXHIBIT GRH-4.**

A. Exhibit GRH-4 includes the organization of the exhibit, an explanation of the bill analysis procedures to develop pro forma billing determinants., summaries of the revenues under the application of present and proposed rates calculated from the pro forma billing determinants within the multiple bill analyses of the tariff areas.

Schedules 1, 1-C, 1-E, and 1-N present the summary of pro forma revenue for the Combined Wastewater Operations and each of the three regions under present and proposed rates for the twelve months ended December 31, 2024, and the proposed revenue increase.

Schedules 2, 2-C, 2-E and 2-N present a summary of the application of proposed rates for the twelve months ended December 31, 2024, under proposed rates for the Combined Wastewater Operations and each of the three regions.

Schedules 3, 3-C, 3-E and 3-N present a summary of the historic test year revenue, bill analysis revenue, pro forma revenue and revenue adjustments for the Combined Wastewater Operations and each of the three regions under present rates, for the twelve months ended December 31, 2024.

Schedule 4, 4-C, 4-E and 4-N presents a summary of the application of pro forma revenues under present rates for the twelve months ended December 31, 2024 for the Combined Wastewater Operations and each of the three regions.

Schedule 5 presents the application of present and proposed rates to the bill analysis for each of the rate zones.

Schedule 6 presents the adjustments to the application of present and proposed rates to each rate zone.

Schedule 7 presents the summary of present and proposed rates by each rate zone.

Schedule 8. presents the comparison of monthly customer bills at various usage levels under present and proposed rates by each rate zone.

**Q. PLEASE LIST THE VARIOUS WASTEWATER REVENUE ADJUSTMENTS.**

A. The following adjustments were made for water operations: (1) Customer Count Adjustment; (2) Change in Customers; (3) Unmetered to Metered Customers (4) SIC Annualization Adjustment; and (5) Unbilled Revenue.

**Q. PLEASE DESCRIBE THE NUMBER OF CUSTOMERS COUNT ADJUSTMENT.**

A. The first adjustment for the derivation of pro forma billing determinants is to normalize the most recent month of the historic test year's number of bills. This adjustment is made to reflect the total number of historic test year bill rounded to the nearest whole number.

**Q. PLEASE DESCRIBE THE CHANGE IN CUSTOMERS ADJUSTMENT.**

A. Schedule 6 calculates the adjustment to revenues for the change in customers due to organic growth to the residential class. The customer growth was determined by evaluating the change in customers from the years 2021 to 2022, 2022 to 2023, and from 2023 to 2024 and taking the average growth of these three time periods to determine the projected growth in customers. Schedule 6 includes an annualized HTY adjustment to revenues and pro forma adjustments to revenues for the change in customers and is then brought forward to Schedule 5.

**Q. PLEASE DESCRIBE THE ADJUSTMENT TO MOVE UNMETERED CUSTOMERS THAT ARE CURRENTLY CHARGED FLAT RATES TO METERED RATES.**

A. The Company requested for me to develop a pro forma revenue adjustment to move unmetered wastewater customers who are currently Aqua TX water customers to metered rates. The Company provided me a list of wastewater customers who are also water customers by their respective water meter sizes in order to develop billing determinants by

meter size for these wastewater customers. The average usages for these unmetered wastewater customers, compiled by water rate zone, were developed using these unmetered wastewater customers' water billing records. These averages were then used to estimate the annual usage for these wastewater customers who transitioned to metered rates.

**Q. PLEASE DESCRIBE THE ANNUALIZATION OF SIC REVENUES ADJUSTMENT.**

A. Schedule 3 and 5 reflects a revenue adjustment to annualize the SIC revenues for the year ended December 31, 2024, which is based on the Company's pro forma billing determinants at the end of the December 31, 2024.

**Q. PLEASE DESCRIBE THE ADJUSTMENT TO ELIMINATE UNBILLED REVENUE.**

A. The Company records booked revenue on an accrual basis and therefore requires an adjustment to be made to eliminate the effect of revenue that was accrued in booked revenue but was not billed during the twelve months ended December 31, 2024.

## VI. WASTEWATER – COST OF SERVICE ALLOCATION

**Q. PLEASE DESCRIBE YOUR EXHIBIT GRH-2.**

A. Exhibit GRH-2 presents the wastewater cost of service study for Aqua's combined wastewater operations.

**Q. PLEASE DESCRIBE THE OVERALL COST OF SERVICE ALLOCATION METHODOLOGY FOR THE COMPANY.**

A. The cost of service allocation study for the Company's combined wastewater operations includes the revenue requirements provided by Company Witness Haddad and operational data provided by the Company.

The purpose of the study is to allocate the total cost of service, which is the total revenue requirement, to the several customer classifications. In the study, the total costs are allocated to the residential and non-residential customer classifications in accordance with generally accepted cost of service principles and procedures.

**Q. HAVE YOU PREPARED AN EXHIBIT PRESENTING THE RESULTS OF YOUR STUDY?**

A. Yes. The results of my allocations of the pro forma cost of service as of December 31, 2024, and proposed customer rates to produce the pro forma revenue requirements for each division as of that date are presented in Exhibit GRH-2

**Q. PLEASE DESCRIBE THE METHOD OF COST ALLOCATION THAT WAS USED IN YOUR STUDY.**

A. I used the functional cost allocation methodology described in "Financing and Charges for Wastewater Systems," Manual of Practice No. 27, published by the Water Environment Federation ("Manual of Practice No. 27"). This method allocated the cost of providing wastewater service to customer classifications in proportion to each classifications' use of the service provider's facilities and services. Costs are assigned to cost components using predominant operational purposes as cost-causative factors. The functional cost method is generally accepted as a sound method for allocating the cost of wastewater service.

**Q. WHAT PROCEDURES DID YOU USE TO APPLY THE COST ALLOCATION METHODOLOGY FOR WASTEWATER OPERATIONS?**

A. Each element of the cost of service is allocated to customer classifications according to the functional categories of flow, infiltration and inflow ("I&I"), customer facilities and customer accounting. The functional costs are allocated to customer classifications based

on the amount of flow contributed to the system, the amount of I&I allocated to each class, and the number and relative size of customers.

**Q. HAVE YOU SUMMARIZED THE RESULTS OF YOUR COST ALLOCATION STUDY?**

A. Yes. The results are summarized in columns 2 and 3 of Schedule A in Exhibit GRH-2. Column 2 sets forth the total allocated pro forma cost of service for each customer classification identified in column 1. Column 3 presents each customer classification's cost responsibility as a percent of the total cost. The cost of service by class in column 2 was developed in Schedule B. The factors that allocate the functional costs to customer classes are presented in Schedule C. The factors that allocate the cost of service to the cost functions are shown in Schedule E.

**Q. HAVE YOU COMPARED THESE COST RESPONSIBILITIES WITH THE PROPORTIONATE REVENUE UNDER EXISTING RATES FOR EACH CUSTOMER CLASSIFICATION?**

A. Yes. A comparison of the allocated cost responsibilities and the percentage revenue under existing rates can be made by comparing columns 4 and 5 of each Schedule A. The revenues in column 6 are simply the revenues under proposed rates that move toward the cost of service in column 2, and the increase or decrease from present revenues is shown in column 8, with the percentage increase or decrease in column 9.

## VII. WASTEWATER RATE DESIGN

**Q. IS THE PROPOSED RATE STRUCTURE PRESENTED IN AN EXHIBIT?**

A. Yes, on Schedule 7 of Exhibit GRH-4.

**Q. DID YOU DEVELOP RATE DESIGN GUIDELINES DURING DISCUSSIONS WITH COMPANY MANAGEMENT?**

A. Yes, I did. The guidelines were: (1) consolidate rates across rate zones to proposed a state-wide wastewater rate; (2) for metered areas, maintain a rate structure that includes a customer charge or EDU charge and a single block usage charge; (3) move unmetered customers to metered rates for wastewater customers who are currently water customers; (4) for unmetered areas, develop a monthly residential flat rate to equal 6,000 gallons priced-out at the proposed state-wide volumetric rate and maintain flat rates by meter size for non-residential customers, and (5) where applicable, eliminate an allowance.

**Q. DOES THE PROPOSED RATE DESIGN COMPLY WITH THESE GUIDELINES?**

A. Yes. Of the various rate zones, the proposed rates consolidate all wastewater rate zones into a single, state-wide tariff rate that is just and reasonable.

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

A. Yes, it does.

**COMMONWEALTH OF PENNSYLVANIA** §

**COUNTY OF CUMBERLAND** §

## AFFIDAVIT OF GREGORY R. HERBERT

BEFORE ME, the undersigned authority, on this day personally appeared Gregory R. Herbert who having been placed under oath by me did depose as follows:

1. "My name is Gregory R. Herbert. I am of sound mind and capable of making this affidavit. The facts stated herein are true and correct based upon my personal knowledge. I am an Assistant Project Manager, Rate Studies, at Gannett Fleming Valuation and Rate Consultants, LLC.

2. I have prepared the foregoing Direct Testimony and I swear or affirm that I have personal knowledge of the facts in the testimony, schedules, and exhibits that I am sponsoring in this application, that I am competent to testify to them, and that the statements and information that I am sponsoring are true and correct to the best of my knowledge."

Further affiant sayeth not.

Gregory R. Herbert

SUBSCRIBED AND SWORN TO BEFORE ME by Gregory R. Herbert on this 8th day of May 2025.

Attention Trey Reginelli
Controller

Pursuant to your request, we have conducted a cost of service allocation study based on proforma revenue requirements estimated for the test year ended December 31, 2024, and have prepared proposed rate schedules designed to produce the pro forma revenue requirements for Aqua Texas, Inc. water operations.

The attached Exhibit GRH-1 presents the results of the study, as well as supporting schedules which set forth the detailed cost allocation calculations. Schedule A presents a comparison of the cost of service by customer classification with the pro forma revenues produced by each classification under present and proposed rates. The supporting operating revenues from sales of water is presented in the attached Exhibit GRH-3.

Respectfully submitted,

# INTRODUCTION

**AQUA TEXAS, INC.**

**COST OF SERVICE ALLOCATION STUDY**
**AS OF DECEMBER 31, 2024**

## PLAN OF REPORT

The report sets forth the results of the cost of service allocation study based on pro forma costs as of December 31, 2024, for Aqua Texas, Inc. The Introduction, contains statements with respect to the basis of the study, the procedures employed, and a summary of the results of the studies. The following section presents the Cost of Service Study for the Combined Water Operations by Customer Classification, including detailed schedules of the allocation of costs to customer classifications, as well as the bases for the allocations. Schedule A of the cost of service study summarizes the cost allocation and the revenues produced under present and proposed rates.

## BASIS OF STUDY

The purpose of the cost allocation study is to determine the relative cost of service responsibilities of the several customer classifications based on considerations of quantity of water consumed, variability of rate of consumption, and costs associated with customer metering, billing and accounting. The allocation study incorporated generally-accepted principles and procedures for allocating the several categories of cost to customer classifications in proportion to each classification's use of facilities, commodities and services required in providing water service.

**ALLOCATION PROCEDURES**

The allocation study was based on the Base-Extra Capacity Method for allocating costs to customer classifications. The method is described in the 2017 and prior editions of the Water Rates Manual, published by the American Water Works Association. The four basic categories of cost responsibility are base, extra capacity, customer, and fire protection costs. The following discussion presents a brief description of these costs and the manner in which they were allocated.

Base Costs are costs that tend to vary with the quantity of water used, plus costs associated with supplying, treating, pumping, and distributing water to customers under average load conditions, without the elements necessary to meet peak demands. Base costs were allocated to customer classifications on the basis of average daily usage.

Extra Capacity Costs are costs associated with meeting usage requirements in excess of the average. They include operating and capital costs for additional plant and system capacity beyond that required for average use. The extra capacity costs in this study are subdivided into costs necessary to meet maximum day extra demand and costs to meet maximum hour extra demand. The extra capacity costs were allocated to customer classifications on the bases of each classification's maximum day and hour usage in excess of average usage.

Customer Costs are costs associated with serving customers regardless of their usage or demand characteristics. Customer costs include the operating and capital costs related to meters and services, meter reading costs, and billing and

collecting costs. The customer costs were allocated on the bases of capital cost of meters and services and the number of customer bills.

Fire Protection Costs are costs associated with providing the facilities to meet the potential peak demand of fire protection service. Fire Protection costs are determined to meet Public Fire Protection demands. The extra capacity costs assigned to fire protection service on the basis of the total relative demands of the hydrants to provide fire protection, as well as general service.

**RESULTS OF STUDIES**

The results of the cost of service allocation study are set forth in the following section of the report. The data summarized in Schedules A, "Comparison of Pro Forma Cost of Service with Revenues Under Present and Proposed Rates for the Twelve Months Ended December 31, 2024", constitute the principal results of the cost allocation study and subsequent rate design.

The cost of service by customer classification shown in column 2 of Schedule A is developed in Schedule D, "Allocation of Cost of Service to Customer Classifications for the Twelve Months Ended December 31, 2024". The allocation of the total cost of service to the several customer classifications was performed by applying the allocation factors referenced in column 3 of Schedule D to the cost of service set forth in column 3. The bases for the allocation factors are presented in Schedule E.

Schedule F, "Basis for Allocating Demand Related Costs of Fire Service to Public Fire Protection Customer Classifications", presents the calculation of the total relative demand of fire hydrants. Schedule G sets forth the "Calculation of the Customer Cost per Month for a 5/8-Inch Meter."

# AQUA TEXAS, INC. - COMBINED WATER OPERATIONS

## FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma, future test year average daily consumption for each customer classification.

| Customer Classification | Average Daily Consumption, 1000 Gallons | Allocation Factor |
|---|---|---|
| (1) | (2) | (3) |
| Residential | 14,818 | 0.8260 |
| Commercial | 2,621 | 0.1461 |
| Public | 4 | 0.0002 |
| Other Water Utilities | 157 | 0.0088 |
| Public Fire Protection | 339 | 0.0189 |
| Total | 17,939 | 1.0000 |

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capapcity demand for each customer classification , as follows:

| | Average Daily Consumption | | Maximum Day Extra Capacity | | |
|---|---|---|---|---|---|
| Customer Classification | Allocation Factor 1 | Weighted Factor | Allocation Factor | Weighted Factor | Allocation Factor |
| (1) | (2) | (3)=(2)x 0.5000 | (4) | (5)=(4)x 0.5000 | (6)=(3)+(5) |
| Residential | 0.8260 | 0.4130 | 0.9006 | 0.4503 | 0.8633 |
| Commercial | 0.1461 | 0.0731 | 0.0922 | 0.0461 | 0.1192 |
| Public | 0.0002 | 0.0001 | 0.0002 | 0.0001 | 0.0002 |
| Other Water Utilities | 0.0088 | 0.0044 | 0.0070 | 0.0035 | 0.0079 |
| Public Fire Protection | 0.0189 | 0.0094 | | | 0.0094 |
| Total | 1.0000 | 0.5000 | 1.0000 | 0.5000 | 1.0000 |

The derivation of the maximum day extra capapcity factors in column 4 and the basis for the column 3 and 5 weightings are presented on the following page.

# AQUA TEXAS, INC. - COMBINED WATER OPERATIONS

## FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

### FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS, cont.

| | | Maximum Day Extra Capacity | | |
|---|---|---|---|---|
| Customer Classification | Average Daily Consumption, 1000 Gallons | Factor* | Rate of Flow, 1000 Gallons Per Day | Allocation Factor |
| (1) | (2) | (3) | (4)=(2)x(3) | (5) |
| Residential | 14,818 | 1.9 | 28,154.2 | 0.9006 |
| Commercial | 2,621 | 1.1 | 2,883.1 | 0.0922 |
| Public | 4 | 1.5 | 6.0 | 0.0002 |
| Other Water Utilities | 157 | 1.4 | 219.8 | 0.0070 |
| Total | 17,600 | | 31,263.1 | 1.0000 |

The weightings of the factos is based on the maximum day ratio of 1.50, based on a review of maximum day ratios experienced during the period 2016 through 2024.

| | Maximum Day Ratio | Weight |
|---|---|---|
| Average Day | 1.00 | 0.5000 |
| Maximum Day Extra Capacity | 1.00 | 0.5000 |
| Total | 2.00 | 1.0000 |

* Ratio of maximum day to average day minus 1.0.

# AQUA TEXAS, INC. - COMBINED WATER OPERATIONS

## FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS.

Factors are based on the weighting of the average daily consumption, the maximum day extra capacity demand, and the fire protection demand for each customer classification.

| | Average Daily Consumption | | Maximum Day Extra Capacity | | Fire Protection | | |
|---|---|---|---|---|---|---|---|
| Customer Classification | Allocation Factor | Weighted Factor | Allocation Factor | Weighted Factor | Allocation Factor | Weighted Factor | Allocation Factor |
| (1) | (2) | (3)=(2) X 0.4853 | (4) | (5)=(4) X 0.4853 | (6) | (7)=(6) X 0.0294 | (8)=(3)+(5)+(7) |
| Residential | 0.8260 | 0.4009 | 0.9006 | 0.4370 | | | 0.8379 |
| Commercial | 0.1461 | 0.0709 | 0.0922 | 0.0448 | | | 0.1157 |

| Public Fire Protection | 0.0189 | 0.0092 | | | 1.0000 | 0.0294 | 0.0386 |
| Total | 1.0000 | 0.4853 | 1.0000 | 0.4853 | 1.0000 | 0.0294 | 1.0000 |

AQUA TEXAS, INC. - COMBINED WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weightings of the factors is based on the potential demannd of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 2.00 and the total system sendout for the test year of 295.85 mgd. The rato is based on a review of the experienced maximum day ratios during the period 2016 through 2024. The system demand for fire protection is 5,000 gpm for 5 hours.

| | Ratio | Rate of Flow, (GPD) | Weight |
|---|---|---|---|
| Average Day | 1.00 | 24,735,768 | 0.4853 |
| Maximum Day Extra Capacity | 1.00 | 24,735,768 | 0.4853 |
| Subtotal | 2.00 | 49,471,536 | 0.9706 |
| Fire Protection | | 1,500,000 | 0.0294 |
| Total | | 50,971,536 | 1.0000 |

The public and private fire protection allocation factors in column 6 on the previous page are based on the relative potiential demands (see Schedule G).

# AQUA TEXAS, INC. - COMBINED WATER OPERATIONS

## FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the average daily consumption, the maximum day extra capapcity demand, and the fire protection demand for each customer classification.

| | | Average Hourly Consumption | | Maximum Hour Extra Capacity | | Fire Protection | | |
|---|---|---|---|---|---|---|---|---|
| Customer Classification | 1000 Gals. | Allocation Factor | Weighted Factor | Allocation Factor | Weighted Factor | Allocation Factor | Weighted Factor | Allocation Factor |
| (1) | (2) | (3) | (4)=(3) X 0.2704 | (5) | (6)=(5) X 0.5407 | (7) | (8)=(7) X 0.1889 | (9)=(4)+(6)+(8) |
| Residential | 617.4 | 0.8261 | 0.2233 | 0.8647 | 0.4676 | | | 0.6909 |
| Commercial | 109.2 | 0.1461 | 0.0395 | 0.1275 | 0.0689 | | | 0.1084 |
| Public | 0.2 | 0.0003 | 0.0001 | 0.0002 | 0.0001 | | | 0.0002 |
| Other Water Utilities | 6.5 | 0.0087 | 0.0024 | 0.0076 | 0.0041 | | | 0.0065 |
| Public Fire Protection | 14.1 | 0.0189 | 0.0051 | | | 1.0000 | 0.1889 | 0.1940 |
| Total | 747.4 | 1.0000 | 0.2704 | 1.0000 | 0.5407 | 1.0000 | 0.1889 | 1.0000 |

The maximum hour extra capacity factors in column 5 are determined as follows:

# AQUA TEXAS, INC. - COMBINED WATER OPERATIONS

## FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

### FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS, cont.

The weightings of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maixmum hour ratio of 3.0 and the total system sendout for the test year of 295.85 mgd. The ratio is based on a review of the experienced maximum hour ratios during the period 2016 through 2024
The system demand for fire protection is 5,000 gpm.

| | Ratio | Rate of Flow, (GPM) | Weight |
|---|---|---|---|
| Average Hour | 1.00 | 17,178 | 0.2704 |
| Maximum Hour Extra Capacity | 2.00 | 34,355 | 0.5407 |
| Subtotal | 3.00 | 51,533 | 0.8111 |
| Fire Protection | | 12,000 | 0.1889 |
| Total | | 63,533 | 1.0000 |

The maximum hour extra capacity factors in column 5 of the previous page are determined as follows:

| Customer Classification | Average Hourly Consumption 1000 Gals. | Maximum Hour Extra Capacity Factor* | Maximum Hour Extra Capacity 1000 Gals. Per Hour | Allocation Factor |
|---|---|---|---|---|
| (1) | (2) | (3) | (4)=(2)x(3) | (5) |
| Residential | 617.4 | 3.0 | 1,852.2 | 0.8647 |
| Commercial | 109.2 | 2.5 | 273.0 | 0.1275 |
| Public | 0.2 | 2.5 | 0.5 | 0.0002 |
| Other Water Utilities | 6.5 | 2.5 | 16.3 | 0.0076 |
| Total | 733.3 | | 2,142.0 | 1.0000 |

* Ratio of Maximum Hour To Average Hour Minus 1.0.

The public and private fire protection allocation factors in column 7 on the previous page are based on the relative potential demands (see Schedule F).

# AQUA TEXAS, INC. - COMBINED WATER OPERATIONS

## FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES.

Factors are based on the weightings of the average hourly consumption, the maximum hour extra capacity demand, and the fire protection demand for each customer classification.

| | Average Hourly Consumption | | | Maximum Hour Extra Capacity | | Fire Protection | | |
|---|---|---|---|---|---|---|---|---|
| Customer Classification | 100 Gals. | Allocation Factor | Weighted Factor | Allocation Factor | Weighted Factor | Allocation Factor | Weighted Factor | Allocation Factor |
| (1) | (2) | (3) | (4)=(3) X 0.2651 | (5) | (6)=(5) X 0.5302 | (7) | (8)=(7) X 0.2046 | (9)=(4)+(6)+(8) |
| Residential | 617.4 | 0.8261 | 0.2190 | 0.8647 | 0.4585 | | | 0.6775 |
| Commercial | 109.2 | 0.1461 | 0.0387 | 0.1275 | 0.0676 | | | 0.1063 |
| Public | 0.2 | 0.0003 | 0.0001 | 0.0002 | 0.0001 | | | 0.0002 |
| Other Water Utilities | 6.5 | 0.0087 | 0.0023 | 0.0076 | 0.0040 | | | 0.0063 |
| Public Fire Protection | 14.1 | 0.0189 | 0.0050 | | | 1.0000 | 0.2046 | 0.2096 |
| Total | 747.4 | 1.0000 | 0.2651 | 1.0000 | 0.5302 | 1.0000 | 0.2046 | 1.0000 |

The weighting of the factors is based on the ratio of the capacity required for a 10-hour dmenad of fire flow, as related to total storage capacity. The calculation is shown on the following page.

# AQUA TEXAS, INC. - COMBINED WATER OPERATIONS

## FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES, cont.

The weighting of the factors is based on the ratio of the capacity required for a 5-hour demand of fire flow, as related to total storage capacity.

Fire Protection Weight = $\frac{\text{5,000 GPM X 60 Min. X 5 Hours}}{\text{7,329,805 Gallons}}$ = 0.2046

General Service Weight = 1.0000 - 0.2046 = 0.7954

The weighting of the average hourly consumption and maximum hour extra demand for general service is based on the maximum hour ratio, as follows:

| | Maximum Hour Ratio | Percent | Weight |
|---|---|---|---|
| Average Hour | 1.00 | 33.33 | 0.2651 |
| Extra Capacity Maximum Hour | 2.00 | 66.67 | 0.5302 |
| Total | 3.00 | 100.00 | 0.7954 |

# AQUA TEXAS, INC. - COMBINED WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 6. ALLOCATION OF COSTS ASSOCIATED WITH FIRE HYDRANTS.

Factors are based on the number of hydrants, as follows:

| Customer Classification | Number of Hydrants | Allocation Factor |
|---|---|---|
| (1) | (2) | (3) |
| Public Fire Protection | 2,302 | 1.0000 |
| Total | 2,302 | 1.0000 |

FACTOR 7 AND 7A. ALLOCATION OF COSTS ASSOCIATED WITH METERS.

Factors are based on the relative cost of meters by size and customer classification, as developed on the following page and summarized below:

| Customer Classification | 5/8" Dollar Equivalents | Factor 7 Allocation Factor |
|---|---|---|
| (1) | (2) | (3) |
| Residential | 75,022 | 0.9032 |
| Commercial | 7,955 | 0.0958 |
| Public | 13 | 0.0002 |
| Other Water Utilities | 75 | 0.0009 |
| Total | 83,065 | 1.0000 |

Attention Trey Reginelli
Controller

Pursuant to your request, we have conducted a cost of service allocation study based on proforma revenue requirements estimated for the test year ended December 31, 2024, and have prepared proposed rate schedules designed to produce the pro forma revenue requirements for Aqua Texas, Inc. wastewater operations.

The attached Exhibit GRH-2 presents the results of the study, as well as supporting schedules which set forth the detailed cost allocation calculations. Schedule A presents a comparison of the cost of service by customer classification with the pro forma revenues produced by each classification under present and proposed rates. The supporting operating revenues from sales of wastewater is presented in the attached Exhibit GRH-4.

Respectfully submitted,

**WASTEWATER COST OF SERVICE ALLOCATION STUDIES
AS OF DECEMBER 31, 2024
AND PROPOSED CUSTOMER RATES**

## PLAN OF REPORT

The reports set forth the results of the cost of service allocation studies for the Combined Wastewater Operations based on pro forma costs as of December 31, 2024, for Aqua Texas, Inc. The studies include cost of service studies for the Company's Combined Wastewater Operations. The introduction contains statements with respect to the basis of the study, the procedures employed, and a summary of the results of the study. Schedule A of each study summarizes the cost allocation for the wastewater operations and total revenues under present and proposed rates. Cost of Service by Customer Classification of each area presents detailed schedules of the allocation of costs to customer classifications, as well as the basis for the allocations.

## BASIS OF STUDY

The method used for the allocation of wastewater cost of service incorporates the functional cost allocation methodology described in the text "Financing and Charges for Wastewater Systems," Manual of Practice No. 27, published by the Water Environment

Federation. This method is recognized for allocating the cost of providing wastewater service to customer classifications in proportion to the classifications' use of the commodity, facilities, and services. It is generally accepted as a sound method for allocating the cost of wastewater service. Under the functional cost method, costs are assigned to cost components using predominant operational purposes as cost-causative factors.

Each element of the cost of service is allocated to customer classifications according to the functional categories. The cost functions are flow, infiltration and inflow (I&I), customer facilities and customer accounting. The functional costs are allocated to customer classifications based on the amount of flow contributed to the system, the amount of I&I allocated to each class, and the number and relative size of customers.

The results of the allocation of wastewater cost of service are summarized on Schedule A, column 2. The cost allocation results can be compared with revenues under present and proposed rates in columns 4 and 6 of Schedule A. The proposed increase and percentage increase in revenues are shown in columns 8 and 9.

The cost of service by customer classification is developed in Schedule D of each study. The allocation factors referenced in column 2 are applied to the costs by account in column 3. The allocation factors are set forth in Schedule E of the study.

The comparison of present and proposed wastewater rates are shown in Schedule 7 of Exhibit No. GRH-4.

AQUA TEXAS, INC
WASTEWATER BASE OPERATIONS
COMPARISON OF COST OF SERVICE WITH REVENUES UNDER PRESENT AND PROPOSED RATES - WASTEWATER
FOR THE TWELVE MONTHS ENDING DECEMBER 31, 2024

AQUA TEXAS, INC
WASTEWATER BASE OPERATIONS
FACTORS FOR ALLOCATING COSTS BY FUNCTION TO CUSTOMER CLASSIFICATIONS

FACTOR A. ALLOCATION OF FLOW COLLECTION COSTS.

Factors are based on the pro forma test year average daily consumption for each customer classification.

| Classification | Average Daily Consumption, 100 gallons | Allocation Factor |
|---|---|---|
| (1) | (2) | (3) |
| Residential | 4,614 | 0.7574 |
| Non-Residential | 1,478 | 0.2426 |
| Total | 6,092 | 1.0000 |

FACTOR A1. ALLOCATION OF FLOW TREATMENT COSTS.

Factors are based on the pro forma test year average daily consumption for each customer

| Classification | Average Daily Consumption, 100 gallons | Allocation Factor |
|---|---|---|
| (1) | (2) | (3) |
| Residential | 4,614 | 0.7574 |
| Non-Residential | 1,478 | 0.2426 |
| Total | 6,092 | 1.0000 |

AQUA TEXAS, INC
WASTEWATER BASE OPERATIONS
FACTORS FOR ALLOCATING COSTS BY FUNCTION TO CUSTOMER CLASSIFICATIONS

FACTOR B. ALLOCATION OF COSTS ASSOCIATED WITH BILLING AND COLLECTING.

Factors are based on the number of customers.

| Customer Classification | Number of Customers | Allocation Factor |
|---|---|---|
| (1) | (2) | (3) |
| Residential | 744 | 0.6385 |
| Non-Residential | 421 | 0.3615 |
| Total | 1,165 | 1.0000 |

FACTOR C. ALLOCATION OF COSTS ASSOCIATED WITH INFILTRATION AND INFLOW.

Factors are based on a 1/3-2/3 weighting of flow and number of customers.

| Customer | Average Daily Flow | | Number of Bills | | Allocation |
|---|---|---|---|---|---|
| Classification | Factor A | Weight | Factor C | Weight | Factor |
| (1) | (2) | (3)=(2) x 0.3333 | (4) | (5)=(4) x 0.6667 | (6)=(3)+(5) |
| Residential | 0.7574 | 0.2524 | 0.6385 | 0.4257 | 0.6781 |
| Non-Residential | 0.2426 | 0.0809 | 0.3615 | 0.2410 | 0.3219 |
| Total | 1.0000 | 0.3333 | 1.0000 | 0.6667 | 1.0000 |

## APPENDIX

Appendix A. Revenue and Cost of Service Minimum Filing Requirements…….. A-1

**AQUA TEXAS, INC.**

**OPERATING REVENUE FROM SALES OF WATER**
**FOR THE TWELVE MONTHS ENDED DECEMBER 31, 2025**

**PLAN OF EXHIBIT**

Exhibit No. GRH-3 sets forth the summaries of the results of applying the proposed rates for sales of water to a detailed analysis of water customers' billing determinants, and the application of proposed rates to the bill analysis.

Schedules 1, 1-C, 1-E and 1-N present a summary of the pro forma revenues for the Combined Water Operations and Company's Central, East and North service regions under proposed rates, for the twelve months ending December 31, 2024. The pro forma revenues under proposed rates are developed in Schedules 2, 2-C, 2-E and 2-N. Schedules 3, 3-C, 3-E, and 3-N present a summary of the pro forma revenues for the Combine Water Operations and Central, East and North service regions under present rates, for the twelve months ending December 31, 2024. The revenues under present rates are developed in Schedules 4, 4-C, 4-E and 4-N. The application of proposed rates to the consumption analysis for each tariff area is presented on Schedule 5. Schedule 6 presents adjustments to the application of present and proposed rates. The summary of present and proposed by tariff area is presented on Schedule 7.

The results of the application of proposed rates are summarized in Schedules 2, 2-C, 2-E and 2-N of Exhibit No. GRH-3 are brought forward to column 3 of Schedules 1, 1-C, 1-E and 1-N. Schedules 2, 2-C, 2-E and 2-N sets forth the application of proposed rates to the detailed analysis of bill and consumption by meter size and customer classification for each present rate tariff area. The revenues in column 3 of Schedules 1, 1-C, 1-E, and 1-N incorporate the revenue adjustments

during the twelve months ended December 31, 2024 shown on Schedules 5 and 6, to develop the total revenues projected for the twelve months ended December 31, 2024, under present and proposed rates of Schedules 1, 1-C, 1-E and 1-N.

A comparison of customer bills at various usage levels under present and proposed rates for sales of water for each current tariff area is shown in Schedule 8 for residential and the non-residential customer classes.

Docket No. 58124
Test Year Ending: December 31, 2024
Schedule II-G-2.6(W) Customer Adjustments
Witness: Greg Herbert

Customer adjustments are not done on a routine basis or following any formula for calculations.

Customer adjustments are done individually. Any adjustments that may be made are done by the customer service representatives depending on the circumstances. The bill analysis provided in Exhibit No. GRH-3 accounts for partial billings (move-ins/move-outs), final bills, and any adjustments to customers' bills that were resolved by the Company's customer service department. These adjustments are incorporated in the bill analysis in order to reconcile with per book revenues.

Appendix A. Revenue and Cost of Service Minimum Filing Requirements…….. A-1

**AQUA TEXAS, INC.**

**OPERATING REVENUE FROM SALES OF WASTEWATER**
**FOR THE TWELVE MONTHS ENDED DECEMBER 31, 2024**

## PLAN OF EXHIBIT

Exhibit No. GRH-4 sets forth the summaries of the results of applying the present rates for sales of wastewater to a detailed analysis of wastewater customers' billing determinants, and the application of proposed rates to the bill analysis.

## WASTEWATER BASE OPERATIONS

Schedules 1-WW, 1-C-WW, 1-E-WW, 1-N-WW present a summary of the pro forma revenues for the wastewater base divisions under proposed rates, for the twelve months ending December 31, 2024. The revenues under proposed rates are developed in Schedules 2-WW, 2-C-WW, 2-E-WW, and 2-N-WW for the Combined Wastewater Operations and the Central, East and North service regions. Schedules 3-WW, 3-C-WW, 3-E-WW, and 3-N-WW present a summary of the proforma revenues under present rates, for the twelve months ending December 31, 2024. The pro forma revenues under present rates are developed in Schedules 4-WW, 4-C-WW, 4-E-WW, and 4-N-WW. The application of proposed rates to the consumption analysis for tariff area are presented on Schedule 5-WW. Schedule 6-WW presents pr forma adjustments to the application of present rates for the test year ending December 31, 2024.

The results of the application of proposed rates are summarized in Schedules 2-WW, 2-C-WW, 2-E-WW, and 2-N-WW of Exhibit No. GRH-4 are brought forward to column 3 of Schedules 1-WW, 1-C-WW, 1-E-WW and 1-N-WW. Schedule 5-WW sets forth the application of proposed rates to the detailed analysis of bill and consumption by meter size or per number of EDUs and customer classification for each wastewater

tariff area. The revenues in column 3 of Schedules 1-WW, 1-C-WW, 1-E-WW, and 1-N-WW include pro forma adjustments during the twelve months ended December 31, 2024, to develop the total revenues projected for the twelve months ended December 31, 2024, under present and proposed rates of Schedules 1-WW, 1-C-WW, 1-E-WW, and 1-N-WW.

A comparison of the present and proposed rates for sales of water for each tariff area is provided in Schedule 7-WW. Schedule 8 provides a comparison of customer bills for various levels of consumption under present and proposed rates in each tariff area.

Docket No. 58124
Test Year Ending: December 31, 2024
Schedule II-G-1.2(WW) Revenue Impact Data - Wastewater Volumes
Witness: Greg Herbert

Note: See Schedule 6 of Exhibit No. GRH-4.

**Aqua Texas, Inc.**
**Total Company - Water & Wastewater**
Docket No. 58124
Test Year Ending: December 31, 2024
Schedule II-G-1.3(WW) Rate Comparison
Witness: Greg Herbert

Note: See Schedule 8-1, 8-2 and 8-3, Exhibit No. GRH-4

Note: Electronic files for Exhibits schedules and workpapers will be provided on the rate filing date.

Note: The source of any amounts included in this schedule without formulas or other references is from the underlying accounting records.

**Aqua Texas, Inc.**
**Total Company - Water & Wastewater**
Docket No. 58124
Test Year Ending: December 31, 2024
Schedule II-G-1.4(WW) Customer Consumption
Witness: Greg Herbert

Note: The majority of sewer customers are flat rate, and there is only one tier of volumetric rates. Therefore, a bill frequency analysis was not performed.

**Aqua Texas, Inc.**
**Total Company - Water & Wastewater**
Docket No. 58124
Test Year Ending: December 31, 2024
Schedule II-G-1.5(WW) Accrued Revenues
Witness: Greg Herbert

| Line No | Account No (a) | Description (b) | Reference (c) | Wastewater As of 12/31/2024 (d) | Wastewater As of 12/31/2023 (e) |
|---|---|---|---|---|---|
| 1 | 536 | Net Unbilled Wastewater Revenues | No workpaper | 86,294 | 68,032 |
| | | Accrued Revenue represents an estimate of metered water service that have been delivered to customers, but have yet to be billed or recognized as revenue due to mid-month billing cycles. | | | |

Note: The source of any amounts included in this schedule without formulas or other references is from the underlying accounting records.

# WATER UTILITY TARIFF

Tariff Control No. 58124

Aqua Texas, Inc. dba Aqua Texas
(Utility Name)

1106 Clayton Lane, Suite 400W
(Business Address)

Austin, Texas 78723
(City, State, Zip Code)

(512) 990-4400
(Area Code/Telephone)

This tariff is effective for utility operations under the following Certificate of Convenience and Necessity:

13201, 13203, and 13254

This tariff is effective the following counties:
Anderson, Bandera, Bexar, Blanco, Bosque, Brazoria, Burnet, Camp, Chambers, Cherokee, Collin, Comal, Cooke, Denton, Erath, Fort Bend, Freestone, Gillespie, Grayson, Gregg, Grimes, Harris, Hays, Henderson, Hood, Hunt, Jefferson, Johnson, Kaufman, Kendall, Kerr, Kimble, Liberty, Live Oak, Llano, Marion, Matagorda, McLennan, Medina, Montgomery, Navarro, Nueces, Parker, Polk, San Jacinto, Smith, Somervell, Tarrant, Travis, Trinity, Victoria, Wharton, Williamson, Wilson, Wise, Wood.

The following is a list of cities where Aqua Texas provides water service:
Alvin, Austin, Beach City, Boerne, Brownsboro, Cedar Park, Chandler, Conroe, Cove, Cut N Shoot, Dayton, Elmendorf, Granbury, Granite Shoals, Houston, Ingram, Lakewood Village, Little Elm, Kerrville, Kyle, New Fairview, Old River Win-Free, Pearland, Port Arthur, Rhome, , Shady Shores, Stagecoach, Stockton Bend, , Weston Lakes, Wimberley, Woodcreek.

**The water rates effective for cities where Aqua provides water service entirely within a city's corporate boundary are not presented in this tariff. Those rates are not under the original jurisdiction of the Public Utility Commission of Texas and will have to be obtained from the city or utility. The tariff applies to outside city customers of systems that provide service inside and outside of a city's corporate boundary.**

This tariff is effective in the following subdivisions and public water systems:
See attached List of Subdivisions and Systems.

## TABLE OF CONTENTS

**Surcharge for Rate Case Expense (Docket No. 58124) – Applicable to all systems served by Aqua Texas, Inc.**

To be collected through a monthly surcharge of $1.88 per customer. The monthly surcharge will be collected for 24 months from the effective date of the rates approved by the Commission in Docket No. 58124 or until the full $3,368,262 for rate-case expenses related to Docket No. 58124 is collected, whichever occurs first. This charge is applicable to customers of the systems identified in the application.

**Right-of-Way Licensing Agreement And Franchise Fee Pass-Through Charge**

This charge will be assessed where applicable at the percentage provided for by the municipality.

REGULATORY ASSESSMENT……..1.0%

PUC RULES REQUIRE THE UTILITY TO COLLECT A FEE OF ONE PERCENT OF THE RETAIL MONTHLY BILL AND TO REMIT THE FEE TO THE TCEQ.

FORM OF PAYMENT: The utility will accept the following forms of payment:

Cash X Check X Money Order X Credit Card X Other (specify) ___

THE UTILITY MAY REQUIRE EXACT CHANGE FOR PAYMENTS AND MAY REFUSE TO ACCEPT PAYMENTS MADE USING MORE THAN $1.00 IN SMALL COINS. A WRITTEN RECEIPT WILL BE GIVEN FOR CASH PAYMENTS.

UNAFFILIATED THIRD PARTIES WHO ACCEPT AND PROCESS CASH, CREDIT CARD, OR ELECTRONIC PAYMENTS FOR UTILITY BILLS MAY REQUIRE PAYMENT OF AN ADDITIONAL CONVENIENCE CHARGE FOR THIS SERVICE.

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

Section 1.02 – Miscellaneous Fees

TAP FEE……$1,600.00

TAP FEE COVERS THE UTILITY'S COST FOR MATERIALS AND LABOR TO INSTALL A STANDARD RESIDENTIAL 5/8" X 3/4" METER. AN ADDITIONAL FEE TO COVER UNIQUE COSTS IS PERMITTED IF LISTED ON THIS TARIFF.

TAP FEE (Unique costs)……Actual Cost

FOR EXAMPLE, A ROAD BORE FOR CUSTOMERS OUTSIDE A SUBDIVISIONS IS A UNIQUE COST. UNIQUE COSTS WILL BE DETERMINED ON A CASE-BY-CASE BASIS.

TAP FEE (Large meter)……Actual Cost

THIS TAP FEE IS BASED ON THE UTILITY'S ACTUAL COST FOR MATERIALS AND LABOR FOR METERS LARGER THAN STANDARD 5/8" X 3/4" METERS. UNIQUE COSTS, SUCH AS ROAD BORES, WILL BE CHANGED IN ADDITION TO THIS TAP FEE AT THEIR ACTUAL COST OF INSTALLATION.

SERVICE INITIATION FEE……$50.00

THE SERVICE INITIAL FEE WILL BE CHARGED FOR INITIATING AN ACCOUNT AT THE SERVICE LOCATION.

RECONNECTION FEE……$25.00

THE RECONNECTION FEE MUST BE PAID BEFORE SERVICE CAN BE RESTORED TO A CUSTOMER WHO HAS BEEN DISCONNECTED FOR NONPAYMENT OF A BILL (MAXIMUM OF $[__]) (OR OTHER REASONS LISTED UNDER SECTION 2.0 OF THIS TARIFF)

SEASONAL RECONNECTION FEE # MONTHS OFF SYSTEM

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

METER/SERVICE RELOCATION FEE……Actual Cost

THIS FEE MAY BE CHARGED IF A CUSTOMER REQUESTS THAT AN EXISTING METER BE RELOCATED.

METER TEST FEE……$25.00

THIS FEE WHICH SHOULD REFLECT THE UTILITY'S COST MAY BE CHARGED IF A CUSTOMER REQUESTS A SECOND METER TEST WITHIN A TWO-YEAR PERIOD AND THE TEST INDICATES THAT THE METER IS RECORDING ACCURATELY. THE FEE MAY NOT EXCEED $25.00.

METER CONVERSION FEE ACTUAL COSTS

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

LATE CHARGE ……..……..…….. (10% OF THE BILL)

PUC RULES ALLOW FOR A ONE-TIME PENALTY TO BE CHARGED ON DELINQUENT BILLS. A LATE CHARGE MAY NOT BE APPLIED TO ANY BALANCE TO WHICH THE PENALTY WAS APPLIED IN A PREVIOUS BILLING.

RETURNED CHECK CHARGE……..……..……$25.00

RETURNED CHECK CHARGES MUST BE BASED ON THE UTILITY'S DOCUMENTABLE COST.

LOCK REMOVAL OR DAMAGE FEE. $10.00

CUSTOMER DEPOSIT RESIDENTIAL (Maximum $50.00)…….……...…$50.00

COMMERCIAL & NON-RESIDENTIAL DEPOSIT……...……1/6th of Estimated Annual Bill

STANDARD METER INSTALLATION FEE…….……$150.00

TO BE CHARGED WHEN UNMETERED SERVICE EXISTS ON THE SYSTEM THAT SHOULD BE METERED TO BE IN COMPLIANCE WITH THE UTILITY'S TARIFF BUT THE CONVERSION OF THE SERVICE WOULD NOT REQUIRE A FULL TAP AND ALL OF ITS COSTS. THIS FEE WILL BE A SHARING OF COSTS BETWEEN THE CUSTOMER AND THE UTILITY. THE CUSTOMER MAY HAVE THE OPTION OF PAYING THE FEE OVER NO MORE THAN THREE (3) MONTHS.

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

CUSTOMER SERVICE INSPECTION FEE……...…….……$100.00

SERVICE APPLICANTS MAY CHOOSE TO HAVE CUSTOMER SERVICE INSPECTIONS REQUIRED BY 30 TAC § 290.46(j) PERFORMED BY ANY STATE LICENSED INSPECTOR OF THEIR CHOICE. UNLESS THE SERVICE APPLICANT CHOOSES TO ARRANGE FOR AND PAY FOR THE INSPECTION INDEPENDENTLY, THE UTILITY MAY CHARGE SERVICE APPLICANTS THE CUSTOMER SERVICE INSPECTION FEE AT THE TIME THEY APPLY FOR SERVICE. IF A RE-INSPECTION IS REQUIRED TO BRING PLUMBING INTO COMPLIANCE WITH APPLICABLE REQUIREMENTS OR IF AN EXTRA INSPECTION APPOINTMENT IS REQUIRED BECAUSE A CUSTOMER DOES NOT PERMIT PERFORMANCE OF AN INSPECTION AT A PREVIOUSLY AGREED UPON APPOINTMENT TIME, THE CUSTOMER MAY CHOOSE TO HAVE ANY STATE LICENSED INSPECTOR OF THEIR CHOICE PERFORM THE INSPECTION. IF THE CUSTOMER CHOOSES TO HAVE THE UTILITY PERFORM THE INSPECTION OR RE-INSPECTION, THE CUSTOMER WILL BE CHARGED $100.00 FOR EACH REQUIRED INSPECTION, RE-INSPECTION, OR AGREED UPON INSPECTION APPOINTMENT AND WILL PAY THE UTILITY THE TOTAL AMOUNT OWED AT THE TIME AN INSPECTION OR RE-INSPECTION IS PERFORMED. THE UTILITY MAY, AT ITS OPTION, INCLUDE THE ADDITIONAL CHARGE OR CHARGES ON THE NEXT MONTH'S UTILITY BILL RATHER THAN REQUIRING PAYMENT AT THE TIME OF THE INSPECTION OR RE-INSPECTION. THE UTILITY MAY USE UTILITY EMPLOYEES OR MAY HAVE THE INSPECTION PERFORMED BY A LICENSED THIRD-PARTY CONTRACTOR.

ILLEGAL RECONNECTION, LOCK REMOVAL, OR DAMAGE FEE..……$85.00

IN ORDER TO REIMBURSE THE UTILITY WITHOUT BURDENING OTHER CUSTOMERS WITH HIGHER RATES FOR THE ADDITIONAL COST OF SERVICE TRIPS TO DISCONNECT A CUSTOMER/ACCOUNT HOLDER WHO HAS BEEN DISCONNECTED FOR NONPAYMENT AND TO PAY FOR THE COST OF BROKEN OR CUT LOCKS AND SERVICE TIME, THIS FEE SHALL BE ASSESSED TO THE ACCOUNT HOLDER OF ANY DELINQUENT ACCOUNT THAT HAS BEEN DISCONNECTED FOR NONPAYMENT BY VALVING OFF, LOCKING, OR REMOVING THE METER WHEN SERVICE TO THE PREMISES IS SUBSEQUENTLY RECONNECTED BY NON-UTILITY PERSONNEL BY CUTTING OR REMOVING THE LOCK, REOPENING THE VALVE, OR REMOVING OR BYPASSING THE METER WITHOUT AUTHORIZATION BY THE UTILITY. THIS FEE MAY BE CHARGED EACH TIME AN EVENT OCCURS AND SERVICE WILL NOT BE RECONNECTED UNTIL THIS FEE IS PAID IN ADDITION TO ANY OTHER BALANCES AND RECONNECT FEES. THIS FEE SHALL NOT BE CHARGED IF A FEE FOR A DAMAGED METER IS CHARGED OR IF THE ACCOUNT HOLDER OR THEIR REPRESENTATIVE INFORMS THE UTILITY WITHIN 24 HOURS AFTER DISCOVERING THAT SERVICE HAS BEEN RESTORED WITHOUT AUTHORIZATION OF THE UTILITY: (1) THAT SERVICE WAS RECONNECTED WITHOUT THE ACCOUNT HOLDER'S PERMISSION; AND (2) THE ACCOUNT HOLDER AGREES TO PAY FOR ALL WATER USED.

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

DAMAGED METER AND APPURTENANCES FEE……...……Actual Cost

THIS FEE SHALL BE ASSESSED TO THE ACCOUNT HOLDER OF ANY DELINQUENT ACCOUNT THAT HAS BEEN DISCONNECTED FOR NONPAYMENT BY VALVING OFF OR LOCKING THE METER WHEN THE METER AND/OR METER APPURTENANCES, SUCH AS AN AMR UNIT OR CURB STOP, ARE DAMAGED IN ORDER TO RESTORE WATER SERVICE TO THE ACCOUNT HOLDER'S ORIGINAL PLACE OF SERVICE REQUIRING THE UTILITY TO REPAIR OR REPLACE THEM. THE ACCOUNT HOLDER SHALL BE CHARGED THE FULL COST OF REPAIRING AND/OR REPLACING ALL DAMAGED PARTS AS THE UTILITY DEEMS NECESSARY, INCLUDING LABOR AND VEHICLE COSTS. THIS WILL INCLUDE REPLACEMENT OF VALVES OR CURB STOPS THAT HAVE HAD THEIR LOCKING EYES BROKEN OFF THE FLANGES.

GOVERNMENT TESTING, INSPECTION, AND COSTS SURCHARGE

WHEN AUTHORIZED IN WRITING BY PUC AND AFTER NOTICE TO CUSTOMERS, THE UTILITY MAY INCREASE RATES TO RECOVER INCREASED COSTS FOR INSPECTION FEES AND WATER TESTING [16 TAC § 24.25(b)(2)(G)].

LINE EXTENSION AND CONSTRUCTION CHARGES…..…...……Actual Cost

REFER TO SECTION 3.0 – EXTENSION POLICY FOR TERMS, CONDITIONS, AND CHARGES WHEN NEW CONSTRUCTION IS NECESSARY TO PROVIDE SERVICE.

REGIONAL PASS-THROUGH GALLONAGE CHARGE TRUE-UP/ADJUSTMENT

REFER TO ATTACHED APPENDIX C.

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

SECTION 2.0 – SERVICE RULES AND REGULATIONS

The utility will have the most current Public Utility Commission of Texas (PUC or Commission) Rules relating to Water and Wastewater Utility regulations, available at its office for reference purposes. The rules and this tariff are available for public inspection and reproduction at a reasonable cost. The latest rules or commission approved changes to the rules supersede any rules or requirements in this tariff.

The utility adopts the administrative rules of the PUC, which may be amended from time to time, as its company specific service rules and regulations. These rules are kept on file at the company's offices for customer inspection during regular business hours. In the event of a conflict between the PUC's amended rules and the provisions of this tariff, the amended rules shall prevail. Where necessary, any conflicting provision of this tariff shall be deemed to have been superseded by the PUC rule in question to the degree that the utility may conduct its lawful business in conformance with all requirements of said rule.

This section contains service rules and regulations that are specific to the utility. It has been reviewed and approved by the Commission and found to be in compliance with PUC Rules.

All references to the "business office" in the utility's tariff, service contracts, or PUC Rules shall mean the utility's offices at 1106 Clayton Lane Suite 400W, Austin, TX, 78723. Customers may apply for service and report service problems at the business office.

Section 2.01 - Application for and Provision of Water Service

A customer may initiate, transfer, or terminate retail sewer service by mail, by telephone, through an Internet website, or through another electronic transmission. If a service request is initiated by mail, the utility's standard application or contract form must be signed and submitted by the applicant before sewer service is provided by the utility. Any required fees (deposits, reconnect, tap, extension fees, etc. as applicable) will be paid and easements, if required, will be granted before service is provided by the utility. A separate application or contract will be made for each service location.

The utility's standard application or contract form is attached in the Appendix to this tariff and available on the Company's website in English at: https://www.aquawater.com/sites/default/files/2024-08/english_tx_app-_updated02012016.pdf

or in Spanish at: https://www.aquawater.com/sites/default/files/2024-08/spanish_tx_app-_updated_02012016.pdf)

If the services of a registered professional engineer are required as a result of a service initiation request received by the utility for service to that applicant's service extension only, such engineer will be selected by the utility and the applicant, and the applicant shall bear all expenses incurred therein.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Non-Standard Service - If an applicant requires service other than the standard service provided by the utility, such applicant will be required to pay all expenses incurred by the utility in excess of the expenses that would be incurred in providing the standard service and connection. Any

applicant who places unique or non-standard service demands on the system may be required to provide contributions in aid of construction (as may be allowed by PUC Rule) for the actual costs of any additional facilities required to maintain compliance with the Texas Commission on Environmental Quality (TCEQ) minimum design criteria for water production, treatment, pumping storage, and transmission.

No Assignment or Transfer of Service - No service request initiated by telephone, through an Internet website or other electronic transmission, written application, agreement, or contract for service may be assigned or transferred without the written consent of the utility.

Other Pre-Conditions of Service - Service applicants may be required to comply with any pre-condition to receiving service not printed herein as may exist under TCEQ rule (customer service, health and safety, water conservation, or environmental), U.S. Environmental Protection Agency rule, Texas Water Development Board rule, local water or conservation district rule, or health department rule. Existing customers shall be required to comply with such rules, including modification of their plumbing and/or consumption patterns, after notice.

Section 2.02 - Refusal of Service

The utility may decline to serve an applicant until the applicant has complied with the regulations of the regulatory agencies (state and municipal regulations), the provisions of this tariff, and for the reasons outlined in the PUC Rules. In the event that the utility refuses to serve an applicant, the utility will inform the applicant in writing of the basis of its refusal. The utility is also required to inform the applicant that a complaint may be filed with the Commission.

Section 2.03 - Fees, Charges, and Easements Required Before Service Can Be Connected

(A) Customer Deposits

If a residential applicant cannot establish credit to the satisfaction of the utility, the applicant may be required to pay a deposit as provided for in Section 1.02 of this tariff. The utility will keep records of the deposit and credit interest in accordance with PUC Rules.

Residential applicants sixty-five (65) years of age or older may not be required to pay deposits unless the applicant has an outstanding account balance with the utility or another water or sewer utility which accrued within the last two (2) years.

Nonresidential applicants who cannot establish credit to the satisfaction of the utility may be required to make a deposit that does not exceed an amount equivalent to one-sixth (1/6) of the estimated annual billings.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Refund of deposit - If service is not connected, or after disconnection of service, the utility will promptly refund the customer's deposit plus accrued interest or the balance, if any, in excess of the unpaid bills for service furnished. The utility may refund the deposit at any time prior to termination of utility service but must refund the deposit plus interest for any customer who has paid eighteen (18) consecutive billings without being delinquent. Deposits from non-residential customers may be held as long as that customer takes service.

(B) Tap or Reconnects Fees

A new customer requesting service at a location where service has not previously been provided must pay a tap fee as provided in Section 1. A customer requesting service where service has previously been provided must pay a reconnect fee as provided in Section 1. Any applicant or existing customer required to pay for any costs not specifically set forth in the rate schedule pages of this tariff shall be given a written explanation of such costs prior to request for payment and/or commencement of construction. If the applicant or existing customer does not believe that these costs are reasonable or necessary, the applicant or existing customer shall be informed of their right to appeal such costs to the PUC or such other regulatory authority having jurisdiction over the utility's rates in the portion of the utility's service area in which the applicant's or existing customer's property(ies) is located.

Tap fees may be increased by unique costs not normally incurred as may be permitted by 16 TAC § 24.163(a)(1)(C). For example, a road bore for customers outside a subdivision or residential area could be considered a unique cost.

(C) Easement Required

Where necessary to serve an applicant's property, the utility may require the applicant to provide it a permanent recorded public utility easement on and across the applicant's real property sufficient to provide service to that applicant. Such easement(s) shall not be used for the construction of production, storage, transmission, or pressure facilities unless they are needed for adequate service to that applicant.

Section 2.04 - Utility Response to Applications for Service

After the applicant has met all the requirements, conditions, and regulations for service, the utility will install a tap, meter, and utility cut-off valve and/or take all necessary actions to initiate service. The utility will serve each qualified applicant for service within ten (10) working days unless line extensions or new facilities are required. If construction is required to fill the order and if it cannot be completed within thirty (30) days, the utility will provide the applicant with a written explanation of the construction required and an expected date of service.

Except for good cause, where service has previously been provided, service will be reconnected within three (3) working days after the applicant has met the requirements for reconnection.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.05 - Customer Responsibility

The customer will be responsible for furnishing and laying the necessary customer service pipe from the meter location to the place of consumption. Customers may be required to install a customer owned cut-off valve on the customer's side of the meter or connection. Customers shall not be allowed to use the utility's cutoff valve on the utility's side of the meter. Existing customers may install cutoff valves on their side of the meter and are encouraged to do so. All new customers must install customer-owned and maintained cutoff valves on their side of the meter.

No direct connection between a public water supply system and any potential source of contamination, or between a public water supply system and a private water source, such as a private well, will be allowed. A customer shall not connect, or allow any other person or party to connect, onto any water lines on the customer's premises.

Except in cases where the customer has a contract with the utility for reserve or auxiliary service, no other water service will be used by the customer on the same installation in conjunction with the utility's service, either by means of a cross-over valve or any other connection. Customer shall not connect, or allow any other person or party to connect, onto any water lines on the customer's premises. Two (2) places shall not be permitted to be supplied with one (1) service pipe where there is a water main abutting the premises.

No connection shall be allowed which allows water to be returned to the public drinking water supply. No backflow prevention device shall be permitted to be installed in the customer's plumbing without notice to and written permission from the utility. Any backflow prevention devices so installed shall be inspected annually by a licensed backflow prevention device inspector or appropriately licensed plumber and a written report of such inspection delivered to the utility.

Section 2.06 - Customer Service Inspections

Applicants for service at new consuming facilities or facilities which have undergone extensive plumbing modifications are required to deliver to the utility a certificate that their facilities have been inspected by a state-licensed inspector and that they are in compliance with all applicable plumbing codes and are free of potential hazards to public health and safety. The inspection certificate shall certify that the establishment is in compliance with the TCEQ Rules and Regulations for Public Water Systems, 30 TAC § 290.46(j). Service may be denied until the certificate is received, or any identified violations or hazards are remedied. The utility is not required to perform these inspections for the applicant or customer, but will assist the applicant or customer to locate and obtain the services of a licensed inspector in a timely manner.

The cost to perform a customer service inspection is included in the tap fees found in Section 1.01 of this tariff.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

When potential sources of contamination are identified which, in the opinion of the inspector or the utility, require the installation of a state-approved backflow prevention device, such back flow prevention device shall be installed on the customer's service line or other necessary plumbing facilities by an appropriately licensed plumber or backflow prevention device specialist at the customer's expense. The backflow prevention device shall be maintained by the customer at the customer's expense and inspected annually by a licensed inspector. Copies of the annual inspection report must be provided to the utility. Failure to comply with this requirement may constitute grounds for termination of water service with notice.

Section 2.07 - Back Flow Prevention Devices

No water connection from any public drinking water supply system shall be made to any establishment where an actual or potential contamination hazard exists unless the public water facilities are protected from contamination by either an approved air gap, backflow prevention assembly, or other approved device between the drinking water supply and the source of potential contamination. The containment air gap is sometimes impractical and, instead, reliance must be placed on individual internal air gaps or mechanical backflow prevention devices. The type of device or backflow prevention assembly required shall be determined by the specific potential hazard identified in 30 TAC § 290.47(f) Appendix F, Assessment of Hazards and Selection of Assemblies of the TCEQ Rules and Regulations for Public Water Systems.

The use of a backflow prevention assembly at the service connection shall be considered as additional backflow protection and shall not negate the use of backflow protection on internal hazards as outlined and enforced by local plumbing codes. When a customer service inspection certificate indicates that an adequate internal cross-connection control program is in effect, backflow protection at the water service entrance or meter is not required.

At any residence or establishment where it has been determined by a customer service inspection, that there is no actual or potential contamination hazard, as referenced in 30 TAC § 290.47(f) Appendix F, Assessment of Hazards and Selection of Assemblies of the TCEQ Rules and Regulations for Public Water Systems, then a backflow prevention assembly or device is not required. Outside hose bibs do require, at a minimum, the installation and maintenance of a working atmospheric vacuum breaker.

Additional protection shall be required at the meter in the form of a backflow prevention device (in accordance with AWWA Standards C510 and C511, and AWWA Manual M14) on those establishments handling substances deleterious or hazardous to the public health. The water purveyor need not require backflow protection at the water service entrance if an adequate cross-connection control program is in effect that includes an annual inspection and testing by a certified backflow prevention device tester. It will be the responsibility of the water purveyor to ensure that these requirements are met.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

All backflow prevention assemblies or devices shall be tested upon installation by a TCEQ certified backflow prevention assembly tester and certified to be operating within specifications. Backflow prevention assemblies which are installed to provide protection against health hazards must also be tested and certified to be operating within specifications at least annually by a certified backflow prevention assembly tester.

If the utility determines that a backflow prevention assembly or device is required, the utility will provide the customer or applicant with a list of TCEQ certified backflow prevention assembly testers. The customer will be responsible for the cost of installation and testing, if any, of backflow prevention assembly or device. The customer should contact several qualified installers to compare prices before installation. The customer must pay for any required maintenance and annual testing and must furnish a copy of the test results demonstrating that the assembly is functioning properly to the utility within 30 days after the anniversary date of the installation unless a different date is agreed upon.

Section 2.08 - Access to Customer's Premises

The utility will have the right of access to the customer's premises at all times reasonable for the purpose of installing, testing, inspecting, or repairing water mains or other equipment used in connection with its provision of water service, or for the purpose of removing its property and disconnecting lines, and for all other purposes necessary to the operation of the utility system including inspecting the customer's plumbing for code, plumbing, or tariff violations. The customer shall allow the utility and its personnel access to the customer's property to conduct any water quality tests or inspections required by law. Unless necessary to respond to equipment failure, leak or other condition creating an immediate threat to public health and safety or the continued provision of adequate utility service to others, such entry upon the customer's property shall be during normal business hours. The customer may require any utility representative, employee, contractor, or agent seeking to make such entry to identify themselves, their affiliation with the utility, and the purpose of their entry.

**THREATS TO OR ASSAULTS UPON UTILITY PERSONNEL SHALL RESULT IN CRIMINAL PROSECUTION. FURTHER, THE UTILITY MAY SEEK PUC APPROVAL TO DISCONTINUE SERVICE.**

All customers or service applicants shall provide access to meters and utility cutoff valves at all times reasonably necessary to conduct ordinary utility business and after normal business hours as needed to protect and preserve the integrity of the public drinking water supply. Access to meters and cutoff valves shall be controlled by the provisions of 16 TAC § 24.169(c).

Section 2.09 - Meter Requirements, Reading, and Testing

All water sold by the utility will be billed based on meter measurements. The utility will provide, install, own, and maintain meters to measure amounts of water consumed by its customers. One meter is required for each residential, commercial, or industrial facility in accordance with the PUC Rules. Service meters will be read at monthly intervals and as nearly as possible on the corresponding day of each monthly meter reading period unless otherwise authorized by the PUC.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Meter Tests - The utility will, upon the request of a customer, and, if the customer so desires, in his or her presence, or in that of his or her authorized representative, make without charge a test of the accuracy of the customer's meter. If the customer asks to observe the test, the test will be made during the utility's normal working hours at a time convenient to the customer. Whenever possible, the test will be made on the customer's premises, but may, at the utility's discretion, be made at the utility's testing facility. If within a period of two (2) years the customer requests a new test, the utility will make the test, but if the meter is found to be within the accuracy standards established by the American Water Works Association (AWWA), the utility will charge the customer a fee which reflects the cost to test the meter up to a maximum twenty-five dollars ($25) for a residential customer. Following the completion of any requested test, the utility will promptly advise the customer of the date of removal of the meter, the date of the test, the result of the test, and who made the test.

Meter Access and Relocation

Customers must make meters accessible to the utility and its personnel. If they do not, the utility may require the removal of the meter to another location according to 16 TAC § 24.169(c). The utility will give the customer the option of converting to a remote radio read meter at the customer's expense in lieu of bearing the cost of relocating the meter and any utility water lines necessitated by the customer's actions. If the customer does not accept this option, the customer will be charged for all incurred meter relocation costs. Before relocating the meter, the utility must provide the customer with written notice of its intent to do so.

This notice must include information on the estimated cost of relocating the meter, an explanation of the condition hindering access and what the customer can do to correct that condition, and information on how to contact the utility. The notice must give the customer a reasonable length of time to arrange for utility access so the customer may avoid incurring the relocation cost. A copy of the notice given to the customer shall be filed with the utility's records on the customer's account.

Customers shall not enclose meters with fences or other artificial barriers. If there is a fence in front of a meter, the customer shall install a gate or stile with a three hundred pound (300 lb) load bearing capacity to enable meter readers and service crews to obtain ready access to the utility's property.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.10 - Billing

(A) Regular Billing

Bills from the utility will be mailed monthly, unless otherwise authorized by the PUC, or if the customer voluntarily elects to be billed through a paperless electronic billing system which uses standard forms, protocols, and conformation processes established and maintained by the utility or unaffiliated third parties providing online billing and payment services that are approved by the utility. The due date to pay bills for utility service will be at least twenty-one (21) days from the date of issuance. The postmark on the bill or, if there is no postmark on the bill, the recorded date of mailing or electronic mailing by the utility or the utility's billing service will constitute proof of the date of issuance.

If the customer is a state agency, the due date for the bill may not be less than thirty (30) days after issuance, unless otherwise agreed to by the agency. At the customer' s option, bills may be sent in a paperless, electronic form by email. The date of the email will constitute the date of issuance.

Payment for utility service is delinquent if full payment, including late fees and the regulatory assessment, is not received at the utility or the utility's authorized payment processor by 5:00 p.m. on the due date. If the due date falls on a holiday or weekend, the due date for payment purposes will be the next workday after the due date.

(B) Late Fees

A late penalty of either $5.00 or 10% will be charged on delinquent bills received after the due date. Customer payments post marked by the due date will not incur a late penalty. The penalty on delinquent bills will not be applied to any balance to which the penalty was applied in a previous billing. The utility must maintain a record of the date of mailing to charge the late penalty.

(C) Information on Bill

Each bill will provide all information required by the PUC Rules. For each of the systems it operates, the utility will maintain and note on the monthly bill a local or toll-free telephone number (or numbers) which may be reached by a local call by customers. At the utility's option, a toll-free telephone number or the equivalent may be provided.

(D) Prorated Bills

If service is interrupted or seriously impaired for twenty-four (24) consecutive hours or more, except by an act of God, the utility will prorate the monthly base bill in proportion to the time service was not available to reflect this loss of service.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.11- Payments

All payments for utility service shall be delivered or mailed to the remittance address on the utility bill received or paid using any method described on the utility bill received. Cash payments are only accepted in person at designated payment locations as described in the utility bill received. If the utility or its authorized agent fails to receive payment prior to the time of noticed disconnection for non-payment of a delinquent account, service will be terminated as scheduled. Utility service crews shall not be allowed to collect payments on customer accounts in the field.

Payment of an account by any means that has been dishonored and returned by the payor or payee's bank, shall be deemed to be delinquent. All returned payments must be redeemed with cash or valid money order. If a customer has two returned payments within a twelve month (12) period, the customer shall be required to pay a deposit if one has not already been paid.

Cash Payments at Non-Utility Payment Locations or Credit Card Payments – The utility may use unaffiliated third parties to accept and process utility bill cash payments at non-utility payment locations or to accept and process utility bill credit card payments. Any charges required by the third party to accept and process such utility bill payments are the responsibility of the customer and are in addition to utility bill amounts.

Electronic Billing and Payment – A customer may voluntarily elect to be billed through a paperless electronic billing system which uses standard forms, protocols and conformation processes established and maintained by the utility or unaffiliated third parties providing online billing and payment services that are approved by the utility. Any charges required by the third party to process the electronic bill or payment are the responsibility of the customer and are in addition to utility bill amounts. In administering this electronic billing option, the utility does not send the customer paper bills. Customers may sign up for electronic billing at www.aquaamerica.com. Required information that otherwise accompanies a paper bill is transmitted to the customer electronically, or an Internet link access to such information is transmitted electronically to the customer. Any applicable disconnection notice continues to be sent to the customer via United States mail. The utility may utilize unaffiliated third parties to electronically transmit bills to the customer. The utility is not responsible for any loss resulting from the customer's election to receive bills electronically, including but not limited to, any loss associated with damage to the customer's computer equipment or facilities and any loss associated with a third party's unauthorized use of the customer's information. Either the Utility or customer may, upon thirty (30) days' notice to the other party, terminate electronic transmission of bills without any liability to the terminating party resulting from such termination, and without affecting the customer's obligation to pay all amounts due to the utility. In such event, the utility will begin to issue paper bills via United States mail to the customer as soon as reasonably practical. The utility reserves the right to determine whether or not a customer is eligible to be billed through its paperless electronic billing system. A customer that elects electronic billing, who is a combination water and sewer service customer of the utility, will receive electronic billing for both services.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Third Party Charges for Processing Utility Bill Payments - Any charges required by a third party to accept or process a cash utility bill payment at a non-utility payment location, a credit card utility bill payment, or an electronic utility bill or payment are the responsibility of the customer and are in addition to utility bill amounts.

Section 2.12 - Service Disconnection

(A) With Notice

Utility service may be disconnected if the bill has not been paid in full by the date listed on the termination notice. The termination date must be at least ten (10) days after the notice is mailed or hand delivered.

The utility may offer a deferred payment plan to a customer who cannot pay an outstanding bill in full and is willing to pay the balance in reasonable installments. However, a customer's utility service may be disconnected if a bill has not been paid or a deferred payment agreement entered into within thirty-one (31) days from the date of issuance of a bill and if proper notice of termination has been given.

Notice of termination must be a separate mailing or hand delivery in accordance with the PUC Rules.

(B) Without Notice

Utility service may also be disconnected without notice for reasons as described in the PUC Rules.

Section 2.13 – Reconnection of Service

Utility personnel must be available to collect payments and to reconnect service on the day of and the day after any disconnection of service unless service was disconnected at the customer's request or due to a hazardous condition.

Service will be reconnected within thirty-six (36) hours after the past due bill, reconnect fees, and any other outstanding charges are paid or the conditions which caused service to be disconnected are corrected.

Section 2.14 - Service Interruptions

The utility will make all reasonable efforts to prevent interruptions of service. If interruptions occur, the utility will re-establish service within the shortest possible time. Except for momentary interruptions due to automatic equipment operations, the utility will keep a complete record of all interruptions, both emergency and scheduled and will notify the PUC in writing of any service interruptions affecting the entire system or any major division of the system lasting more than four (4) hours. The notice will explain the cause of the interruptions.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.15 - Quality of Service

The utility will plan, furnish, and maintain production, treatment, storage, transmission, and distribution facilities of sufficient size and capacity to provide a continuous and adequate supply of water for all reasonable consumer uses. Unless otherwise authorized by the PUC, the utility will maintain facilities as described in the PUC Rules or in the TCEQ's Rules and Regulations for Public Water Systems. The utility will not provide supply for fire prevention, fire flow, or firefighting services as part of standard retail water utility service.

Compliance with Uniform Plumbing Code

The utility adopts the Uniform Plumbing Code pursuant to 30 TAC § 290.46(i). The piping and other equipment on the premises furnished by the customer will be maintained by the customer at all times in conformity with the requirements of the TCEQ, the Uniform Plumbing Code, and with the service rules and regulations of the utility. The customer will bring out the customer's service line to the customer's property line at the point on the customer's property mutually acceptable to the customer and the utility subject to such requirements as may exist by PUC Rules. No meters smaller than those identified in Section 1.0 of this tariff will be connected. No pipe or pipe fitting which contains more than 8.0% lead can be used for the installation or repair of plumbing at any connection that provides water for human use. No solder or flux which contains more than 0.2% lead can be used at any connection which provides water for human use.

Section 2.16 - Customer Complaints and Disputes

If a customer or applicant for service lodges a complaint, the utility will promptly make a suitable investigation and advise the complainant of the results. Service will not be disconnected pending completion of the investigation. If the complainant is dissatisfied with the utility's response, the utility must advise the complainant that he has recourse through the PUC complaint process. Pending resolution of a complaint, the commission may require continuation or restoration of service.

The utility will maintain a record of all complaints which shows the name and address of the complainant, the date and nature of the complaint and the adjustment or disposition thereof, for a period of two (2) years after the final settlement of the complaint.

In the event of a dispute between a customer and a utility regarding any bill for utility service, the utility will conduct an investigation and report the results to the customer. If the dispute is not resolved, the utility will inform the customer that a complaint may be filed with the PUC.

Section 2.17 - Liability

(A) Customer Liability

Customer shall be liable for any damage or injury to utility-owned property or personnel shown to be caused by the customer or the customer's invitees, agents, employees, or others directly under the customer's control.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

(B) Utility Liability

Limitation on Product/Service Liability. - Public water utilities are required to deliver water to the customer's side of the meter or service connection that meets the potability and pressure standards of the TCEQ. The utility will not accept liability for any injury or damage to individuals or their property occurring on the customer's side of the meter when the water delivered meets these state standards. The utility makes no representations or warranties (expressed or implied) that customer's appliances will not be damaged by disruptions of or fluctuations in water service, whatever the cause.

The utility will not accept liability for injuries or damages to persons or property due to disruption of water service caused by: (1) acts of God, (2) acts of third parties not subject to the control of the utility if the utility has undertaken such preventive measures as are required by PUC or TCEQ rules, (3) electrical power failures in water systems not required by TCEQ rule to have auxiliary power supplies, or (4) termination of water service pursuant to the utility's tariff and the PUC Rules. The utility is not required by law and does not provide fire prevention, fire flow, or firefighting services. The utility therefore does not accept liability for fire-related injuries or damages to persons or property caused or aggravated by the availability of water (or lack thereof) or water pressure (or lack thereof) during fire emergencies. The utility will accept liability for any injury or damage to individuals or their property directly caused by defective utility plant facilities (*e.g.*, leaking water lines or meters) or the repairs to or construction of the utility's facilities.

Section 2.18 – Ownership of Equipment

It is agreed and understood that any and all meters, water lines, and other equipment furnished by the utility (excepting the customer's individual service lines from the point of connection to customer's structures on customer's premises) are and shall remain the sole property of the utility, and nothing contained herein or in a contract or application for service whether in verbal, written, or electronic transmission format, shall be construed to reflect a sale or transfer of any such meters, lines, or equipment to any customer. All tap and extension charges shall be for the privilege of connecting to said water lines and for installation, not purchase, of said meters and lines.

Section 2.19 – Equipment Removal or Damage

Lock Removal or Damage Fee - This fee shall be accessed to the account holder of any delinquent account that has been terminated for non-payment by locking the meter and the lock has subsequently been removed or damaged without authorization by the utility in order to restore water service to the account holder's original place of service. This fee shall not be charged if the damaged meter fee is charged.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Damaged Meter and Appurtenances Fee - This fee shall be accessed to the account holder of any delinquent account that has been terminated for non-payment by locking the meter and meter or appurtenances such as the curb stop have been damaged requiring repair and/or replacement in an attempt to restore water service to the point of serve that was disconnected. The account holder shall be charged the full cost of repairing and/or replacing all damaged parts, including labor and vehicles. This will include replacement of meters that have had their locking eyes broken off the flanges.

Service applicants are free to have customer service inspections required by 30 TAC § 290.46(j) done by any state-licensed inspector of their choice. They are encouraged to use a third party inspector and not an employee of the utility. However, if they request the utility to perform the inspection, it will be done at market prices. Since this is not a function of public water utility service, performing customer service inspections must take lower priority to fulfilling utility service responsibilities under 30 TAC §§ 290 and 291.

# SECTION 3.0 – EXTENSION POLICY

This section contains the utility's extension policy. It has been reviewed and approved by the Commission and is in compliance with PUC Rules.

## Section 3.01 - Standard Extension Requirements

Line extension and construction charges. No contribution in aid of construction may be required of any customer except as provided for in this approved extension policy.

The utility is not required to extend service to any applicant outside of its CCN service area and will only do so, at the utility's sole option, under terms and conditions mutually agreeable to the utility and the applicant and upon extension of the utility's certificated service area boundaries by the PUC. Service applicants may be required to bear the cost of the service area amendment.

The customer will be given an itemized statement of the costs, options such as rebates to the customer, sharing of construction costs between the utility and the customer, or sharing of costs between the customer and other applicants prior to beginning construction.

The utility will bear the full cost of any oversizing of water mains necessary to serve other customers in the immediate area. The individual residential customer shall not be charged for any additional production, storage, or treatment facilities. Contributions in aid of construction may not be required of individual residential customers for production, storage, treatment, or transmission facilities unless otherwise approved by the Commission under this specific extension policy.

Unless expressly exempted by PUC Rule or order, each point of use (as defined by 16 TAC § 24.3(25)) must be individually metered.

## Section 3.02 - Costs Utilities and Service Applicants Shall Bear

Within its CCN service area, the utility shall bear the cost of the first two hundred feet (200') of any water main or sewer collection line necessary to extend service to an individual residential service applicant within a platted subdivision unless the utility can document:

(a) that the developer of the subdivision refused to provide facilities compatible with the utility's facilities in accordance with the utility's approved extension policy after receiving a written request from the utility; or,

(b) that the developer defaulted on the terms and conditions of a written agreement or contract existing between the utility and the developer or the terms of this tariff regarding payment for services, extensions, or other requirements; or in the event the developer declared bankruptcy and was therefore unable to meet obligations; and,

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

(c) that the residential service applicant purchased the property from the developer after the developer was notified of the need to provide facilities to the utility. A residential service applicant may be charged the remaining costs of extending service to the customer's property; provided, however, that the residential service applicant may only be required to pay the cost equivalent to the cost of extending the nearest water main, whether or not that line has adequate capacity to serve that residential service applicant. The following criteria shall be considered to determine the residential service applicant's cost for extending service:

(1) The residential service applicant shall not be required to pay for costs of main extensions greater than two inches (2") in diameter for water distribution.

(2) Exceptions may be granted by the PUC:

(i) if adequate service cannot be provided to the applicant using the maximum line sizes listed due to distance or elevation, in which case, it shall be the utility's burden to justify that a larger diameter pipe is required for adequate service; or

(ii) if larger minimum line sizes are required under subdivision platting requirements or applicable building codes of municipalities within whose corporate limits or extraterritorial jurisdiction the point of use is located; or

(iii) the residential service applicant is located outside the CCN service area.

(3) If an exception is granted, the utility shall establish a proportional cost plan for the specific extension or a rebate plan which may be limited to seven (7) years to return the portion of the applicant's costs for oversizing as new customers are added to ensure that future applicants for service on the line pay at least as much as the initial service applicant.

Developers may be required to provide contributions in aid of construction in amounts to furnish the system with all facilities necessary to comply with the PUC Rules.

Residential customers not covered under Section 3.01 will be charged the equivalent of the costs of extending service to their property from the nearest transmission or distribution line even if that line does not have adequate capacity to serve the customer. However, if the customer places unique, non-standard service demands upon the system, the customer may be charged the full cost of extending service to and throughout their property, including the cost of all necessary transmission and storage facilities necessary to meet the service demands anticipated to be created by that property.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

For purposes of determining the costs that service applicants shall pay, commercial customers with service demands greater than residential customer demands in the certified area, industrial, and wholesale customers shall be treated as developers. A service applicant requesting a one inch (1") meter for a lawn sprinkler system to service a residential lot is not considered nonstandard service.

If an applicant requires service other than the standard service provided by the utility, such applicant will be required to pay all expenses incurred by the utility in excess of the expenses that would be incurred in providing the standard service and connection beyond two hundred feet (200') and throughout the customer's property including the cost of all necessary transmission facilities.

The utility will bear the full cost of any over-sizing of water mains necessary to serve other customers in the immediate area. The individual residential customer shall not be charged for any additional production, storage, or treatment facilities. Contributions in aid of construction may not be required of individual residential customers for production, storage, treatment, or transmission facilities unless otherwise approved by the PUC under this specific extension policy.

When an individual residential applicant requires an extension of a main line beyond two hundred feet (200'), the charge to that applicant shall be the actual cost of such extension in excess of two hundred feet (200'), plus the applicable tap fee plus such other approved costs as may be provided in this tariff and/or PUC Rules.

Residential tap fees may be increased by other unique costs not normally incurred as permitted by PUC Rules. Larger meter taps shall be made at actual cost associated with that tap which shall include such extraordinary expenses.

Section 3.03 - Contributions in Aid of Construction

Developers may be required to provide contributions in aid of construction in amounts sufficient to furnish the development with all facilities necessary to provide for reasonable local demand requirements and to comply with TCEQ minimum design criteria for facilities used in the production, transmission, pumping, or treatment of water or other TCEQ minimum requirements. For purposes of this subsection, a developer is one who subdivides a piece of real property or requests more than two meters on a piece of real property. Commercial, industrial, and wholesale customers will be treated as developers.

Any applicant who places unique or non-standard service demands on the system may be required to provide contributions in aid of construction for the actual costs of any additional facilities required to maintain compliance with the TCEQ minimum design criteria for water production, treatment, pumping, storage, and transmission.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

Any service extension to a subdivision (recorded or unrecorded) may be subject to the provisions and restrictions of 16 TAC § 24.163(d). When a developer wishes to extend the system to prepare to service multiple new connections, the charge shall be the cost of such extension, plus a pro-rata charge based upon the capacities of production, transmission, storage, pumping and treatment facilities, compliant with the TCEQ minimum design criteria, which must be committed to such extension. As provided by 16 TAC § 24.163(d)(4), for purposes of this tariff, commercial, industrial, and wholesale customers shall be treated as developers.

A utility may only charge standby fees to a developer for unrecovered costs of facilities committed to a developer's property under the following circumstances:

- Under a contract and only in accordance with the terms of the contract; or
- if service is not being provided to a lot or lots within two years after installation of facilities necessary to provide service to the lots has been completed and if the standby fees are included on the utilities approved tariff after a rate change application has been filed. The fees cannot be billed to the developer or collected until the standby fees have been approved by the commission or executive director.

For purposes of this section, a manufactured housing rental community can only be charged standby fees under a contract or if the utility installs the facilities necessary to provide individually metered service to each of the rental lots or spaces in the community.

Section 3.04 - Appealing Connection Costs

The imposition of additional extension costs or charges as provided by Sections 2.0 or 3.0 of this tariff shall be subject to appeal as provided in this tariff, PUC Rules, or the rules of such other regulatory authority as may have jurisdiction over the utility's rates and services. Any applicant required to pay for any costs not specifically set forth in the rate schedule pages of this tariff shall be given a written explanation of such costs prior to payment and/or commencement of construction. If the applicant does not believe that these costs are reasonable or necessary, the applicant shall be informed of the right to appeal such costs to the PUC or such other regulatory authority having jurisdiction over the utility's rates in that portion of the utility's service area in which the applicant's property(ies) is located. Unless the PUC or other regulatory authority enters interlocutory orders to the contrary, service to the applicant may be delayed until such appeal is resolved.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

Section 3.05 - Applying for Service Extensions

Where a new tap or service connection is required, the service applicant shall be required to submit a service = request by mail, by telephone, through an Internet website, or through another electronic transmission and request that a tap be made. The service application form may be obtained from the utility's business office during normal weekday business hours or electronically at the website address identified in Section 2.01 - Application for and Provision of Water Service, of this tariff. The tap request must be accompanied with a plat, map, diagram, or written metes and bounds description of precisely where the applicant desires each tap or service connection is to be made and, if necessary, where the meter is to be installed, along the applicant's property line. The actual point of connection and meter installation must be readily accessible to utility personnel for inspection, servicing, and meter reading while being reasonably secure from damage by vehicles and mowers.

A separate application shall be required for each potential service location if more than one service connection is desired by any individual applicant.

Any relocation cost of the installed tap shall be borne by the applicant.

If the utility has more than one main adjacent to the service applicant's property, the tap or service connection will be made to the utility's nearest service main with adequate capacity to service the applicant's full potential service demand. If the tap or service connection cannot be made at the applicant's desired location, it will be made at another location mutually acceptable to the applicant and the utility. If no agreement on location can be made, applicant may refer the matter to the PUC for resolution. Unless otherwise ordered by the PUC, the tap or service connection will not be made until the location dispute is resolved.

Section 3.06 - Qualified Service Applicant

A "qualified service applicant" is an applicant who has met the following requirements: (1) has met all of the utility's requirements for service contained in this tariff, PUC rules, and/or PUC orders, (2) has made all payments for tap fees and extension charges, (3) has provided all necessary easements and rights-of-way necessary to provide service to the requested location, including staking said easements or rights-of-way where necessary, (4) delivered an executed customer service inspection certificate to the utility, if applicable, and (5) has, for each location to which service is being requested, completed the verbal, written, or electronic transmission customer service request process.

The utility shall serve each qualified service applicant within its certified service area as soon as practical after receiving a completed service application. All service requests will be fulfilled within the time limits prescribed by PUC Rules once the applicant has met all requirements to achieving qualified service applicant status. If a service request cannot be fulfilled within the required period, the applicant shall be notified in writing of the delay, its cause, and the anticipated date that service will be available. The PUC service dates shall not become applicable until the service applicant has met all requirements to becoming a qualified service applicant as defined by PUC Rules.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

Section 3.07 - Developer Requirements

The utility shall require a developer (as defined by PUC Rules) to provide permanent recorded public utility easements as a condition of service to any location within the developer's property. The developer shall be required to obtain all necessary easements and rights-of-way required to extend the utility's existing service facilities from their nearest point with adequate service capacity (as prescribed by TCEQ rules and local service conditions) to and throughout the developer's property. The easements shall be sufficient to allow the construction, installation, repair, maintenance, testing, and replacement of any and all utility plant necessary to provide continuous and adequate service to each and every potential service location within the property at full occupancy. Unless otherwise restricted by law, well plant sites shall convey with unrestricted rights to produce water for public drinking water supply.

The developer shall be required to provide the utility with a minimum of a one hundred and sixty foot (160') radius sanitary control easement or fee simple real property conveyance around the proposed well site acceptable to the PUC for each water well site to be located within the developer's property or otherwise being obtained to serve the developer's property. Unless otherwise agreed to by the utility, pipeline right-of-way easements must be at least fifteen feet (15') wide to allow adequate room to facilitate backhoe and other heavy equipment operation and meter installation. Easements must be provided for all production, storage, treatment, pressurization, and disposal sites which are sufficient to construct and maintain all weather roads as prescribed by TCEQ rules. All easements shall be evidenced, at developer's expense, by recorded county-approved subdivision plat or by specific assignment supported by metes and bounds survey from a surveyor licensed by the State of Texas.

Prior to the extension of utility service to developers (as defined by PUC Rules) or new subdivisions, the developer shall comply with the following:

(a) The developer shall make a written request for service to property that is to be subdivided and developed. The developer shall submit to the utility a proposed plat on a scale of one inch (1") to two hundred feet (200') for review and determination of required easements, utility plant, and plant location. If sewer service is requested, the plat must contain elevation data. A reconcilable deposit in an amount set by the utility may be required to cover preliminary engineering, legal, and copy costs to be incurred by the utility in reviewing and planning to meet this service request. The plat and/or accompanying information shall identify the type, location, and number of houses and other planned structures that will be requiring utility service. If other than residential structures are to be located on the property, all other types of anticipated businesses and their service demands shall be identified with specificity. All areas requiring special irrigation and/or other unique water demands must be identified. To the extent reasonably possible, this information must be precise so that adequate facilities can be designed and constructed to meet all future service demands without hazard to the public, other utility customers, and/or the environment.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

(b) After the requirements of easements and rights-of-way have been determined, a red line copy will be returned by the utility to the developer for final plat preparation.

(c) Copies of all proposed plats and plans must be submitted to the utility prior to their submission to the county for approval to ensure that they are compatible with the adequate long-term utility needs of potential service customers. Copies will be returned after review by the utility so that necessary changes may be incorporated into the developer's final submitted plat(s) and plans.

(d) The utility shall be provided with three (3) certified copies of the final plat(s) approved by the County Commissioners Court. At this time, the utility will begin engineering the facilities necessary to serve the property. Plans and specifications will be prepared and submitted to the TCEQ by the utility if required by law. If further plat or plans changes are necessary to accommodate the specific service needs of the property and the anticipated customer demands, the developer will be so notified. Plat amendments must be obtained by the developer. The developer shall be notified when all required PUC, TCEQ, or other governmental approvals or permits have been received. No construction of utility plant which requires prior TCEQ plans approval shall be commenced until that approval has been received by the utility and any conditions imposed by the PUC or the TCEQ in association with its approvals have been satisfied.

(e) The developer shall be required to post bond or escrow the funds necessary to construct all required utility plant, except individual taps, meters, and sewer connections, required to serve the property. Construction shall not commence until funds are available. If the construction is to be done in coordination with the phased development of the property, funds must be provided in advance which are sufficient to complete each phase. No phase or facilities for any phase shall be constructed prior to the bonding or escrowing of all funds associated with that phase.

(f) At the sole option of the utility, the developer may be required to execute a Developer Extension Contract setting forth all terms and conditions of extending service to their property including all contributions-in-aid of construction and developer reimbursements, if any.

(g) The utility may require the developer to commence construction of subdivision improvements within three (3) months of utility plans approval or the utility may abate its construction activities until full development construction begins. If the developer stops construction of subdivision improvements for any purpose, the utility may abate its construction for a similar period.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

(h) As soon as the roads are rough cut and prior to paving, extension lines will need to be constructed at each road crossing. The developer must notify the utility sufficiently in advance of this development stage to allow for the necessary utility construction without disruption to other service operations of the utility. Failure to provide adequate advance notice and cooperation in the construction of necessary utility plant may result in additional delays in obtaining service to the property. The developer shall be required to pay for all additional costs of road boring or other remedial construction necessary to install adequate utility plant throughout the affected property.

(i) The developer, not the utility, shall insure that developer's employees, agents, contractors, and others under its control coordinate their work or construction throughout the property with the utility to insure the orderly and timely construction of all utility plant necessary to serve the public

## APPENDIX A - DROUGHT CONTINGENCY PLAN

## APPENDIX B - SAMPLE SERVICE AGREEMENT

## Appendix C – Aqua Texas, Inc. – Water Utility Tariff

### REGIONAL PASS-THROUGH GALLONAGE CHARGE TRUE-UP/ADJUSTMENT PROVISION AND REPORT

The purpose of this true-up/adjustment provision is to true-up and adjust Aqua Texas' authorized Regional Pass-Through Gallonage Charge each year in an effort to provide the best opportunity for regional revenue collected from the charge to align with certain types and amounts of pass-through costs that Aqua Texas has incurred in the preceding year for the region using a process that does not require the expense of a full rate proceeding. Additionally, this process is intended to ensure that Aqua Texas balances the collections versus the pass-through costs annually. The types of pass-through costs that form the basis of the Regional Pass-Through Gallonage Charge may be regional costs, fees, rates, and charges imposed by governmental entities, water authorities, or districts having jurisdiction over Aqua Texas or its operations or by non-affiliated third-party water suppliers or water rights holders selling water or water rights to Aqua Texas.

1) Regional Pass-Through Gallonage Charge true-up and adjustment calculations shall use historic, actual gallons billed to all regional retail water customers in the previous completed calendar year.

2) Amounts referred to in gallons shall be per 1,000 gallons, unless otherwise specified.

3) Aqua Texas has provided a list of all expenses (see attached) to be included in the regional pass-through costs. The PUC has approved the attached list.

4) Aqua Texas shall only collect costs directly associated with the production of water in the pass-through and specifically shall not include impact fees and other fees associated with plant and equipment.

5) Normalization shall not be used in any pass through calculations.

6) No changes by affiliates (as defined by the Texas Water Code) of Aqua Texas shall be included in the pass-through.

7) True-up Report to the regulatory authority ("Report"). Between the end of each calendar year and the following February 28, Aqua Texas shall provide a Report that reconciles the total Regional Pass-Through Gallonage Charge revenues bill during the previous completed calendar year to the North, Southwest, and Southeast regions to the total amount of all regional passed-through costs incurred during that year as reflected in the general ledger. The Report shall include the amount paid to each entity for allowed passed through costs, the names of the entities paid by Aqua Texas, and the total costs incurred requested for the purpose of an adjusted Regional Pass-Through Gallonage Charge. Any supporting documentation shall be attached to the Report. Aqua Texas may submit information regarding new district charges in the Report (other than fines or penalties – see No. 4 above). New district charges associated with newly acquired systems shall not be included unless otherwise approved in a rate

determination proceeding. Aqua Texas will not include new purchase water agreements unless approved in a rate proceeding.

***Calculations using this formula ended with the filing of 2024 True-Up Report***

8) The true-up calculations for a completed calendar year Report shall be as follows:
   a) Regional Pass-Through Gallonage Charge revenues billed during completed calendar year
   b) Regional passed-through costs actually incurred during completed calendar year
   c) Difference between a) and b)

      Where, a) – b) = c)

   d) Prior year's over/under collections
   e) This year's total over/under collections

      Where, c) + d) = e)

   Annual Regional Pass-Through Gallonage Charge recalculations shall follow the following formula:

   b) Same as b) above
   e) Same difference as e) above
   f) Total adjusted statewide passed-through costs subject to adjusted Regional Pass-Through Gallonage Charge

      Where, b) – c) = d)

   Divided by:
   g) Actual historic gallons billed to all regional customers in completed calendar year

   Equals:
   h) Regional Pass-Through Gallonage Charge as adjusted

      Where, d) / e) = f)

   Notice of any adjustments to the pass-through will be sent to the PUC or regulatory authority and to the affected customers. Notice to the customers may be in the form of a billing insert and must track the language in 16 TAC § 24.25(b)(2)(F)(ii).

**APPENDIX C (CONTINUED)**

**AQUA TEXAS, INC. – WATER UTILITY TARIFF**
**REGIONAL PASS-THROUGH GALLONAGE CHARGE TRUE-UP/ADJUSTMENT PROVISION AND REPORT**

***Calculations using this formula begin with the filing of 2024 True-Up Report***

8) The true-up calculations for a completed calendar year Report shall be as follows:
   a) Regional Pass-Through Gallonage Charge revenues billed during completed calendar year
   b) Regional passed-through costs actually incurred during completed calendar year
   c) Difference between a) and b)

      Where, a) – b) = c)

   f) Prior year's over/under collections;
   g) This year's total over/under collections

      Where, c) + d) = e)

   Annual Regional Pass-Through Gallonage Charge recalculations shall follow the following formula:

   c) Same as b) above
   i) Same difference as e) above
   j) Total adjusted regional passed-through costs subject to adjusted Regional Pass-Through Gallonage Charge

      Where, b) – e) = f)

   **Divided by:**
   k) Actual historic gallons billed to all regional customers in completed calendar year

   **Equals:**
   l) Regional Pass-Through Gallonage Charge as adjusted

      Where, f) / g) = h)

   Notice of any adjustments to the pass-through will be sent to the PUC or regulatory authority and to the affected customers. Notice to the customers may be in the form of a billing insert and must track the language in 16 TAC § 24.25(b)(2)(F)(ii).

**APPENDIX C (CONTINUED)**

**AQUA TEXAS, INC. – WATER UTILITY TARIFF**
**REGIONAL PASS-THROUGH GALLONAGE CHARGE TRUE-UP/ADJUSTMENT PROVISION AND REPORT**

9) With the Report Aqua Texas files on February 28 setting forth its calculations and supporting documentation for its adjusted Statewide Pass-Through Gallonage Charge in accordance with 5) and 6) above, Aqua Texas shall include a tariff page that incorporates the adjusted Regional Pass-Through Gallonage Charge reflected in the Report. Aqua Texas shall implement the adjusted filed rates as follows.

   a) Aqua Texas will bill the adjusted Regional Pass-Through Gallonage Charge for service rendered on or after March 1 each year and thereafter until the rate is modified.

   b) The first bill received each year incorporating the adjusted Regional Pass-Through Gallonage Charge will be prorated to apply the adjusted charge to service during those days in the billing cycle on or after March 1.

   c) The PUC or a successor agency with authority to regulate investor-owned utility rates (regulatory authority) shall review the Report and provide the results of its review to Aqua Texas in writing within 45 days after Aqua Texas submits the Report. If no written response is provided to Aqua Texas during that time, the adjusted Regional Pass-Through Gallonage Charge filed with the Report shall stand until modified.

   d) The PUC may dispute the calculation or supporting documentation as presented in the Report. If so, Aqua Texas and the PUC shall work in good faith to attempt resolution of the dispute.

   e) The process of implementing the Regional Pass-Through Gallonage Charge True-up/Adjustment and the regulatory authority's review of same is an informal proceeding and not a contested case hearing. However, if a dispute between Aqua Texas and the regulatory authority cannot be resolved through negotiation, only the PUC or Aqua Texas may request a hearing on Statewide Pass-Through Gallonage Charge true-ups/adjustments. It shall not be considered a rate case under the Texas Water Code or PUC (or other regulatory authority) rules, and Texas Water Code § 13.187 shall not apply.

**APPENDIX C (CONTINUED)**

**AQUA TEXAS, INC. – WATER UTILITY TARIFF**
**REGIONAL PASS-THROUGH GALLONAGE CHARGE TRUE-UP/ADJUSTMENT PROVISION AND REPORT**

f) In the event of a dispute or hearing concerning the Regional Pass-Through Gallonage Charge reflected in the tariff page filed with the Report, the filed rate shall be considered effective on an interim basis and previous charges will be adjusted in the next annual true-up, except that adjustments to the pass-through exceeding 50 percent may require immediate refunds or credits as directed by the regulatory authority. If the filed rate is modified pursuant to dispute or hearing resolution, a replacement tariff page shall be filed with the regulatory authority reflecting the modified rate.

g) Notwithstanding the procedures outlined herein, if the Report indicates an increase to Aqua Texas' Statewide Pass-Through Gallonage Charge is appropriate for the calendar year assessed, Aqua Texas may elect not to implement the increase. Aqua Texas will submit a written notification of such an election with the Report, indicating the amount of foregone pass through revenues. Foregone pass through revenues due to such election shall not be collected.

h) This pass through provision is not intended to negate any authority granted to the regulatory authority.

Aqua Texas regional pass-through approved entity list:

**North Region – Water:** [56298]

Aqua Texas regional pass-through approved entity list Entities on the list as of 2/8/2015

The regulating commission approved the pass through of costs per contract or permit, existing as of 12/31/2014, for base rates and gallonage charges made by the following entities.

**North Region - Water:**

Bethesda Water Supply
Cash Special Utility District
Fort Worth, City of
Granbury, City of
Kilgore, City of
Longview, City of
MacBee SUD
Palestine, City of

Waco, City of
Walnut Creek SUD
Lakes Cities MUA
Southern Trinity GCD
Upper Trinity GCD
Neches and Trinity Valley GCD
North Texas GCD
Northern Trinity GCD
Prairielands GCD
Red River GW

**Southwest Region – Water**: [56300]

Aqua Texas regional pass-through approved entity list Entities on the list as of 4/5/2013.

The regulating commission approved the pass through of costs per contract or permit, existing as of 12/3 1/2014, for base rates and gallonage charges made by the following entities.

**Southwest Region - Water:**

City of Austin (Rivercrest Water System)
LCRA (Raw Water) (Rivercrest Water System)
City of Austin (Mooreland Subdivision)
LCRA (Raw Water) (Pecan Utilities Oak Ridge Subdivision)
City of Horseshoe Bay (successor to Lake L.B.J. Municipal Utility District) (Pecan Utilities Oak Ridge Subdivision)
City of Cedar Park
Manville WSC
Nueces WSC
City of Round Rock
Barton Springs/Edwards Aquifer CD
Cow Creek GCD
Edwards Aquifer Authority
Springtown Water
Trinity/Glen Rose

**Southeast Region – Water:** [56299]

Aqua Texas regional pass-through approved entity list Entities on the last as of 3/31/2023.

The regulating commission approved the pass through of costs per contract or permit existing as of 3/31/2023, for base rates and gallonage charges made by the following entities.

**Southeast - Water:**

Harris County MUD 371
City of Houston

Northwest Harris County MUD # 24

# SEWER UTILITY TARIFF

Tariff Control No. 58124

Aqua Texas, Inc. dba Aqua Texas
(Utility Name)

1106 Clayton Lane, Suite 400W
(Business Address)

Austin, Texas 78723
(City, State, Zip Code)

(512) 990-4400
(Area Code/Telephone)

This tariff is effective for utility operations under the following Certificate of Convenience and Necessity:

21059, 21065, and 21116

This tariff is effective the following counties:
Bexar, Brazoria, Burnet, Caldwell, Chambers, Cherokee, Denton, Fort Bend, Harris, Hays, Hood, Jefferson, Marion, Montgomery, Polk, Rockwall, Tarrant, Travis, Trinity, Victoria, Wise.

The following is a list of cities where Aqua Texas provides sewer service:
Alvin, Austin, Beach City, Boerne, Brownsboro, Cedar Park, Chandler, Conroe, Cove, Cut N Shoot, Dayton, Elmendorf, Granbury, Granite Shoals, Houston, Ingram, Lakewood Village, Little Elm, Kerrville, Kyle, New Fairview, Old River Win-Free, Pearland, Port Arthur, Rhome, San Antonio, Shady Shores, Stagecoach, Stockton Bend, Waco, Weston Lakes, Wimberley, Woodcreek.

**The rates set of approved by the city for the systems entirely within its corporate boundary are not presented in this tariff. Those rates are not under the original jurisdiction of the PUC and will have to be obtained from the city or utility. This tariff applies to outside city customers of systems that provide service inside and outside of a city's corporate boundary.**

This tariff is effective in the following subdivisions and public sewer systems:
See attached List of Subdivisions and Systems.

SECTION 1.0 – RATE SCHEDULE

Section 1.01 – Rates

| Minimum Monthly Charge (Includes 0 gals) | **Non-Metered** | **Metered** |
|---|---|---|
| **Meter Size** | **Flat Rate by Meter Size** | **Metered Customer Charges** |
| 5/8" x 3/4" | $96.93 | $65.31 |
| 3/4" | $145.40 | $97.97 |
| 1" | $242.33 | $163.28 |
| 1 1/2" | $484.65 | $326.55 |
| 2" | $775.45 | $522.49 |
| 3" | $1,453.95 | $979.65 |
| 4" | $2,423.28 | $1,632.77 |
| 6" | $4,846.54 | $3,265.53 |
| 8" | $7,754.47 | $5,224.84 |
| 10" | $11,146.95 | $7,510.65 |
| 12" | $20,839.95 | $14,041.65 |
| | | |
| **Volumetric Charges** | | |
| | **Charge per 1,000 gals** | **Charge per 1,000 gals** |
| **Metered Residential Consumption Charge** | | $5.27 |
| **Metered Non-Residential Consumption Charge** | | $5.27 |

Non-residential customers who purchase sewer service only and who have no reliable sewer consumption data available will be charged the applicable monthly fee for their meter size multiplied by 1.69. If a sewer meter is not available, a meter size will be imputed by the utility based upon the size of the sewer service pipe.

**Surcharge for Rate Case Expense (Docket No. 58124 )**

To be collected through a monthly surcharge of $1.88 per customer. The monthly surcharge will be collected for 24 months from the effective date of the rates approved by the Commission in Docket No. 58124 or until the full $1,124,551 for rate-case expenses related to Docket No. 58124 is collected, whichever occurs first. This charge is applicable to customers of the systems identified in the application.

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

FORM OF PAYMENT: The utility will accept the following forms of payment:

Cash X Check X Money Order X Credit Card X Other (specify) ___

UTILITY MAY REQUIRE EXACT CHANGE FOR PAYMENTS AND MAY REFUSE TO ACCEPT PAYMENTS MADE USING MORE THAN $1.00 IN SMALL COINS. A WRITTEN RECEIPT WILL BE GIVEN FOR CASH PAYMENTS.

UNAFFILIATED THIRD PARTIES WHO ACCEPT AND PROCESS CASH, CREDIT CARD, OR ELECTRONIC PAYMENTS FOR UTILITY BILLS MAY REQUIRE PAYMENT OF AN ADDITIONAL CONVENIENCE CHARGE FOR THIS SERVICE.

REGULATORY ASSESSMENT……..1.0%

PUC RULES REQUIRE THE UTILITY TO COLLECT A FEE OF ONE PERCENT OF THE RETAIL MONTHLY BILL AND TO REMIT THE FEE TO THE TCEQ.

Section 1.02 – Miscellaneous Fees

TAP FEE……...……$3,200.00

TAP FEE COVERS THE UTILITY'S COST FOR MATERIALS AND LABOR TO INSTALL A STANDARD RESIDENTIAL 5/8" X 3/4" METER. AN ADDITIONAL FEE TO COVER UNIQUE COSTS IS PERMITTED IF LISTED ON THIS TARIFF.

TAP FEE (Unique costs)……..……...……Actual Cost

FOR EXAMPLE, A ROAD BORE FOR CUSTOMERS OUTSIDE A SUBDIVISIONS IS A UNIQUE COST. UNIQUE COSTS WILL BE DETERMINED ON A CASE-BY-CASE BASIS.

TAP FEE (Large meter)……..……...……Actual Cost

THIS TAP FEE IS BASED ON THE UTILITY'S ACTUAL COST FOR MATERIALS AND LABOR FOR METERS LARGER THAN STANDARD 5/8" X 3/4" METERS. UNIQUE COSTS, SUCH AS ROAD BORES, WILL BE CHANGED IN ADDITION TO THIS TAP FEE AT THEIR ACTUAL COST OF INSTALLATION.

SERVICE INITIATION FEE…….....……$50.00

THE SERVICE INITIAL FEE WILL BE CHARGED FOR INITIATING AN ACCOUNT AT THE SERVICE LOCATION.

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

RECONNECTION FEE……$25.00

THE RECONNECTION FEE MUST BE PAID BEFORE SERVICE CAN BE RESTORED TO A CUSTOMER WHO HAS BEEN DISCONNECTED FOR THE FOLLOWING REASONS (OR OTHER REASONS LISTED UNDER SECTION 2.0 OF THIS TARIFF):

A) Nonpayment of a bill (Maximum of $25.00)……$25.00
B) Non-residential customer failure to correct improper wastewater discharges……$45.00

IF A NON-RESIDENTIAL CUSTOMER FAILS TO CORRECT IMPROPER GREASE TRAP CONDITIONS OR TO BRING SEWER DISCHARGES FROM ANY GREASE TRAP OR OTHER PRETREATMENT UNIT INTO COMPLIANCE WITH THE "CONDITIONS FOR NON-RESIDENTIAL SEWER SERVICE" INCLUDED IN [APPENDIX B] WITHIN 10 DAYS AFTER WRITTEN NOTICE IS PROVIDED, SERVICE BE DISCONNECTED UNTIL THE IMPROPER CONDITIONS ARE CORRECTED. RECONNECTION OF SERVICE WILL REQUIRE PAYMENT OF THIS FEE AND AN ONSITE INSPECTION OF THE GREASE TRAP OR OTHER PRETREATMENT UNIT BY UTILITY PERSONNEL.

SERVICE RELOCATION FEE……Actual Cost

THIS FEE MAY BE CHARGED IF A CUSTOMER REQUESTS THAT AN EXISTING METER BE RELOCATED.

METER TEST FEE……$25.00

THIS FEE WHICH SHOULD REFLECT THE UTILITY'S COST MAY BE CHARGED IF A CUSTOMER REQUESTS A SECOND METER TEST WITHIN A TWO-YEAR PERIOD AND THE TEST INDICATES THAT THE METER IS RECORDING ACCURATELY. THE FEE MAY NOT EXCEED $25.00.

LATE CHARGE (10% OF THE BILL)

PUC RULES ALLOW FOR A ONE-TIME PENALTY TO BE CHARGED ON DELINQUENT BILLS. A LATE CHARGE MAY NOT BE APPLIED TO ANY BALANCE TO WHICH THE PENALTY WAS APPLIED IN A PREVIOUS BILLING.

RETURNED CHECK CHARGE……$25.00

RETURNED CHECK CHARGES MUST BE BASED ON THE UTILITY'S DOCUMENTABLE COST.

CUSTOMER DEPOSIT - RESIDENTIAL (Maximum $50.00)……$50.00

COMMERCIAL & NON-RESIDENTIAL DEPOSIT……1/6$^{th}$ of Estimated Annual Bill

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

STANDARD METER INSTALLATION FEE……$150.00

TO BE CHARGED WHEN UNMETERED SERVICE EXISTS ON THE SYSTEM THAT SHOULD BE METERED TO BE IN COMPLIANCE WITH THE UTILITY'S TARIFF BUT THE CONVERSION OF THE SERVICE WOULD NOT REQUIRE A FULL TAP AND ALL OF ITS COSTS. THIS FEE WILL BE A SHARING OF COSTS BETWEEN THE CUSTOMER AND THE UTILITY. THE CUSTOMER MAY HAVE THE OPTION OF PAYING THE FEE OVER NO MORE THAN THREE (3) MONTHS.

ILLEGAL RECONNECTION OR SHUT-OFF EQUIPMENT DAMAGE FEE……$250.00

IN ORDER TO REIMBURSE THE UTILITY WITHOUT BURDENING OTHER CUSTOMERS WITH HIGHER RATES FOR THE ADDITIONAL COST OF SERVICE TRIPS TO MORE FORCEFULLY DISCONNECT A CUSTOMER/ACCOUNT HOLDER WHO HAS BEEN DISCONNECTED FOR NONPAYMENT, FAILURE TO CORRECT IMPROPER WASTEWATER DISCHARGES, OR OTHER LAWFUL REASONS, WHO ILLEGALLY RECONNECTED SERVICE OR BEGUN TO DISCHARGE WASTEWATER TO THE UTILITY'S SYSTEM AGAIN WITHOUT PAYING PAST DUE CHARGES, CORRECTING IMPROPER GREASE TRAP OPERATING CONDITIONS, OR OTHERWISE ACHIEVING COMPLIANCE WITH THE "CONDITIONS FOR NON-RESIDENTIAL SEWER SERVICE" INCLUDED IN [APPENDIX B], AND TO PAY THE COST OF DAMAGE TO EQUIPMENT NECESSARY TO KEEP DELINQUENT CUSTOMER DISCONNECTED, THIS FEE SHALL BE ASSESSED TO THE ACCOUNT HOLDER OF ANY DELINQUENT ACCOUNT DISCONNECTED FOR NONPAYMENT BY ANY PHYSICAL MEANS, INCLUDING INSTALLING A PHYSICAL BLOCKING DEVICE IN THE SERVICE LINE, WHEN NON-UTILITY PERSONNEL RECONNECT SERVICE TO THE PREMISES BY CUTTING, DAMAGING, OR REMOVING THE PHYSICAL BLOCKING DEVICE OR WHEN WASTEWATER IS OTHERWISE DISCHARGED THROUGH THE SERVICE CONNECTION WITHOUT AUTHORIZATION BY THE UTILITY. THIS FEE MAY BE CHARGED EACH TIME AN EVENT OCCURS AND SERVICE WILL NOT BE RECONNECTED UNTIL THIS FEE IS PAID IN ADDITION TO ANY OTHER BALANCES AND RECONNECT FEES. THIS FEE SHALL NOT BE CHARGED IF A FEE FOR A DAMAGED METER IS CHARGED OR IF THE ACCOUNT HOLDER OR THEIR REPRESENTATIVE INFORMS THE UTILITY WITHIN 24 HOURS AFTER DISCOVERING THAT SERVICE HAS BEEN RESTORED WITHOUT AUTHORIZATION OF THE UTILITY: (1) THAT SERVICE WAS RECONNECTED WITHOUT THE ACCOUNT HOLDER'S PERMISSION; AND (2) THE ACCOUNT HOLDER AGREES TO PAY FOR ALL WASTEWATER SERVICE PROVIDED.

DAMAGED SEWER CONNECTION FEE……Actual Cost

THIS FEE SHALL BE ASSESSED TO THE ACCOUNT HOLDER OF ANY DELINQUENT ACCOUNT THAT HAS BEEN DISCONNECTED FOR NON-PAYMENT, OR OF AN ACCOUNT DISCONNECTED FOR FAILURE TO CORRECT IMPROPER WASTEWATER DISCHARGES OR OTHER LAWFUL REASONS, BY VALVING OFF OR LOCKING THE SEWER CONNECTION WHEN THE SEWER CONNECTION AND/OR SEWER CONNECTION APPURTENANCES ARE DAMAGED IN ORDER TO RESTORE SEWER SERVICE TO THE ACCOUNT HOLDER'S ORIGINAL PLACE OF SERVICE REQUIRING THE UTILITY TO REPAIR OR REPLACE THEM. THE ACCOUNT HOLDER SHALL BE CHARGED THE FULL COST OF REPAIRING AND/OR REPLACING ALL DAMAGED PARTS AS THE UTILITY DEEMS NECESSARY, INCLUDING LABOR AND VEHICLE COSTS.

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

GREASE TRAP, PRETREATMENT UNIT, SAMPLING WELL INSPECTION, REINSPECTION, AND TESTING

IN ORDER TO ENSURE THAT DISCHARGES FROM NON-RESIDENTIAL WASTEWATER CUSTOMERS UTILIZING GREASE TRAP OR PRETREATMENT UNIT FACILITIES/EQUIPMENT CAN BE PROPERLY TREATED AND DISCHARGED ACCORDING TO TCEQ PERMIT REQUIREMENTS, INSPECTIONS OF SUCH FACILITIES/EQUIPMENT AND DISCHARGE TESTING ARE REQUIRED. THE FOLLOWING FEES WILL BE CHARGED RELATED TO THESE ACTIVITIES:

BEFORE INITIAL SERVICE (INITIAL INSPECTION
AND, IF NEEDED, RE-INSPECTION)……...……..$75.00

TO ENSURE PROPOSED DISCHARGES CAN MEET THE "CONDITIONS FOR NON-RESIDENTIAL SEWER SERVICE" INCLUDED IN [APPENDIX B], AN ONSITE INSPECTION OF ALL GREASE TRAPS, PRETREATMENT UNITS AND SAMPLING WELLS FOR THOSE CUSTOMERS REQUIRED TO HAVE ONE WILL BE CONDUCTED BY UTILITY PERSONNEL OR A UTILITY CONTRACTOR BEFORE SERVICE IS INITIATED. IF THE INSPECTION IDENTIFIES DEFICIENCIES THAT NEED TO BE CORRECTED, THE SAME FEE WILL BE CHARGED FOR EACH RE-INSPECTION BEFORE SERVICE BEGINS. THE INITIAL INSPECTION FEE WILL BE CHARGED WHEN THE TAP FEE IS ASSESSED AND IS TO BE PAID SIMULTANEOUSLY. ALL RE-INSPECTION FEES, IF REQUIRED, MUST BE PAID BEFORE SERVICE IS INITIATED.

PERIODIC GREASE TRAP INSPECTION FEE
AFTER SERVICE COMMENCES……..……..$75.00

TO ENSURE EFFECTIVENESS AND PROPER MAINTENANCE OF GREASE TRAPS, PERIODIC INSPECTIONS OF ALL GREASE TRAPS WILL BE CONDUCTED BY UTILITY PERSONNEL OR A UTILITY CONTRACTOR AFTER SERVICE COMMENCES AND THIS FEE WILL BE ASSESSED EACH TIME SUCH AN INSPECTION OCCURS. INSPECTIONS WILL TYPICALLY BE CONDUCTED QUARTERLY, BUT IF AN INSPECTION IDENTIFIES PERFORMANCE ISSUES, REVEALS IMPROPER MAINTENANCE, OR FINDS EXCESSIVE OIL/GREASE IN A MANHOLE(S) DOWNSTREAM FROM A CUSTOMER INDICATING GREASE TRAP PROBLEMS EXIST, INSPECTIONS MAY BE CONDUCTED MONTHLY FOR THE NEXT QUARTER. IF AN INSPECTION IDENTIFIES PERFORMANCE ISSUES, DEFICIENCIES, OR IMPROPER MAINTENANCE, A WRITTEN NOTICE OF SUCH DEFICIENCIES WILL BE PROVIDED TO THE CUSTOMER. A RE-INSPECTION WILL BE REQUIRED AFTER THE CUSTOMER INFORMS THE UTILITY THAT ISSUES IDENTIFIED IN THE NOTICE ARE CORRECTED. IF A RE-INSPECTION REVEALS CORRECTIONS ARE NOT SATISFACTORY, ANOTHER RE-INSPECTION WILL BE REQUIRED. RE-INSPECTIONS SHALL BE REQUIRED UNTIL ALL IDENTIFIED DEFICIENCIES ARE ADDRESSED TO THE UTILITY'S SATISFACTION. THIS FEE WILL BE ASSESSED EACH TIME A RE-INSPECTION IS PERFORMED.

SECTION 1.0 – RATE SCHEDULE (CONTINUED)

PERIODIC SAMPLING OF GREASE TRAPS OR PRETREATMENT UNITS……..….$50.00

SAMPLES FOR OIL, GREASE, OR OTHER CONSTITUENTS DETERMINED TO BE A COMPONENT OF A NON-RESIDENTIAL CUSTOMER'S DISCHARGE FROM EITHER THE CUSTOMER'S INITIAL APPLICATION FOR SERVICE OR BY LATER INVESTIGATION MAY BE COLLECTED BY UTILITY PERSONNEL OR A UTILITY CONTRACTOR DURING INSPECTIONS IF IT APPEARS A GREASE TRAP OR PRETREATMENT UNIT IS NOT FUNCTIONING PROPERLY. THIS FEE WILL BE ASSESSED IF SUCH SAMPLES ARE TAKEN. SAMPLES WILL BE ANALYZED TO DETERMINE IF THE DISCHARGE MEETS LIMITS SET FORTH IN THE "CONDITIONS FOR NON-RESIDENTIAL SEWER SERVICE" INCLUDED IN [APPENDIX B]. (IF IT DOES NOT, THE GREASE TRAP OR PRETREATMENT UNIT MUST BE CLEANED, SERVICED, OR REPAIRED AS NEEDED WITHIN 7 DAYS. UTILITY PERSONNEL OR A UTILITY CONTRACTOR WILL COLLECT SAMPLES AFTER CORRECTIONS ARE MADE TO ENSURE PROPER FUNCTIONALITY. THIS FEE WILL BE ASSESSED EACH TIME SAMPLES ARE COLLECTED AND ANALYZED

GOVERNMENT TESTING, INSPECTION, AND COSTS SURCHARGE

WHEN AUTHORIZED IN WRITING BY PUC AND AFTER NOTICE TO CUSTOMERS, THE UTILITY MAY INCREASE RATES TO RECOVER INCREASED COSTS FOR INSPECTION FEES AND WATER TESTING [16 TAC § 24.25(b)(2)(G)].

LINE EXTENSION AND CONSTRUCTION CHARGES……..……..Actual Cost

REFER TO SECTION 3.0 – EXTENSION POLICY FOR TERMS, CONDITIONS, AND CHARGES WHEN NEW CONSTRUCTION IS NECESSARY TO PROVIDE SERVICE.

SECTION 2.0 – SERVICE RULES AND REGULATIONS

The utility will have the most current Public Utility Commission of Texas (PUC) Rules, available at its office for reference purposes. The Rules and this tariff shall be available for public inspection and reproduction at a reasonable cost. The latest Rules or Commission approved changes to the Rules supersede any rules or requirements in this tariff.

Copies of the utility's state and federal wastewater discharge permits shall be available for public inspection and copying in the utility's business office during normal business hours.

This tariff contains specific utility service rules. It must be reviewed and approved by the PUC and be in compliance with the PUC Rules to be effective.

The utility adopts the administrative rules of the PUC, as the same may be amended from time to time, as its company specific service rules and regulations. These rules will be kept on file at the company's offices for customer inspection during regular business hours. In the event of a conflict between the PUC's amended rules and the provisions of this tariff, the amended rules shall prevail. Where necessary, any conflicting provision of this tariff shall be deemed to have been superseded by the PUC rule in question to the degree that the utility may conduct its lawful business in conformance with all requirements of said rule.

All references to the "business office" in the utility's tariff, service contracts, or PUC Rules shall mean the utility's offices at 1106 Clayton Lane, Suite 400W, Austin, TX, 78723. Customers may apply for service and report service problems at the office.

Section 2.01— Application for Sewer Service

A customer may initiate, transfer, or terminate retail sewer service by mail, by telephone, through an Internet website, or through another electronic transmission. If a service request is initiated by mail, the utility's standard application or contract form must be signed and submitted by the applicant before sewer service is provided by the utility. Any required fees (deposits, reconnect, tap, extension fees, etc. as applicable) will be paid and easements, if required, will be granted before service is provided by the utility. A separate application or contract will be made for each service location.

The utility's standard application or contract form is attached in the Appendix to this tariff and available on the Company's website in English at:
https://www.aquawater.com/sites/default/files/2024-08/english_tx_app-_updated02012016.pdf

or in Spanish at: https://www.aquawater.com/sites/default/files/2024-08/spanish_tx_app-_updated_02012016.pdf)

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

If the services of a registered professional engineer are required as a result of a service initiation request received by the utility for service to that applicant's service extension only, such engineer will be selected by the utility and the applicant, and the applicant shall bear all expenses incurred therein.

Non-Standard Service - If an applicant requires service other than the standard service provided by the utility, such applicant will be required to pay all expenses incurred by the utility in excess of the expenses that would be incurred in providing the standard service and connection.

Any applicant who places unique or non-standard service demands on the system may be required to provide contributions in aid of construction (as may be allowed by PUC Rules) for the actual costs of any additional facilities required to maintain compliance with the Texas Commission on Environmental Quality (TCEQ) minimum design criteria for sewer collection, treatment, pumping and discharge.

Pretreatment Costs - Non-residential customers electing the pretreatment option for sewage with non-standard characteristics may be charged those costs set forth in the utility's extension policy if such pretreatment fails or otherwise causes the utility's facilities to violate their waste-water discharge permits.

Non-residential customers requiring pretreatment for sewage with non-standard characteristics may be charged the costs to treat wastewater loadings in excess of the domestic waste characteristics shown above, and those costs set forth in the utility's extension policy if such pretreatment fails or otherwise causes the utility' s facilities to violate their wastewater discharge permits.

Costs Not in Tariff - Any applicant or existing customer required to pay for any costs not specifically set forth in the rate schedule pages of this tariff shall be entitled to a written explanation of such costs prior to payment and/or commencement of construction. If the applicant or existing customer does not believe that these costs are reasonable or necessary, the applicant or existing customer shall have the right to appeal such costs to the PUC or such other regulatory authority having jurisdiction over the utility's rates in that portion of the utility's service area in which the applicant's or existing customer's property(ies) is located. Unless the PUC or other regulatory authority enters interlocutory orders to the contrary, service to the applicant may be delayed until such appeal is resolved.

Section 2.02 - Refusal of Service

The utility may decline to serve an applicant until the applicant has complied with the regulations of the regulatory agencies (state and municipal regulations) and for the reasons outlined in the PUC Rules. In the event that the utility refuses to serve an applicant, the utility will inform the applicant in writing of the basis of its refusal. The utility is also required to inform the applicant that a complaint may be filed with the Commission.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.03 - Fees, Charges & Easements Required Before Service Can Be Connected

(A) Customer Deposits

If a residential applicant cannot establish credit to the satisfaction of the utility, the applicant will be required to pay a deposit as provided for in Section 1.02 of this tariff. The utility will keep records of the deposit and credit interest in accordance with PUC Rules.

Residential applicants sixty-five (65) years of age or older may not be required to pay deposits unless the applicant has an outstanding account balance with the utility or another water or sewer utility that accrued within the last two (2) years.

Nonresidential applicants who cannot establish credit to the satisfaction of the utility may be required to make a deposit that does not exceed an amount equivalent to one-sixth (1/6) of the estimated annual billings.

Refund of deposit. - If service is not connected, or after disconnection of service, the utility will promptly refund the customer's deposit plus accrued interest or the balance, if any, in excess of the unpaid bills for service furnished. The utility may refund the deposit at any time prior to termination of utility service but must refund the deposit plus interest for any customer who has paid eighteen (18) consecutive billings without being delinquent.

(B) Tap or Reconnect Fees

A new customer requesting service at a location where service has not previously been provided must pay a tap fee as provided in Section 1. A customer requesting service where service has previously been provided must pay a reconnect fee as provided in Section 1.

Tap fees may be increased by unique costs not normally incurred as may be permitted by 16 TAC § 24.163(b)(1)(C). For example, a road bore for customers outside a subdivision or residential area could be considered a unique cost.

(C) Easement Requirement

Where recorded public utility easements on the service applicant's property do not exist or public road right-of-way easements are not available to access the applicant's property, the utility may require the applicant to provide it with a permanent recorded public utility easement on and across the applicant's real property sufficient to provide service to that applicant. Such easement(s) shall not be used for the construction of production, storage, transmission, or pressure facilities unless they are needed for adequate service to that applicant.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.04 - Utility Response to Applications for Service

After the applicant has met all the requirements, conditions, and regulations for service, the utility will install service connections, which may include a utility cut-off valve, and/or take all necessary actions to initiate service. The utility will serve each qualified applicant for service within five (5) business days unless line extensions or new facilities are required. If construction is required to fill the order and if it cannot be completed within thirty (30) days, the utility will provide the applicant with a written explanation of the construction required and an expected date of service.

Except for good cause, where service has previously been provided, the utility will reconnect the service within one (1) working day after the applicant has met the requirements for reconnection.

Section 2.05 - Customer Responsibility

The customer will be responsible for furnishing and laying the necessary customer service pipe from the tap location to the place of use. Customers will not be allowed to use the utility's cutoff valve on the utility's side of the meter. Existing customers may install cutoff valves on their side of the meter and are encouraged to do so. All new customers may be required to install and maintain a cutoff valve on their side of the meter.

Section 2.07 Access to Customer's Premises

All customers or service applicants shall provide access to utility cutoffs at all times reasonably necessary to conduct ordinary utility business and after normal business hours as needed to protect and preserve the integrity of the public drinking water supply or sewer system.

Except in cases where the customer has a contract with the utility for reserve or auxiliary service, no other sewer service will be used by the customer on the same installation in conjunction with the utility's service, either by means of a crossover valve or any other connection. Customer shall not connect, or allow any other person or party to connect, onto any sewer lines on his premises. Two places shall not be permitted to be supplied with one service pipe where there is a sewer main abutting the premises.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Pursuant to 16 TAC § 24.163(b)(3)(A) and (B), the customer's service line and appurtenances shall be construed in accordance with the laws and regulations of the State of Texas, local plumbing codes, or, in the absence of such local codes, the Uniform Plumbing Code. It shall be the customer's responsibility to maintain the service line and appurtenances in good operating condition, i.e., clear of obstruction, defects, or blockage.

If the utility can provide evidence of excessive infiltration or inflow or failure to provide proper pretreatment, the utility may, with the written approval of the PUC, require the customer to repair the line or eliminate the infiltration or inflow or take such actions necessary to correct the problem. If the customer fails to correct the problem within a reasonable time, the utility may disconnect service after proper notice.

Section 2.08 - Back Flow Prevention Devices

No water connection shall be made to any establishment where an actual or potential contamination or system hazard exists without an approved air gap or mechanical backflow prevention assembly. The air gap or backflow prevention assembly shall be installed in accordance with the American Water Works Association (AWWA) standards C510, C511 and AWWA Manual M14 or the University of Southern California Manual of Cross-Connection Control, current edition. The backflow assembly installation by a licensed plumber shall occur at the customer's expense.

The back flow assembly shall be tested upon installation by a recognized prevention assembly tester and certified to be operating within specifications. Back flow prevention assemblies which are installed to provide protection against high health hazards must be tested and certified to be operating within specifications at least annually by a recognized back flow prevention device tester. The maintenance and testing of the back flow assembly shall occur at the customer's expense.

Section 2.09 - Metering

It is not a requirement that the utility use meters to measure the quantity of sewage disposed of by individual customers. One connection is required for each residential, commercial, or industrial facility in accordance with the PUC Rules.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.10 - Billing

(A) Regular Billing
Bills from the utility will be mailed monthly unless otherwise authorized by the Commission. The due date of the bills for utility service will be at least twenty-one (21) days from the date of issuance. The postmark on the bill or, if there is no postmark on the bill, the recorded date of mailing by the utility will constitute proof of the date of issuance. Payment for utility service is delinquent if full payment, including late fees and the regulatory assessment, is not received at the utility or the utility's authorized payment agency by 5:00 p.m. on the due date. If the due date falls on a holiday or weekend, the due date for payment purposes will be the next business after the due date.

(B) Late Fees
A late charge penalty of $5.00 or 10.0% will be charged on bills received after the due date. Customer payments postmarked by the due date will not incur a late penalty. The penalty on delinquent bills will not be applied to any balance to which the penalty was applied in a previous billing. The utility must maintain a record of the date of mailing to charge the late penalty.

(C) Information on Bill
Each bill will provide all information required by the PUC Rules. For each of the systems it operates, the utility will maintain and note on the monthly billing a telephone number (or numbers) which may be reached by a local call by customers to which customers can direct questions about their utility service. At the utility's option, a toll-free telephone number or the equivalent may be provided.

(D) Prorated Bills
If service is interrupted or seriously impaired for twenty-four (24) consecutive hours or more, the utility will prorate the monthly base bill in proportion to the time service was not available to reflect this loss of service.

Section 2.11- Payments

All payments for utility service shall be delivered or mailed to the utility's business office. If the business office fails to receive payment prior to the time of noticed disconnection for non-payment of a delinquent account, service will be terminated as scheduled. Utility service crews shall not be allowed to collect payments on customer accounts in the field.

Payment of an account by any means that has been dishonored and returned by the payor or payee's bank shall be deemed to be delinquent. All returned payments must be redeemed with cash or valid money order. If a customer has two (2) returned payments within a twelve-month (12) period, the customer shall be required to pay a deposit if one has not already been paid.

Electronic Billing and Payment

A customer may voluntarily elect to be billed through a paperless electronic billing system which uses standard forms, protocols and conformation processes established and maintained by the utility or unaffiliated third parties providing online billing and payment services that are approved by the utility. Any charges required by the third party to process the electronic bill or payment are the responsibility of the customer and are in addition to utility bill amounts. In administering this electronic billing option, the utility does not send the customer paper bills. Customers may sign up for electronic billing at www.aquaamerica.com. Required information that otherwise accompanies a paper bill is transmitted to the customer electronically, or an Internet link access to such information is transmitted electronically to the customer. Any applicable disconnection notice continues to be sent to the customer via United States mail. The utility may utilize unaffiliated third parties to electronically transmit bills to the customer. The utility is not responsible for any loss resulting from the customer's election to receive bills electronically, including but not limited to, any loss associated with damage to the customer's computer equipment or facilities and any loss associated with a third party's unauthorized use of the customer's information. Either the Utility or customer may, upon thirty (30) days' notice to the other party, terminate electronic transmission of bills without any liability to the terminating party resulting from such termination, and without affecting the customer's obligation to pay all amounts due to the utility. In such event, the utility will begin to issue paper bills via United States mail to the customer as soon as reasonably practical. The utility reserves the right to determine whether or not a customer is eligible to be billed through its paperless electronic billing system. A customer that elects electronic billing, who is a combination water and sewer service customer of the utility, will receive electronic billing for both services.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.12 - Service Disconnection

(A) With Notice
Utility service may be disconnected if the bill has not been paid in full by the date listed on the termination notice. The termination date must be at least ten (10) days after the notice is mailed or hand delivered.

The utility is encouraged to offer a deferred payment plan to a customer who cannot pay an outstanding bill in full and is willing to pay the balance in reasonable installments. However, a customer's utility service may be disconnected if a bill has not been paid or a deferred payment agreement entered into within thirty-one (31) days from the date of issuance of a bill and if proper notice of termination has been given.

Notice of termination must be a separate mailing or hand delivery in accordance with the PUC Rules.

(B) Without Notice
Utility service may also be disconnected without notice for reasons as described in the PUC Rules.

Section 2.13 - Reconnection of Service

Utility personnel must be available during normal business hours to collect payments and to reconnect service on the day of and the day after any disconnection of service unless service was disconnected at the customer's request or due to a hazardous condition.

Service will be reconnected within thirty-six (36) hours after the past due bill and any other outstanding charges are paid or correction of the conditions which caused service to be disconnected.

Section 2.14 - Service Interruptions

The utility will make all reasonable efforts to prevent interruptions of service. If interruptions occur, the utility will re-establish service within the shortest possible time. Except for momentary interruptions due to automatic equipment operations, the utility will keep a complete record of all interruptions, both emergency and scheduled and will notify the PUC in writing of any service interruptions affecting the entire system or any major division of the system lasting more than four (4) hours. The notice will explain the cause of the interruptions.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.15 - Quality of Service

The utility will plan, furnish, and maintain and operate treatment, storage, transmission, and collection facilities of sufficient size and capacity to provide a continuous and adequate service for all reasonable consumer uses and to treat sewage and discharge the effluent at the quality required by its discharge permit issued by the TCEQ. Unless otherwise authorized by the TCEQ, the utility will maintain facilities as described in the TCEQ Rules and Regulations for Public Sewer Systems.

Section 2.16 - Customer Complaints and Disputes

If a customer or applicant for service lodges a complaint, the utility will promptly make a suitable investigation and advise the complainant of the results. Service will not be disconnected pending completion of the investigation. If the complainant is dissatisfied with the utility's response, the utility must advise the complainant that he has recourse through the PUC complaint process. Pending resolution of a complaint, the commission may require continuation or restoration of service.

The utility will maintain a record of all complaints which shows the name and address of the complainant, the date and nature of the complaint and the adjustment or disposition thereof, for a period of two (2) years after the final settlement of the complaint.

In the event of a dispute between a customer and a utility regarding any bill for utility service, the utility will conduct an investigation and report the results to the customer. If the dispute is not resolved, the utility will inform the customer that a complaint may be filed with the PUC.

Section 2.17 - Liability

(A) Customer Liability
Customer shall be liable for any damage or injury to utility-owned property or personnel shown to be caused by the customer, his invitees, his agents, his employees, or others directly under his control.

(B) Utility Limitation on Product/Service Liability
The utility will not accept liability for any injury or damage to individuals or their property occurring on the customer's premises. The utility makes no representations or warranties (expressed or implied) that customer's appliances will not be damaged by disruptions of or fluctuations in sewer service whatever the cause. The utility will not accept liability for injuries or damages to persons or property due to disruption of sewer service caused by: (1) acts of God, (2) acts of third parties not subject to the control of the utility if the utility has undertaken such preventive measures as are required by PUC or TCEQ rules, (3) electrical power failures in sewer systems not required by TCEQ rule to have auxiliary power supplies, or (4) termination of sewer service pursuant to the utility's tariff and the PUC's rules.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.18 – Exclusivity of Service and Ownership of Facilities

Except in cases where the customer has a contract with the utility for reserve or auxiliary service, no other sewer service will be used by the customer on the same installation in conjunction with the utility's service, either by means of a crossover valve or any other connection. Customer shall not connect, or allow any other person or party to connect, onto any sewer lines on his premises. Two places shall not be permitted to be supplied with one service pipe where there is a sewer main abutting the premises.

No service request initiated by telephone, through an Internet website or other electronic transmission, written application, agreement, or contract for service may be assigned or transferred without the written consent of the utility.

It is agreed and understood that any and all sewer lines and other equipment furnished by the utility (excepting the customer's individual service lines from the point of connection to customer's structures on customer's premises) are and shall remain the sole property of the utility, and nothing contained herein or in a contract/application for service whether in verbal, written, or electronic transmission format, shall be construed to reflect a sale or transfer of any such lines or equipment to any customer. All tap and extension charges shall be for the privilege of connecting to said sewer lines and for installation, not purchase, of said lines.

Service applicants may be required to comply with any pre-condition to receiving service not printed herein as may exist under PUC Rules, TCEQ rules (customer service, health and safety, water conservation, or environmental), U.S. Environmental Protection Agency rules, Texas Water Development Board rules, local water or conservation district rules, or health department rules. Existing customers shall be required to comply with such rules, including modification of their plumbing and/or consumption patterns, after notice.

In accordance with the requirements of utility's wastewater discharge permit, any and all repairs and maintenance of utility's lines, tanks, pumps and equipment located on Customer's premises shall be performed exclusively by the utility.

Section 2.19 – Impermissible Disposal of Waste other than Sewage

The utility only provides "sewage" collection and disposal service to the public. This service is limited to the collection, treatment and disposal of waterborne human waste and waste from domestic activities such as washing, bathing, and food preparation. This service does not include the collection, treatment or disposal of waste of such high BOD or TSS characteristics that it cannot reasonably be processed by the utility's state-approved wastewater treatment plant within the parameters of the utility's state and federal wastewater discharge permits.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

The disposal into the utility's sewer collection system of bulk quantities of food or food scraps not previously processed by a grinder or similar garbage disposal unit and grease and oils, except as incidental waste in process or wash water, used in or resulting from food preparation by sewer utility customers engaged in the preparation and/or processing of food for other than domestic consumption for sale to the public shall be prohibited. Specifically included in this prohibition are grease and oils from grease traps or other grease and/or oil storage containers. These substances are defined as "garbage" under Texas Health and Safety Code § 361.003(10), and are not "sewage" as defined by the Texas Water Code § 26.001(7).

Domestic sewage means wastewater, that when analyzed, indicates that the concentration of BOD5 does not exceed 200 milligram per lie (mg/L), TSS Chemical Oxygen Demand (COD) does not exceed 450 mg/L, TDS does not exceed 300 mg/L, Chlorides do not exceed 60 mg/L, and Metals do not exceed values that would be detrimental to the treatment process. Commercial/Industrial sewage means waste which, when analyzed, exceeds the concentrations of BOD5, TSS, COD, TDS, Chlorides, and Metals as stated in the paragraph above. Any sewage other than domestic sewage will require pretreatment by the discharger, which may be waived; such waiver or non/waiver will be determined by the utility at its sole discretion.

**SEWER SERVICE DOES NOT INCLUDE THE COLLECTION AND DISPOSAL OF STORM WATERS OR RUN OFF WATERS, WHICH MAY NOT BE DIVERTED INTO OR DRAINED INTO THE UTILITY'S COLLECTION SYSTEM.**

The introduction of any Clean Water by the Customer to the Service Line shall not be permitted under any circumstances, and the continuance of such practice shall be grounds for immediate discontinuance of sewer service.

No Customer may make connection of roof downspouts, foundation drains, areaway drains, sump pumps, or other sources of Clean Water, infiltration or inflow to a public sanitary sewer or to a building sewer or building drain that in turn is connected directly or indirectly to the Company's sewer system. The Customer must immediately disconnect any such connections when found. Failure to disconnect is grounds for immediate discontinuance of sewer service.

It shall be the responsibility of the Customer to keep and maintain the building Service Line connected to the Company's sewer system in good repair. The Customer shall be responsible for making necessary repairs, at his or her own expense, to the building Service Line when notified in writing by the Company that repairs are necessary. Should the Customer fail to repair the building sewer within 60 days after receiving written notification by the Company that such repairs are necessary, the Company may terminate sewer service to the property without further notice.

No unauthorized Person shall uncover, make any connections with or opening into, use, alter, or disturb any part of the Company's sewer system or appurtenance thereof without first obtaining written approval from the Company. All Costs and expenses incidental to the installation and connection of the building Service Line shall be borne by the Customer. The Customer shall indemnify the Company from any loss or damage that may directly or indirectly be occasioned by

the installation of the building sewer, provided, however, that such indemnification shall not extend to loss or damage due solely to willful misconduct or negligence on the part of the Company.
No user shall introduce, cause to be introduced, or allow to be introduced into the Company sewer system any pollutant or wastewater, including High-Strength Waste Discharges, that causes pass through or interference with the Company's sewer system. These general prohibitions apply to all users of the Company sewer system whether or not they are subject to categorical pretreatment standards or any other national or state pretreatment standards or requirements.

If in the professional opinion of the Company a violation exists that threatens the health, safety, and/or welfare of the Company's employees, the general public, or the Company's sewer system, the Company may terminate sewer service to the property without notice. In such cases, the Company shall notify the Commission as soon as practicable as to the action taken, the reasons for such action, and the corrective action required.

Under 16 TAC § 24.165(o), the utility may charge for all labor, material, equipment, and other costs necessary to repair to replace all equipment damaged due to service diversion or the discharge of wastes which the system cannot properly treat. This shall include all repair and cleanup costs associated with discharges of grease and oils, except as incidental waste in process or wash water, used in or resulting from food preparation by sewer utility customers engaged in the preparation and/or processing of food for other than domestic consumption or for sale to the public discharged from grease traps or other grease and/or oil storage containers. The utility may charge for all costs necessary to correct service diversion or unauthorized taps where there is no equipment damage, including incidents where service is reconnected without authority.

The utility may not charge any additional penalty or charge other than actual costs unless such penalty has been expressly approved by the PUC and filed in the utility's tariff.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Section 2.20 – Pretreatment for Non-Standard Service

Any pretreatment required shall be at the sole cost and expense of the applicant. Pretreatment means the processes and actions taken that result in the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of the properties of pollutants in the wastewater prior to introducing such pollutants into the utility's sewer system. Sole costs and expenses are to be paid by the applicant for any pretreatment facilities and/or processes. The pretreatment requirements shall be such requirements that may be required by the Rules for Commercial Wastewater Pretreatment as promulgated by the TCEQ, local or county authorities having appropriate jurisdiction, and any State and Federal laws, rules or, regulations that may be adopted from time to time by the utility. The applicant is responsible and liable for and must pay for any costs of operation, maintenance, repair, compliance and fines and penalties that result from any misuse and/or any failure of any pretreatment facilities on any pretreatment facilities installed by the applicant and/or installed upon the customer's property. The applicant must acknowledge receipt of the documentation for all pretreatment requirements. As used in this tariff, the terms sewage and wastewater have the same meaning.

Section 2.21 - Residential Single-Family Grinders and Sewage Stations

Prior to the installation of a grinder or sewage station, the utility must be given a complete listing of all materials and equipment that will be used.

In order to prevent inflow and infiltration, the materials must comply with standard specifications, approved by the TCEQ and the utility.

After the utility has approved the proposed grinder or sewage station, the construction may begin. Once the work has been completed, the utility will do an inspection of the grinder / sewage station to ensure the complete installation was as specified.

The customer will retain ownership of receiving tanks or lift stations on the customer's property, and all maintenance, repairs, and replacement are the customer's responsibility, as required by 16 TAC § 24.163(b)(3)(C). The customer shall own and maintain the grinder pump and appurtenances. Additionally, all Repairs may be performed by anyone selected by the customer who is competent to perform such repairs. The utility requires that parts and equipment meet the minimum standards approved by the TCEQ, to insure proper and efficient operation of the sewer system.

All grinder pumps, storage tanks, controls, and other appurtenances necessary to provide pressurized wastewater service shall conform to the utility's specifications.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

The utility will install the grinder pumps, storage tanks, controls and other appurtenances necessary to provide pressurized wastewater service to a residential connection at the property line with a maximum offset of three feet (3'). The utility will have ownership of all utility-installed grinder pumps, receiving tanks, lift stations or controls on the customer's property, and all maintenance, repairs, and replacements will be performed by the utility. Electric bills and electric service to the grinder pump are the customer's responsibility. In some cases, the repairs may be performed by anyone selected by the customer and approved by the utility, who is competent to perform such repairs. The utility requires that parts and equipment meet the minimum standards approved by the TCEQ, to insure proper and efficient operation of the wastewater system.

Customers are not permitted to flush materials that are known to clog grinder/sewage stations, as provided by the utility. At premises where repeated problems are due to violations of this requirement, the costs of repairs required due to customer flushing such materials shall be charged in full to said customer. Violations of this requirement will be considered as Tampering or Damaging to the Sewer Service Connection and will be subject to the additional Damage or Service Diversion Penalty.

In accordance with the requirements of utility's Wastewater Discharge Permit, any and all repairs and maintenance of utility's lines, tanks, pumps, and equipment located on Customer's premises shall be performed exclusively by the utility. Copies of the utility's state and federal wastewater discharge permits shall be available for public inspection and copying in the business office during normal business hours.

Section 2.22 - Multi-Family and Commercial Receiving Tanks and Lift Stations

Prior to the installation of a grinder or sewage station by a commercial or multi-family service applicant, the utility must be given a complete listing of all materials and equipment that will be used, along with the storage for that development. In order to minimize inflow and infiltration into the collection system, the installation and materials must comply with standard specifications approved by the TCEQ. After the utility has approved the proposed grinder / sewage station, the construction may begin. Once the work has been completed, the utility will do an inspection of the grinder / sewage station to ensure the complete installation was as specified. Prior to acceptance of an existing receiving tank or lift station that is being used as an interceptor tank for primary treatment, wastewater storage or pump tanks prior to discharge into an alternative or conventional sewage system must be cleaned, inspected, repaired, modified, or replaced if necessary to minimize inflow and infiltration into the collection system.

Existing pumps and tanks must be of adequate size to insure proper pumpage in the event of high flow or if one pump is out of service. If the existing pumps and receiving tanks or lift stations are of inadequate size the utility will not accept liability for backups due to high flows, one pump out of service, rainfall causing inflow or infiltration, power outages, lack of proper storage capacity, etc.

SECTION 2.0 – SERVICE RULES AND REGULATIONS (CONTINUED)

Regardless of who performs the initial installation, the utility shall hold title to and the responsibility to maintain and repair all equipment necessary to connect that service location to the utility' s collection line. The customer shall be responsible for the monthly electric bill.

If the collection system that discharges into the receiving tank or lift station has an inflow or infiltration problem and collects rainfall discharge, the owner or P.O.A. will correct it within ninety (90) days of written notice from the utility. If no action is taken to correct the problem within ninety (90) days, the utility may take the responsibility to make corrections at the owner's or P.O.A.'s expense. The utility is not responsible for the collection system that discharges into the receiving tank or lift station.

The owner or P.O.A. shall be responsible for the monthly electric bill.

An adequate easement must encompass the receiving tank or lift station by a fifteen-foot (15') radius and also a fifteen-foot (15') access easement to the receiving tank or lift station site. If this easement does not exist, one must be created and recorded.

Section 2.23 - Access to Customer's Premises

The utility will have the right of access to the customer's premises at all times reasonable for the purpose of installing, testing, inspecting or repairing sewer mains or other equipment used in connection with its provision of sewer service, or for the purpose of removing its property and disconnecting lines, and for all other purposes necessary to the operation of the utility system including inspecting the customer's plumbing for code, plumbing, or tariff violations.

The customer shall allow the utility and its personnel access to the customer's property to conduct any tests or inspections required by law. Unless necessary to respond to equipment failure, leak or other condition creating an immediate threat to public health and safety or the continued provision of adequate utility service to others, such entry upon the customer's property shall be during normal business hours. The customer may require any utility representative, employee, contractor, or agent seeking to make such entry identify themselves, their affiliation with the utility, and the purpose of their entry.

All customers or service applicants shall provide access to utility cutoff valves at all times reasonably necessary to conduct ordinary utility business and after normal business hours as needed to protect and preserve the integrity of the public drinking water supply.

**THREATS TO OR ASSAULTS UPON UTILITY PERSONNEL SHALL RESULT IN CRIMINAL PROSECUTION. FURTHER, THE UTILITY MAY SEEK PUC APPROVAL TO DISCONTINUE SERVICE.**

## SECTION 3.0 – EXTENSION POLICY

This section contains the utility's specific extension policy. It has been reviewed and approved by the PUC and is in compliance with PUC Rules.

The utility adopts the PUC Rules, as the same may be amended from time to time, as its company specific extension policy. These rules will be kept on file at the business office for customer inspection during normal business hours.

### Section 3.01 - Standard Extension Requirements

Line extension and construction charges. No contribution in aid of construction may be required of any customer except as provided for in this approved extension policy.

The customer will be given an itemized statement of the costs, options such as rebates to the customer, sharing of construction costs between the utility and the customer, or sharing of costs between the customer and other applicants prior to beginning construction.

The utility is not required to extend service to any applicant outside of its certificated service area and will only do so, at the utility's sole option, under terms and conditions mutually agreeable to the utility and the applicant and upon extension of the utility's certificated service area boundaries by the PUC. Service applicants may be required to bear the cost of the service area amendment.

### Section 3.02 - Costs Utilities and Service Applicants Shall Bear

Within its certificate area, the utility will pay the cost of the first two hundred feet (200') of any sewer collection line necessary to extend service to an individual residential customer within a platted subdivision. However, if the residential customer requesting service purchased the property after the developer was notified of the need to provide facilities to the utility, the utility may charge for the first two hundred feet (200'). The utility must also be able to document that the developer of the subdivision refused to provide facilities compatible with the utility's facilities in accordance with the utility's approved extension policy after receiving a written request from the utility. Developers may be required to provide contributions in aid of construction in amounts to furnish the system with all facilities necessary to comply with the PUC Rules.

Residential customers not covered under Section 3.01 will be charged the equivalent of the costs of extending service to their property from the nearest collection line even if that line does not have adequate capacity to serve the customer. However, if the customer places unique, non-standard service demands upon the system, the customer may be charged the additional cost of extending service to and throughout their property, including the cost of all necessary transmission and storage facilities necessary to meet the service demands anticipated to be created by that property.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

Within its certificated area, the utility shall bear the cost of the first two hundred feet (200') of any water main or sewer collection line necessary to extend service to an individual residential service applicant within a platted subdivision unless the utility can document:

(a) that the developer of the subdivision refused to provide facilities compatible with the utility's facilities in accordance with the utility's approved extension policy after receiving a written request from the utility; or,

(b) that the developer defaulted on the terms and conditions of a written agreement or contract existing between the utility and the developer or the terms of this tariff regarding payment for services, extensions, or other requirements; or in the event the developer declared bankruptcy and was therefore unable to meet its obligations; and,

(c) that the residential service applicant purchased the property from the developer after the developer was notified of the need to provide facilities to the utility.

A residential service applicant may be charged the remaining costs of extending service to his property; provided, however, that the residential service applicant may only be required to pay the cost equivalent to the cost of extending the nearest water main or wastewater collection line, whether or not that line has adequate capacity to serve that residential service applicant. The following criteria shall be considered to determine the residential service applicant's cost for extending service:

1. The residential service applicant shall not be required to pay for costs of main extensions greater than two inches (2") in diameter for pressure wastewater collection lines and six inches (6") in diameter for gravity wastewater lines.
2. Exceptions may be granted by the PUC if:
   i. adequate service cannot be provided to the applicant using the maximum line sizes listed due to distance or elevation, in which case, it shall be the utility's burden to justify that a larger diameter pipe is required for adequate service;
   ii. larger minimum line sizes are required under subdivision platting requirements or applicable building codes; or
   iii. the residential service applicant is located outside the CCN service area.
3. If an exception is granted, the utility shall establish a proportional cost plan for the specific extension or a rebate plan which may be limited to seven years to return the portion of the applicant's costs for oversizing as new customers are added to ensure that future applicants for service on the line pay at least as much as the initial service applicant.

For purposes of determining the costs that service applicants shall pay, commercial customers with service demands greater than residential customer demands in the certificated area, industrial, and wholesale customers shall be treated as developers.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

If an applicant requires service other than the standard service provided by the utility, such applicant will be required to pay all expenses incurred by the utility in excess of the expenses that would be incurred in providing the standard service and connection beyond two hundred feet (200') and throughout his property including the cost of all necessary transmission facilities.

The utility will bear the full cost of any oversizing of wastewater collection lines necessary to serve other potential service applicants or customers in the immediate area. The individual residential customer shall not be charged for any additional treatment capacity or facilities. Contributions in aid of construction may not be required of individual residential customers for treatment capacity or collection facilities unless otherwise approved by the PUC under this specific extension policy.

Section 3.03 - Contributions in Aid of Construction

Developers will be required to provide contributions in aid of construction in amounts sufficient to furnish the system with all facilities necessary to comply with the PUC Rules, to provide for reasonable local demand requirements, and to comply with TCEQ's minimum design criteria for facilities used in collecting, treating, transmitting, and discharging of wastewater effluent. For purposes of this subsection, a developer is one who subdivides or requests more than two (2) connections on a piece of property. Commercial, industrial, and wholesale customers will be treated as developers.

Any applicant who places unique or non-standard service demands on the system may be required to provide contributions in aid of construction for the actual costs of any additional facilities required to maintain compliance with the TCEQ minimum design criteria for water production, treatment, pumping, storage and transmission.

Any service extension to a subdivision (recorded or unrecorded) may be subject to the provisions and restrictions of 16 TAC 24.163(d) and this tariff. When a developer wishes to extend the system to prepare to service multiple new connections, the charge shall be the cost of such extension, plus a pro-rata charge based upon the capacities of collection, transmission, storage, treatment and discharge facilities, compliant with the TCEQ minimum design criteria, which must be committed to such extension. As provided by 16 TAC § 24.163(d)(4), for purposes of this section, commercial, industrial, and wholesale customers shall be treated as developers.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

A utility may only charge a developer standby fees for unrecovered costs of facilities committed to a developer's property under the following circumstances:

- Under a contract and only in accordance with the terms of the contract; or
- if service is not being provided to a lot or lots within two (2) years after installation of facilities necessary to provide service to the lots has been completed and if the standby fees are included on the utilities approved tariff after a rate change application has been filed. The fees cannot be billed to the developer or collected until the standby fees have been approved by the commission or executive director.
- for purposes of this section, a manufactured housing rental community can only be charged standby fees under a contract or if the utility installs the facilities necessary to provide individually metered service to each of the rental lots or spaces in the community.

Section 3.04 - Appealing Connection Costs

The imposition of additional extension costs or charges as provided by Sections 2 and 3 of this tariff shall be subject to appeal as provided in this tariff, PUC Rules, or the rules of such other regulatory authority as may have jurisdiction over the utility's rates and services. Any applicant required to pay for any costs not specifically set forth in the rate schedule pages of this tariff shall be entitled to a written explanation of such costs prior to payment and/or commencement of construction. If the applicant does not believe that these costs are reasonable or necessary, the applicant shall have the right to appeal such costs to the PUC or such other regulatory authority having jurisdiction over the utility's rates in that portion of the utility's service area in which the applicant's property(ies) is located. Unless the PUC or other regulatory authority enters interlocutory orders to the contrary, service to the applicant may be delayed until such appeal is resolved.

Section 3.05 - Applying for Service Extensions

A service applicant shall be required to submit a service request by mail, by telephone, through an Internet website, or through another electronic transmission. The service application form may be obtained from the utility's business office during normal weekday business hours or electronically at the website address identified in Section 2.01 - Application for and Provision of Water Service, of this tariff.

A separate application shall be required for each potential service location if more than one service connection is desired by any individual applicant.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

The tap request must be accompanied with a plat, map, diagram or written metes and bounds description of precisely where the applicant desires each tap or service connection is to be made and, if necessary, where the connection is to be installed, along the applicant's property line. The actual point of connection must be readily accessible to utility personnel for inspection, servicing and testing while being reasonably secure from damage by vehicles and mowers. If the utility has more than one main adjacent to the service applicant's property, the tap or service connection will

be made to the utility's nearest service main with adequate capacity to service the applicant's full potential service demand.

Beyond the initial two hundred feet (200'), the customer shall bear only the equivalent cost of extending from the nearest main.

If the tap or service connection cannot be made at the applicant's desired location, it will be made at another location mutually acceptable to the applicant and the utility. If no agreement on location can be made, applicant may refer the matter to the PUC for resolution. Unless otherwise ordered by the PUC, the tap or service connection will not be made until the location dispute is resolved.

Section 3.06 - Qualified Service Applicant

A "qualified service applicant" is an applicant who has met the following requirements: (1) has met all of the utility's requirements for service contained in this tariff, PUC Rules, and/or PUC orders; (2) has made all payments for tap fees and extension charges; (3) has provided all easements and rights-of-way necessary to provide service to the requested location, including staking said easements or rights-of-way where necessary; and (4) has completed the verbal, written, or electronic transmission customer service request process for each location to which service is being requested.

The utility shall serve each qualified service applicant within its certificated service area as soon as practical after receiving a request for service. All service requests will be fulfilled within the time limits prescribed by PUC Rules once the applicant has met all requirements to become a qualified service applicant. If a service request cannot be fulfilled within the required time period, the applicant shall be notified in writing of the delay, its cause, and the anticipated date that service will be available. The PUC service dates shall not become applicable until the service applicant has met all requirements to becoming a qualified service applicant as defined herein or by PUC Rules.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

Section 3.07 - Developer Requirements

The utility shall require a developer (as defined by PUC rule) to provide permanent recorded public utility easements as a condition of service to any location within the developer's property. The developer shall be required to obtain all necessary easements and rights-of-way required to extend the utility's existing service facilities from their nearest point with adequate service capacity (as prescribed by TCEQ rules and local service conditions) to and throughout the developer's property. The easements shall be sufficient to allow the construction, installation, repair, maintenance, testing, and replacement of any and all utility plant necessary to provide continuous and adequate service to each and every potential service location within the property at full occupancy. Unless otherwise restricted by law, sewage treatment, holding tank sites, lift station sites shall convey with all permanent easements and buffers required by TCEQ rules. Unless otherwise agreed to by the utility, pipeline right-of-way easements must be at least fifteen feet (15') wide to allow adequate room to facilitate backhoe and other heavy equipment operation and meters.

Easements must be provided for all storage, treatment, pressurization and disposal sites which are sufficient to construct and maintain all weather roads as prescribed by TCEQ rules. All easements shall be evidenced, at developer's expense, by recorded county-approved subdivision plat or by specific assignment supported by metes and bounds survey from a surveyor licensed by the State of Texas.

Prior to the extension of utility service to developers (as defined by PUC Rules) or new subdivisions, the developer shall comply with the following:

(a) The developer shall make a written request for service to property that is to be subdivided and developed. The Developer shall submit to the utility a proposed plat on a scale of one inch (1") to two hundred feet (200') for review and determination of required easements, utility plant, and plant location. If sewer service is requested, the plat must contain elevation data. A reconcilable deposit in an amount set by the utility may be required to cover preliminary engineering, legal, and copy cost to be incurred by the utility in reviewing and planning to meet this service request. The plat and/or accompanying information shall identify the type, location and number of houses and other planned structures that will be requiring utility service. If other than residential structures are to be located on the property, all other types of anticipated businesses and their service demands shall be identified with specificity. All areas requiring special irrigation and/or other unique sewer demands must be identified. To the extent reasonably possible, this information must be precise so that adequate facilities can be designed and constructed to meet all future service demands without hazard to the public, other utility customers, and/or the environment.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

(b) After the requirements of easements and rights-of-way have been determined, a red line copy will be returned by the utility to the developer for final plat preparation.

(c) Copies of all proposed plats and plans must be submitted to the utility prior to their submission to the county for approval to ensure that they are compatible with the adequate long-term utility needs of potential service customers. Copies will be returned after review by the utility so that necessary changes may be incorporated into the developer's final submitted plat(s) and plans.

(d) The utility shall be provided with three (3) certified copies of the final plat(s) approved by the County Commissioners Court. At this time, the utility will begin engineering the facilities necessary to serve the property. Plans and specifications will be prepared and submitted to the TCEQ by the utility if required by law. If further plat or plans changes are necessary to accommodate the specific service needs of the property and the anticipated customer demands, the developer will be so notified. Plat amendments must be obtained by the developer. The developer shall be notified when all required TCEQ or other governmental approvals or permits have been received. No construction of utility plant which requires prior TCEQ plans approval shall be commenced until that approval has been received by the utility and any conditions imposed by the TCEQ in association with its approvals have been satisfied.

(e) The developer shall be required to post bond or escrow the funds necessary to construct all required utility plant, except individual sewer connections, required to serve the property. Construction shall not commence until funds are available. If the construction is to be done in coordination with the phased development of the property, funds must be provided in advance which are sufficient to complete each phase. No phase or facilities for any phase shall be constructed prior to the bonding or escrowing of all funds associated with that phase.

(f) At the sole option of the utility, the developer may be required to execute a Developer Extension Contract setting forth all terms and conditions of extending service to their property including all contributions in aid of construction and developer reimbursements, if any.

(g) The utility may require the developer to commence construction of subdivision improvements within three (3) months of utility plans approval or the utility may abate its construction activities until full development construction begins. If the developer stops construction of subdivision improvements for any purpose, the utility may abate its construction for a similar period.

SECTION 3.0 – EXTENSION POLICY (CONTINUED)

(h) As soon as the roads are rough cut and prior to paving, extension lines will need to be constructed at each road crossing. The developer must notify the utility sufficiently in advance of this development stage to allow for the necessary utility construction without disruption to other service operations of the utility. Failure to provide adequate advance notice and cooperation in the construction of necessary utility plant may result in additional delays in obtaining service to the property. The developer shall be required to pay for all additional costs of road boring or other remedial construction necessary to install adequate utility plant throughout the affected property.

3.08 – Non-Standard Service

Non-residential customers generating sewage creating unique or non-standard treatment demands which might reasonably be expected to cause the utility's treatment facilities to operate outside their current waste-water discharge permit parameters may be charged the cost of all studies, engineering plans, permit costs, and collection treatment or discharge facilities construction or modification costs necessary to enable the utility to treat said sewage within permit limits acceptable to the TCEQ, EPA and other regulatory agencies. In the alternative, the customer may have the option of pre-treating said sewage in such a manner to that it may not reasonably be expected to cause the utility's facilities to operate outside their permit parameters. In such case, the customer shall be required to pay the utility's costs of evaluating such pretreatment processes and cost of obtaining regulatory approval of such pretreatment processes. In the event of the pretreatment facilities of a customer making this election fail and cause the utility's facilities to operate outside their permit parameters, the customer shall indemnify the utility for all costs incurred for clean ups or environmental remediation and all fines, penalties, and costs imposed by regulatory or judicial enforcement actions relating to such permit violations.

Non-residential sewer customers producing water borne waste significantly different from waste generated by residential customers may be required to provide a suitable sampling point at the property line for testing the customer's waste for chemicals or substances, e.g., grease, oils, solvents, pesticides, etc., which can reasonably be believed to have an injurious effect on the utility's plant and/or its ability to treat and dispose of such wastes within the parameters of the utility's permit. The utility shall have reasonable access to the sampling point at all times. For any wastewater loading in excess of Domestic Wastewater the customer shall pay the prorated costs of treatment based on their wastewater load characteristics.

## Memorandum

**TO:** Central Records

**FROM:** David Skawin, Legal Division

**DATE:** March 12, 2024

**RE:** **Docket No. 55818** — Application of Aqua Texas, Inc. for a Minor Tariff Change

**CC:** Ann M. Coffin

---

In response to Ordering Paragraph 2 in the Notice of Approval filed on February 28, 2024, please find clean copies of Aqua Texas's tariffs for water Certificate of Convenience and Necessity (CCN) Nos. 13201, 13203, and 13254 and for sewer CCN Nos. 21059, 21065, and 21116. The copies provided are to be stamped *Approved* and placed in the Commission's tariff book.

All parties to Docket No. 55818 have been copied on this memo.

# WATER UTILITY TARIFF
## North Region
## Tariff Control No. 55818

Aqua Texas, Inc. dba Aqua Texas
(North Region)
(Utility Name)

1106 Clayton Lane, Suite 400W
(Business Address)

Austin, Texas 78723
(City, State, Zip Code)

(512) 990-4400
(Area Code/Telephone)

This tariff is effective for utility operations under the following Certificate of Convenience and Necessity:

13201

This tariff is effective in the following counties:
See attached Table – North Region

The following is a list of cities where Aqua Texas – North Region provides water service:

City of Stockton Bend, City of Granbury, The Town of Lakewood Village, City of Rhome, Town of Shady Shores, and City of Waco

**The rates set or approved by the city for the systems entirely within its corporate boundary are not presented in this tariff. Those rates are not under the original jurisdiction of the PUC and will have to be obtained from the city or utility. This tariff applies to outside city customers of systems that provide service inside and outside of a city's corporate boundary.**

This tariff is effective in the following subdivisions and public water systems:
See attached Table A – North Region

TABLE OF CONTENTS

The above utility lists the following sections of its tariff (if additional pages are needed for a section, all pages should be numbered consecutively):

SECTION 1.0 -- RATE SCHEDULE ..... 2
SECTION 2.0 -- SERVICE RULES AND POLICIES ..... 17
SECTION 2.20 – SPECIFIC UTILITY SERVICE RULES AND POLICIES ..... 23

SECTION 1.0 -- RATE SCHEDULE (Continued)

FORM OF PAYMENT: The utility will accept the following forms of payment:
Cash X (If in person at designated locations), Check X, Money Order X, Credit Card X,
Other (specify) Electronic Billing and Payment (See Section 2.06 Billing)

THE UTILITY MAY REQUIRE EXACT CHANGE FOR PAYMENTS AND MAY REFUSE TO ACCEPT PAYMENTS MADE USING MORE THAN $1.00 IN SMALL COINS. A WRITTEN RECEIPT WILL BE GIVEN FOR CASH PAYMENTS.

UNAFFILIATED THIRD PARTIES WHO ACCEPT AND PROCESS CASH, CREDIT CARD, OR ELECTRONIC PAYMENTS FOR UTILITY BILLS MAY REQUIRE PAYMENT OF AN ADDITIONAL CONVENIENCE CHARGE FOR THIS SERVICE

REGULATORY ASSESSMENT ..... 1.0%
PUC RULES REQUIRE THE UTILITY TO COLLECT A FEE OF ONE PERCENT OF THE RETAIL MONTHLY BILL AND REMIT THE FEE TO THE TCEQ.

Section 1.02 - Miscellaneous Fees

TAP FEE ..... $1,100.00
TAP FEE COVERS THE UTILITY'S COSTS FOR MATERIALS AND LABOR TO INSTALL A STANDARD RESIDENTIAL 5/8" x 3/4" METER. AN ADDITIONAL FEE TO COVER UNIQUE COSTS IS PERMITTED IF LISTED ON THIS TARIFF.

TAP FEE (Unique costs) ..... ACTUAL COST
FOR EXAMPLE, A ROAD BORE FOR CUSTOMERS OUTSIDE A SUBDIVISION IS A UNIQUE COST. UNIQUE COSTS WILL BE DETERMINED ON A CASE-BY-CASE BASIS.

TAP FEE (Larger meter) ..... ACTUAL COST
THIS TAP FEE IS BASED ON THE UTILITY'S ACTUAL COST FOR MATERIALS AND LABOR FOR METERS LARGER THAN STANDARD 5/8" x 3/4" METERS. UNIQUE COSTS, SUCH AS ROAD BORES, WILL BE CHARGED IN ADDITION TO THIS TAP FEE AT THEIR ACTUAL COST OF INSTALLATION.

RECONNECTION FEE
THE RECONNECTION FEE MUST BE PAID BEFORE SERVICE CAN BE RESTORED TO A CUSTOMER WHO HAS BEEN DISCONNECTED FOR THE FOLLOWING REASONS (OR OTHER REASONS LISTED UNDER SECTION 2.0 OF THIS TARIFF):
a) Non-payment of bill (Maximum $25.00) ..... $25.00
b) Customer's request that service be disconnected ..... $75.00

SERVICE INITATION FEE ..... $50.00
THE SERVICE INITIATION FEE WILL BE CHARGED FOR INITIATING AN ACCOUNT AT THE SERVICE LOCATION.

LATE CHARGE ..... 10%
PUC RULES ALLOW A ONE-TIME PENALTY TO BE CHARGED ON DELINQUENT BILLS. A LATE CHARGE MAY NOT BE APPLIED TO ANY BALANCE TO WHICH THE PENALTY WAS APPLIED IN A PREVIOUS BILLING.

RETURNED CHECK CHARGE ..... $25.00
RETURNED CHECK CHARGES MUST BE BASED ON THE UTILITY'S DOCUMENTABLE COST.

PUBLIC UTILITY COMMISSION OF TEXAS
APPROVED
FEB 28 2024
DOCKET
55811622

SECTION 1.0 -- RATE SCHEDULE (Continued)

CUSTOMER DEPOSIT - RESIDENTIAL (Maximum $50) .....$50.00

CUSTOMER DEPOSIT - COMMERCIAL & NON-RESIDENTIAL.....1/6TH OF ESTIMATED ANNUAL BILL

METER TEST FEE .....$25.00

THIS FEE, WHICH SHOULD REFLECT THE UTILITY'S COST, MAY BE CHARGED IF A CUSTOMER REQUESTS A SECOND METER TEST WITHIN A TWO-YEAR PERIOD AND THE TEST INDICATES THAT THE METER IS RECORDING ACCURATELY. THE FEE MAY NOT EXCEED $25.

METER/SERVICE RELOCATION FEE (Customer's Request).....ACTUAL COST

THIS FEE MAY BE CHARGED IF A CUSTOMER REQUESTS THAT AN EXISTING METER BE RELOCATED.

STANDARD METER INSTALLATION FEE.....$150.00

TO BE CHARGED WHEN UNMETERED SERVICE EXISTS ON THE SYSTEM THAT SHOULD BE METERED TO BE IN COMPLIANCE WITH THE UTILITY'S TARIFF BUT THE CONVERSION OF THE SERVICE WOULD NOT REQUIRE A FULL TAP AND ALL OF ITS COSTS. THIS FEE WILL BE A SHARING OF COSTS BETWEEN THE CUSTOMER AND THE UTILITY. THE CUSTOMER MAY HAVE THE OPTION OF PAYING THE FEE OVER NO MORE THAN THREE (3) MONTHS.

CUSTOMER SERVICE INSPECTION FEE.....$100.00

SERVICE APPLICANTS MAY CHOOSE TO HAVE CUSTOMER SERVICE INSPECTIONS REQUIRED BY 30 TAC § 290.46(j) PERFORMED BY ANY STATE LICENSED INSPECTOR OF THEIR CHOICE. UNLESS THE SERVICE APPLICANT CHOOSES TO ARRANGE FOR AND PAY FOR THE INSPECTION INDEPENDENTLY, THE UTILITY MAY CHARGE SERVICE APPLICANTS THE CUSTOMER SERVICE INSPECTION FEE AT THE TIME THEY APPLY FOR SERVICE. IF A RE-INSPECTION IS REQUIRED TO BRING PLUMBING INTO COMPLIANCE WITH APPLICABLE REQUIREMENTS OR IF AN EXTRA INSPECTION APPOINTMENT IS REQUIRED BECAUSE A CUSTOMER DOES NOT PERMIT PERFORMANCE OF AN INSPECTION AT A PREVIOUSLY AGREED UPON APPOINTMENT TIME, THE CUSTOMER MAY CHOOSE TO HAVE ANY STATE LICENSED INSPECTOR OF THEIR CHOICE PERFORM THE INSPECTION. IF THE CUSTOMER CHOOSES TO HAVE THE UTILITY PERFORM THE INSPECTION OR RE-INSPECTION, THE CUSTOMER WILL BE CHARGED $100.00 FOR EACH REQUIRED INSPECTION, RE-INSPECTION OR AGREED UPON INSPECTION APPOINTMENT AND WILL PAY THE UTILITY THE TOTAL AMOUNT OWED AT THE TIME AN INSPECTION OR RE-INSPECTION IS PERFORMED. THE UTILITY MAY, AT ITS OPTION, INCLUDE THE ADDITIONAL CHARGE OR CHARGES ON THE NEXT MONTH'S UTILITY BILL RATHER THAN REQUIRING PAYMENT AT THE TIME OF THE INSPECTION OR RE-INSPECTION. THE UTILITY MAY USE UTILITY EMPLOYEES OR MAY HAVE THE INSPECTION PERFORMED BY A LICENSED THIRD PARTY CONTRACTOR.

PUBLIC UTILITY COMMISSION OF TEXAS
APPROVED

SECTION 1.0 -- RATE SCHEDULE (Continued)

ILLEGAL RECONNECTION, LOCK REMOVAL OR DAMAGE FEE.....$85.00

IN ORDER TO REIMBURSE THE UTILITY WITHOUT BURDENING OTHER CUSTOMERS WITH HIGHER RATES FOR THE ADDITIONAL COST OF SERVICE TRIPS TO DISCONNECT A CUSTOMER/ACCOUNT HOLDER WHO HAS BEEN DISCONNECTED FOR NONPAYMENT AND TO PAY FOR THE COST OF BROKEN OR CUT LOCKS AND SERVICE TIME. THIS FEE SHALL BE ASSESSED TO THE ACCOUNT HOLDER OF ANY DELINQUENT ACCOUNT THAT HAS BEEN DISCONNECTED FOR NONPAYMENT BY VALVING OFF, LOCKING OR REMOVING THE METER WHEN SERVICE TO THE PREMISES IS SUBSEQUENTLY RECONNECTED BY NON-UTILITY PERSONNEL BY CUTTING OR REMOVING THE LOCK, REOPENING THE VALVE, OR REMOVING OR BYPASSING THE METER WITHOUT AUTHORIZATION BY THE UTILITY. THIS FEE MAY BE CHARGED EACH TIME AN EVENT OCCURS AND SERVICE WILL NOT BE RECONNECTED UNTIL THIS FEE IS PAID IN ADDITION TO ANY OTHER BALANCES AND RECONNECT FEES. THIS FEE SHALL NOT BE CHARGED IF A FEE FOR A DAMAGED METER IS CHARGED OR IF THE ACCOUNT HOLDER OR HIS/HER REPRESENTATIVE INFORMS THE UTILITY WITHIN 24 HOURS AFTER DISCOVERING THAT SERVICE HAS BEEN RESTORED WITHOUT AUTHORIZATION OF THE UTILITY: (1) THAT SERVICE WAS RECONNECTED WITHOUT THE ACCOUNT HOLDER'S PERMISSION; AND (2) THE ACCOUNT HOLDER AGREES TO PAY FOR ALL WATER USED.

DAMAGED METER AND APPURTENANCES FEE.....ACTUAL COST

THIS FEE SHALL BE ASSESSED TO THE ACCOUNT HOLDER OF ANY DELINQUENT ACCOUNT THAT HAS BEEN DISCONNECTED FOR NONPAYMENT BY VALVING OFF OR LOCKING THE METER WHEN THE METER AND/OR METER APPURTENANCES, SUCH AS AN AMR UNIT OR CURB STOP, ARE DAMAGED IN ORDER TO RESTORE WATER SERVICE TO THE ACCOUNT HOLDER'S ORIGINAL PLACE OF SERVICE REQUIRING THE UTILITY TO REPAIR OR REPLACE THEM. THE ACCOUNT HOLDER SHALL BE CHARGED THE FULL COST OF REPAIRING AND/OR REPLACING ALL DAMAGED PARTS AS THE UTILITY DEEMS NECESSARY, INCLUDING LABOR AND VEHICLE COSTS. THIS WILL INCLUDE REPLACEMENT OF VALVES OR CURB STOPS THAT HAVE HAD THEIR LOCKING EYES BROKEN OFF THE FLANGES.

GOVERNMENTAL TESTING, INSPECTION AND COSTS SURCHARGE:

WHEN AUTHORIZED IN WRITING BY PUC AND AFTER NOTICE TO CUSTOMERS, THE UTILITY MAY INCREASE RATES TO RECOVER INCREASED COSTS FOR INSPECTION FEES AND WATER TESTING. [16 TAC § 24 25(b)(2)(G)]

LINE EXTENSION AND CONSTRUCTION CHARGES:

REFER TO SECTION 3.0--EXTENSION POLICY FOR TERMS, CONDITIONS, AND CHARGES WHEN NEW CONSTRUCTION IS NECESSARY TO PROVIDE SERVICE

PUBLIC UTILITY COMMISSION OF TEXAS
APPROVED
DOCKET
FEB 26 2024 55818
1624

SECTION 1.0 -- RATE SCHEDULE (Continued)

REGIONAL TEMPORARY WATER RATE:

UNLESS OTHERWISE SUPERSEDED BY PUC ORDER OR RULE, IF THE UTILITY IS ORDERED BY A COURT OR GOVERNMENTAL BODY OF COMPETENT JURISDICTION TO REDUCE ITS PUMPAGE, PRODUCTION OR WATER SALES, AQUA TEXAS SHALL BE AUTHORIZED TO INCREASE ITS APPROVED LINE ITEM CHARGES PER 1,000 GALLONS USED (GALLONAGE CHARGE & REGIONAL PASS-THROUGH GALLONAGE CHARGE) BY THE AMOUNT OF THE REGIONAL TEMPORARY WATER RATE INCREASE ("RTWR") CALCULATED ACCORDING TO THE FORMULA:

$$RTWR = (((PRR)(CGC)(R))/(1-R))*((APV)/(RPV))$$

Where:

RTWR = Regional Temporary Water Rate increase per 1,000 gallons
CGC = current total volume charge per 1,000 gallons used (Gallonage Charge + Regional Pass-Through gallonage charge)
R = water use reduction expressed as a decimal fraction (the pumping restriction)
PRR = percentage of revenues to be recovered expressed as a decimal fraction, for this tariff PRR shall equal 0.5
APV = Annual Pumped and/or Purchased volume from the most recent rate application for the system or systems where the temporary restrictions are imposed; or the most recent 12 months if more than 3 years have passed since the most recent rate application was filed; and
RPV = Annual Pumped and Purchased volume for Region from the most recent rate application; or the most recent 12 months if more than 3 years have passed since the most recent rate application was filed

To implement the Regional Temporary Water Rate, Aqua Texas must comply with all notice and other requirements of 16 TAC § 24.25(j).

REGIONAL PASS-THROUGH GALLONAGE CHARGE ADJUSTMENT:

SEE ATTACHED APPENDIX C.

FEDERAL TAX CHANGE CREDIT RIDER (FTCCR):

The Federal Tax Change Credit Rider gives effect to the Tax Cuts and Jobs Act of 2017, which changed the federal corporate tax rate from 35% to 21%, by reducing the cost of service paid by customers taking service under this rate tariff. The FTCCR will provide credits to customers taking service under this rate tariff.

SECTION 1.0 - RATE SCHEDULE (Continued)

METER TEST FEE.....$25.00
THIS FEE WHICH SHOULD REFLECT THE UTILITY'S COST MAY BE CHARGED IF A CUSTOMER REQUESTS A SECOND METER TEST WITHIN A TWO-YEAR PERIOD AND THE TEST INDICATES THAT THE METER IS RECORDING ACCURATELY THE FEE MAY NOT EXCEED $25.

RETURNED CHECK CHARGE .....$25.00
RETURNED CHECK CHARGES MUST BE BASED ON THE UTILITY'S DOCUMENTABLE COST

RECONNECTION FEE
THE RECONNECT FEE MUST BE PAID BEFORE SERVICE CAN BE RESTORED TO A CUSTOMER WHO HAS BEEN DISCONNECTED FOR THE FOLLOWING REASONS (OR OTHER REASONS LISTED UNDER SECTION 2.0 OF THIS TARIFF):
a) Nonpayment of bill (Maximum $25.00) .....$25.00
b) Customer's request that service be disconnected.....$50.00

SERVICE INITIATION FEE .....$20.00
THE SERVICE INITIATION FEE WILL BE CHARGED FOR INITIATING AN ACCOUNT AT THE SERVICE LOCATION.

LATE CHARGE (EITHER $5.00 OR 10% OF THE BILL).....10%
PUC RULES ALLOW A ONE-TIME PENALTY TO BE CHARGED ON DELINQUENT BILLS. A LATE CHARGE MAY NOT BE APPLIED TO ANY BALANCE TO WHICH THE PENALTY WAS APPLIED IN A PREVIOUS BILLING.

CUSTOMER DEPOSIT RESIDENTIAL (Maximum $50) .....$50.00

COMMERCIAL & NON-RESIDENTIAL DEPOSIT ..... 1/6TH OF ESTIMATED ANNUAL BILL

GOVERNMENTAL TESTING, INSPECTION AND COSTS SURCHARGE
WHEN AUTHORIZED IN WRITING BY PUC AND AFTER NOTICE TO CUSTOMERS, THE UTILITY MAY INCREASE RATES TO RECOVER INCREASED COSTS FOR INSPECTION FEES AND WATER TESTING [16 TAC § 24.21(b)(2)(F)].

LINE EXTENSION AND CONSTRUCTION CHARGES:
REFER TO SECTION 3.0--EXTENSION POLICY FOR TERMS, CONDITIONS, AND CHARGES WHEN NEW CONSTRUCTION IS NECESSARY TO PROVIDE SERVICE.

FEDERAL TAX CHANGE CREDIT RIDER (FTCCR):
The Federal Tax Change Credit Rider gives effect to the Tax Cuts and Jobs Act of 2017, which changed the federal corporate tax rate from 35% to 21%, by reducing the cost of service paid by customers taking service under this rate tariff. The FTCCR will provide credits to customers taking service under this rate tariff.

FORM OF PAYMENT: Will accept the following forms of payment:
Cash X (if in person at designated locations), Check X, Money Order X, Credit Card X,
Other (Specify) Electronic Billing & Payment (See tariff service policies)

MAY REQUIRE EXACT CHANGE FOR PAYMENTS AND MAY REFUSE TO ACCEPT PAYMENTS MADE USING MORE THAN $1.00 IN SMALL COINS A WRITTEN RECEIPT WILL BE GIVEN FOR CASH PAYMENTS.

UNAFFILIATED THIRD PARTIES WHO ACCEPT AND PROCESS CASH, CREDIT CARD, OR ELECTRONIC PAYMENTS FOR BILLS MAY REQUIRE PAYMENT OF AN ADDITIONAL CONVENIENCE CHARGE FOR THIS SERVICE.

Section 1.02 - Miscellaneous Fees

TAP FEE.....$1,100.00
THE TAP FEE COVERS COSTS FOR MATERIALS AND LABOR TO INSTALL A STANDARD RESIDENTIAL 5/8" x 3/4" METER. AN ADDITIONAL FEE TO COVER UNIQUE COSTS IS PERMITTED AS LISTED ON THIS TARIFF.

TAP FEE (Unique Costs) ..... ACTUAL COST
FOR EXAMPLE, A ROAD BORE FOR CUSTOMERS OUTSIDE A SUBDIVISION IS A UNIQUE COST. UNIQUE COSTS WILL BE DETERMINED ON A CASE-BY-CASE BASIS

TAP FEE (Larger Meter)..... ACTUAL COST
THIS TAP FEE IS BASED ON THE SERVICE PROVIDER'S ACTUAL COST FOR MATERIALS AND LABOR FOR METERS LARGER THAN STANDARD 5/8" x 3/4" METERS. UNIQUE COSTS, SUCH AS ROAD BORES, WILL BE CHARGED IN ADDITION TO THIS TAP FEE AT THEIR ACTUAL COST OF INSTALLATION.

RECONNECTION FEE
THE RECONNECTION FEE MUST BE PAID BEFORE SERVICE CAN BE RESTORED TO A CUSTOMER WHO HAS BEEN DISCONNECTED FOR THE FOLLOWING REASONS (OR OTHER REASONS LISTED UNDER SECTION 2.0 OF THIS TARIFF):
a) Non-payment of bill (Maximum $25.00) .....$25.00
b) Customer's request that service be disconnected.....$75.00

SERVICE INITIATION FEE.....$50.00
THE SERVICE INITIATION FEE WILL BE CHARGED FOR INITIATING AN ACCOUNT AT THE SERVICE LOCATION

LATE CHARGE..... 10% of BILL
PUC RULES ALLOW A ONE-TIME PENALTY TO BE CHARGED ON DELINQUENT BILLS. A LATE CHARGE MAY NOT BE APPLIED TO ANY BALANCE TO WHICH THE PENALTY WAS APPLIED IN A PREVIOUS BILLING.

RETURNED CHECK CHARGE.....$25.00
RETURNED CHECK CHARGES MUST BE BASED ON DOCUMENTABLE COST.

CUSTOMER DEPOSIT - RESIDENTIAL.....$50.00

CUSTOMER DEPOSIT - COMMERCIAL & NON-RESIDENTIAL 1/6TH OF ESTIMATEDANNUAL BILL

METER TEST FEE .....$25.00
THIS FEE, WHICH SHOULD REFLECT THE SERVICE PROVIDER'S COST, MAY BE CHARGED IF A CUSTOMER REQUESTS A SECOND METER TEST WITHIN A TWO-YEAR PERIOD AND THE TEST INDICATES THAT THE METER IS RECORDING ACCURATELY. THE FEE MAY NOT EXCEED $25.

PUBLIC UTILITY COMMISSION OF TEXAS
APPROVED
DOCK 1629

SECTION 1.0 - RATE SCHEDULE (Continued)

METER/SERVICE RELOCATION FEE (Customer's Request) ..... ACTUAL COST

THIS FEE MAY BE CHARGED IF A CUSTOMER REQUESTS THAT AN EXISTING METER BE RELOCATED.

STANDARD METER INSTALLATION FEE.....$150.00

TO BE CHARGED WHEN UNMETERED SERVICE EXISTS ON THE SYSTEM THAT SHOULD BE METERED TO BE IN COMPLIANCE WITH THE SERVICE PROVIDER'S TARIFF BUT THE CONVERSION OF THE SERVICE WOULD NOT REQUIRE A FULL TAP AND ALL OF ITS COSTS. THIS FEE WILL BE A SHARING OF COSTS BETWEEN THE CUSTOMER AND THE SERVICE PROVIDER THE CUSTOMER MAY HAVE THE OPTION OF PAYING THE FEE OVER NO MORE THAN THREE (3) MONTHS

GOVERNMENTAL TESTING, INSPECTION, AND COSTS SURCHARGE:

THE SERVICE PROVIDER MAY INCREASE RATES TO RECOVER INCREASED COSTS FOR INSPECTION FEES AND WATER TESTING. IF SYSTEM ASSETS ARE SOLD TO AND USED BY A PUBLIC UTILITY AS DEFINED IN TEXAS WATER CODE SECTION 13.002 TO PROVIDE POTABLE WATER SERVICE, THEN IMPLEMENTATION OF SUCH SURCHARGES SHALL BE GOVERNED BY [16 TAC § 24.21(b)(2)(F)].

LINE EXTENSION AND CONSTRUCTION CHARGES:

REFER TO SECTION 3.0--EXTENSION POLICY FOR TERMS, CONDITIONS, AND CHARGES WHEN NEW CONSTRUCTION IS NECESSARY TO PROVIDE SERVICE.

CUSTOMER SERVICE INSPECTION FEE .....$100.00

SERVICE APPLICANTS MAY CHOOSE TO HAVE CUSTOMER SERVICE INSPECTIONS REQUIRED BY TCEQ RULE 290.46(j) PERFORMED BY ANY STATE- LICENSED INSPECTOR OF THEIR CHOICE. UNLESS THE SERVICE APPLICANT CHOOSES TO ARRANGE FOR AND PAY FOR THE INSPECTION INDEPENDENTLY, THE SERVICE PROVIDER MAY CHARGE SERVICE APPLICANTS THE CUSTOMER SERVICE INSPECTION FEE AT THE TIME THEY APPLY FOR SERVICE. IF A RE-INPSECTION IS REQUIRED TO BRING PLUMBING INTO COMPLIANCE WITH APPLICABLE REQUIREMENTS OR IF AN EXTRA INSPECTION APPOINTMENT IS REQUIRED BECAUSE A CUSTOMER DOES NOT PERMIT PERFORMANCE OF AN INSPECTION AT A PREVIOUSLY AGREED UPON APPOINTMENT TIME, THE CUSTOMER MAY CHOOSE TO HAVE ANY STATE-LICENSED INSPECTOR OF THEIR CHOICE PERFORM THE INSPECTION. IF THE CUSTOMER CHOOSES TO HAVE THE SERVICE PROVIDER PERFORM THE INSPECTION OR RE-INSPECTION, THE CUSTOMER WILL BE CHARGED $100.00 FOR EACH REQUIRED INSPECTION, RE-INSPECTION OR AGREED UPON INSPECTION APPOINTMENT AND WILL PAY THE SERVICE PROVIDER THE TOTAL AMOUNT OWED AT THE TIME AN INSPECTION OR RE-INSPECTION IS PERFORMED. THE SERVICE PROVIDER MAY, AT ITS OPTION, INCLUDE THE ADDITIONAL CHARGE OR CHARGES ON THE NEXT MONTH'S SERVICE BILL RATHER THAN REQUIRING PAYMENT AT THE TIME OF THE INSPECTION OR RE-INSPECTION. THE SERVICE PROVIDER MAY USE ITS EMPLOYEES OR MAY HAVE THE INSPECTION PERFORMED BY A LICENSED THIRD PARTY CONTRACTOR.

ILLEGAL RECONNECTION, LOCK REMOVAL OR DAMAGE FEE .....$85.00

IN ORDER TO REIMBURSE THE SERVICE PROVIDER WITHOUT BURDENING OTHER CUSTOMERS WITH HIGHER RATES FOR THE ADDITIONAL COST OF SERVICE TRIPS TO DISCONNECT A CUSTOMER/ACCOUNT HOLDER WHO HAS BEEN DISCONNECTED FOR NONPAYMENT AND TO PAY FOR THE COST OF BROKEN OR CUT LOCKS AND SERVICE TIME, THIS FEE SHALL BE ASSESSED TO THE ACCOUNT HOLDER OF ANY DELINQUENT ACCOUNT THAT HAS BEEN DISCONNECTED FOR NONPAYMENT BY VALVING OFF, LOCKING OR REMOVING THE METER WHEN SERVICE TO THE PREMISES IS SUBSEQUENTLY RECONNECTED BY NON-SERVICE PROVIDER PERSONNEL BY CUTTING OR REMOVING THE LOCK, REOPENING THE VALVE, OR REMOVING OR BYPASSING THE METER WITHOUT AUTHORIZATION BY THE SERVICE PROVIDER. THIS FEE MAY BE CHARGED EACH TIME AN EVENT OCCURS AND SERVICE WILL NOT BE RECONNECTED UNTIL THIS FEE IS PAID IN ADDITION TO ANY OTHER BALANCES AND RECONNECT FEES. THIS FEE SHALL NOT BE CHARGED IF A FEE FOR A DAMAGED METER IS CHARGED OR IF THE ACCOUNT HOLDER OR HIS/HER REPRESENTATIVE INFORMS THE SERVICE PROVIDER WITHIN 24 HOURS AFTER DISCOVERING THAT SERVICE HAS BEEN RESTORED WITHOUT AUTHORIZATION OF THE SERVICE PROVIDER. (1) THAT SERVICE WAS RECONNECTED WITHOUT THE ACCOUNT HOLDER'S PERMISSION, AND (2) THE ACCOUNT HOLDER AGREES TO PAY FOR ALL WATER USED

## SECTION 2.0 - SERVICE RULES AND POLICIES

### Section 2.01 – Public Utility Commission of Texas (PUC or Commission) Rules

The utility will have the most current PUC Substantive Rules, Chapter 24, Water Rates, available at its office for reference purposes. The Rules and this tariff shall be available for public inspection and reproduction at a reasonable cost. The latest Rules or Commission approved changes to the Rules supersede any rules or requirements in this tariff.

### Section 2.02 – Request to Initiate, Transfer, or Terminate Water or Sewer Service

A customer may initiate, transfer or terminate retail water or sewer service by mail, by telephone, through an Internet website, or through another electronic transmission. If a service request is initiated by mail, the utility's standard application or contract form (attached in the Appendix to this tariff) must be signed and submitted by the applicant before water service is provided by the utility.

After the applicant has met all the requirements, conditions and regulations for service, the utility will install a tap, meter, and utility cut-off valve and/or take all necessary actions to initiate service. The utility will serve each qualified applicant for service within ten working days unless line extensions or new facilities are required. If construction is required to fill the order and if it cannot be completed within 30 days, the utility will provide the applicant with a written explanation of the construction required and an expected date of service. Notwithstanding any statement in this tariff to the contrary, the utility will serve each qualified applicant for service within the time limits prescribed in 16 TAC § 24.161(a) through (b) as that rule may be amended by the PUC.

Where service has previously been provided, service will be reconnected within three working days after the applicant has met the requirements for reconnection.

The customer will be responsible for furnishing and laying the necessary customer service pipe from the meter location to the place of consumption. Customers may be required to install a customer owned cut-off valve on the customer's side of the meter or connection.

### Section 2.03 - Refusal of Service

The utility may decline to serve an applicant until the applicant has complied with the regulations of the regulatory agencies (state and municipal regulations) and for the reasons outlined in the PUC Rules. In the event that the utility refuses to serve an applicant, the utility will inform the applicant in writing of the basis of its refusal. The utility is also required to inform the applicant a complaint may be filed with the Commission.

If a residential applicant cannot establish credit to the satisfaction of the utility, the applicant may be required to pay a deposit as provided for in Section 1.02 of this tariff. The utility will keep records of the deposit and credit interest in accordance with PUC Rules.

### Section 2.04 - Customer Deposits

Residential applicants 65 years of age or older may not be required to pay deposits unless the applicant has an outstanding account balance with the utility or another water or sewer utility which accrued within the last two years.

PUBLIC UTILITY COMMISSION OF TEXAS
APPROVED
DOCKET
FEB 28 2024
1634
55818

SECTION 2.0 - SERVICE RULES AND POLICIES (Continued)

Nonresidential applicants who cannot establish credit to the satisfaction of the utility may be required to make a deposit that does not exceed an amount equivalent to one-sixth of the estimated annual billings.

Refund of deposit. - If service is not connected, or after disconnection of service, the utility will promptly refund the customer's deposit plus accrued interest or the balance, if any, in excess of the unpaid bills for service furnished. The utility may refund the deposit at any time prior to termination of utility service but must refund the deposit plus interest for any customer who has paid 18 consecutive billings without being delinquent.

Section 2.05 - Meter Requirements, Readings, and Testing

All water sold by the utility will be billed based on meter measurements. The utility will provide, install, own, and maintain meters to measure amounts of water consumed by its customers. One meter is required for each residential, commercial, or industrial facility in accordance with the PUC Rules.

Service meters will be read at monthly intervals and as nearly as possible on the corresponding day of each monthly meter reading period unless otherwise authorized by the Commission.

Meter Tests. - The utility will, upon the request of a customer, and, if the customer so desires, in his or her presence or in that of his or her authorized representative, make without charge a test of the accuracy of the customer's meter. If the customer asks to observe the test, the test will be made during the utility's normal working hours at a time convenient to the customer. Whenever possible, the test will be made on the customer's premises, but may, at the utility's discretion, be made at the utility's testing facility. If within a period of two years the customer requests a new test, the utility will make the test, but if the meter is found to be within the accuracy standards established by the American Water Works Association, the utility will charge the customer a fee which reflects the cost to test the meter up to a maximum $25 for a residential customer. Following the completion of any requested test, the utility will promptly advise the customer of the date of removal of the meter, the date of the test, the result of the test, and who made the test.

Section 2.06 - Billing

Bills from the Utility will be mailed monthly unless authorized by the Commission or the customer voluntarily elects to be billed through a paperless electronic billing system which uses standard forms, protocols and conformation processes established and maintained by the utility or unaffiliated third parties providing online billing and payment services that are approved by the Utility. The due date to pay bills for utility service will be at least 21 days from the date of issuance. The postmark on the bill or, if there is no postmark on the bill, the recorded date of mailing or electronic mailing by the Utility or the Utility's billing service will constitute proof of the date of issuance. Payment for utility service is delinquent if full payment, including late fees and the regulatory assessment, is not received at the Utility or the Utility's authorized payment processor by 5:00 p.m. on the due date. If the due date falls on a holiday or weekend, the due date for payment purposes will be the next work day after the due date.

PUBLIC UTILITY COMMISSION OF TEXAS
APPROVED
DOCKET
FEB 28 2024
55818

SECTION 2.0 - SERVICE RULES AND POLICIES (Continued)

A late penalty of 10% will be charged on delinquent bills. Customer payments post marked by the due date will not incur a late penalty. The penalty on delinquent bills will not be applied to any balance to which the penalty was applied in a previous billing. The utility must maintain a record of the date of mailing to charge the late penalty.

Each bill will provide all information required by the PUC Rules. For each of the systems it operates, the utility will maintain and note on the monthly bill a telephone number (or numbers) which may be reached by a local call by customers. At the utility's option, a toll-free telephone number or the equivalent may be provided.

Cash Payments at Non-utility payment locations or Credit Card Payments – The Utility may use unaffiliated third parties to accept and process utility bill cash payments at non-utility payment locations or to accept and process utility bill credit card payments. Any charges required by the third party to accept and process such utility bill payments are the responsibility of the customer and are in addition to utility bill amounts.

Electronic Billing and Payment – A customer may voluntarily elect to be billed through a paperless electronic billing system which uses standard forms, protocols and conformation processes established and maintained by the Utility or unaffiliated third parties providing online billing and payment services that are approved by the Utility. Any charges required by the third party to process the electronic bill or payment are the responsibility of the customer and are in addition to utility bill amounts. In administering this electronic billing option, the Utility does not send the customer paper bills. Customers may sign up for electronic billing at www.aquaamerica.com. Required information that otherwise accompanies a paper bill is transmitted to the customer electronically, or an Internet link access to such information is transmitted electronically to the customer. Any applicable disconnection notice continues to be sent to the customer via United States mail. The Utility may utilize unaffiliated third parties to electronically transmit bills to the customer. The Utility is not responsible for any loss resulting from the customer's election to receive bills electronically, including but not limited to, any loss associated with damage to the customer's computer equipment or facilities and any loss associated with a third party's unauthorized use of the customer's information. Either the Utility or customer may, upon thirty (30) days' notice to the other party, terminate electronic transmission of bills without any liability to the terminating party resulting from such termination, and without affecting the customer's obligation to pay all amounts due to the Utility. In such event, the Utility will begin to issue paper bills via United States mail to the customer as soon as reasonably practical. The Utility reserves the right to determine whether or not a customer is eligible to be billed through its paperless electronic billing system. A customer that elects electronic billing, who is a combination water and sewer service customer of the Utility, will receive electronic billing for both services.

Third party charges for processing utility bill payments- Any charges required by a third party to accept or process a cash utility bill payment at a non-utility payment location, a credit card utility bill payment, or an electronic utility bill or payment are the responsibility of the customer and are in addition to utility bill amounts.

PUBLIC UTILITY COMMISSION OF TEXAS
APPROVED
FEB 28 2024
DOCKET
55818 1636

SECTION 2.0 - SERVICE RULES AND POLICIES (Continued)

In the event of a dispute between a customer and a utility regarding any bill for utility service, the utility will conduct an investigation and report the results to the customer. If the dispute is not resolved, the utility will inform the customer that a complaint may be filed with the Commission.

Section 2.07 - Service Disconnection

Utility service may be disconnected if the bill has not been paid in full by the date listed on the termination notice. The termination date must be at least 10 days after the notice is mailed or hand delivered.

The utility is encouraged to offer a deferred payment plan to a customer who cannot pay an outstanding bill in full and is willing to pay the balance in reasonable installments. However, a customer's utility service may be disconnected if a bill has not been paid or a deferred payment agreement entered into within 31 days from the date of issuance of a bill and if proper notice of termination has been given.

Notice of termination must be a separate mailing or hand delivery in accordance with the PUC Rules.

Utility service may also be disconnected without notice for reasons as described in the PUC Rules.

Utility personnel must be available to collect payments and to reconnect service on the day of and the day after any disconnection of service unless service was disconnected at the customer's request or due to a hazardous condition.

Section 2.08 – Reconnection of Service

Service will be reconnected within 36 hours after the past due bill and any other outstanding charges are paid or correction of the conditions which caused service to be disconnected.

Section 2.09 - Service Interruptions

The utility will make all reasonable efforts to prevent interruptions of service. If interruptions occur, the utility will re-establish service within the shortest possible time. Except for momentary interruptions due to automatic equipment operations, the utility will keep a complete record of all interruptions, both emergency and scheduled and will notify the Commission in writing of any service interruptions affecting the entire system or any major division of the system lasting more than four hours. The notice will explain the cause of the interruptions.

Prorated Bills. - If service is interrupted or seriously impaired for 24 consecutive hours or more, except by an act of God, the utility will prorate the monthly base bill in proportion to the time service was not available to reflect this loss of service.

PUBLIC UTILITY COMMISSION OF TEXAS
APPROVED

SECTION 2.0 - SERVICE RULES AND POLICIES (Continued)

Section 2.10 - Quality of Service

The utility will plan, furnish, and maintain production, treatment, storage, transmission, and distribution facilities of sufficient size and capacity to provide a continuous and adequate supply of water for all reasonable consumer uses. Unless otherwise authorized by the Commission, the utility will maintain facilities as described in the PUC Rules or in the TCEQ's "Rules and Regulations for Public Water Systems." The utility will not provide supply for fire prevention, fire flow, or firefighting services as part of standard retail water utility service.

Section 2.11 - Customer Complaints and Disputes

If a customer or applicant for service lodges a complaint, the utility will promptly make a suitable investigation and advise the complainant of the results. Service will not be disconnected pending completion of the investigation. If the complainant is dissatisfied with the utility's response, the utility must advise the complainant that he has recourse through the PUC complaint process. Pending resolution of a complaint, the commission may require continuation or restoration of service.

PUBLIC UTILITY COMMISSION OF TEXAS
APPROVED
DOCKET
FEB 28 2024 55818 1038

## SECTION 2.20 - SPECIFIC UTILITY SERVICE RULES AND POLICIES

The utility will maintain a record of all complaints which shows the name and address of the complainant, the date and nature of the complaint and the adjustment or disposition thereof, for a period of two years after the final settlement of the complaint.

This section contains specific utility service rules in addition to the rules previously listed under Section 2.0. It must be reviewed and approved by the Commission and in compliance with PUC Rules to be effective.

The utility adopts the administrative rules of the PUC, as the same may be amended from time to time, as its company specific service rules and regulations. These rules will be kept on file at the company's offices for customer inspection during regular business hours. In the event of a conflict between the PUC's amended rules and the provisions of this tariff, the amended rules shall prevail. Where necessary, any conflicting provision of this tariff shall be deemed to have been superseded by the PUC rule in question to the degree that the utility may conduct its lawful business in conformance with all requirements of said rule.

All payments for utility service shall be delivered or mailed to the remittance address on the utility bill received or paid using any method described on the utility bill received. Cash payments are only accepted in person at designated payment locations as described in the utility bill received. If the utility or its authorized agent fails to receive payment prior to the time of noticed disconnection for non-payment of a delinquent account, service will be terminated as scheduled. Utility service crews shall not be allowed to collect payments on customer accounts in the field.

Payment of an account by any means that has been dishonored and returned by the payer or payee's bank, shall be deemed to be delinquent. All returned payments must be redeemed with cash or valid money order. If a customer has two returned payments within a twelve month period, the customer shall be required to pay a deposit if one has not already been paid.

Customers shall not be allowed to use the utility's cutoff valve on the utility's side of the meter. Existing customers may install cutoff valves on their side of the meter and are encouraged to do so. All new customers must install customer-owned and maintained cutoff valves on their side of the meter.

No water connection from any public drinking water supply system shall be made to any establishment where an actual or potential contamination or system hazard exists without an air gap separation between the drinking water supply and the source of potential contamination. The containment air gap is sometimes impractical and, instead, reliance must be placed on individual internal air gaps or mechanical backflow prevention devices.

Under these conditions, additional protection shall be required at the meter in the form of a backflow prevention device (in accordance with AWWA Standards C510 and C511, and AWWA Manual M14) on those establishments handling substances deleterious or hazardous to the public health. The water purveyor need not require backflow protection at the water service entrance if an adequate cross-connection control program is in effect that includes an annual inspection and testing by a certified backflow prevention device tester. It will be the responsibility of the water purveyor to ensure that these requirements are met.

SECTION 2.20 - SPECIFIC UTILITY SERVICE RULES AND POLICIES (Continued)

Customer shall be liable for any damage or injury to utility-owned property or personnel shown to be caused by the customer, his invitees, his agents, his employees, or others directly under his control.

Limitation on Product/Service Liability. - Public water utilities are required to deliver water to the customer's side of the meter or service connection that meets the potability and pressure standards of the TCEQ. The utility will not accept liability for any injury or damage to individuals or their property occurring on the customer's side of the meter when the water delivered meets these state standards. The utility makes no representations or warranties (expressed or implied) that customer's appliances will not be damaged by disruptions of or fluctuations in water service whatever the cause. The utility will not accept liability for injuries or damages to persons or property due to disruption of water service caused by: (1) acts of God, (2) acts of third parties not subject to the control of the utility if the utility has undertaken such preventive measures as are required by TCEQ rules, (3) electrical power failures in water systems not required by TCEQ rule to have auxiliary power supplies, or (4) termination of water service pursuant to the utility's tariff and the PUC's rules. The utility is not required by law and does not provide fire prevention, fire flow, or firefighting services. The utility therefore does not accept liability for fire-related injuries or damages to persons or property caused or aggravated by the availability (or lack thereof) of water or water pressure (or lack thereof) during fire emergencies. The utility will accept liability for any injury or damage to individuals or their property directly caused by defective utility plant facilities (*e.g.*, leaking water lines or meters) or the repairs to or construction of the utility's facilities.

If the services of a registered professional engineer are required as a result of service initiation request received by the utility for service to that applicant's service extension only, such engineer will be selected by the utility and the applicant, and the applicant shall bear all expenses incurred therein.

If an applicant requires service other than the standard service provided by the utility, such applicant will be required to pay all expenses incurred by the utility in excess of the expenses that would be incurred in providing the standard service and connection. Any applicant who places unique or non-standard service demands on the system may be required to provide contributions in aid of construction (as may be allowed by PUC rule) for the actual costs of, any additional facilities required to maintain compliance with the PUC minimum design criteria for water production, treatment, pumping storage and transmission.

Any applicant or existing customer required to pay for any costs not specifically set forth in the rate schedule pages of this tariff shall be entitled to a written explanation of such costs prior to payment and/or commencement of construction. If the applicant or existing customer does not believe that these costs are reasonable or necessary, the applicant or existing customer shall have the right to appeal such costs to the PUC or such other regulatory authority having jurisdiction over the utility's rates in that portion of the utility's service area in which the applicant's or existing customer's property(ies) is located.

Tap fees may be increased by unique costs not normally incurred as may be permitted by 16 TAC § 24.163(a)(1)(C).

SECTION 2.20 - SPECIFIC UTILITY SERVICE RULES AND POLICIES (Continued)

The utility adopts the Uniform Plumbing Code pursuant to TCEQ Rule 290.46(i). The piping and other equipment on the premises furnished by the customer will be maintained by the customer at all times in conformity with the requirements of the TCEQ, the Uniform Plumbing Code and with the service rules and regulations of the utility. The customer will bring out his service line to his property line at the point on the customer's property mutually acceptable to the customer and the utility subject to such requirements as may exist by TCEQ rule. No meters smaller than those identified in Section 1.0 of this tariff will be connected. No pipe or pipe fitting which contains more than 8.0% lead can be used for the installation or repair of plumbing at any connection which provides water for human use. No solder or flux which contains more than 0.2% lead can be used at any connection which provides water for human use.

The utility will have the right of access to the customer's premises at all times reasonable for the purpose of installing, testing, inspecting or repairing water mains or other equipment used in connection with its provision of water service, or for the purpose of removing its property and disconnecting lines, and for all other purposes necessary to the operation of the utility system including inspecting the customer's plumbing for code, plumbing or tariff violations. The customer shall allow the utility and its personnel access to the customer's property to conduct any water quality tests or inspections required by law. Unless necessary to respond to equipment failure, leak or other condition creating an immediate threat to public health and safety or the continued provision of adequate utility service to others, such entry upon the customer's property shall be during normal business hours. The customer may require any utility representative, employee, contractor, or agent seeking to make such entry to identify themselves, their affiliation with the utility, and the purpose of their entry.

Threats to or assaults upon utility personnel shall result in criminal prosecution.

Except in cases where the customer has a contract with the utility for reserve or auxiliary service, no other water service will be used by the customer on the same installation in conjunction with the utility's service, either by means of a cross-over valve or any other connection. Customer shall not connect, or allow any other person or party to connect, onto any water lines on his premises. Two places shall not be permitted to be supplied with one service pipe where there is a water main abutting the premises.

No connection shall be allowed which allows water to be returned to the public drinking water supply. No backflow prevention device shall be permitted to be installed in the customer's plumbing without notice to and written permission from the utility. Any backflow prevention devices so installed shall be inspected annually by a licensed backflow prevention device inspector or appropriately licensed plumber and a written report of such inspection delivered to the utility.

No service request initiated by telephone, through an internet website, or other electronic transmission, written application, agreement or contract for service may be assigned or transferred without the written consent of the utility.

SECTION 2.20 - SPECIFIC UTILITY SERVICE RULES AND POLICIES (Continued)

It is agreed and understood that any and all meters, water lines and other equipment furnished by the utility (excepting the customer's individual service lines from the point of connection to customer's structures on customer's premises) are and shall remain the sole property of the utility, and nothing contained herein or in a contract/application for service whether in verbal, written, or electronic transmission format shall be construed to reflect a sale or transfer of any such meters, lines, or equipment to any customer. All tap and extension charges shall be for the privilege of connecting to said water lines and for installation, not purchase, of said meters and lines.

Applicants for service at new consuming facilities or facilities which have undergone extensive plumbing modifications are required to deliver to the utility a certificate that their facilities have been inspected by a state-licensed inspector and that they are in compliance with all applicable plumbing codes and are free of potential hazards to public health and safety. Service may be denied until the certificate is received or any identified violations or hazards are remedied. The utility is not required to perform these inspections for the applicant/customer, but will assist the applicant/customer to locate and obtain the services of a licensed inspector in a timely manner. When potential sources of contamination are identified which, in the opinion of the inspector or the utility, require the installation of a state-approved backflow prevention device, such back flow prevention device shall be installed on the customer's service line or other necessary plumbing facilities by an appropriately licensed plumber/backflow prevention device specialist at the customer's expense. The backflow prevention device shall be maintained by the customer at his expense and inspected annually by a licensed inspector. Copies of the annual inspection report must be provided to the utility. Failure to comply with this requirement may constitute grounds for termination of water service with notice.

All customers or service applicants shall provide access to meters and utility cutoff valves at all times reasonably necessary to conduct ordinary utility business and after normal business hours as needed to protect and preserve the integrity of the public drinking water supply. Access to meters and cutoff valves shall be controlled by the provisions of 16 TAC § 24.169(c).

Where necessary to serve an applicant's property, the utility may require the applicant to provide it a permanent recorded public utility easement on and across the applicant's real property sufficient to provide service to that applicant.

Service applicants may be required to comply with any pre-condition to receiving service not printed herein as may exist under PUC rule (customer service, health and safety, water conservation, or environmental), USEPA rule, TWDB rule, local water or conservation district rule or health department rule. Existing customers shall be required to comply with such rules, including modification of their plumbing and/or consumption patterns, after notice.

SECTION 2.20 - SPECIFIC UTILITY SERVICE RULES AND POLICIES (Continued)

Customers must make meters accessible to the Utility and its personnel. If they do not, the Utility may require the removal of the meter to another location according to 16 TAC § 24.169(c) of the PUC's rules. The Utility will give the customer the option of converting to a remote radio read meter at the customer's expense in lieu of bearing the cost of relocating the meter and any Utility water lines necessitated by the customer's actions. If the customer does not accept this option, the customer will be charged for all incurred meter relocation costs. Before relocating the meter, the utility must provide the customer with written notice of its intent to do so.

This notice must include information on the estimated cost of relocating the meter, an explanation of the condition hindering access and what the customer can do to correct that condition, and information on how to contact the utility. The notice must give the customer a reasonable length of time to arrange for utility access so the customer may avoid incurring the relocation cost. A copy of the notice given to the customer shall be filed with the utility's records on the customer's account.

Customers shall not enclose meters with fences or other artificial barriers. If there is a fence in front of a meter, the customer shall install a gate or stile with 300 pound-load bearing capacity to enable meter readers and service crews to obtain ready access to the utility's property.

## SECTION 3.0 - EXTENSION POLICY

### Section 3.01 - Standard Extension Requirements

LINE EXTENSION AND CONSTRUCTION CHARGES. No contribution in aid of construction may be required of any customer except as provided for in this approved extension policy.

The customer will be given an itemized statement of the costs, options such as rebates to the customer, sharing of construction costs between the utility and the customer, or sharing of costs between the customer and other applicants prior to beginning construction.

The utility will bear the full cost of any oversizing of water mains necessary to serve other customers in the immediate area. The individual residential customer shall not be charged for any additional production, storage, or treatment facilities. Contributions in aid of construction may not be required of individual residential customers for production, storage, treatment, or transmission facilities unless otherwise approved by the Commission under this specific extension policy.

COST UTILITY SHALL BEAR. Within its Certificate of Convenience and Necessity ("CCN") service area, the utility will pay the cost of the first 200 feet of any water main or distribution line necessary to extend service to an individual residential customer within a platted subdivision. However, if the residential customer requesting service purchased the property after the developer was notified of the need to provide facilities to the utility, the utility may charge for the first 200 feet. The utility must also be able to document that the developer of the subdivision refused to provide facilities compatible with the utility's facilities in accordance with the utility's approved extension policy after receiving a written request from the utility.

Developers may be required to provide contributions in aid of construction in amounts to furnish the system with all facilities necessary to comply with the PUC's Rules.

This section contains the utility's specific extension policy that complies with the requirements already stated under Section 3.01. It must be reviewed and approved by the Commission and in compliance with PUC Rules to be effective.

Residential customers not covered under Section 3.01 will be charged the equivalent of the costs of extending service to their property from the nearest transmission or distribution line even if that line does not have adequate capacity to serve the customer. However, if the customer places unique, non-standard service demands upon the system, the customer may be charged the full cost of extending service to and throughout their property, including the cost of all necessary transmission and storage facilities necessary to meet the service demands anticipated to be created by that property.

Developers may be required to provide contributions in aid of construction in amounts sufficient to furnish the development with all facilities necessary to provide for reasonable local demand requirements and to comply with TCEQ minimum design criteria for facilities used in the production, transmission, pumping, or treatment of water or TCEQ minimum requirements. For purposes of this tariff, a developer is one who subdivides or requests more than two meters on a piece of property. Commercial, industrial, and wholesale customers will be treated as developers.

## SECTION 3.20 - SPECIFIC UTILITY EXTENSION POLICY

The utility adopts the administrative rules of the PUC, as amended from time to time, as its company specific extension policy. These rules will be kept on file at the company's business office for customer inspection during normal business hours. In the event of a conflict between the PUC's amended rules and the provisions of this tariff, the amended rules shall prevail. Where necessary, any conflicting provision of this tariff shall be deemed to have been superseded by the PUC rule in question to the degree that the utility may conduct its lawful business in conformance with all requirements of said rule.

When an individual residential applicant requires an extension of a main line beyond 200 feet, the charge to that applicant shall be the actual cost of such extension in excess of 200 feet, plus the applicable tap fee plus such other approved costs as may be provided in this tariff and/or PUC rules.

Residential tap fees may be increased by other unique costs not normally incurred as permitted by PUC rule. Larger meter taps shall be made at actual cost associated with that tap which shall include such extraordinary expenses.

Any service extension to a subdivision (recorded or unrecorded) may be subject to the provisions and restrictions of 16 TAC § 24.163(d) and this tariff. When a developer wishes to extend the system to prepare to service multiple new connections, the charge shall be the cost of such extension, plus a pro-rata charge based upon the capacities of production, transmission, storage, pumping and treatment facilities, compliant with the TCEQ minimum design criteria, which must be committed to such extension. As provided by 16 TAC § 24.163(d)(4), for purposes of this tariff, commercial, industrial, and wholesale customers shall be treated as developers.

Any applicant who places unique or non-standard service demands on the system may be required to provide contributions in aid of construction for the actual costs of any additional facilities required to maintain compliance with the TCEQ minimum design criteria for water production, treatment, pumping, storage, and transmission.

Unless expressly exempted by PUC rule or order, each point of use (as defined by 16 TAC § 24.3(25)) must be individually metered.

The imposition of additional extension costs or charges as provided by Sections 2.20 and 3.20 of this tariff shall be subject to appeal as provided in this tariff, PUC rules, or the rules of such other regulatory authority as may have jurisdiction over the utility's rates and services. Any applicant required to pay for any costs not specifically set forth in the rate schedule pages of this tariff shall be entitled to a written explanation of such costs prior to payment and/or commencement of construction. If the applicant does not believe that these costs are reasonable or necessary, the applicant shall have the right to appeal such costs to the PUC or such other regulatory authority having jurisdiction over the utility's rates in that portion of the utility's service area in which the applicant's property(ies) is located. Unless the PUC or other regulatory authority enters interlocutory orders to the contrary, service to the applicant may be delayed until such appeal is resolved.

SECTION 3.20 - SPECIFIC UTILITY EXTENSION POLICY (Continued)

The Utility may initiate, transfer, or terminate retail water or sewer service upon request of a customer request by mail, by telephone, through an Internet website, or through other electronic transmission. A separate request to initiate, transfer or terminate service shall be required for each potential service location if more than one service connection is desired by any individual applicant. Written service applications forms will be available for applicant pick up at the utility's business office during normal weekday business hours. Upon request, written service applications will also be sent by prepaid first class United States mail to the address provided by the applicant upon request.

The utility shall serve each qualified service applicant within its CCN service area as soon as practical after receiving a request for service. All service requests will be fulfilled within the time limits prescribed by PUC rules once the applicant has met all conditions precedent to achieving a qualified service applicant. If a service request cannot be fulfilled within the required period, the applicant shall be notified in writing of the delay, its cause, and the anticipated date that service will be available. The PUC service dates shall not become applicable until the service applicant has met all conditions precedent to becoming a "qualified service applicant" as defined herein or by PUC rules.
