Supreme Court of the United States
FEDERAL POWER COMMISSION et al.
v.
HOPE NATURAL GAS CO.
CITY OF CLEVELAND
v.
SAME.
**Nos. 34 and 35.**

Argued Oct. 20, 21, 1943.
Decided Jan. 3, 1944.

Separate proceedings before the Federal Power Commission by such Commission, by the City of Cleveland and the City of Akron, and by Pennsylvania Public Utility Commission wherein the State of West Virginia and its Public Service Commission were permitted to intervene concerning rates charged by Hope Natural Gas Company which were consolidated for hearing. An order fixing rates was reversed and remanded with directions by the Circuit Court of Appeals, 134 F.2d 287, and Federal Power Commission, City of Akron and Pennsylvania Public Utility Commission in one case and the City of Cleveland in another bring certiorari.

Reversed.

Mr. Justice REED, Mr. Justice FRANKFURTER and Mr. Justice JACKSON, dissenting.

On Writs of Certiorari to the United States Circuit Court of Appeals for the Fourth Circuit.

As respects rates for natural gas, from the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business, which includes service on the debt and dividends on stock, and by such standard the return to the equity owner should be commensurate with the terms on investments in other enterprises having corresponding risks, and such returns should be sufficient to assure confidence in the financial integrity of the enterprise so as to maintain its credit and to attract capital. Natural Gas Act, § § 4(a), 5(a), 15 U.S.C.A. § § 717c(a), 717d(a).

Findings of the Federal Power Commission on lawfulness of past natural gas rates, which the Commission was without power to enforce, were not reviewable under the Natural Gas Act giving any "party aggrieved" by an order of the Commission the right of review. Natural Gas Act, § 19(b), 15 U.S.C.A. § 717r(b).

****283 *592** Mr. Francis M. Shea, Asst. Atty. Gen., for petitioners Federal Power Com'n and others.
***593** Mr. Spencer W. Reeder, of Cleveland, Ohio, for petitioner City of cleveland.
Mr. William B. Cockley, of Cleveland, Ohio, for respondent.
Mr. M. M. Neeley, of Charleston, W. Va., for State of West Virginia, as amicus curiae by special leave of Court.

Mr. Justice DOUGLAS delivered the opinion of the Court.
The primary issue in these cases concerns the validity under the Natural Gas Act of 1938, 52 Stat. 821, 15 U.S.C. s 717 et seq., 15 U.S.C.A. s 717 et seq., of a rate order issued by the Federal Power Commission reducing the rates chargeable by Hope Natural Gas Co., 44 P.U.R.,N.S., 1. On a petition for review of the order made pursuant to s 19(b) of the Act, the ***594** Circuit Court of Appeals set it aside, one judge dissenting. 4 Cir., 134 F.2d 287. The cases ****284** are here on petitions for writs of certiorari which we granted because of the public importance of the questions presented. City of Cleveland v. Hope Natural Gas Co., 319 U.S. 735, 63 S.Ct. 1165.

Hope is a West Virginia corporation organized in 1898. It is a wholly owned subsidiary of Standard Oil Co. (N.J.). Since the date of its organization, it has been in the business of producing, purchasing and marketing natural gas in that state. [FN1] It sells some of that gas to local consumers in West Virginia. But the great bulk of it goes to five customer companies which receive it at the West Virginia line and distribute it in Ohio and in Pennsylvania. [FN2] In July, 1938, the cities of Cleveland and Akron filed complaints with the Commission charging that the rates collected by Hope from East Ohio Gas Co. (an affiliate of Hope which distributes gas in Ohio) were excessive and unreasonable. Later in 1938 the Commission on its own motion instituted an investigation to determine the reasonableness of all of Hope's interstate rates. In March ***595** 1939 the Public Utility Commission of Pennsylvania filed a complaint with the Commission charging that the rates collected by Hope from Peoples Natural Gas Co. (an affiliate of Hope distributing gas in Pennsylvania) and two non-affiliated companies were unreasonable. The City of Cleveland asked that the challenged rates be declared unlawful and that just and reasonable rates be determined from June 30, 1939 to the date of the Commission's order. The latter finding was requested in aid of state regulation and to afford the Public Utilities Commission of Ohio a proper basic for disposition of a fund collected by East Ohio under bond from Ohio consumers since June 30, 1939. The cases were consolidated and hearings were held.

FN1 Hope produces about one-third of its annual gas requirements and purchases the rest under some 300 contracts.

FN2 These five companies are the East Ohio Gas Co., the Peoples Natural Gas Co., the

River Gas Co., the Fayette County Gas Co., and the Manufacturers Light & Heat Co. The first three of these companies are, like Hope, subsidiaries of Standard Oil Co. (N.J.). East Ohio and River distribute gas in Ohio, the other three in Pennsylvania. Hope's approximate sales in m.c.f. for 1940 may be classified as follows:

| | |
|---|---|
| Local West Virginia. sales. | 11,000,000 |
| East Ohio. | 40,000,000 |
| Peoples. | 10,000,000 |
| River. | 400,000 |
| Fayette. | 860,000 |
| Manufacturers. | 2,000,000 |

Local West Virginia

Hope's natural gas is processed by Hope Construction & Refining Co., an affiliate, for the extraction of gasoline and butane. Domestic Coke Corp., another affiliate, sells coke-oven gas to Hope for boiler fuel.

On May 26, 1942, the Commission entered its order and made its findings. Its order required Hope to decrease its future interstate rates so as to reflect a reduction, on an annual basis of not less than $3,609,857 in operating revenues. And it established 'just and reasonable' average rates per m.c.f. for each of the five customer companies. FN3 In response to the prayer of the City of Cleveland the Commission also made findings as to the lawfulness of past rates, although concededly it had no authority under the Act to fix past rates or to award reparations. 44 P.U.R.,U.S., at page 34. It found that the rates collected by Hope from East Ohio were unjust, unreasonable, excessive and therefore unlawful, by $830,892 during 1939, $3,219,551 during 1940, and $2,815,789 on an annual basis since 1940. It further found that just, reasonable, and lawful rates for gas sold by Hope to East Ohio for resale for ultimate public consumption were those required ***596** to produce $11,528,608 for 1939, $11,507,185 for 1940 and $11.910,947 annually since 1940.

FN3 These required minimum reductions of 7¢ per m.c.f. from the 36.5¢ and 35.5¢ rates previously charged East Ohio and Peoples, respectively, and 3¢ per m.c.f. from the 31.5¢ rate previously charged Fayette and Manufacturers.

The Commission established an interstate rate base of $33,712,526 which, it found, represented the 'actual legitimate cost' of the company's interstate property less depletion and depreciation and plus unoperated acreage, working capital and future net capital additions. The Commission, beginning with book cost, made ****285** certain adjustments not necessary to relate here and found the 'actual legitimate cost' of the plant in interstate service to be $51,957,416, as of December 31, 1940. It deducted accrued depletion and depreciation, which it found to be $22,328,016 on an 'economic-service-life' basis. And it added $1,392,021 for future net capital additions, $566,105 for useful unoperated acreage, and $2,125,000 for working capital. It used 1940 as a test year to estimate future revenues and expenses. It allowed over $16,000,000 as annual operating expenses-about $1,300,000 for taxes, $1,460,000 for depletion and depreciation, $600,000 for exploration and development costs, $8,500,000 for gas purchased. The Commission allowed a net increase of $421,160 over 1940 operating expenses, which amount was to take care of future increase in wages, in West Virginia property taxes, and in exploration and development costs. The total amount of deductions allowed from interstate revenues was $13,495,584.

Hope introduced evidence from which it estimated reproduction cost of the property at $97,000,000. It also presented a so-called trended 'original cost' estimate which exceeded $105,000,000. The latter was designed 'to indicate what the original cost of the property would have been if 1938 material and labor prices had prevailed throughout the whole period of the piece-meal construction of the company's property since 1898.' 44 P.U.R.,N.S., at pages 8, 9. Hope estimated by the 'percent condition' method accrued depreciation at about 35% of ***597** reproduction cost new. On that basis Hope contended for a rate base of $66,000,000. The Commission refused to place any reliance on reproduction cost new, saying that it was 'not predicated upon facts' and was 'too conjectural and illusory to be given any weight in these proceedings.' Id., 44 P.U.R.,U.S., at page 8. It likewise refused to give any 'probative value' to trended 'original cost' since it was 'not founded in fact' but was 'basically erroneous' and produced 'irrational results.' Id., 44 P.U.R., N.S., at page 9. In determining the amount of accrued depletion and depreciation the Commission, following Lindheimer v. Illinois Bell

**(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)**

Telephone Co., 292 U.S. 151, 167-169, 54 S.Ct. 658, 664-666, 78 L.Ed. 1182; Federal Power Commission v. Natural Gas Pipeline Co., 315 U.S. 575, 592, 593, 62 S.Ct. 736, 745, 746, 86 L.Ed. 1037, based its computation on 'actual legitimate cost'. It found that Hope during the years when its business was not under regulation did not observe 'sound depreciation and depletion practices' but 'actually accumulated an excessive reserve' [FN4] of about $46,000,000. Id., 44 P.U.R.,N.S., at page 18. One member of the Commission thought that the entire amount of the reserve should be deducted from 'actual legitimate cost' in determining the rate base. [FN5] The majority of the ***598** Commission concluded, however, that where, as here, a business is brought under regulation for the first time and where incorrect depreciation and depletion practices have prevailed, the deduction of the reserve requirement (actual existing depreciation and depletion) rather than the excessive reserve should be made so as to ****286** lay 'a sound basis for future regulation and control of rates.' Id., 44 P.U.R.,N.S., at page 18. As we have pointed out, it determined accrued depletion and depreciation to be $22,328,016; and it allowed approximately $1,460,000 as the annual operating expense for depletion and depreciation. [FN6]

FN4 The book reserve for interstate plant amounted at the end of 1938 to about $18,000,000 more than the amount determined by the Commission as the proper reserve requirement. The Commission also noted that 'twice in the past the company has transferred amounts aggregating $7,500,000 from the depreciation and depletion reserve to surplus. When these latter adjustments are taken into account, the excess becomes $25,500,000, which has been exacted from the ratepayers over and above the amount required to cover the consumption of property in the service rendered and thus to keep the investment unimpaired.' 44 P.U.R.,N.S., at page 22.

FN5 That contention was based on the fact that 'every single dollar in the depreciation and depletion reserves' was taken 'from gross operating revenues whose only source was the amounts charged customers in the past for natural gas. It is, therefore, a fact that the depreciation and depletion reserves have been contributed by the customers and do not represent any investment by Hope.' Id., 44 P.U.R.,N.S., at page 40. And see Railroad Commission v. Cumberland Tel. & T. Co., 212 U.S. 414, 424, 425, 29 S.Ct. 357, 361, 362, 53 L.Ed. 577; 2 Bonbright, Valuation of Property (1937), p. 1139.

FN6 The Commission noted that the case was 'free from the usual complexities involved in the estimate of gas reserves because the geologists for the company and the Commission presented estimates of the remaining recoverable gas reserves which were about one per cent apart.' 44 P.U.R.,N.S., at pages 19, 20.

The Commission utilized the 'straight-line-basis' for determining the depreciation and depletion reserve requirements. It used estimates of the average service lives of the property by classes based in part on an inspection of the physical condition of the property. And studies were made of Hope's retirement experience and maintenance policies over the years. The average service lives of the various classes of property were converted into depreciation rates and then applied to the cost of the property to ascertain the portion of the cost which had expired in rendering the service.

The record in the present case shows that Hope is on the lookout for new sources of supply of natural gas and is contemplating an extension of its pipe line into Louisiana for that purpose. The Commission recognized in fixing the rates of depreciation that much material may be used again when various present sources of gas supply are exhausted, thus giving that property more than scrap value at the end of its present use.

Hope's estimate of original cost was about $69,735,000-approximately $17,000,000 more than the amount found by the Commission. The item of $17,000,000 was made up largely of expenditures which prior to December 31, 1938, were charged to operating expenses. Chief among those expenditures was some $12,600,000 expended ***599** in well-drilling prior to 1923. Most of that sum was expended by Hope for labor, use of drilling-rigs, hauling, and similar costs of well-drilling. Prior to 1923 Hope followed the general practice of the natural gas industry and charged the cost of drilling wells to operating expenses. Hope continued that practice until the Public Service Commission of West Virginia in 1923 required it to capitalize such expenditures, as does the Commission under its present Uniform System of Accounts. [FN7] The Commission refused to add such items to the rate base stating that 'No greater injustice to consumers could be done than to allow items as operating expenses and at a later date include them in the rate base, thereby placing multiple charges upon the consumers.' Id., 44 P.U.R.,N.S., at page 12. For the same reason the Commission excluded from the rate base about $1,600,000 of expenditures on properties which Hope acquired from other utilities, the latter having charged those payments to operating expenses. The Commission disallowed certain other overhead items amounting to

**(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)**

over $3,000,000 which also had been previously charged to operating expenses. And it refused to add some $632,000 as interest during construction since no interest was in fact paid.

FN7 See Uniform System of Accounts prescribed for Natural Gas Companies effective January 1, 1940, Account No. 332.1.

Hope contended that it should be allowed a return of not less than 8%. The Commission found that an 8% return would be unreasonable but that 6 1/2% was a fair rate of return. That rate of return, applied to the rate base of $33,712,526, would produce $2,191,314 annually, as compared with the present income of not less than $5,801,171.

The Circuit Court of Appeals set aside the order of the Commission for the following reasons. (1) It held that the rate base should reflect the 'present fair value' of the ***600** property, that the Commission in determining the 'value' should have considered reproduction cost and trended original cost, and that 'actual legitimate cost' (prudent investment) was not the proper measure of 'fair value' where price levels had changed since the investment. (2) It concluded that the well-drilling costs and overhead items in the amount of some $17,000,000 should have been included in the rate base. (3) It held that accrued depletion and depreciation and the annual allowance for that expense should be computed on the basis of 'present fair value' of the property not on the basis of 'actual legitimate cost'.

****287** The Circuit Court of Appeals also held that the Commission had no power to make findings as to past rates in aid of state regulation. But it concluded that those findings were proper as a step in the process of fixing future rates. Viewed in that light, however, the findings were deemed to be invalidated by the same errors which vitiated the findings on which the rate order was based.

Order Reducing Rates. Congress has provided in s 4(a) of the Natural Gas Act that all natural gas rates subject to the jurisdiction of the Commission 'shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful.' Sec. 5(a) gives the Commission the power, after hearing, to determine the 'just and reasonable rate' to be thereafter observed and to fix the rate by order. Sec. 5(a) also empowers the Commission to order a 'decrease where existing rates are unjust * * * unlawful, or are not the lowest reasonable rates.' And Congress has provided in s 19(b) that on review of these rate orders the 'finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive.' Congress, however, has provided no formula by which the 'just and reasonable' rate is to be determined. It has not filled in the ***601** details of the general prescription FN8 of s 4(a) and s 5(a). It has not expressed in a specific rule the fixed principle of 'just and reasonable'.

FN8. Sec. 6 of the Act comes the closest to supplying any definite criteria for rate making. It provides in subsection (a) that, 'The Commission may investigate the ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.' Subsection (b) provides that every natural-gas company on request shall file with the Commission a statement of the 'original cost' of its property and shall keep the Commission informed regarding the 'cost' of all additions, etc.

[1] [2] When we sustained the constitutionality of the Natural Gas Act in the Natural Gas Pipeline Co. case, we stated that the 'authority of Congress to regulate the prices of commodities in interstate commerce is at least as great under the Fifth Amendment as is that of the states under the Fourteenth to regulate the prices of commodities in intrastate commerce.' 315 U.S. at page 582, 62 S.Ct. at page 741, 86 L.Ed. 1037. Rate-making is indeed but one species of price-fixing. Munn v. Illinois, 94 U.S. 113, 134, 24 L.Ed. 77. The fixing of prices, like other applications of the police power, may reduce the value of the property which is being regulated. But the fact that the value is reduced does not mean that the regulation is invalid. Block v. Hirsh, 256 U.S. 135, 155-157, 41 S.Ct. 458, 459, 460, 65 L.Ed. 865, 16 A.L.R. 165; Nebbia v. New York, 291 U.S. 502, 523-539, 54 S.Ct. 505, 509-517, 78 L.Ed. 940, 89 A.L.R. 1469, and cases cited. It does, however, indicate that 'fair value' is the end product of the process of rate-making not the starting point as the Circuit Court of Appeals held. The heart of the matter is that rates cannot be made to depend upon 'fair value' when the value of the going enterprise depends on earnings under whatever rates may be anticipated. FN9

FN9 We recently stated that the meaning of the word 'value' is to be gathered 'from the purpose for which a valuation is being made. Thus the question in a valuation for rate making is how much a utility will be allowed to earn. The basic

**(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)**

> question in a valuation for reorganization purposes is how much the enterprise in all probability can earn.' Institutional Investors v. Chicago, M., St. P. & P.R. Co., 318 U.S. 523, 540, 63 S.Ct. 727, 738.

***602** [3] [4] [5] [6] [7] We held in Federal Power Commission v. Natural Gas Pipeline Co., supra, that the Commission was not bound to the use of any single formula or combination of formulae in determining rates. Its rate-making function, moreover, involves the making of 'pragmatic adjustments.' Id., 315 U.S. at page 586, 62 S.Ct. at page 743, 86 L.Ed. 1037. And when the Commission's order is challenged in the courts, the question is whether that order 'viewed in its entirety' meets the requirements of the Act. Id., 315 U.S. at page 586, 62 S.Ct. at page 743, 86 L.Ed. 1037. Under the statutory standard of 'just and reasonable' it is the result reached not the method employed which is controlling. Cf. ****288**Los Angeles Gas & Electric Corp. v. Railroad Commission, 289 U.S. 287, 304, 305, 314, 53 S.Ct. 637, 643, 644, 647, 77 L.Ed. 1180; West Ohio Gas Co. v. Public Utilities Commission (No. 1), 294 U.S. 63, 70, 55 S.Ct. 316, 320, 79 L.Ed. 761; West v. Chesapeake & Potomac Tel. Co., 295 U.S. 662, 692, 693, 55 S.Ct. 894, 906, 907, 79 L.Ed. 1640 (dissenting opinion). It is not theory but the impact of the rate order which counts. If the total effect of the rate order cannot be said to be unjust and unreasonable, judicial inquiry under the Act is at an end. The fact that the method employed to reach that result may contain infirmities is not then important. Moreover, the Commission's order does not become suspect by reason of the fact that it is challenged. It is the product of expert judgment which carries a presumption of validity. And he who would upset the rate order under the Act carries the heavy burden of making a convincing showing that it is invalid because it is unjust and unreasonable in its consequences. Cf. Railroad Commission v. Cumberland Tel. & T. Co., 212 U.S. 414, 29 S.Ct. 357, 53 L.Ed. 577; Lindheimer v. Illinois Bell Tel. Co., supra, 292 U.S. at pages 164, 169, 54 S.Ct. at pages 663, 665, 78 L.Ed. 1182; Railroad Commission v. Pacific Gas & E. Co., 302 U.S. 388, 401, 58 S.Ct. 334, 341, 82 L.Ed. 319.

***603** [8] [9] The rate-making process under the Act, i.e., the fixing of 'just and reasonable' rates, involves a balancing of the investor and the consumer interests. Thus we stated in the Natural Gas Pipeline Co. case that 'regulation does not insure that the business shall produce net revenues.' 315 U.S. at page 590, 62 S.Ct. at page 745, 86 L.Ed. 1037. But such considerations aside, the investor interest has a legitimate concern with the financial integrity of the company whose rates are being regulated. From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. Cf. Chicago & Grand Trunk R. Co. v. Wellman, 143 U.S. 339, 345, 346, 12 S.Ct. 400, 402, 36 L.Ed. 176. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital. See State of Missouri ex rel. South-western Bell Tel. Co. v. Public Service Commission, 262 U.S. 276, 291, 43 S.Ct. 544, 547, 67 L.Ed. 981, 31 A.L.R. 807 (Mr. Justice Brandeis concurring). The conditions under which more or less might be allowed are not important here. Nor is it important to this case to determine the various permissible ways in which any rate base on which the return is computed might be arrived at. For we are of the view that the end result in this case cannot be condemned under the Act as unjust and unreasonable from the investor or company viewpoint.

We have already noted that Hope is a wholly owned subsidiary of the Standard Oil Co. (N.J.). It has no securities outstanding except stock. All of that stock has been owned by Standard since 1908. The par amount presently outstanding is approximately $28,000,000 as compared with the rate base of $33,712,526 established by ***604** the Commission. Of the total outstanding stock $11,000,000 was issued in stock dividends. The balance, or about $17,000,000, was issued for cash or other assets. During the four decades of its operations Hope has paid over $97,000,000 in cash dividends. It had, moreover, accumulated by 1940 an earned surplus of about $8,000,000. It had thus earned the total investment in the company nearly seven times. Down to 1940 it earned over 20% per year on the average annual amount of its capital stock issued for cash or other assets. On an average invested capital of some $23,000,000 Hope's average earnings have been about 12% a year. And during this period it had accumulated in addition reserves for depletion and depreciation of about $46,000,000. Furthermore, during 1939, 1940 and 1941, Hope paid dividends of 10% on its stock. And in the year 1942, during about half of which the lower rates were in effect, it paid dividends of 7 1/2%. From 1939-1942 its earned surplus increased from $5,250,000 to about $13,700,000, i.e., to almost half the par value of its outstanding stock.

As we have noted, the Commission fixed a rate of return which permits Hope to earn $2,191,314 annually. In determining that amount it stressed the importance of maintaining the financial integrity of the ****289** company. It considered the financial history of Hope and a vast

**(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)**

array of data bearing on the natural gas industry, related businesses, and general economic conditions. It noted that the yields on better issues of bonds of natural gas companies sold in the last few years were 'close to 3 per cent', 44 P.U.R.,N.S., at page 33. It stated that the company was a 'seasoned enterprise whose risks have been minimized' by adequate provisions for depletion and depreciation (past and present) with 'concurrent high profits', by 'protected established markets, through affiliated distribution companies, in populous and industralized areas', and by a supply of gas locally to meet all requirements,***605** 'except on certain peak days in the winter, which it is feasible to supplement in the future with gas from other sources.' Id., 44 P.U.R.,N.S., at page 33. The Commission concluded, 'The company's efficient management, established markets, financial record, affiliations, and its prospective business place it in a strong position to attract capital upon favorable terms when it is required.' Id., 44 P.U.R.,N.S., at page 33.

[10] [11] [12] In view of these various considerations we cannot say that an annual return of $2,191,314 is not 'just and reasonable' within the meaning of the Act. Rates which enable the company to operate successfully, to maintain its financial integrity, to attract capital, and to compensate its investors for the risks assumed certainly cannot be condemned as invalid, even though they might produce only a meager return on the so-called 'fair value' rate base. In that connection it will be recalled that Hope contended for a rate base of $66,000,000 computed on reproduction cost new. The Commission points out that if that rate base were accepted, Hope's average rate of return for the four-year period from 1937-1940 would amount to 3.27%. During that period Hope earned an annual average return of about 9% on the average investment. It asked for no rate increases. Its properties were well maintained and operated. As the Commission says such a modest rate of 3.27% suggests an 'inflation of the base on which the rate has been computed.' Dayton Power & Light Co. v. Public Utilities Commission, 292 U.S. 290, 312, 54 S.Ct. 647, 657, 78 L.Ed. 1267. Cf. Lindheimer v. Illinois Bell Tel. Co., supra, 292 U.S. at page 164, 54 S.Ct. at page 663, 78 L.Ed. 1182. The incongruity between the actual operations and the return computed on the basis of reproduction cost suggests that the Commission was wholly justified in rejecting the latter as the measure of the rate base.

In view of this disposition of the controversy we need not stop to inquire whether the failure of the Commission to add the $17,000,000 of well-drilling and other costs to ***606** the rate base was consistent with the prudent investment theory as developed and applied in particular cases.

[13] [14] [15] Only a word need be added respecting depletion and depreciation. We held in the Natural Gas Pipeline Co. case that there was no constitutional requirement 'that the owner who embarks in a wasting-asset business of limited life shall receive at the end more than he has put into it.' 315 U.S. at page 593, 62 S.C. at page 746, 86 L.Ed. 1037. The Circuit Court of Appeals did not think that that rule was applicable here because Hope was a utility required to continue its service to the public and not scheduled to end its business on a day certain as was stipulated to be true of the Natural Gas Pipeline Co. But that distinction is quite immaterial. The ultimate exhaustion of the supply is inevitable in the case of all natural gas companies. Moreover, this Court recognized in Lindheimer v. Illinois Bell Tel. Co., supra, the propriety of basing annual depreciation on cost. FN10 By such a procedure the ****290** utility is made whole and the integrity of its investment maintained. FN11 No more is required. FN12 We cannot approve the contrary holding ***607** of United Railways & Electric Co. v. West, 280 U.S. 234, 253, 254, 50 S.Ct. 123, 126, 127, 74 L.Ed. 390. Since there are no constitutional requirements more exacting than the standards of the Act, a rate order which conforms to the latter does not run afoul of the former.

FN10 Chief Justice Hughes said in that case (292 U.S. at pages 168, 169, 54 S.Ct. at page 665, 78 L.Ed. 1182): 'If the predictions of service life were entirely accurate and retirements were made when and as these predictions were precisely fulfilled, the depreciation reserve would represent the consumption of capital, on a cost basis, according to the method which spreads that loss over the respective service periods. But if the amounts charged to operating expenses and credited to the account for depreciation reserve are excessive, to that extent subscribers for the telephone service are required to provide, in effect, capital contributions, not to make good losses incurred by the utility in the service rendered and thus to keep its investment unimpaired, but to secure additional plant and equipment upon which the utility expects a return.'

FN11 See Mr. Justice Brandeis (dissenting) in United Railways & Electric Co. v. West, 280 U.S. 234, 259-288, 50 S.Ct. 123, 128-138, 74 L.Ed. 390, for an extended analysis of the problem.

FN12 It should be noted that the Act provides no specific rule governing depletion and depreciation. Sec. 9(a) merely states that the

> Commission 'may from time to time ascertain and determine, and by order fix, the proper and adequate rates of depreciation and amortization of the several classes of property of each natural-gas company used or useful in the production, transportation, or sale of natural gas.'

The Position of West Virginia. The State of West Virginia, as well as its Public Service Commission, intervened in the proceedings before the Commission and participated in the hearings before it. They have also filed a brief amicus curiae here and have participated in the argument at the bar. Their contention is that the result achieved by the rate order 'brings consequences which are unjust to West Virginia and its citizens' and which 'unfairly depress the value of gas, gas lands and gas leaseholds, unduly restrict development of their natural resources, and arbitrarily transfer their properties to the residents of other states without just compensation therefor.'

West Virginia points out that the Hope Natural Gas Co. holds a large number of leases on both producing and unoperated properties. The owner or grantor receives from the operator or grantee delay rentals as compensation for postponed drilling. When a producing well is successfully brought in, the gas lease customarily continues indefinitely for the life of the field. In that case the operator pays a stipulated gas-well rental or in some cases a gas royalty equivalent to one-eighth of the gas marketed. FN13 Both the owner and operator have valuable property interests in the gas which are separately taxable under West Virginia law. The contention is that the reversionary interests in the leaseholds should be represented in the rate proceedings since it is their gas which is being sold in interstate ***608** commerce. It is argued, moreover, that the owners of the reversionary interests should have the benefit of the 'discovery value' of the gas leaseholds, not the interstate consumers. Furthermore, West Virginia contends that the Commission in fixing a rate for natural gas produced in that State should consider the effect of the rate order on the economy of West Virginia. It is pointed out that gas is a wasting asset with a rapidly diminishing supply. As a result West Virginia's gas deposits are becoming increasingly valuable. Nevertheless the rate fixed by the Commission reduces that value. And that reduction, it is said, has severe repercussions on the economy of the State. It is argued in the first place that as a result of this rate reduction Hope's West Virginia property taxes may be decreased in view of the relevance which earnings have under West Virginia law in the assessment of property for tax purposes. FN14 Secondly, it is pointed out that West Virginia has a production tax FN15 on the 'value' of the gas exported from the State. And we are told that for purposes of that tax 'value' becomes under West Virginia law 'practically the substantial equivalent of market value.' Thus West Virginia argues that undervaluation of Hope's gas leaseholds will cost the State many thousands of dollars in taxes. The effect, it is urged, is to impair West Virginia's tax structure for the benefit of Ohio and Pennsylvania consumers. West Virginia emphasizes, moreover, its deep interest in the conservation of its natural resources including its natural gas. It says that a reduction of the value of these leasehold values will jeopardize these conservation policies in three respects: (1) ****291** exploratory development of new fields will be discouraged; (2) abandonment of lowyield high-cost marginal wells will be hastened; and (3) secondary recovery of oil will be hampered. ***609** Furthermore, West Virginia contends that the reduced valuation will harm one of the great industries of the State and that harm to that industry must inevitably affect the welfare of the citizens of the State. It is also pointed out that West Virginia has a large interest in coal and oil as well as in gas and that these forms of fuel are competitive. When the price of gas is materially cheapened, consumers turn to that fuel in preference to the others. As a result this lowering of the price of natural gas will have the effect of depreciating the price of West Virginia coal and oil.

> FN13 See Simonton, The Nature of the Interest of the Grantee Under an Oil and Gas Lease (1918), 25 W.Va.L.Quar. 295.
>
> FN14 West Penn Power Co. v. Board of Review, 112 W.Va. 442, 164 S.E. 862.
>
> FN15 W.Va.Rev.Code of 1943, ch. 11. Art. 13, ss 2a, 3a.

West Virginia insists that in neglecting this aspect of the problem the Commission failed to perform the function which Congress entrusted to it and that the case should be remanded to the Commission for a modification of its order. FN16

> FN16 West Virginia suggests as a possible solution (1) that a 'going concern value' of the company's tangible assets be included in the rate base and (2) that the fair market value of gas delivered to customers be added to the outlay for operating expenses and taxes.

We have considered these contentions at length in view of the earnestness with which they have been urged upon us. We have searched the legislative history of the Natural

Gas Act for any indication that Congress entrusted to the Commission the various considerations which West Virginia has advanced here. And our conclusion is that Congress did not.

[16] [17] We pointed out in Illinois Natural Gas Co. v. Central Illinois Public Service Co., 314 U.S. 498, 506, 62 S.Ct. 384, 387, 86 L.Ed. 371, that the purpose of the Natural Gas Act was to provide, 'through the exercise of the national power over interstate commerce, an agency for regulating the wholesale distribution to public service companies of natural gas moving interstate, which this Court had declared to be interstate commerce not subject to certain types of state regulation.' As stated in the House Report the 'basic purpose' of this legislation was 'to occupy' the field in which such cases as ***610**State of Missouri v. Kansas Natural Gas Co., 265 U.S. 298, 44 S.Ct. 544, 68 L.Ed. 1027, and Public Utilities Commission v. Attleboro Steam & Electric Co., 273 U.S. 83, 47 S.Ct. 294, 71 L.Ed. 549, had held the States might not act. H.Rep. No. 709, 75th Cong., 1st Sess., p. 2. In accomplishing that purpose the bill was designed to take 'no authority from State commissions' and was 'so drawn as to complement and in no manner usurp State regulatory authority.' Id., p. 2. And the Federal Power Commission was given no authority over the 'production or gathering of natural gas.' s 1(b).

[18] The primary aim of this legislation was to protect consumers against exploitation at the lands of natural gas companies. Due to the hiatus in regulation which resulted from the Kansas Natural Gas Co. case and related decisions state commissions found it difficult or impossible to discover what it cost interstate pipe-line companies to deliver gas within the consuming states; and thus they were thwarted in local regulation. H.Rep., No. 709, supra, p. 3. Moreover, the investigations of the Federal Trade Commission had disclosed that the majority of the pipe-line mileage in the country used to transport natural gas, together with an increasing percentage of the natural gas supply for pipe-line transportation, had been acquired by a handful of holding companies. [FN17] State commissions, independent producers, and communities having or seeking the service were growing quite helpless against these combinations. [FN18] These were the types of problems with which those participating in the hearings were pre-occupied. [FN19] Congress addressed itself to those specific evils.

FN17 S.Doc. 92, Pt. 84-A, ch. XII, Final Report, Federal Trade Commission to the Senate pursuant to S.Res.No. 83, 70th Cong., 1st Sess.

FN18 S.Doc. 92, Pt. 84-A, chs. XII, XIII, op. cit., supra, note 17.

FN19 See Hearings on H.R. 11662, Subcommittee of House Committee on Interstate & Foreign Commerce, 74th Cong., 2d Sess.; Hearings on H.R. 4008, House Committee on Interstate & Foreign Commerce, 75th Cong., 1st Sess.

***611** The Federal Power Commission was given****292** broad powers of regulation. The fixing of 'just and reasonable' rates (s 4) with the powers attendant thereto [FN20] was the heart of the new regulatory system. Moreover, the Commission was given certain authority by s 7(a), on a finding that the action was necessary or desirable 'in the public interest,' to require natural gas companies to extend or improve their transportation facilities and to sell gas to any authorized local distributor. By s 7(b) it was given control over the abandonment of facilities or of service. And by s 7(c), as originally enacted, no natural gas company could undertake the construction or extension of any facilities for the transportation of natural gas to a market in which natural gas was already being served by another company, or sell any natural gas in such a market, without obtaining a certificate of public convenience and necessity from the Commission. In passing on such applications for certificates of convenience and necessity the Commission was told by s 7(c), as originally enacted, that it was 'the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest.' The latter provision was deleted from s 7(c) when that subsection was amended by the Act of February 7, 1942, 56 Stat. 83. By that amendment limited grandfather rights were granted companies desiring to extend their facilities and services over the routes or within the area which they were already serving. Moreover, s 7(c) was broadened so as to require certificates***612** of public convenience and necessity not only where the extensions were being made to markets in which natural gas was already being sold by another company but in other situations as well.

FN20 The power to investigate and ascertain the 'actual legitimate cost' of property (s 6), the requirement as to books and records (s 8), control over rates of depreciation (s 9), the requirements for periodic and special reports (s 10), the broad powers of investigation (s 14) are among the chief powers supporting the rate making function.

[19] These provisions were plainly designed to protect the consumer interests against exploitation at the hands of private natural gas companies. When it comes to cases of abandonment or of extensions of facilities or service, we may assume that, apart from the express exemptions [FN21] contained in s 7, considerations of conservation are material to the issuance of certificates of public convenience and necessity. But the Commission was not asked here for a certificate of public convenience and necessity under s 7 for any proposed construction or extension. It was faced with a determination of the amount which a private operator should be allowed to earn from the sale of natural gas across state lines through an established distribution system. Secs. 4 and 5, not s 7, provide the standards for that determination. We cannot find in the words of the Act or in its history the slightest intimation or suggestion that the exploitation of consumers by private operators through the maintenance of high rates should be allowed to continue provided the producing states obtain indirect benefits from it. That apparently was the Commission's view of the matter, for the same arguments advanced here were presented to the Commission and not adopted by it.

FN21 Apart from the grandfather clause contained in s 7(c), there is the provision of s 7(f) that a natural gas company may enlarge or extend its facilities with the 'service area' determined by the Commission without any further authorization.

We do not mean to suggest that Congress was unmindful of the interests of the producing states in their natural gas supplies when it drafted the Natural Gas Act. As we have said, the Act does not intrude on the domain traditionally reserved for control by state commissions; and the Federal Power Commission was given no authority over***613** 'the production or gathering of natural gas.' s 1(b). In addition, Congress recognized the legitimate interests of the States in the conservation of natural gas. By s 11 Congress instructed the Commission to make reports on compacts between two or more States dealing with the conservation, production and transportation of natural gas. [FN22] The Commission was also ****293** directed to recommend further legislation appropriate or necessary to carry out any proposed compact and 'to aid in the conservation of natural-gas resources within the United States and in the orderly, equitable, and economic production, transportation, and distribution of natural gas.' s 11(a). Thus Congress was quite aware of the interests of the producing states in their natural gas supplies. [FN23] But it left the protection of ***614** those interests to measures other than the maintenance of high rates to private companies. If the Commission is to be compelled to let the stockholders of natural gas companies have a feast so that the producing states may receive crumbs from that table, the present Act must be redesigned. Such a project raises questions of policy which go beyond our province.

FN22 See P.L. 117, approved July 7, 1943, 57 Stat. 383 containing an 'Interstate Compact to Conserve Oil and Gas' between Oklahoma, Texas, New Mexico, Illinois, Colorado, and Kansas.

FN23 As we have pointed out, s 7(c) was amended by the Act of February 7, 1942, 56 Stat. 83, so as to require certificates of public convenience and necessity not only where the extensions were being made to markets in which natural gas was already being sold by another company but to other situations as well. Considerations of conservation entered into the proposal to give the Act that broader scope. H.Rep.No. 1290, 77th Cong. 1st Sess., pp. 2, 3. And see Annual Report, Federal Power Commission (1940) pp. 79, 80; Baum, The Federal Power Commission and State Utility Regulation (1942), p. 261.
The bill amending s 7(c) originally contained a subsection (h) reading as follows: 'Nothing contained in this section shall be construed to affect the authority of a State within which natural gas is produced to authorize or require the construction or extension of facilities for the transportation and sale of such gas within such State: Provided, however, That the Commission, after a hearing upon complaint or upon its own motion, may by order forbid any intrastate construction or extension by any natural-gas company which it shall find will prevent such company from rendering adequate service to its customers in interstate or foreign commerce in territory already being served.' See Hearings on H.R. 5249, House Committee on Interstate & Foreign Commerce, 77th Cong., 1st Sess., pp. 7, 11, 21, 29, 32, 33. In explanation of its deletion the House Committee Report stated, pp. 4, 5: 'The increasingly important problems raised by the desire of several States to regulate the use of the natural gas produced therein in the interest of consumers within such States, as against the Federal power to regulate interstate commerce in the interest of both interstate and intrastate consumers, are deemed by the committee to warrant further intensive study and probably a more retailed and comprehensive plan for the handling thereof than that which would have been provided by the stricken subsection.'

[20] It is hardly necessary to add that a limitation on the net earnings of a natural gas company from its interstate business is not a limitation on the power of the producing state either to safeguard its tax revenues from that industry [FN24] or to protect the interests of those who sell their gas to the interstate operator. [FN25] The return which ****294** the Commission***615** allowed was the net return after all such charges.

FN24 We have noted that in the annual operating expenses of some $16,000.000 the Commission included West Virginia and federal taxes. And in the net increase of $421,160 over 1940 operating expenses allowed by the Commission was some $80,000 for increased West Virginia property taxes. The adequacy of these amounts has not been challenged here.

FN25 The Commission included in the aggregate annual operating expenses which it allowed some $8,500,000 for gas purchased. It also allowed about $1,400,000 for natural gas production and about $600,000 for exploration and development.

It is suggested, however, that the Commission in ascertaining the cost of Hope's natural gas production plant proceeded contrary to s 1(b) which provides that the Act shall not apply to 'the production or gathering of natural gas'. But such valuation, like the provisions for operating expenses, is essential to the rate-making function as customarily performed in this country. Cf. Smith, The Control of Power Rates in the United States and England (1932), 159 The Annals 101. Indeed s 14(b) of the Act gives the Commission the power to 'determine the propriety and reasonableness of the inclusion in operating expenses, capital, or surplus of all delay rentals or other forms of rental or compensation for unoperated lands and leases.'

It is suggested that the Commission has failed to perform its duty under the Act in that it has not allowed a return for gas production that will be enough to induce private enterprise to perform completely and efficiently its functions for the public. The Commission, however, was not oblivious of those matters. It considered them. It allowed, for example, delay rentals and exploration and development costs in operating expenses. [FN26] No serious attempt has been made here to show that they are inadequate. We certainly cannot say that they are, unless we are to substitute our opinions for the expert judgment of the administrators to whom Congress entrusted the decision. Moreover, if in light of experience they turn out to be inadequate for development of new sources of supply, the doors of the Commission are open for increased allowances. This is not an order for all time. The Act contains machinery for obtaining rate adjustments. s 4.

FN26 See note 25, supra.

[21] [22] But it is said that the Commission placed too low a rate on gas for industrial purposes as compared with gas for domestic purposes and that industrial uses should be discouraged. It should be noted in the first place that the rates which the Commission has fixed are Hope's interstate wholesale rates to distributors not interstate rates to industrial users [FN27] and domestic consumers. We hardly ***616** can assume, in view of the history of the Act and its provisions, that the resales intrastate by the customer companies which distribute the gas to ultimate consumers in Ohio and Pennsylvania are subject to the rate-making powers of the Commission. [FN28] But in any event those rates are not in issue here. Moreover, we fail to find in the power to fix 'just and reasonable' rates the power to fix rates which will disallow or discourage resales for industrial use. The Committee Report stated that the Act provided 'for regulation along recognized and more or less standardized lines' and that there was 'nothing novel in its provisions'. H.Rep.No.709, supra, p. 3. Yet if we are now to tell the Commission to fix the rates so as to discourage particular uses, we would indeed be injecting into a rate case a 'novel' doctrine which has no express statutory sanction. The same would be true if we were to hold that the wasting-asset nature of the industry required the maintenance of the level of rates so that natural gas companies could make a greater profit on each unit of gas sold. Such theories of rate-making for this industry may or may not be desirable. The difficulty is that s 4(a) and s 5(a) contain only the conventional standards of rate-making for natural gas companies. [FN29] The ***617** Act of February 7, 1942, by broadening s 7 gave the Commission some additional authority to deal with the conservation aspects of the problem. [FN30] But s 4(a) and s 5(a) were not changed. If the standard****295** of 'just and reasonable' is to sanction the maintenance of high rates by a natural gas company because they restrict the use of natural gas for certain purposes, the Act must be further amended.

FN27 The Commission has expressed doubts over its power to fix rates on 'direct sales to industries' from interstate pipelines as distinguished from 'sales for resale to the industrial customers of distributing companies.' Annual Report, Federal Power Commission (1940), p. 11.

FN28. Sec. 1(b) of the Act provides: 'The provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.' And see s 2(6), defining a 'natural-gas company', and H.Rep.No. 709, supra, pp. 2, 3.

FN29 The wasting-asset characteristic of the industry was recognized prior to the Act as requiring the inclusion of a depletion allowance among operating expenses. See Columbus Gas & Fuel Co. v. Public Utilities Commission, 292 U.S. 398, 404, 405, 54 S.Ct. 763, 766, 767, 78 L.Ed. 1327, 91 A.L.R. 1403. But no such theory of rate-making for natural gas companies as is now suggested emerged from the cases arising during the earlier period of regulation.

FN30 The Commission has been alert to the problems of conservation in its administration of the Act. It has indeed suggested that it might be wise to restrict the use of natural gas 'by functions rather than by areas.' Annual Report (1940) p. 79.

The Commission stated in that connection that natural gas was particularly adapted to certain industrial uses. But it added that the general use of such gas 'under boilers for the production of steam' is 'under most circumstances of very questionable social economy.' Ibid.

[23] [24] It is finally suggested that the rates charged by Hope are discriminatory as against domestic users and in favor of industrial users. That charge is apparently based on s 4(b) of the Act which forbids natural gas companies from maintaining 'any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.' The power of the Commission to eliminate any such unreasonable differences or discriminations is plain. s 5(a). The Commission, however, made no findings under s 4(b). Its failure in that regard was not challenged in the petition to review. And it has not been raised or argued here by any party. Hence the problem of discrimination has no proper place in the present decision. It will be time enough to pass on that issue when it is presented to us. Congress has entrusted the administration of the Act to the Commission not to the courts. Apart from the requirements of judicial review it is not ***618** for us to advise the Commission how to discharge its functions.

Findings as to the Lawfulness of Past Rates. As we have noted, the Commission made certain findings as to the lawfulness of past rates which Hope had charged its interstate customers. Those findings were made on the complaint of the City of Cleveland and in aid of state regulation. It is conceded that under the Act the Commission has no power to make reparation orders. And its power to fix rates admittedly is limited to those 'to be thereafter observed and in force.' s 5(a). But the Commission maintains that it has the power to make findings as to the lawfulness of past rates even though it has no power to fix those rates. [FN31] However that may be, we do not think that these findings were reviewable under s 19(b) of the Act. That section gives any party 'aggrieved by an order' of the Commission a review 'of such order' in the circuit court of appeals for the circuit where the natural gas company is located or has its principal place of business or in the United States Court of Appeals for the District of Columbia. We do not think that the findings in question fall within that category.

FN31 The argument is that s 4(a) makes 'unlawful' the charging of any rate that is not just and reasonable. And s 14(a) gives the Commission power to investigate any matter 'which it may find necessary or proper in order to determine whether any person has violated' any provision of the Act. Moreover, s 5(b) gives the Commission power to investigate and determine the cost of production or transportation of natural gas in cases where it has 'no authority to establish a rate governing the transportation or sale of such natural gas.' And s 17(c) directs the Commission to 'make available to the several State commissions such information and reports as may be of assistance in State regulation of natural-gas companies.' For a discussion of these points by the Commission see 44 P.U.R.,N.S., at pages 34, 35.

[25] [26] The Court recently summarized the various types of administrative action or determination reviewable as orders under the Urgent Deficiencies Act of October 22, ***619** 1913, 28 U.S.C. ss 45, 47a, 28 U.S.C.A. ss 45, 47a, and kindred statutory provisions. Rochester Tel. Corp. v. United States, 307 U.S. 125, 59 S.Ct. 754, 83 L.Ed. 1147. It was there pointed out that where 'the order sought to be reviewed does not of itself adversely affect complainant but only affects his rights adversely on the contingency of future administrative action', it is not

reviewable. Id., 307 U.S. at page 130, 59 S.Ct. at page 757, 83 L.Ed. 1147. The Court said, 'In view of traditional conceptions of federal judicial power, resort to the courts in these situations is either premature or wholly beyond their province.' ****296**Id., 307 U.S. at page 130, 59 S.Ct. at page 757, 83 L.Ed. 1147. And see United States v. Los Angeles s.l.r. c/o., 273 U.S. 299, 309, 310, 47 S.Ct. 413, 414, 415, 71 L.Ed. 651; Shannahan v. United States, 303 U.S. 596, 58 S.Ct. 732, 82 L.Ed. 1039. These considerations are apposite here. The Commission has no authority to enforce these findings. They are 'the exercise solely of the function of investigation.' United States v. Los Angeles & S.L.R. Co., supra, 273 U.S. at page 310, 47 S.Ct. at page 414, 71 L.Ed. 651. They are only a preliminary, interim step towards possible future action-action not by the Commission but by wholly independent agencies. The outcome of those proceedings may turn on factors other than these findings. These findings may never result in the respondent feeling the pinch of administrative action.

Reversed.

Mr. Justice ROBERTS took no part in the consideration or decision of this case.

Opinion of Mr. Justice BLACK and Mr. Justice MURPHY.

We agree with the Court's opinion and would add nothing to what has been said but for what is patently a wholly gratuitous assertion as to Constitutional law in the dissent of Mr. Justice FRANKFURTER. We refer to the statement that 'Congressional acquiescence to date in the doctrine of Chicago, etc., R. Co. v. Minnesota, supra (134 U.S. 418, 10 S.Ct. 462, 702, 33 L.Ed. 970), may fairly be claimed.' That was the case in which a majority of this Court was finally induced to expand the meaning ***620** of 'due process' so as to give courts power to block efforts of the state and national governments to regulate economic affairs. The present case does not afford a proper occasion to discuss the soundness of that doctrine because, as stated in Mr. Justice FRANKFURTER'S dissent, 'That issue is not here in controversy.' The salutary practice whereby courts do not discuss issues in the abstract applies with peculiar force to Constitutional questions. Since, however, the dissent adverts to a highly controversial due process doctrine and implies its acceptance by Congress, we feel compelled to say that we do not understand that Congress voluntarily has acquiesced in a Constitutional principle of government that courts, rather than legislative bodies, possess final authority over regulation of economic affairs. Even this Court has not always fully embraced that principle, and we wish to repeat that we have never acquiesced in it, and do not now. See Federal Power Commission v. Natural Gas Pipeline Co., 315 U.S. 575, 599-601, 62 S.Ct. 736, 749, 750, 86 L.Ed. 1037.

Mr. Justice REED, dissenting.

This case involves the problem of rate making under the Natural Gas Act. Added importance arises from the obvious fact that the principles stated are generally applicable to all federal agencies which are entrusted with the determination of rates for utilities. Because my views differ somewhat from those of my brethren, it may be of some value to set them out in a summary form.

The Congress may fix utility rates in situations subject to federal control without regard to any standard except the constitutional standards of due process and for taking private property for public use without just compensation. Wilson v. New, 243 U.S. 332, 350, 37 S.Ct. 298, 302, 61 L.Ed. 755, L.R.A.1917E, 938, Ann.Cas.1918A, 1024. A Commission, however, does not have this freedom of action. Its powers are limited not only by the constitutional standards but also by the standards of the delegation. Here the standard added by the Natural Gas Act is that the rate be 'just ***621** and reasonable.' [FN1] Section 6 [FN2] ****297** throws additional light on the meaning of these words.

FN1 Natural Gas Act, s 4(a), 52 Stat. 821, 822, 15 U.S.C. s 717c(a), 15 U.S.C.A. s 717c(a).

FN2 52 Stat. 821, 824, 15 U.S.C. s 717e, 15 U.S.C.A. s 717e:

'(a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

'(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction.'

When the phrase was used by Congress to describe allowable rates, it had relation to something ascertainable. The rates were not left to the whim of the Commission. The rates fixed would produce an annual return and that annual return was to be compared with a theoretical just and reasonable return, all risks considered, on the fair value of the property used and useful in the public service at the time of the determination.

Such an abstract test is not precise. The agency charged

**(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)**

with its determination has a wide range before it could properly be said by a court that the agency had disregarded statutory standards or had confiscated the property of the utility for public use. Cf. Chicago, M. & St. P.R. Co. v. Minnesota, 134 U.S. 418, 461-466, 10 S.Ct. 462, 702, 703-705, 33 L.Ed. 970, dissent. This is as Congress intends. Rates are left to an experienced agency particularly competent by training to appraise the amount required.

The decision as to a reasonable return had not been a source of great difficulty, for borrowers and lenders reached such agreements daily in a multitude of situations; and although the determination of fair value had been troublesome, its essentials had been worked out in fairness to investor and consumer by the time of the enactment***622** of this Act. Cf. Los Angeles G. & E. Corp. v. Railroad Comm., 289 U.S. 287, 304 et seq., 53 S.Ct. 637, 643 et seq., 77 L.Ed. 1180. The results were well known to Congress and had that body desired to depart from the traditional concepts of fair value and earnings, it would have stated its intention plainly. Helvering v. Griffiths, 318 U.S. 371, 63 S.Ct. 636.

It was already clear that when rates are in dispute, 'earnings produced by rates do not afford a standard for decision.' 289 U.S. at page 305, 53 S.Ct. at page 644, 77 L.Ed. 1180. Historical cost, prudent investment and reproduction cost [FN3] were all relevant factors in determining fair value. Indeed, disregarding the pioneer investor's risk, if prudent investment and reproduction cost were not distorted by changes in price levels or technology, each of them would produce the same result. The realization from the risk of an investment in a speculative field, such as natural gas utilities, should be reflected in the present fair value. [FN4] The amount of evidence to be admitted on any point was of course in the agency's reasonable discretion, and it was free to give its own weight to these or other factors and to determine from all the evidence its own judgment as to the necessary rates.

FN3 'Reproduction cost' has been variously defined, but for rate making purposes the most useful sense seems to be, the minimum amount necessary to create at the time of the inquiry a modern plant capable of rendering equivalent service. See I Bonbright, Valuation of Property (1937) 152. Reproduction cost as the cost of building a replica of an obsolescent plant is not of real significance.
'Prudent investment' is not defined by the Court. It may mean the sum originally put in the enterprise, either with or without additional amounts from excess earnings reinvested in the business.

FN4 It is of no more than bookkeeping significance whether the Commission allows a rate of return commensurate with the risk of the original investment or the lower rate based on current risk and a capitalization reflecting the established earning power of a successful company and the probable cost of duplicating its services. Cf. American T. & T. Co. v. United States, 299 U.S. 232, 57 S.Ct. 170, 81 L.Ed. 142. But the latter is the traditional method.

***623** I agree with the Court in not imposing a rule of prudent investment alone in determining the rate base. This leaves the Commission free, as I understand it, to use any available evidence for its finding of fair value, including both prudent investment and the cost of installing at the present time an efficient system for furnishing the needed utility service.

My disagreement with the Court arises primarily from its view that it makes no ****298** difference how the Commission reached the rate fixed so long as the result is fair and reasonable. For me the statutory command to the Commission is more explicit. Entirely aside from the constitutional problem of whether the Congress could validly delegate its rate making power to the Commission, in toto and without standards, it did legislate in the light of the relation of fair and reasonable to fair value and reasonable return. The Commission must therefore make its findings in observance of that relationship.

The Federal Power Commission did not, as I construe their action, disregard its statutory duty. They heard the evidence relating to historical and reproduction cost and to the reasonable rate of return and they appraised its weight. The evidence of reproduction cost was rejected as unpersuasive, but from the other evidence they found a rate base, which is to me a determination of fair value. On that base the earnings allowed seem fair and reasonable. So far as the Commission went in appraising the property employed in the service, I find nothing in the result which indicates confiscation, unfairness or unreasonableness. Good administration of rate making agencies under this method would avoid undue delay and render revaluations unnecessary except after violent fluctuations of price levels. Rate making under this method has been subjected to criticism. But until Congress changes the standards for the agencies, these rate making bodies should continue the conventional theory of rate ***624** making. It will probably be simpler to improve present methods than to devise new ones.

But a major error, I think was committed in the disregard

by the Commission of the investment in exploratory operations and other recognized capital costs. These were not considered by the Commission because they were charged to operating expenses by the company at a time when it was unregulated. Congress did not direct the Commission in rate making to deduct from the rate base capital investment which had been recovered during the unregulated period through excess earnings. In my view this part of the investment should no more have been disregarded in the rate base than any other capital investment which previously had been recovered and paid out in dividends or placed to surplus. Even if prudent investment throughout the life of the property is accepted as the formula for figuring the rate base, it seems to me illogical to throw out the admittedly prudent cost of part of the property because the earnings in the unregulated period had been sufficient to return the prudent cost to the investors over and above a reasonable return. What would the answer be under the theory of the Commission and the Court, if the only prudent investment in this utility had been the seventeen million capital charges which are now disallowed?

For the reasons heretofore stated, I should affirm the action of the Circuit Court of Appeals in returning the proceeding to the Commission for further consideration and should direct the Commission to accept the disallowed capital investment in determining the fair value for rate making purposes.

Mr. Justice FRANKFURTER, dissenting.
My brother JACKSON has analyzed with particularity the economic and social aspects of natural gas as well as ***625** the difficulties which led to the enactment of the Natural Gas Act, especially those arising out of the abortive attempts of States to regulate natural gas utilities. The Natural Gas Act of 1938 should receive application in the light of this analysis, and Mr. Justice JACKSON has, I believe, drawn relevant inferences regarding the duty of the Federal Power Commission in fixing natural gas rates. His exposition seems to me unanswered, and I shall say only a few words to emphasize my basic agreement with him.

For our society the needs that are met by public utilities are as truly public services as the traditional governmental functions of police and justice. They are not less so when these services are rendered by private enterprise under governmental regulation. Who ultimately determines the ways of regulation, is the decisive aspect in the public supervision of privately-owned utilities. Foreshadowed nearly sixty years ago, Railroad Commission Cases (Stone v. Farmers' Loan & Trust Co.), 116 U.S. 307, 331, 6 S.Ct. 334, 344, 388, 1191, 29 L.Ed. 636, it was decided more than fifty ****299** years ago that the final say under the Constitution lies with the judiciary and not the legislature. Chicago, etc., R. Co. v. Minnesota , 134 U.S. 418, 10 S.Ct. 462, 702, 33 L.Ed. 970.

While legal issues touching the proper distribution of governmental powers under the Constitution may always be raised, Congressional acquiescence to date in the doctrine of Chicago, etc., R. Co. v. Minnesota, supra, may fairly be claimed. But in any event that issue is not here in controversy. As pointed out in the opinions of my brethren, Congress has given only limited authority to the Federal Power Commission and made the exercise of that authority subject to judicial review. The Commission is authorized to fix rates chargeable for natural gas. But the rates that it can fix must be 'just and reasonable'. s 5 of the Natural Gas Act, 15 U.S.C. s 717d, 15 U.S.C.A. s 717d. Instead of making the Commission's rate determinations final, Congress***626** specifically provided for court review of such orders. To be sure, 'the finding of the Commission as to the facts, if supported by substantial evidence' was made 'conclusive', s 19 of the Act, 15 U.S.C. s 717r; 15 U.S.C.A. s 717r. But obedience of the requirement of Congress that rates be 'just and reasonable' is not an issue of fact of which the Commission's own determination is conclusive. Otherwise, there would be nothing for a court to review except questions of compliance with the procedural provisions of the Natural Gas Act. Congress might have seen fit so to cast its legislation. But it has not done so. It has committed to the administration of the Federal Power Commission the duty of applying standards of fair dealing and of reasonableness relevant to the purposes expressed by the Natural Gas Act. The requirement that rates must be 'just and reasonable' means just and reasonable in relation to appropriate standards. Otherwise Congress would have directed the Commission to fix such rates as in the judgment of the Commission are just and reasonable; it would not have also provided that such determinations by the Commission are subject to court review.

To what sources then are the Commission and the courts to go for ascertaining the standards relevant to the regulation of natural gas rates? It is at this point that Mr. Justice JACKSON'S analysis seems to me pertinent. There appear to be two alternatives. Either the fixing of natural gas rates must be left to the unguided discretion of the Commission so long as the rates it fixes do not reveal a glaringly had prophecy of the ability of a regulated utility to continue its service in the future. Or the Commission's rate orders must be founded on due consideration of all the elements of the public interest which the production and distribution of natural gas involve just because it is natural gas. These elements are reflected in the Natural Gas Act, if that Act be applied as

an entirety. See, for ***627** instance, ss 4(a)(b)(c)(d), 6, and 11, 15 U.S.C. ss 717c(a)(b)(c)(d), 717e, and 717j, 15 U.S.C.A. ss 717c(a-d), 717e, 717j. Of course the statute is not concerned with abstract theories of ratemaking. But its very foundation is the 'public interest', and the public interest is a texture of multiple strands. It includes more than contemporary investors and contemporary consumers. The needs to be served are not restricted to immediacy, and social as well as economic costs must be counted.

It will not do to say that it must all be left to the skill of experts. Expertise is a rational process and a rational process implies expressed reasons for judgment. It will little advance the public interest to substitute for the hodge-podge of the rule in Smyth v. Ames, 169 U.S. 466, 18 S.Ct. 418, 42 L.Ed. 819, an encouragement of conscious obscurity or confusion in reaching a result, on the assumption that so long as the result appears harmless its basis is irrelevant. That may be an appropriate attitude when state action is challenged as unconstitutional. Cf. Driscoll v. Edison Light & Power Co., 307 U.S. 104, 59 S.Ct. 715, 83 L.Ed. 1134. But it is not to be assumed that it was the design of Congress to make the accommodation of the conflicting interests exposed in Mr. Justice JACKSON'S opinion the occasion for a blind clash of forces or a partial assessment of relevant factors, either before the Commission or here.

The objection to the Commission's action is not that the rates it granted were too low but that the range of its vision was too narrow. And since the issues before the Commission involved no less than the ****300** total public interest, the proceedings before it should not be judged by narrow conceptions of common law pleading. And so I conclude that the case should be returned to the Commission. In order to enable this Court to discharge its duty of reviewing the Commission's order, the Commission should set forth with explicitness the criteria by which it is guided ***628** in determining that rates are 'just and reasonable', and it should determine the public interest that is in its keeping in the perspective of the considerations set forth by Mr. Justice JACKSON.

By Mr. Justice JACKSON.

Certainly the theory of the court below that ties rate-making to the fair-value-reproduction-cost formula should be overruled as in conflict with Federal Power Commission v. Natural Gas Pipeline Co. [FN1] But the case should, I think, be the occasion for reconsideration of our rate-making doctrine as applied to natural gas and should be returned to the Commission for further consideration in the light thereof.

FN1 315 U.S. 575, 62 S.Ct. 736, 86 L.Ed. 1037.

The Commission appears to have understood the effect of the two opinions in the Pipeline case to be at least authority and perhaps direction to fix natural gas rates by exclusive application of the 'prudent investment' rate base theory. This has no warrant in the opinion of the Chief Justice for the Court, however, which released the Commission from subservience to 'any single formula or combination of formulas' provided its order, 'viewed in its entirety, produces no arbitrary result.' 315 U.S. at page 586, 62 S.Ct. at page 743, 86 L.Ed. 1037. The minority opinion I understood to advocate the 'prudent investment' theory as a sufficient guide in a natural gas case. The view was expressed in the court below that since this opinion was not expressly controverted it must have been approved. [FN2] I disclaim this imputed***629** approval with some particularity, because I attach importance at the very beginning of federal regulation of the natural gas industry to approaching it as the performance of economic functions, not as the performance of legalistic rituals.

FN2 Judge Dobie, dissenting below, pointed out that the majority opinion in the Pipeline case 'contains no express discussion of the Prudent Investment Theory' and that the concurring opinion contained a clear one, and said, 'It is difficult for me to believe that the majority of the Supreme Court, believing otherwise, would leave such a statement unchallenged.' (134 F.2d 287, 312.) The fact that two other Justices had as matter of record in our books long opposed the reproduction cost theory of rate bases and had commented favorably on the prudent investment theory may have influenced that conclusion. See opinion of Mr. Justice Frankfurter in Driscoll v. Edison Light & Power Co., 307 U.S. 104, 122, 59 S.Ct. 715, 724, 83 L.Ed. 1134, and my brief as Solicitor General in that case. It should be noted, however, that these statements were made, not in a natural gas case, but in an electric power case-a very important distinction, as I shall try to make plain.

I.

Solutions of these cases must consider eccentricities of the industry which gives rise to them and also to the Act of Congress by which they are governed.

The heart of this problem is the elusive, exhaustible, and irreplaceable nature of natural gas itself. Given sufficient money, we can produce any desired amount of railroad,

bus, or steamship transportation, or communications facilities, or capacity for generation of electric energy, or for the manufacture of gas of a kind. In the service of such utilities one customer has little concern with the amount taken by another, one's waste will not deprive another, a volume of service and be created equal to demand, and today's demands will not exhaust or lessen capacity to serve tomorrow. But the wealth of Midas and the wit of man cannot produce or reproduce a natural gas field. We cannot even reproduce the gas, for our manufactured product has only about half the heating value per unit of nature's own. FN3

FN3 Natural gas from the Appalachian field averages about 1050 to 1150 B.T.U. content, while by-product manufactured gas is about 530 to 540. Moody's Manual of Public Utilities (1943) 1350; Youngberg, Natural Gas (1930) 7.

****301** Natural gas in some quantity is produced in twenty-four states. It is consumed in only thirty-five states, and is ***630** available only to about 7,600,000 consumers. FN4 Its availability has been more localized than that of any other utility service because it has depended more on the caprice of nature.

FN4 Sen.Rep. No. 1162, 75th Cong., 1st Sess., 2.

The supply of the Hope Company is drawn from that old and rich and vanishing field that flanks the Appalachian mountains. Its center of production is Pennsylvania and West Virginia, with a fringe of lesser production in New York, Ohio, Kentucky, Tennessee, and the north end of Alabama. Oil was discovered in commercial quantities at a depth of only 69 1/2 feet near Titusville, Pennsylvania, in 1859. Its value then was about $16 per barrel. FN5 The oil branch of the petroleum industry went forward at once, and with unprecedented speed. The area productive of oil and gas was roughed out by the drilling of over 19,000 'wildcat' wells, estimated to have cost over $222,000,000. Of these, over 18,000 or 94.9 per cent, were 'dry holes.' About five per cent, or 990 wells, made discoveries of commercial importance, 767 of them resulting chiefly in oil and 223 in gas only. FN6 Prospecting for many years was a search for oil, and to strike gas was a misfortune. Waste during this period and even later is appalling. Gas was regarded as having no commercial value until about 1882, in which year the total yield was valued only at about $75,000. FN7 Since then, contrary to oil, which has become cheaper gas in this field has pretty steadily advanced in price.

FN5 Arnold and Kemnitzer, Petroleum in the United States and Possessions (1931) 78.

FN6. Id. at 62-63.

FN7. Id. at 61.

While for many years natural gas had been distributed on a small scale for lighting, FN8 its acceptance was slow, ***631** facilities for its utilization were primitive, and not until 1885 did it take on the appearance of a substantial industry. FN9 Soon monopoly of production or markets developed. FN10 To get gas from the mountain country, where it was largely found, to centers of population, where it was in demand, required very large investment. By ownership of such facilities a few corporate systems, each including several companies, controlled access to markets. Their purchases became the dominating factor in giving a market value to gas produced by many small operators. Hope is the market for over 300 such operators. By 1928 natural gas in the Appalachian field commanded an average price of 21.1 cents per m.c.f. at points of production and was bringing 45.7 cents at points of consumption. FN11 The companies which controlled markets, however, did not rely on gas purchases alone. They acquired and held in fee or leasehold great acreage in territory proved by 'wildcat' drilling. These large marketing system companies as well as many small independent owners and operators have carried on the commercial development of proved territory. The development risks appear from the estimate that up to 1928, 312,318 proved area wells had been sunk in the Appalachian field of which 48,962, or 15.7 per cent, failed to produce oil or gas in commercial quantity. FN12

FN8 At Fredonia, New York, in 1821, natural gas was conveyed from a shallow well to some thirty people. The lighthouse at Barcelona Harbor, near what is now Westfield, New York, was at about that time and for many years afterward lighted by gas that issued from a crevice. Report on Utility Corporations by Federal Trade Commission, Sen.Doc. 92, Pt. 84-A, 70th Cong., 1st Sess., 8-9.

FN9 In that year Pennsylvania enacted 'An Act to provide for the incorporation and regulation of natural gas companies.' Penn.Laws 1885, No. 32, 15 P.S. s 1981 et seq.

***632** With the source of supply thus tapped to serve centers of large demand, like Pittsburgh, Buffalo, Cleveland, Youngstown, Akron, and other industrial communities, the distribution of natural gas fast became big business. Its advantages as a ****302** fuel and its price commended it, and the business yielded a handsome return. All was merry and the goose hung high for consumers and gas companies alike until about the time of the first. World War. Almost unnoticed by the consuming public, the whole Appalachian field passed its peak of production and started to decline. Pennsylvania, which to 1928 had given off about 38 per cent of the natural gas from this field, had its peak in 1905; Ohio, which had produced 14 per cent, had its peak in 1915; and West Virginia, greatest producer of all, with 45 per cent to its credit, reached its peak in 1917. FN13

FN13. Id. at 64.

Western New York and Eastern Ohio, on the fringe of the field, had some production but relied heavily on imports from Pennsylvania and West Virginia. Pennsylvania, a producing and exporting state, was a heavy consumer and supplemented her production with imports from West Virginia. West Virginia was a consuming state, but the lion's share of her production was exported. Thus the interest of the states in the North Appalachian supply was in conflict.

Competition among localities to share in the failing supply and the helplessness of state and local authorities in the presence of state lines and corporate complexities is a part of the background of federal intervention in the industry. FN14 West Virginia took the boldest measure. It legislated a priority in its entire production in favor of its own inhabitants. That was frustrated by an injunction**633** from this Court. FN15 Throughout the region clashes in the courts and conflicting decisions evidenced public anxiety and confusion. It was held that the New York Public Service Commission did not have power to classify consumers and restrict their use of gas. FN16 That Commission held that a company could not abandon a part of its territory and still serve the rest. FN17 Some courts admonished the companies to take action to protect consumers. FN18 Several courts held that companies, regardless of failing supply, must continue to take on customers, but such compulsory additions were finally held to be within the Public Service Commission's discretion. FN19 There were attempts to throw up franchises and quit the service, and municipalities resorted to the courts with conflicting results. FN20 Public service commissions of consuming states were handicapped, for they had no control of the supply. FN21

Railroad Commission, 278 U.S. 300, 308, 49 S.Ct. 150, 152, 73 L.Ed. 390.

FN21 The New York Public Service Commission said: 'While the transportation of natural gas through pipe lines from one state to another state is interstate commerce * * *, Congress has not taken over the regulation of

that particular industry. Indeed, it has expressly excepted it from the operation of the Interstate Commerce Commissions Law (Interstate Commerce Commissions Law, section 1). It is quite clear, therefore, that this Commission can not require a Pennsylvania corporation producing gas in Pennsylvania to transport it and deliver it in the State of New York, and that the Interstate Commerce Commission is likewise powerless. If there exists such a power, and it seems that there does, it is a power vested in Congress and by it not yet exercised. There is no available source of supply for the Crystal City Company at present except through purchasing from the Porter Gas Company. It is possible that this Commission might fix a price at which the Potter Gas Company should sell if it sold at all, but as the Commission can not require it to supply gas in the State of New York, the exercise of such a power to fix the price, if such power exists, would merely say, sell at this price or keep out of the State.' Lane v. Crystal City Gas Co., 8 New York Public Service Comm.Reports, Second District, 210, 212.

****303 *634** Shortages during World War I occasioned the first intervention in the natural gas industry by the Federal Government. Under Proclamation of President Wilson the United States Fuel Administrator took control, stopped extensions, classified consumers and established a priority for domestic over industrial use. FN22 After the war federal control was abandoned. Some cities once served with natural gas became dependent upon mixed gas of reduced heating value and relatively higher price. FN23

FN22 Proclamation by the President of September 16, 1918; Rules and Regulations of H. A. Garfield, Fuel Administrator, September 24, 1918.

FN23 For example, the Iroquois Gas Corporation which formerly served Buffalo, New York, with natural gas ranging from 1050 to 1150 b.t.u. per cu. ft., now mixes a by-product gas of between 530 and 540 b.t.u. in proportions to provide a mixed gas of about 900 b.t.u. per cu. ft. For space heating or water heating its charges range from 65 cents for the first m.c.f. per month to 55 cents for all above 25 m.c.f. per month. Moody's Manual of Public Utilities (1943) 1350.

Utilization of natural gas of highest social as well as economic return is domestic use for cooking and water ***635** heating, followed closely by use for space heating in homes. This is the true public utility aspect of the enterprise, and its preservation should be the first concern of regulation. Gas does the family cooking cheaper than any other fuel. FN24 But its advantages do not end with dollars and cents cost. It is delivered without interruption at the meter as needed and is paid for after it is used. No money is tied up in a supply, and no space is used for storage. It requires no handling, creates no dust, and leaves no ash. It responds to thermostatic control. It ignites easily and immediately develops its maximum heating capacity. These incidental advantages make domestic life more liveable.

FN24 The United States Fuel Administration made the following cooking value comparisons, based on tests made in the Department of Home Economics of Ohio State University:
Natural gas at 1.12 per M. is equivalent to coal at $6.50 per ton.
Natural gas at 2.00 per M. is equivalent to gasoline at 27¢ per gal.
Natural gas at 2.20 per M. is equivalent to electricity at 3¢ per k.w.h.
Natural gas at 2.40 per M. is equivalent to coal oil at 15¢ per gal.
Use and Conservation of Natural Gas, issued by U.S. Fuel Administration (1918) 5.

Industrial use is induced less by these qualities than by low cost in competition with other fuels. Of the gas exported from West Virginia by the Hope Company a very substantial part is used by industries. This wholesale use speeds exhaustion of supply and displaces other fuels. Coal miners and the coal industry, a large part of whose costs are wages, have complained of unfair competition from low-priced industrial gas produced with relatively little labor cost. FN25

FN25 See Brief on Behalf jof Legislation Imposing an Excise Tax on Natural Gas, submitted to N.R.A. by the United Mine Workers of America and the National Coal Association.

Gas rate structures generally have favored industrial users. In 1932, in Ohio, the average yield on gas for domestic consumption was 62.1 cents per m.c.f. and on industrial,***636** 38.7. In Pennsylvania, the figures were 62.9 against 31.7. West Virginia showed the least spread, domestic consumers paying 36.6 cents; and industrial, 27.7. FN26 Although this spread is less than ****304** in other parts of the United States, FN27 it can hardly be said to be

64 S.Ct. 281
51 P.U.R.(NS) 193, 320 U.S. 591, 64 S.Ct. 281, 88 L.Ed. 333
**(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)**

self-justifying. It certainly is a very great factor in hastening decline of the natural gas supply.

FN26 Brief of National Gas Association and United Mine Workers, supra, note 26, pp. 35, 36, compiled from Bureau of Mines Reports.

FN27 From the source quoted in the preceding note the spread elsewhere is shown to be:

| State. | Industrial | Domestic |
|---|---|---|
| Illinois. | 29.2 | 1.678 |
| Louisiana. | 10.4 | 59.7 |
| Oklahoma. | 11.2 | 41.5 |
| Texas. | 13.1 | 59.7 |
| Alabama. | 17.8 | 1.227 |
| Georgia. | 22.9 | 1.043 |

About the time of World War I there were occasional and short-lived efforts by some hard-pressed companies to reverse this discrimination and adopt graduated rates, giving a low rate to quantities adequate for domestic use and graduating it upward to discourage industrial use. FN28 ***637** These rates met opposition from industrial sources, of course, and since diminished revenues from industrial sources tended to increase the domestic price, they met little popular or commission favor. The fact is that neither the gas companies nor the consumers nor local regulatory bodies can be depended upon to conserve gas. Unless federal regulation will take account of conservation, its efforts seem, as in this case, actually to constitute a new threat to the life of the Appalachian supply.

FN28 In Corning, New York, rates were initiated by the Crystal City Gas Company as follows: 70¢ for the first 5,000 cu. ft. per month; 80¢ from 5,000 to 12,000; $1 for all over 12,000. The Public Service Commission rejected these rates and fixed a flat rate of 58¢ per m.c.f. Lane v. Crystal City Gas Co., 8 New York Public Service Comm. Reports, Second District, 210.
The Pennsylvania Gas Company (National Fuel Gas Company group) also attempted a sliding scale rate for New York consumers, net per month as follows: First 5,000 feet, 35¢ ; second 5,000 feet, 45¢ ; third 5,000 feet, 50¢ ; all above 15,000, 55¢ . This was eventually abandoned, however. The company's present scale in Pennsylvania appears to be reversed to the following net monthly rate; first 3 m.c.f., 75¢ ; next 4 m.c.f., 60¢ ; next 8 m.c.f., 55¢ ; over 15 m.c.f., 50¢ . Moody's Manual of Public Utilities (1943) 1350. In New York it now serves a mixed gas.
For a study of effect of sliding scale rates in reducing consumption see 11 Proceedings of Natural Gas Association of America (1919) 287.

II.

Congress in 1938 decided upon federal regulation of the industry. It did so after an exhaustive investigation of all aspects including failing supply and competition for the use of natural gas intensified by growing scarcity. FN29 Pipelines from the Appalachian area to markets were in the control of a handful of holding company systems. FN30 This created a highly concentrated control of the producers' market and of the consumers' supplies. While holding companies dominated both production and distribution they segregated those activities in separate ***638** subsidiaries, FN31 the effect of which, if not the purpose, was to isolate ****305** some end of the business from the reach of any one state commission. The cost of natural gas to consumers moved steadily upwards over the years, out of proportion to prices of oil, which, except for the element of competition, is produced under somewhat comparable conditions. The public came to feel that the companies were exploiting the growing scarcity of local gas. The problems of this region had much to do with creating the demand for federal regulation.

FN29 See Report on Utility Corporations by Federal Trade Commission, Sen. Doc. 92, Pt. 84-A, 70th Cong., 1st Sess.

FN30 Four holding company systems control over 55 per cent of all natural gas transmission lines in the United States. They are Columbia Gas and Electric Corporation, Cities Service Co., Electric Bond and Share Co., and Standard Oil Co. of New Jersey. Columbia alone controls nearly 25 per cent, and fifteen companies account for over 80 per cent of the total. Report on Utility Corporations by Federal Trade Commission, Sen. Doc. 92, Pt. 84-A, 70th Cong., 1st Sess., 28.
In 1915, so it was reported to the Governor of West

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

**(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)**

Virginia, 87 per cent of the total gas production of that state was under control of eight companies. Steptoe and Hoffheimer, Legislative Regulation of Natural Gas Supply in West Virginia, 17 West Virginia Law Quarterly 257, 260. Of these, three were subsidiaries of the Columbia system and others were subsidiaries of larger systems. In view of inter-system sales and interlocking interests it may be doubted whether there is much real competition among these companies.

FN31 This pattern with its effects on local regulatory efforts will be observed in our decisions. See United Fuel Gas Co. v. Railroad Commission, 278 U.S. 300, 49 S.Ct. 150, 73 L.Ed. 390; United Fuel Gas Co. v. Public Service Commission, 278 U.S. 322, 49 S.Ct. 157, 73 L.Ed. 402; Dayton Power & Light v. Public Utilities Commission, 292 U.S. 290, 54 S.Ct. 647, 78 L.Ed. 1267; Columbus Gas & Fuel Co. v. Public Utilities Commission, 292 U.S. 398, 54 S.Ct. 763, 78 L.Ed. 1327, 91 A.L.R. 1403, and the present case.

The Natural Gas Act declared the natural gas business to be 'affected with a public interest,' and its regulation 'necessary in the public interest.' FN32 Originally, and at the time this proceeding was commenced and tried, it also declared 'the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest.' FN33 While this was later dropped, there is nothing to indicate that it was not and is not still an accurate statement of purpose of the Act. Extension or improvement of facilities may be ordered when 'necessary or desirable in the public interest,' abandonment of facilities may be ordered when the supply is 'depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience or necessity ***639** permit' abandonment and certain extensions can only be made on finding of 'the present or future public convenience and necessity.' FN34 The Commission is required to take account of the ultimate use of the gas. Thus it is given power to suspend new schedules as to rates, charges, and classification of services except where the schedules are for the sale of gas 'for resale for industrial use only,' FN35 which gives the companies greater freedom to increase rates on industrial gas than on domestic gas. More particularly, the Act expressly forbids any undue preference or advantage to any person or 'any unreasonable difference in rates * * * either as between localities or as between classes of service.' FN36 And the power of the Commission expressly includes that to determine the 'just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force.' FN37

FN34 15 U.S.C. s 717f, 15 U.S.C.A. s 717f.

FN35 Id., s 717c(e).

FN36 Id., s 717c(b).

FN37 Id., s 717d(a).

In view of the Court's opinion that the Commission in administering the Act may ignore discrimination, it is interesting that in reporting this Bill both the Senate and the House Committees on Interstate Commerce pointed out that in 1934, on a nationwide average the price of natural gas per m.c.f. was 74.6 cents for domestic use, 49.6 cents for commercial use, and 16.9 for industrial use. FN38 I am not ready to think that supporters of a bill called attention to the striking fact that householders were being charged five times as much for their gas as industrial users only as a situation which the Bill would do nothing to remedy. On the other hand the Act gave to the Commission what the Court aptly describes as 'broad powers of regulation.'

FN38 Sen. Rep. No. 1162, 75th Cong., 1st Sess. 2.

***640** III.

This proceeding was initiated by the Cities of Cleveland and Akron. They alleged that the price charged by Hope for natural gas 'for resale to domestic, commercial and small industrial consumers in Cleveland and elsewhere is excessive, unjust, unreasonable, greatly in excess of the price charged by Hope to nonaffiliated companies at wholesale for resale to domestic, commercial and small industrial consumers, and greatly in excess of the price charged by Hope to East Ohio for resale to certain favored industrial consumers in Ohio, and therefore is further unduly discriminatory between consumers and between classes of service' (italics supplied). The company answered admitting differences in prices to affiliated and nonaffiliated companies and justifying them by differences in conditions of delivery.****306** As to the allegation that the contract price is 'greatly in excess of the price charged by Hope to East Ohio for resale to

certain favored industrial consumers in Ohio,' Hope did not deny a price differential, but alleged that industrial gas was not sold to 'favored consumers' but was sold under contract and schedules filed with and approved by the Public Utilities Commission of Ohio, and that certain conditions of delivery made it not 'unduly discriminatory.'

The record shows that in 1940 Hope delivered for industrial consumption 36,523,792 m.c.f. and for domestic and commercial consumption, 50,343,652 m.c.f. I find no separate figure for domestic consumption. It served 43,767 domestic consumers directly, 511,521 through the East Ohio Gas Company, and 154,043 through the Peoples Natural Gas Company, both affiliates owned by the same parent. Its special contracts for industrial consumption, so far as appear, are confined to about a dozen big industries.

***641** Hope is responsible for discrimination as exists in favor of these few industrial consumers. It controls both the resale price and use of industrial gas by virtue of the very interstate sales contracts over which the Commission is exercising its jurisdiction.

Hope's contract with East Ohio Company is an example. Hope agrees to deliver, and the Ohio Company to take, '(a) all natural gas requisite for the supply of the domestic consumers of the Ohio Company; (b) such amounts of natural gas as may be requisite to fulfill contracts made with the consent and approval of the Hope Company by the Ohio Company, or companies which it supplies with natural gas, for the sale of gas upon special terms and conditions for manufacturing purposes.' The Ohio company is required to read domestic customers' meters once a month and meters of industrial customers daily and to furnish all meter readings to Hope. The Hope Company is to have access to meters of all consumers and to all of the Ohio Company's accounts. The domestic consumers of the Ohio Company are to be fully supplied in preference to consumers purchasing for manufacturing purposes and 'Hope Company can be required to supply gas to be used for manufacturing purposes only where the same is sold under special contracts which have first been submitted to and approved in writing by the Hope Company and which expressly provide that natural gas will be supplied thereunder only in so far as the same is not necessary to meet the requirements of domestic consumers supplied through pipe lines of the Ohio Company.' This basic contract was supplemented from time to time, chiefly as to price. The last amendment was in a letter from Hope to East Ohio in 1937. It contained a special discount on industrial gas and a schedule of special industrial contracts, Hope reserving the right to make eliminations therefrom and agreeing that others might be added from time to ***642** time with its approval in writing. It said, 'It is believed that the price concessions contained in this letter, while not based on our costs, are under certain conditions, to our mutual advantage in maintaining and building up the volumes of gas sold by us (italics supplied).' FN39

FN39 The list of East Ohio Gas Company's special industrial contracts thus expressly under Hope's control and their demands are as follows:

****307** The Commission took no note of the charges of discrimination and made no disposition of the issue tendered on this point. It ordered a flat reduction in the price per m.c.f. of all gas delivered by Hope in interstate commerce. It made no limitation, condition, or provision as to what classes of consumers should get the benefit of the reduction. While the cities have accepted and are defending the reduction, it is my view that the discrimination of which they have complained is perpetuated and increased by the order of the Commission and that it violates the Act in so doing.

The Commission's opinion aptly characterizes its entire objective by saying that 'bona fide investment figures now become all-important in the regulation of rates.' It should be noted that the all-importance of this theory is not the result of any instruction from Congress. When the Bill to regulate gas was first before Congress it contained***643** the following: 'In determining just and reasonable rates the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question.' H.R. 5423, 74th Cong., 1st Sess. Title III, s 312(c). Congress rejected this language. See H.R. 5423, s 213 (211(c)), and H.R. Rep. No. 1318, 74th Cong., 1st Sess. 30.

The Commission contends nevertheless that the 'all important' formula for finding a rate base is that of prudent investment. But it excluded from the investment base an amount actually and admittedly invested of some $17,000,000. It did so because it says that the Company recouped these expenditures from customers before the days of regulation from earnings above a fair return. But it would not apply all of such 'excess earnings' to reduce the rate base as one of the Commissioners suggested. The reason for applying excess earnings to reduce the investment base roughly from $69,000,000 to $52,000,000 but refusing to apply them to reduce it from that to some $18,000,000 is not found in a difference in the character of the earnings or in their reinvestment. The reason assigned is a difference in bookkeeping treatment many years before the Company was subject to regulation. The $17,000,000, reinvested chiefly in well

drilling, was treated on the books as expense. (The Commission now requires that drilling costs be carried to capital account.) The allowed rate base thus actually was determined by the Company's bookkeeping, not its investment. This attributes a significance to formal classification in account keeping that seems inconsistent with rational rate regulation. FN40 Of ***644** course, the ****308** Commission would not and should not allow a rate base to be inflated by bookkeeping which had improperly capitalized expenses. I have doubts about resting public regulation upon any rule that is to be used or not depending on which side it favors.

FN40 To make a fetish of mere accounting is to shield from examination the deeper causes, forces, movements, and conditions which should govern rates. Even as a recording of current transactions, bookkeeping is hardly an exact science. As a representation of the condition and trend of a business, it uses symbols of certainty to express values that actually are in constant flux. It may be said that in commercial or investment banking or any business extending credit success depends on knowing what not to believe in accounting. Few concerns go into bankruptcy or reorganization whose books do not show them solvent and often even profitable. If one cannot rely on accountancy accurately to disclose past or current conditions of a business, the fallacy of using it as a sole guide to future price policy ought to be apparent. However, our quest for certitude is so ardent that we pay an irrational reverence to a technique which uses symbols of certainty, even though experience again and again warns us that they are delusive. Few writers have ventured to challenge this American idolatry, but see Hamilton, Cost as a standard for Price, 4 Law and Contemporary Problems 321, 323-25. He observes that 'As the apostle would put it, accountancy is all things to all men. * * * Its purpose determines the character of a system of accounts.' He analyzes the hypothetical character of accounting and says 'It was no eternal mold for pecuniary verities handed down from on high. It was-like logic or algebra, or the device of analogy in the law-an ingenious contrivance of the human mind to serve a limited and practical purpose.' 'Accountancy is far from being a pecuniary expression of all that is industrial reality. It is an instrument, highly selective in its application, in the service of the institution of money making.' As to capital account he observes 'In an enterprise in lusty competition with others of its kind, survival is the thing and the system of accounts has its focus in solvency. * * * Accordingly depreciation, obsolescence, and other factors which carry no immediate threat are matters of lesser concern and the capital account is likely to be regarded as a secondary phenomenon. * * * But in an enterprise, such as a public utility, where continued survival seems assured, solvency is likely to be taken for granted. * * * A persistent and ingenious attention is likely to be directed not so much to securing the upkeep of the physical property as to making it certain that capitalization fails in not one whit to give full recognition to every item that should go into the account.'

***645** The Company on the other hand, has not put its gas fields into its calculations on the present-value basis, although that, it contends, is the only lawful rule for finding a rate base. To do so would result in a rate higher than it has charged or proposes as a matter of good business to charge.

The case before us demonstrates the lack of rational relationship between conventional rate-base formulas and natural gas production and the extremities to which regulating bodies are brought by the effort to rationalize them. The Commission and the Company each stands on a different theory, and neither ventures to carry its theory to logical conclusion as applied to gas fields.

IV.

This order is under judicial review not because we interpose constitutional theories between a State and the business it seeks to regulate, but because Congress put upon the federal courts a duty toward administration of a new federal regulatory Act. If we are to hold that a given rate is reasonable just because the Commission has said it was reasonable, review becomes a costly, time-consuming pageant of no practical value to anyone. If on the other hand we are to bring judgment of our own to the task, we should for the guidance of the regulators and the regulated reveal something of the philosophy, be it legal or economic or social, which guides us. We need not be slaves to a formula but unless we can point out a rational way of reaching our conclusions they can only be accepted as resting on intuition or predilection. I must admit that I possess no instinct jby which to know the 'reasonable' from the 'unreasonable' in prices and must seek some conscious design for decision.

The Court sustains this order as reasonable, but what makes it so or what could possibly make it otherwise,

**(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)**

***646** I cannot learn. It holds that: 'it is the result reached not the method employed which is controlling'; 'the fact that the method employed to reach that result may contain infirmities is not then important' and it is not 'important to this case to determine the various permissible ways in which any rate base on which the return is computed might be arrived at.' The Court does lean somewhat on considerations of capitalization and dividend history and requirements for dividends on outstanding stock. But I can give no real weight to that for it is generally and I think deservedly in discredit as any guide in rate cases. FN41

FN41 See 2 Bonbright, Valuation of Property (1937) 1112.

Our books already contain so much talk of methods of rationalizing rates that we must appear ambiguous if we announce results without our working methods. We are confronted with regulation of a unique type of enterprise which I think requires considered rejection of much conventional utility doctrine and adoption of concepts of 'just and reasonable' rates and practices and of the 'public interest' that will take account of the peculiarities of the business.

The Court rejects the suggestions of this opinion. It says that the Committees in reporting the bill which became the Act said it provided 'for regulation along recognized and more or less standardized lines' and that there was 'nothing novel in its provisions.' So saying it sustains a rate calculated on a novel variation of a rate base theory which itself had at the time of enactment of the legislation been recognized only in dissenting opinions. Our difference seems to be between unconscious innovation, FN42 and the purposeful ****309** and deliberate innovation I ***647** would make to meet the necessities of regulating the industry before us.

FN42 Bonbright says, '* * * the vice of traditional law lies, not in its adoption of excessively rigid concepts of value and rules of valuation, but rather in its tendency to permit shifts in meaning that are inept, or else that are ill-defined because the judges that make them will not openly admit that they are doing so.' Id., 1170.

Hope's business has two components of quite divergent character. One, while not a conventional common-carrier undertaking, is essentially a transportation enterprise consisting of conveying gas from where it is produced to point of delivery to the buyer. This is a relatively routine operation not differing substantially from many other utility operations. The service is produced by an investment in compression and transmission facilities. Its risks are those of investing in a tested means of conveying a discovered supply of gas to a known market. A rate base calculated on the prudent investment formula would seem a reasonably satisfactory measure for fixing a return from that branch of the business whose service is roughly proportionate to the capital invested. But it has other consequences which must not be overlooked. It gives marketability and hence 'value' to gas owned by the company and gives the pipeline company a large power over the marketability and hence 'value' of the production of others.

The other part of the business-to reduce to possession an adequate supply of natural gas-is of opposite character, being more erratic and irregular and unpredictable in relation to investment than any phase of any other utility business. A thousand feet of gas captured and severed from real estate for delivery to consumers is recognized under our law as property of much the same nature as a ton of coal, a barrel of oil, or a yard of sand. The value to be allowed for it is the real battleground between the investor and consumer. It is from this part of the business that the chief difference between the parties as to a proper rate base arises.

It is necessary to a 'reasonable' price for gas that it be anchored to a rate base of any kind? Why did courts in the first place begin valuing 'rate bases' in order to 'value' something else? The method came into vogue ***648** in fixing rates for transportation service which the public obtained from common carriers. The public received none of the carriers' physical property but did make some use of it. The carriage was often a monopoly so there were no open market criteria as to reasonableness. The 'value' or 'cost' of what was put to use in the service by the carrier was not a remote or irrelevant consideration in making such rates. Moreover the difficulty of appraising an intangible service was thought to be simplified if it could be related to physical property which was visible and measurable and the items of which might have market value. The court hoped to reason from the known to the unknown. But gas fields turn this method topsy turvy. Gas itself is tangible, possessible, and does have a market and a price in the field. The value of the rate base is more elusive than that of gas. It consists of intangibles-leaseholds and freeholds-operated and unoperated-of little use in themselves except as rights to reach and capture gas. Their value lies almost wholly in predictions of discovery, and of price of gas when captured, and bears little relation to cost of tools and supplies and labor to develop it. Gas is what Hope sells and it can be directly priced more reasonably and easily and accurately than the

components of a rate base can be valued. Hence the reason for resort to a roundabout way of rate base price fixing does not exist in the case of gas in the field.

But if found, and by whatever method found, a rate base is little help in determining reasonableness of the price of gas. Appraisal of present value of these intangible rights to pursue fugitive gas depends on the value assigned to the gas when captured. The 'present fair value' rate base, generally in ill repute, FN43 is not even ****310** urged by the gas company for valuing its fields.

> FN43 'The attempt to regulate rates by reference to a periodic or occasional reappraisal of the properties has now been tested long enough to confirm the worst fears of its critics. Unless its place is taken by some more promising scheme of rate control, the days of private ownership under government regulation may be numbered.' 2 Bonbright, Valuation of Property (1937) 1190.

***649** The prudent investment theory has relative merits in fixing rates for a utility which creates its service merely by its investment. The amount and quality of service rendered by the usual utility will, at least roughly, be measured by the amount of capital it puts into the enterprise. But it has no rational application where there is no such relationship between investment and capacity to serve. There is no such relationship between investment and amount of gas produced. Let us assume that Doe and Roe each produces in West Virginia for delivery to Cleveland the same quantity of natural gas per day. Doe, however, through luck or foresight or whatever it takes, gets his gas from investing $50,000 in leases and drilling. Roe drilled poorer territory, got smaller wells, and has invested $250,000. Does anybody imagine that Roe can get or ought to get for his gas five times as much as Doe because he has spent five times as much? The service one renders to society in the gas business is measured by what he gets out of the ground, not by what he puts into it, and there is little more relation between the investment and the results than in a game of poker.

Two-thirds of the gas Hope handles it buys from about 340 independent producers. It is obvious that the principle of rate-making applied to Hope's own gas cannot be applied, and has not been applied, to the bulk of the gas Hope delivers. It is not probable that the investment of any two of these producers will bear the same ratio to their investments. The gas, however, all goes to the same use, has the same utilization value and the same ultimate price.

To regulate such an enterprise by undiscriminatingly transplanting any body of rate doctrine conceived and ***650** adapted to the ordinary utility business can serve the 'public interest' as the Natural Gas Act requires, if at all, only by accident. Mr. Justice Brandeis, the pioneer juristic advocate of the prudent investment theory for man-made utilities, never, so far as I am able to discover, proposed its application to a natural gas case. On the other hand, dissenting in Commonwealth of Pennsylvania v. West Virginia, he reviewed the problems of gas supply and said, 'In no other field of public service regulation is the controlling body confronted with factors so baffling as in the natural gas industry, and in none is continuous supervision and control required in so high a degree.' 262 U.S. 553, 621, 43 S.Ct. 658, 674, 67 L.Ed. 1117, 32 A.L.R. 300. If natural gas rates are intelligently to be regulated we must fit our legal principles to the economy of the industry and not try to fit the industry to our books.

As our decisions stand the Commission was justified in believing that it was required to proceed by the rate base method even as to gas in the field. For this reason the Court may not merely wash its hands of the method and rationale of rate making. The fact is that this Court, with no discussion of its fitness, simply transferred the rate base method to the natural gas industry. It happened in Newark Natural Gas & Fuel Co. v. City of Newark, Ohio, 1917, 242 U.S. 405, 37 S.Ct. 156, 157, 61 L.Ed. 393, Ann.Cas.1917B, 1025, in which the company wanted 25 cents per m.c.f., and under the Fourteenth Amendment challenged the reduction to 18 cents by ordinance. This Court sustained the reduction because the court below 'gave careful consideration to the questions of the value of the property * * * at the time of the inquiry,' and whether the rate 'would be sufficient to provide a fair return on the value of the property.' The Court said this method was 'based upon principles thoroughly established by repeated secisions of this court,' citing many cases, not one of which involved natural gas or a comparable wasting natural resource. Then came issues as to state power to ***651** regulate as affected by the commerce clause. Public Utilities Commission v. Landon, 1919, 249 U.S. 236, 39 S.Ct. 268, 63 L.Ed. 577; Pennsylvania Gas Co. v. Public Service Commission, 1920, 252 U.S. 23, 40 S.Ct. 279, 64 L.Ed. 434. These questions settled, the Court again was called upon in natural gas cases to consider state rate-making claimed to be invalid under the Fourteenth Amendment. United Fuel Gas Co. v. Railroad Commission of Kentucky, 1929, 278 U.S. 300, 49 S.Ct. 150, 73 L.Ed. 390; United Fuel Gas Company v. Public Service Commission of West Virginia, 1929, 278 U.S. 322, 49 S.Ct. 157, 73 L.Ed. 402. Then, as now, the differences were 'due ****311** chiefly to the difference in value ascribed by each to the gas rights and leaseholds.' 278 U.S. 300, 311, 49 S.Ct. 150, 153, 73 L.Ed. 390. No one seems to have questioned that the rate

base method must be pursued and the controversy was at what rate base must be used. Later the 'value' of gas in the field was questioned in determining the amount a regulated company should be allowed to pay an affiliate therefor-a state determination also reviewed under the Fourteenth Amendment. Dayton Power & Light Co. v. Public Utilities Commission of Ohio, 1934, 292 U.S. 290, 54 S.Ct. 647, 78 L.Ed. 1267; Columbus Gas & Fuel Co. v. Public Utilities Commission of Ohio, 1934, 292 U.S. 398, 54 S.Ct. 763, 78 L.Ed. 1327, 91 A.L.R. 1403. In both cases, one of which sustained, and one of which struck down a fixed rate the Court assumed the rate base method, as the legal way of testing reasonableness of natural gas prices fixed by public authority, without examining its real relevancy to the inquiry.

Under the weight of such precedents we cannot expect the Commission to initiate economically intelligent methods of fixing gas prices. But the Court now faces a new plan of federal regulation based on the power to fix the price at which gas shall be allowed to move in interstate commerce. I should now consider whether these rules devised under the Fourteenth Amendment are the exclusive tests of a just and reasonable rate under the federal statute, inviting reargument directed to that point ***652** if necessary. As I see it now I would be prepared to hold that these rules do not apply to a natural gas case arising under the Natural Gas Act.

Such a holding would leave the Commission to fix the price of gas in the field as one would fix maximum prices of oil or milk or coal, or any other commodity. Such a price is not calculated to produce a fair return on the synthetic value of a rate base of any individual producer, and would not undertake to assure a fair return to any producer. The emphasis would shift from the producer to the product, which would be regulated with an eye to average or typical producing conditions in the field.

Such a price fixing process on economic lines would offer little temptation to the judiciary to become back seat drivers of the price fixing machine. The unfortunate effect of judicial intervention in this field is to divert the attention of those engaged in the process from what is economically wise to what is legally permissible. It is probable that price reductions would reach economically unwise and self-defeating limits before they would reach constitutional ones. Any constitutional problems growing out of price fixing are quite different than those that have heretofore been considered to inhere in rate making. A producer would have difficulty showing the invalidity of such a fixed price so long as he voluntarily continued to sell his product in interstate commerce. Should he withdraw and other authority be invoked to compel him to part with his property, a different problem would be presented.

Allowance in a rate to compensate for gas removed from gas lands, whether fixed as of point of production or as of point of delivery, probably best can be measured by a functional test applied to the whole industry. For good or ill we depend upon private enterprise to exploit these natural resources for public consumption. The function which an allowance for gas in the field should perform ***653** for society in such circumstances is to be enough and no more than enough to induce private enterprise completely and efficiently to utilize gas resources, to acquire for public service any available gas or gas rights and to deliver gas at a rate and for uses which will be in the future as well as in the present public interest.

The Court fears that 'if we are now to tell the Commission to fix the rates so as to discourage particular uses, we would indeed be injecting into a rate case a 'novel' doctrine * * *.' With due deference I suggest that there is nothing novel in the idea that any change in price of a service or commodity reacts to encourage or discourage its use. The question is not whether such consequences will or will not follow; the question is whether effects must be suffered blindly or may be intelligently selected, whether price control shall have targets at which it deliberately aims or shall be handled like a gun in the hands of one who does not know it is loaded.

We should recognize 'price' for what it is-a tool, a means, an expedient. In public****312** hands it has much the same economic effects as in private hands. Hope knew that a concession in industrial price would tend to build up its volume of sales. It used price as an expedient to that end. The Commission makes another cut in that same price but the Court thinks we should ignore the effect that it will have on exhaustion of supply. The fact is that in natural gas regulation price must be used to reconcile the private property right society has permitted to vest in an important natural resource with the claims of society upon it-price must draw a balance between wealth and welfare.

To carry this into techniques of inquiry is the task of the Commissioner rather than of the judge, and it certainly is no task to be solved by mere bookkeeping but requires the best economic talent available. There would doubtless be inquiry into the price gas is bringing in the ***654** field, how far that price is established by arms' length bargaining and how far it may be influenced by agreements in restraint of trade or monopolistic influences. What must Hope really pay to get and to replace gas it delivers under this order? If it should get more or less than that for its own, how much and why? How far are such prices influenced by pipe line access to

markets and if the consumers pay returns on the pipe lines how far should the increment they cause go to gas producers? East Ohio is itself a producer in Ohio. [FN44] What do Ohio authorities require Ohio consumers to pay for gas in the field? Perhaps these are reasons why the Federal Government should put West Virginia gas at lower or at higher rates. If so what are they? Should East Ohio be required to exploit its half million acres of unoperated reserve in Ohio before West Virginia resources shall be supplied on a devalued basis of which that State complains and for which she threatens measures of self keep? What is gas worth in terms of other fuels it displaces?

FN44 East Ohio itself owns natural gas rights in 550,600 acres, 518,526 of which are reserved and 32,074 operated, by 375 wells. Moody's Manual of Public Utilities (1943) 5.

A price cannot be fixed without considering its effect on the production of gas. Is it an incentive to continue to exploit vast unoperated reserves? Is it conducive to deep drilling tests the result of which we may know only after trial? Will it induce bringing gas from afar to supplement or even to substitute for Appalachian gas? [FN45] Can it be had from distant fields as cheap or cheaper? If so, that competitive potentiality is certainly a relevant consideration. Wise regulation must also consider, as a private buyer would, what alternatives the producer has ***655** if the price is not acceptable. Hope has intrastate business and domestic and industrial customers. What can it do by way of diverting its supply to intrastate sales? What can it do by way of disposing of its operated or reserve acreage to industrial concerns or other buyers? What can West Virginia do by way of conservation laws, severance or other taxation, if the regulated rate offends? It must be borne in mind that while West Virginia was prohibited from giving her own inhabitants a priority that discriminated against interstate commerce, we have never yet held that a good faith conservation act, applicable to her own, as well as to others, is not valid. In considering alternatives, it must be noted that federal regulation is very incomplete, expressly excluding regulation of 'production or gathering of natural gas,' and that the only present way to get the gas seems to be to call it forth by price inducements. It is plain that there is a downward economic limit on a safe and wise price.

FN45 Hope has asked a certificate of convenience and necessity to lay 1140 miles of 22-inch pipeline from Hugoton gas fields in southwest Kansas to West Virginia to carry 285 million cu. ft. of natural gas per day. The cost was estimated at $51,000,000. Moody's Manual of Public Utilities (1943) 1760.

But there is nothing in the law which compels a commission to fix a price at that 'value' which a company might give to its product by taking advantage of scarcity, or monopoly of supply. The very purpose of fixing maximum prices is to take away from the seller his opportunity to get all that otherwise the market would award him for his goods. This is a constitutional use of the power to fix maximum prices, ****313**Block v. Hirsh, 256 U.S. 135, 41 S.Ct. 458, 65 L.Ed. 865, 16 A.L.R. 165; Marcus Brown Holding Co. v. Feldman, 256 U.S. 170, 41 S.Ct. 465, 65 L.Ed. 877; International Harvester Co. v. Kentucky, 234 U.S. 216, 34 S.Ct. 853, 58 L.Ed. 1284; Highland v. Russell Car & Snow Plow Co., 279 U.S. 253, 49 S.Ct. 314, 73 L.Ed. 688, just as the fixing of minimum prices of goods in interstate commerce is constitutional although it takes away from the buyer the advantage in bargaining which market conditions would give him. United States v. Darby, 312 U.S. 100, 657, 61 S.Ct. 451, 85 L.Ed. 609, 132 A.L.R. 1430; Mulford v. Smith, 307 U.S. 38, 59 S.Ct. 648, 83 L.Ed. 1092; United States v. Rock Royal Co-operative, Inc., 307 U.S. 533, 59 S.Ct. 993, 83 L.Ed. 1446; Sunshine Anthracite Coal Co. v. Adkins, 310 U.S. 381, 60 S.Ct. 907, 84 L.Ed. 1263. The Commission has power to fix ***656** a price that will be both maximum and minimum and it has the incidental right, and I think the duty, to choose the economic consequences it will promote or retard in production and also more importantly in consumption, to which I now turn.

If we assume that the reduction in company revenues is warranted we then come to the question of translating the allowed return into rates for consumers or classes of consumers. Here the Commission fixed a single rate for all gas delivered irrespective of its use despite the fact that Hope has established what amounts to two rates-a high one for domestic use and a lower one for industrial contracts. [FN46] The Commission can fix two prices for interstate gas as readily as one-a price for resale to domestic users and another for resale to industrial users. This is the pattern Hope itself has established in the very contracts over which the Commission is expressly given jurisdiction. Certainly the Act is broad enough to permit two prices to be fixed instead of one, if the concept of the 'public interest' is not unduly narrowed.

FN46 I find little information as to the rates for industries in the record and none at all in such usual sources as Moody's Manual.

The Commission's concept of the public interest in natural

gas cases which is carried today into the Court's opinion was first announced in the opinion of the minority in the Pipeline case. It enumerated only two 'phases of the public interest: (1) the investor interest; (2) the consumer interest,' which it emphasized to the exclusion of all others. 315 U.S. 575, 606, 62 S.Ct. 736, 753, 86 L.Ed. 1037. This will do well enough in dealing with railroads or utilities supplying manufactured gas, electric, power, a communications service or transportation, where utilization of facilities does not impair their future usefulness. Limitation of supply, however, brings into a natural gas case another phase of the public interest that to my mind overrides both the owner ***657** and the consumer of that interest. Both producers and industrial consumers have served their immediate private interests at the expense of the long-range public interest. The public interest, of course, requires stopping unjust enrichment of the owner. But it also requires stopping unjust impoverishment of future generations. The public interest in the use by Hope's half million domestic consumers is quite a different one from the public interest in use by a baker's dozen of industries.

Prudent price fixing it seems to me must at the very threshold determine whether any part of an allowed return shall be permitted to be realized from sales of gas for resale for industrial use. Such use does tend to level out daily and seasonal peaks of domestic demand and to some extent permits a lower charge for domestic service. But is that a wise way of making gas cheaper when, in comparison with any substitute, gas is already a cheap fuel? The interstate sales contracts provide that at times when demand is so great that there is not enough gas to go around domestic users shall first be served. Should the operation of this preference await the day of actual shortage? Since the propriety of a preference seems conceded, should it not operate to prevent the coming of a shortage as well as to mitigate its effects? Should industrial use jeopardize tomorrow's service to householders any more than today's? If, however, it is decided to cheapen domestic use by resort to industrial sales, should they be limited to the few uses ****314** for which gas has special values or extend also to those who use it only because it is cheaper than competitive fuels? FN47 And how much cheaper should industrial***658** gas sell than domestic gas, and how much advantage should it have over competitive fuels? If industrial gas is to contribute at all to lowering domestic rates, should it not be made to contribute the very maximum of which it is capable, that is, should not its price be the highest at which the desired volume of sales can be realized?

> FN47 The Federal Power Commission has touched upon the problem of conservation in connection with an application for a certificate permitting construction of a 1500-mile pipeline from southern Texas to New York City and says: 'The Natural Gas Act as presently drafted does not enable the Commission to treat fully the serious implications of such a problem. The question should be raised as to whether the proposed use of natural gas would not result in displacing a less valuable fuel and create hardships in the industry already supplying the market, while at the same time rapidly depleting the country's natural-gas reserves. Although, for a period of perhaps 20 years, the natural gas could be so priced as to appear to offer an apparent saving in fuel costs, this would mean simply that social costs which must eventually be paid had been ignored.
> 'Careful study of the entire problem may lead to the conclusion that use of natural gas should be restricted by functions rather than by areas. Thus, it is especially adapted to space and water heating in urban homes and other buildings and to the various industrial heat processes which require concentration of heat, flexibility of control, and uniformity of results. Industrial uses to which it appears particularly adapted include the treating and annealing of metals, the operation of kilns in the ceramic, cement, and lime industries, the manufacture of glass in its various forms, and use as a raw material in the chemical industry. General use of natural gas under boilers for the production of steam is, however, under most circumstances of very questionable social economy.' Twentieth Annual Report of the Federal Power Commission (1940) 79.

If I were to answer I should say that the household rate should be the lowest that can be fixed under commercial conditions that will conserve the supply for that use. The lowest probable rate for that purpose is not likely to speed exhaustion much, for it still will be high enough to induce economy, and use for that purpose has more nearly reached the saturation point. On the other hand the demand for industrial gas at present rates already appears to be increasing. To lower further the industrial rate is merely further to subsidize industrial consumption and speed depletion. The impact of the flat reduction ***659** of rates ordered here admittedly will be to increase the industrial advantages of gas over competing fuels and to increase its use. I think this is not, and there is no finding by the Commission that it is, in the public interest.

There is no justification in this record for the present discrimination against domestic users of gas in favor of industrial users. It is one of the evils against which the Natural Gas Act was aimed by Congress and one of the evils complained of here by Cleveland and Akron. If

Hope's revenues should be cut by some $3,600,000 the whole reduction is owing to domestic users. If it be considered wise to raise part of Hope's revenues by industrial purpose sales, the utmost possible revenue should be raised from the least consumption of gas. If competitive relationships to other fuels will permit, the industrial price should be substantially advanced, not for the benefit of the Company, but the increased revenues from the advance should be applied to reduce domestic rates. For in my opinion the 'public interest' requires that the great volume of gas now being put to uneconomic industrial use should either be saved for its more important future domestic use or the present domestic user should have the full benefit of its exchange value in reducing his present rates.

Of course the Commission's power directly to regulate does not extend to the fixing of rates at which the local company shall sell to consumers. Nor is such power required to accomplish the purpose. As already pointed out, the very contract the Commission is altering classifies the gas according to the purposes for which it is to be resold and provides differentials between the two classifications. It would only be necessary for the Commission to order ****315** that all gas supplied under paragraph (a) of Hope's contract with the East Ohio Company shall be ***660** at a stated price fixed to give to domestic service the entire reduction herein and any further reductions that may prove possible by increasing industrial rates. It might further provide that gas delivered under paragraph (b) of the contract for industrial purposes to those industrial customers Hope has approved in writing shall be at such other figure as might be found consistent with the public interest as herein defined. It is too late in the day to contend that the authority of a regulatory commission does not extend to a consideration of public interests which it may not directly regulate and a conditioning of its orders for their protection. Interstate Commerce Commission v. Railway Labor Executives Ass'n, 315 U.S. 373, 62 S.Ct. 717, 86 L.Ed. 904; United States v. Lowden, 308 U.S. 225, 60 S.Ct. 248, 84 L.Ed. 208.

Whether the Commission will assert its apparently broad statutory authorization over prices and discriminations is, of course, its own affair, not ours. It is entitled to its own notion of the 'public interest' and its judgment of policy must prevail. However, where there is ground for thinking that views of this Court may have constrained the Commission to accept the rate-base method of decision and a particular single formula as 'all important' for a rate base, it is appropriate to make clear the reasons why I, at least, would not be so understood. The Commission is free to face up realistically to the nature and peculiarity of the resources in its control, to foster their duration in fixing price, and to consider future interests in addition to those of investors and present consumers. If we return this case it may accept or decline the proffered freedom. This problem presents the Commission an unprecedented opportunity if it will boldly make sound economic considerations, instead of legal and accounting theories, the foundation of federal policy. I would return the case to the Commission and thereby be clearly quit of what now may appear to be some responsibility for perpetrating a shortsighted pattern of natural gas regulation.

Supreme Court of the United States
BLUEFIELD WATERWORKS & IMPROVEMENT CO.
v.
PUBLIC SERVICE COMMISSION OF WEST VIRGINIA et al.
**No. 256.**

Argued January 22, 1923.
Decided June 11, 1923.

In Error to the Supreme Court of Appeals of West Virginia.

Proceedings by the Bluefield Waterworks & Improvement Company against the Public Service Commission of the State of West Virginia and others to suspend and set aside an order of the Commission fixing rates. From a judgment of the Supreme Court of West Virginia, dismissing the petition, and denying the relief (89 W. Va. 736, 110 S. E. 205), the Waterworks Company bring error. Reversed.

of Charges. Most Cited Cases
Since the investors take into account the result of past operations as well as present rates in determining whether they will invest, a waterworks company which had been earning a low rate of returns through a long period up to the time of the inquiry is entitled to return of more than 6 per cent. on the value of its property used in the public service, in order to justly compensate it for the use of its property.

A proceeding in a state court attacking an order of a public service commission fixing rates, on the ground that the rates were confiscatory and the order void under the federal Constitution, is one where there is drawn in question the validity of authority exercised under the state, on the ground of repugnancy to the federal Constitution, and therefore is reviewable by writ of error.

****675 *680** Messrs. Alfred G. Fox and Jos. M. Sanders, both of Bluefield, W. Va., for plaintiff in error.
Mr. Russell S. Ritz, of Bluefield, W. Va., for defendants in error.

***683** Mr. Justice BUTLER delivered the opinion of the Court.
Plaintiff in error is a corporation furnishing water to the city of Bluefield, W. Va., ****676** and its inhabitants. September 27, 1920, the Public Service Commission of the state, being authorized by statute to fix just and reasonable rates, made its order prescribing rates. In accordance with the laws of the state (section 16, c. 15-O, Code of West Virginia [sec. 651]), the company instituted proceedings in the Supreme Court of Appeals to suspend and set aside the order. The petition alleges that the order is repugnant to the Fourteenth Amendment, and deprives the company of its property without just compensation and without due process of law, and denies it equal protection of the laws. A final judgment was entered, denying the company relief and dismissing its petition. The case is here on writ of error.

[1] 1. The city moves to dismiss the writ of error for the reason, as it asserts, that there was not drawn in question the validity of a statute or an authority exercised under the state, on the ground of repugnancy to the federal Constitution.

The validity of the order prescribing the rates was directly challenged on constitutional grounds, and it was held valid by the highest court of the state. The prescribing of rates is a legislative act. The commission is an instrumentality of the state, exercising delegated powers. Its order is of the same force as would be a like enactment by the Legislature. If, as alleged, the prescribed rates are confiscatory, the order is void. Plaintiff in error is entitled to bring the case here on writ of error and to have that question decided by this court. The motion to dismiss will be denied. See ***684**Oklahoma Natural Gas Co. v. Russell, 261 U. S. 290, 43 Sup. Ct. 353, 67 L. Ed. 659, decided March 5, 1923, and cases cited; also Ohio Valley Co. v. Ben Avon Borough, 253 U. S. 287, 40 Sup. Ct. 527, 64 L. Ed. 908.

2. The commission fixed $460,000 as the amount on which the company is entitled to a return. It found that under existing rates, assuming some increase of business, gross earnings for 1921 would be $80,000 and operating expenses $53,000 leaving $27,000, the equivalent of 5.87 per cent., or 3.87 per cent. after deducting 2 per cent. allowed for depreciation. It held existing rates insufficient to the extent of 10,000. Its order allowed the company to add 16 per cent. to all bills, excepting those for public and private fire protection. The total of the bills so to be increased amounted to $64,000; that is, 80 per cent. of the revenue was authorized to be increased 16 per cent., equal to an increase of 12.8 per cent. on the total, amounting to $10,240.

As to value: The company claims that the value of the property is greatly in excess of $460,000. Reference to the evidence is necessary. There was submitted to the commission evidence of value which it summarized substantially as follows:

a. Estimate by company's engineer

**(Cite as: P.U.R. 1923D 11, 43 S.Ct. 675)**

| | | |
|---|---|---|
| | on. basis of reproduction new, less. depreciation, at prewar prices. | $ 624,548 00 |
| b. | Estimate by company's engineer on. basis of reproduction new, less. depreciation, at 1920 prices. | 1,194,663 00 |
| c. | Testimony of company's engineer. fixing present fair value for rate. making purposes. | 900,000 00 |
| d. | Estimate by commissioner's engineer on. basis of reproduction new, less. depreciation at 1915 prices, plus. additions since December 31, 1915, at. actual cost, excluding Bluefield. Valley waterworks, water rights,. and going value. | 397,964 38 |
| e. | Report of commission's statistician. showing investment cost less. depreciation. | 365,445 13 |
| f. | Commission's valuation, as fixed in. case No. 368 ($360,000), plus gross. additions to capital since made. ($92,520.53). | 452,520 53 |

***685** It was shown that the prices prevailing in 1920 were nearly double those in 1915 and pre-war time. The company did not claim value as high as its estimate of cost of construction in 1920. Its valuation engineer testified that in his opinion the value of the property was $900,000-a figure between the cost of construction in 1920, less depreciation, and the cost of construction in 1915 and before the war, less depreciation.

The commission's application of the evidence may be stated briefly as follows:

As to 'a,' supra: The commission deducted $204,000 from the estimate (details printed in the margin), FN1 leaving approximately $421,000, which it contrasted with the estimate of its own engineer, $397,964.38 (see 'd,' supra). It found that there should be included $25,000 for the Bluefield Valley waterworks plant in Virginia, 10 per cent. for going value, and $10,000 for working capital. If these be added to $421,000, there results $500,600. This may be compared with the commission's final figure, $460,000.

FN1

| | |
|---|---|
| Difference in depreciation allowed. | $ 49,000 |
| Preliminary organization and development. cost. | 14,500 |
| Bluefield Valley waterworks plant. | 25,000 |
| Water rights. | 50,000 |
| Excess overhead costs. | 39,000 |
| Paving over mains. | 28,500 |
| | $204,000 |

**(Cite as: P.U.R. 1923D 11, 43 S.Ct. 675)**

***686** As to 'b' and 'c,' supra: These were given no weight by the commission in arriving at its final figure, $460,000. It said:
'Applicant's plant was originally constructed more than twenty years ago, and has been added to from time to time as the progress and development of the community required. For this reason, it would be unfair to its consumers to use as a basis for present fair value the abnormal prices prevailing during the recent war period; but, when, as in this case, a part of the plant has been constructed or added to during that period, in fairness to the applicant, consideration must be given to the cost of such expenditures made to meet the demands of the public.'

****677** As to 'd,' supra: The commission, taking $400,000 (round figures), added $25,000 for Bluefield Valley waterworks plant in Virginia, 10 per cent. for going value, and $10,000 for working capital, making $477,500. This may be compared with its final figure, $460,000.

As to 'e,' supra: The commission, on the report of its statistician, found gross investment to be $500,402.53. Its engineer, applying the straight line method, found 19 per cent. depreciation. It applied 81 per cent. to gross investment and added 10 per cent. for going value and $10,000 for working capital, producing $455,500. [FN2] This may be compared with its final figure, $460,000.

'The books of the company show a total gross investment,

FN2 As to 'e': $365,445.13 represents investment cost less depreciation. The gross investment was found to be $500,402.53, indicating a deduction on account of depreciation of $134,957.40, about 27 per cent., as against 19 per cent. found by the commission's engineer.

As to 'f,' supra: It is necessary briefly to explain how this figure, $452,520.53, was arrived at. Case No. 368 was a proceeding initiated by the application of the company for higher rates, April 24, 1915. The commission made a valuation as of January 1, 1915. There were presented two estimates of reproduction cost less depreciation, one by a valuation engineer engaged by the company, ***687** and the other by a valuation engineer engaged by the city, both 'using the same method.' An inventory made by the company's engineer was accepted as correct by the city and by the commission. The method 'was that generally employed by courts and commissions in arriving at the value of public utility properties under this method.' and in both estimates 'five year average unit prices' were applied. The estimate of the company's engineer was $540,000 and of the city's engineer, $392,000. The principal differences as given by the commission are shown in the margin. [FN3] The commission disregarded both estimates and arrived at $360,000. It held that the best basis of valuation was the net investment, i. e., the total cost of the property less depreciation. It said:

FN3

| | | Company Engineer. | City Engineer. |
|---|---|---|---|
| 1. | Preliminary costs. | $14,455 | $1,000 |
| 2. | Water rights. | 50,000 | Nothing |
| 3. | Cutting pavements over. mains. | 27,744 | 233 |
| 4. | Pipe lines from gravity. springs. | 22,072 | 15,442 |
| 5. | Laying cast iron street. mains. | 19,252 | 15,212 |
| 6. | Reproducing Ada springs. | 18,558 | 13,027 |
| 7. | Superintendence and. engineering. | 20,515 | 13,621 |
| 8. | General contingent cost. | 16,415 | 5,448 |
| | | $189,011 | $63,983 |

since its organization, of $407,882, and that there has been charged off for depreciation from year to year the total sum of $83,445, leaving a net investment of

**(Cite as: P.U.R. 1923D 11, 43 S.Ct. 675)**

$324,427. * * * From an examination of the books * * * it appears that the records of the company have been remarkably well kept and preserved. It therefore seems that, when a plant is developed under these conditions, the net investment, which, of course, means the total gross investment less depreciation, is the very best basis of valuation for rate making purposes and that the other methods above referred to should ***688** be used only when it is impossible to arrive at the true investment. Therefore, after making due allowance for capital necessary for the conduct of the business and considering the plant as a going concern, it is the opinion of the commission that the fair value for the purpose of determining reasonable and just rates in this case of the property of the applicant company, used by it in the public service of supplying water to the city of Bluefield and its citizens, is the sum of $360,000, which sum is hereby fixed and determined by the commission to be the fair present value for the said purpose of determining the reasonable and just rates in this case.'

In its report in No. 368, the commission did not indicate the amounts respectively allowed for going value or working capital. If 10 per cent. be added for the former, and $10,000 for the latter (as fixed by the commission in the present case), there is produced $366,870, to be compared with $360,000, found by the commission in its valuation as of January 1, 1915. To this it added $92,520.53, expended since, producing $452,520.53. This may be compared with its final figure, $460,000.

The state Supreme Court of Appeals holds that the valuing of the property of a public utility corporation and prescribing rates are purely legislative acts, not subject to judicial review, except in so far as may be necessary to determine whether such rates are void on constitutional or other grounds, and that findings of fact by the commission based on evidence to support them will not be reviewed by the court. City of Bluefield v. Waterworks, 81 W. Va. 201, 204, 94 S. E. 121; Coal & Coke Co. v. Public Service Commission, 84 W. Va. 662, 678, 100 S. E. 557, 7 A. L. R. 108; Charleston v. Public Service Commission, 86 W. Va. 536, 103 S. E. 673.

In this case (89 W. Va. 736, 738, 110 S. E. 205, 206) it said:
'From the written opinion of the commission we find that it ascertained the value of the petitioner's property for rate making [then quoting the commission] 'after ***689** maturely and carefully considering the various methods presented for the ascertainment of fair value and giving such weight as seems proper to every element involved and all the facts and circumstances disclosed by the record.''

[2] [3] The record clearly shows that the commission, in arriving at its final figure, did not accord proper, if any, weight to the greatly enhanced costs of construction in 1920 over those prevailing about 1915 and before the war, as established by uncontradicted ****678** evidence; and the company's detailed estimated cost of reproduction new, less depreciation, at 1920 prices, appears to have been wholly disregarded. This was erroneous. Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Commission of Missouri, 262 U. S. 276, 43 Sup. Ct. 544, 67 L. Ed. 981, decided May 21, 1923. Plaintiff in error is entitled under the due process clause of the Fourteenth Amendment to the independent judgment of the court as to both law and facts. Ohio Valley Co. v. Ben Avon Borough, 253 U. S. 287, 289, 40 Sup. Ct. 527, 64 L. Ed. 908, and cases cited.

We quote further from the court's opinion (89 W. Va. 739, 740, 110 S. E. 206):
'In our opinion the commission was justified by the law and by the facts in finding as a basis for rate making the sum of $460,000.00. * * * In our case of Coal & Coke Ry. Co. v. Conley, 67 W. Va. 129, it is said: 'It seems to be generally held that, in the absence of peculiar and extraordinary conditions, such as a more costly plant than the public service of the community requires, or the erection of a plant at an actual, though extravagant, cost, or the purchase of one at an exorbitant or inflated price, the actual amount of money invested is to be taken as the basis, and upon this a return must be allowed equivalent to that which is ordinarily received in the locality in which the business is done, upon capital invested in similar enterprises. In addition to this, consideration must be given to the nature of the investment, a higher rate ***690** being regarded as justified by the risk incident to a hazardous investment.'
'That the original cost considered in connection with the history and growth of the utility and the value of the services rendered constitute the principal elements to be considered in connection with rate making, seems to be supported by nearly all the authorities.'

[4] The question in the case is whether the rates prescribed in the commission's order are confiscatory and therefore beyond legislative power. Rates which are not sufficient to yield a reasonable return on the value of the property used at the time it is being used to render the service are unjust, unreasonable and confiscatory, and their enforcement deprives the public utility company of its property in violation of the Fourteenth Amendment. This is so well settled by numerous decisions of this court that citation of the cases is scarcely necessary:

**(Cite as: P.U.R. 1923D 11, 43 S.Ct. 675)**

'What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience.' Smyth v. Ames (1898) 169 U. S. 467, 547, 18 Sup. Ct. 418, 434 (42 L. Ed. 819).
'There must be a fair return upon the reasonable value of the property at the time it is being used for the public. * * * And we concur with the court below in holding that the value of the property is to be determined as of the time when the inquiry is made regarding the rates. If the property, which legally enters into the consideration of the question of rates, has increased in value since it was acquired, the company is entitled to the benefit of such increase.' Willcox v. Consolidated Gas Co. (1909) 212 U. S. 19, 41, 52, 29 Sup. Ct. 192, 200 (53 L. Ed. 382, 15 Ann. Cas. 1034, 48 L. R. A. [N. S.] 1134).
'The ascertainment of that value is not controlled by artificial rules. It is not a matter of formulas, but there must be a reasonable judgment having its basis in a proper consideration of all relevant facts.' Minnesota Rate Cases (1913) 230 U. S. 352, 434, 33 Sup. Ct. 729, 754 (57 L. Ed. 1511, 48 L. R. A. [N. S.] 1151, Ann. Cas. 1916A, 18).
***691** 'And in order to ascertain that value, the original cost of construction, the amount expended in permanent improvements, the amount and market value of its bonds and stock, the present as compared with the original cost of construction, the probable earning capacity of the property under particular rates prescribed by statute, and the sum required to meet operating expenses, are all matters for consideration, and are to be given such weight as may be just and right in each case. We do not say that there may not be other matters to be regarded in estimating the value of the property.' Smyth v. Ames, 169 U. S., 546, 547, 18 Sup. Ct. 434, 42 L. Ed. 819.
'* * * The making of a just return for the use of the property involves the recognition of its fair value if it be more than its cost. The property is held in private ownership and it is that property, and not the original cost of it, of which the owner may not be deprived without due process of law.'

Minnesota Rate Cases, 230 U. S. 454, 33 Sup. Ct. 762, 57 L. Ed. 1511, 48 L. R. A. (N. S.) 1151, Ann. Cas. 1916A, 18.

In Missouri ex rel. Southwestern Bell Telephone Co., v. Public Service Commission of Missouri, supra, applying the principles of the cases above cited and others, this court said:
'Obviously, the commission undertook to value the property without according any weight to the greatly enhanced costs of material, labor, supplies, etc., over those prevailing in 1913, 1914, and 1916. As matter of common knowledge, these increases were large. Competent witnesses estimated them as 45 to 50 per centum. * * * It is impossible to ascertain what will amount to a fair return upon properties devoted to public service, without giving consideration to the cost of labor, supplies, etc., at the time the investigation is made. An honest and intelligent forecast of probable future values, made upon a view of all the relevant circumstances, is essential. If the highly important element of present costs is wholly disregarded, such a forecast becomes impossible. Estimates for to-morrow cannot ignore prices of to-day.'

[5] ***692** It is clear that the court also failed to give proper consideration to the higher cost of construction in 1920 over that in 1915 and before the war, and failed to give weight to cost of reproduction less depreciation on the basis of 1920 prices, or to the testimony of the company's valuation engineer, based on present and past costs of construction, that the property in his opinion, was worth $900,000. The final figure, $460,000, was arrived ****679** at substantially on the basis of actual cost, less depreciation, plus 10 per cent. for going value and $10,000 for working capital. This resulted in a valuation considerably and materially less than would have been reached by a fair and just consideration of all the facts. The valuation cannot be sustained. Other objections to the valuation need not be considered.

3. Rate of return: The state commission found that the company's net annual income should be approximately $37,000, in order to enable it to earn 8 per cent. for return and depreciation upon the value of its property as fixed by it. Deducting 2 per cent. for depreciation, there remains 6 per cent. on $460,000, amounting to $27,600 for return. This was approved by the state court.

[6] The company contends that the rate of return is too low and confiscatory. What annual rate will constitute just compensation depeds upon many circumstances, and must be determined by the exercise of a fair and enlightened judgment, having regard to all relevant facts. A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding, risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in ***693** highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. A

**(Cite as: P.U.R. 1923D 11, 43 S.Ct. 675)**

rate of return may be reasonable at one time and become too high or too low by changes affecting opportunities for investment, the money market and business conditions generally.

In 1909, this court, in Willcox v. Consolidated Gas Co., 212 U. S. 19, 48-50, 29 Sup. Ct. 192, 53 L. Ed. 382, 15 Ann. Cas. 1034, 48 L. R. A. (N. S.) 1134, held that the question whether a rate yields such a return as not to be confiscatory depends upon circumstances, locality and risk, and that no proper rate can be established for all cases; and that, under the circumstances of that case, 6 per cent. was a fair return on the value of the property employed in supplying gas to the city of New York, and that a rate yielding that return was not confiscatory. In that case the investment was held to be safe, returns certain and risk reduced almost to a minimum-as nearly a safe and secure investment as could be imagined in regard to any private manufacturing enterprise.

In 1912, in Cedar Rapids Gas Co. v. Cedar Rapids, 223 U. S. 655, 670, 32 Sup. Ct. 389, 56 L. Ed. 594, this court declined to reverse the state court where the value of the plant considerably exceeded its cost, and the estimated return was over 6 per cent.

In 1915, in Des Moines Gas Co. v. Des Moines, 238 U. S. 153, 172, 35 Sup. Ct. 811, 59 L. Ed. 1244, this court declined to reverse the United States District Court in refusing an injunction upon the conclusion reached that a return of 6 per cent. per annum upon the value would not be confiscatory.

In 1919, this court in Lincoln Gas Co. v. Lincoln, 250 U. S. 256, 268, 39 Sup. Ct. 454, 458 (63 L. Ed. 968), declined on the facts of that case to approve a finding that no rate yielding as much as 6 per cent. ***694** on the invested capital could be regarded as confiscatory. Speaking for the court, Mr. Justice Pitney said:
'It is a matter of common knowledge that, owing principally to the World War, the costs of labor and supplies of every kind have greatly advanced since the ordinance was adopted, and largely since this cause was last heard in the court below. And it is equally well known that annual returns upon capital and enterprise the world over have materially increased, so that what would have been a proper rate of return for capital invested in gas plants and similar public utilities a few years ago furnishes no safe criterion for the present or for the future.'

In 1921, in Brush Electric Co. v. Galveston, the United States District Court held 8 per cent. a fair rate of return. FN4

FN4 This case was affirmed by this court June 4, 1923, 262 U. S. 443, 43 Sup. Ct. 606, 67 L. Ed. 1076.

In January, 1923, in City of Minneapolis v. Rand, the Circuit Court of Appeals of the Eighth Circuit (285 Fed. 818, 830) sustained, as against the attack of the city on the ground that it was excessive, 7 1/2 per cent., found by a special master and approved by the District Court as a fair and reasonable return on the capital investment-the value of the property.

[7] Investors take into account the result of past operations, especially in recent years, when determining the terms upon which they will invest in such an undertaking. Low, uncertain, or irregular income makes for low prices for the securities of the utility and higher rates of interest to be demanded by investors. The fact that the company may not insist as a matter of constitutional right that past losses be made up by rates to be applied in the present and future tends to weaken credit, and the fact that the utility is protected against being compelled to serve for confiscatory rates tends to support it. In ***695** this case the record shows that the rate of return has been low through a long period up to the time of the inquiry by the commission here involved. For example, the average rate of return on the total cost of the property from 1895 to 1915, inclusive, was less than 5 per cent.; from 1911 to 1915, inclusive, about 4.4 per cent., without allowance for depreciation. In 1919 the net operating income was approximately $24,700, leaving $15,500, approximately, or 3.4 per cent. on $460,000 fixed by the commission, after deducting 2 per cent. for depreciation. In 1920, the net operating income was approximately $25,465, leaving $16,265 for return, after allowing for depreciation. Under the facts and circumstances indicated by the record, we think that a rate of return of 6 per cent. upon the value of the property is substantially too low to constitute just compensation for the use of the property employed to render the service.

The judgment of the Supreme Court of Appeals of West Virginia is reversed.

Mr. Justice BRANDEIS concurs in the judgment of reversal, for the reasons stated by him in Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Commission of Missouri, supra.

**The Water Utility Industry is one of the smaller sectors in the *Value Line* universe. There are only six companies in the group, of which, only two can be classified as large cap stocks. In sum, the Industry's entire market cap is equal to that of a just one of the larger electric utilities.**

**Fundamentals in the water sector do not change quickly. For decades, water entities did not invest enough to maintain the integrity of their assets. Sufficient reserve funds were not set aside to replace pipelines, valves, and wastewater facilities as they deteriorated. Hence, it was only about 15 years ago that the water companies realized that much of their existing infrastructure needed to be replaced. This began major construction programs for each company that ought to be ongoing for the foreseeable future. To finance these building projects, most companies have had to rely, to some extent, on issuing new debt.**

**One of the bright spots in the water industry has been the cooperation between state regulators and the utilities. For example, there has not been the friction and enmity that has existed between regulators and electric utilities.**

**The Water Industry is not well ranked for Timeliness, as it falls in the bottom quartile of the 93 different industries we follow.**

**INDUSTRY TIMELINESS: 80 (of 93)**

### Industry Fundamentals

The six companies followed here make up only a small part of the water utility sector in the United States. Unlike the public companies covered here that have issued stock, the vast majority of water districts in the country are owned and operated by states, cities, and towns. Indeed, there are well over 50,000 large, medium, and small domestic municipality run operations. When very small rural utilities in underpopulated areas are included, the total number of water districts rises by the tens of thousands.

One problem with the Industry's structure is that it leads to great inefficiencies. Each small entity could reduce its workforce by merging because there are so many overlapping jobs that could be eliminated. Consolidation can lead to substantial economies of scale. In addition, water utilities have to be in compliance with EPA regulations regarding drinking water. To meet these standards requires funds that a fair amount of these undercapitalized districts do not have. *American Water Works* and *Essential Utilities* have been the most active on this front. *American Water* has actually budgeted $4 billion to $5 billion over the next decade just to acquire other operations. The company has proven that by adding such assets to existing plant, it can achieve major cost savings while growing the rate base.

### Construction

Every member in this industry is involved in a meaningful construction program. As was previously mentioned, the replacement of aging infrastructure had been deferred for years. Therefore, water companies are in catch-up mode. Although estimates vary widely, in many places, the average age of a pipeline system can be between 50 and 80 years. Many have broken valves and leaky pipes that need to be completely replaced. What's more, since all the building is being done incrementally, upgrading the water infrastructure will be an ongoing project for decades to come.

### Finances

Most of the balance sheets in this Industry are only of average strength. This is a result of the large issuance of new bonds to fund the capital expenditure programs. Since no one company has decided to fix all of their problems at once, no water utility is too heavily burdened by debt. It should be noted that the amount of construction activity would be curtailed should interest rates spike higher.

### Regulatory Climate

Regulation in this space is mostly controlled by state authorities. Since utilities cannot raise the prices they charge at will, any hikes must first be approved by the state regulatory commissions. Depending upon the state, a utility must file in advance, justifying why they should be allowed to increase the amount that their customers must pay. Typically, rising costs are related to general inflation. Petitions also have to be made to recoup investments being made to improve the quality of service.

### Conclusion

There isn't much to recommend about this group at the current time. While dividend yields are not particularly high, distribution growth prospects are better than average. Other positives include that these companies offer predictable earnings, as the demand for water is relatively inelastic. However, returns on assets are regulated, so there is a cap on the amount of profits that can be earned. For some investors the well-defined income stream and low volatility offset the potential for greater capital appreciation that other equities offer. As always, we recommend that subscribers read each individual report to better understand the underlying risks associated with each company before making an investment.

## Maturity Matching or "Self-Liquidating," Approach

**Maturity Matching, or "Self-Liquidating," Approach**
A financing policy that matches asset and liability maturities. This is a moderate policy.

The **maturity matching, or "self-liquidating," approach** calls for matching asset and liability maturities as shown in Panel a of Figure 14-3. This strategy minimizes the risk that the firm will be unable to pay off its maturing obligations. To illustrate, suppose a company borrows on a one-year basis and uses the funds obtained to build and equip a plant. Cash flows from the plant (profits plus depreciation) would not be sufficient to pay off the loan at the end of only one year, so the loan would have to be renewed. If for some reason the lender refused to renew the loan, then the company would have problems. Had the plant been financed with long-term debt, however, the required loan payments would have been better matched with cash flows from profits and depreciation, and the problem of renewal would not have arisen.

At the limit, a firm could attempt to match exactly the maturity structure of its assets and liabilities. Inventory expected to be sold in 30 days could be financed with a 30-day bank loan; a machine expected to last for 5 years could be financed with a 5-year loan; a 20-year building could be financed with a 20-year mortgage bond; and so forth. Actually, of course, two factors prevent this exact maturity matching: (1) there is uncertainty about the lives of assets, and (2) some common equity must be used, and common equity has no maturity. To illustrate the uncertainty factor, a firm might finance inventories with a 30-day loan, expecting to sell the inventories and then use the cash to retire the loan. But if sales were slow, the cash would not be forthcoming, and the use of short-term credit could end up causing a problem. Still, if a firm makes an attempt to match asset and liability maturities, we would define this as a moderate current asset financing policy.

In practice, firms don't finance each specific asset with a type of capital that has a maturity equal to the asset's life. However, academic studies do show that most firms tend to finance short-term assets from short-term sources and long-term assets from long-term sources.[16]

## Aggressive Approach

Students can access various types of historical interest rates, including fixed and variable rates, at the St. Louis Federal Reserve's FRED site. The address is **http://research.stlouisfed.org/fred/**.

Panel b of Figure 14-3 illustrates the situation for a relatively aggressive firm that finances all of its fixed assets with long-term capital and part of its permanent current assets with short-ferm, nonspontaneous credit. Note that we used the term "relatively" in the title for Panel b because there can be different *degrees* of aggressiveness. For example, the dashed line in Panel b could have been drawn *below* the line designating fixed assets, indicating that all of the permanent current assets and part of the fixed assets were financed with short-term credit; this would be a highly aggressive, extremely nonconservative position, and the firm would be very much subject to dangers from rising interest rates as well as to loan renewal problems. However, short-term debt is often cheaper than long-term debt, and some firms are willing to sacrifice safety for the chance of higher profits.

## Conservative Approach

Panel c of Figure 14-3 has the dashed line *above* the line designating permanent current assets, indicating that long-term capital is being used to finance all permanent

# New approach to estimating the cost of common equity capital for public utilities

**Pauline M. Ahern · Frank J. Hanley · Richard A. Michelfelder**

Published online: 26 August 2011
© Springer Science+Business Media, LLC 2011

**Abstract** The regulatory process for setting public utilities' allowed rate of return on common equity has generally used the Gordon DCF, CAPM and Risk Premium specifications to estimate the cost of common equity. Despite the widely known problems with these models, there has been little movement to adopt more recently developed asset pricing models to provide additional evidence for estimating the cost of capital. This paper presents, validates empirically and applies a general yet simple consumption-based asset pricing specification to model the risk-return relationship for stocks and estimate the cost of common equity for public utilities. The model is not necessarily superior to other models in its practical results, yet these results do indicate that it should be used to provide additional estimates of the cost of common equity. Additionally, the model raises doubts as to whether assets such as utility stocks are a consumption (business cycle) hedge.

## 1 Introduction

Following electricity deregulation with the National Energy Policy Act of 1992, the estimation of the cost of common equity capital remains a critical component of the utility rate-of-return regulatory process. Since the cost of common equity is not observable in capital markets, it must be inferred from asset pricing models. The models that are commonly applied in regulatory proceedings are the Gordon (1974) Discounted Cash Flow (DCF), the Capital Asset Pricing (CAPM) and Risk Premium Models. There are other tools used to estimate the cost of common equity such as comparable earnings or earnings-to-price ratios, but they are not asset pricing models. The empirical literature on the CAPM is vast {Fama and French (2004)} and the CAPM is used by a number of US regulatory jurisdictions. The DCF model has not been empirically tested to the same extent as the CAPM, yet it is considered by many US regulatory jurisdictions.

The purpose of this paper is to present, test empirically and apply a recently developed general consumption-based asset pricing model that estimates the risk-return relationship directly from asset pricing data and, when estimated with recently developed time series methods, produces a prediction of the equity risk premium that is driven by its predicted volatility. The predicted risk premium is then added to a risk-free rate of return to provide an estimate of the cost of common equity. We predict two forms of the equity risk premium with the model, the risk premium net of the risk-free rate and the equity-to-debt risk premium (equity risk premium net of the relevant bond yield for the company's stock). Either can be applied to predict the common equity cost of capital for a public utility. Although the model is tested and applied to public utilities for rate of return regulation, it can be used to estimate the cost of capital for any stock. Section 2 reviews the asset pricing models typically used in public utility rate cases and the generalized consumption asset pricing model we propose to estimate the cost of common equity. Section 3 discusses the data and the empirical testing of the consumption asset pricing model. Section 4 reviews the application of the model and compares it with the DCF and CAPM results. Section 5 is the conclusion.

## 2 DCF, CAPM and consumption asset pricing model

### 2.1 DCF and CAPM approaches

The standard DCF model frequently used in estimative the cost rate of common equity in regulatory proceedings is defined by the following equation:

$$k = D_0 (1 + g) / P_0 + g,$$

where $k$ is the expected return on common equity; $D_0$ is the current dividend per share; $g$ is the expected dividend per share growth rate; and $P_0$ is the current market price.

The DCF was developed by Gordon (1974) specifically for regulatory purposes. Underlying the DCF model is the theory that the present value of an expected future stream of net cash flows during the investment holding period can be determined

by discounting those cash flows at the cost of capital, or the investors' capitalization rate. DCF theory indicates that an investor buys a stock for an expected total return rate which is derived from cash flows received in the form of dividends plus appreciation in market price (the expected growth rate) over the investment holding period. Mathematically, the expected dividend yield ($D_0(1+g)/P_0$) on market price plus an expected growth rate equals the capitalization rate, i.e., the expected return on common equity.

The standard DCF contains several restrictive assumptions, the most contentious of which during utility cost of capital proceedings is typically that dividends per share (DPS), book value per share (BVPS), earnings per share (EPS) as well as market price grow at the same rate in perpetuity. There is also considerable contention over the proper proxy for $g$, prospective or historical growth in DPS, BVPS, EPS and market price and over what time period. In addition, although the standard DCF described above is a single stage annual growth model, there is considerable discussion over the use of multiple stage growth models during regulatory proceedings. Some analysts use the discrete version and others use the continuous version of the DCF model. Solving these models for $k$, the cost of common equity, results in differing equations to solve for $k$. The equation above is from the discrete version. The continuous version uses the current dividend yield and is not adjusted by g, which results in a lower estimate for $k$. Because of these and other restrictive assumptions that require numerous subjective judgments in application, it is often difficult for regulatory commissions to reconcile the frequently large disparities in rates of return on common equity recommended by various parties in a public utility rate case.

The CAPM model is defined by the following equation:

$$k = R_f + \beta\left(R_m - R_f\right),$$

where $k$ is the expected return on common equity; $R_f$ is the expected risk-free rate of return; $\beta$ is the expected beta; and $R_m$ is the expected market return.

CAPM theory defines risk as the co-variability of a security's returns with the market's returns or $\beta$, also known as systematic or market risk, with the market beta being defined as 1.0. Because CAPM theory assumes that all investors hold perfectly diversified portfolios, they are presumed to be exposed only to systematic risk and the market (according to the model) will not reward them a risk premium for unsystematic or non-market risk. In other words, the CAPM presumes that investors require compensation only for systematic or market risks which are due to macroeconomic and other events that affect the returns on all assets. Mathematically, the CAPM is applied by adding a forward-looking risk-free rate of return to an expected market equity risk premium adjusted proportionately by the expected beta to reflect the systematic risk.

As with the DCF, there is considerable contention during regulatory cost of capital proceedings as to the proper proxies for all components of the CAPM: the $R_f$, the $R_m$, as well as $\beta$. In addition, the CAPM assumption that the market will only reward investors for systematic or market risk is extremely restrictive when estimating the expected return on common equity for a single asset such as a single jurisdictional regulated operating utility. Additionally, this assumption requires that the investor have a perfectly diversified portfolio, that is, one with no unsystematic risk. Since

this assumption is not applicable, estimating the cost of common equity capital for a single utility's common equity undoubtedly will not reflect the risk actually faced by the imperfectly diversified investor.

As will be discussed in the next section, our application of the risk premium approach, the consumption asset pricing model and GARCH[1] rest on minimal assumptions and restrictions and therefore requires considerably less judgment in its application.

### 2.2 Risk premium approach, consumption asset pricing models, and GARCH

A widely used model to estimate the cost of common equity capital for public utilities is the risk premium approach. This approach often estimates the expected rate of return as the long-term historic mean of the realized risk premium above an historic yield plus the current yield of the relevant bond applicable to a specific utility or peer group of utilities. Litigants in public utility rate proceedings debate the choice of inputs to estimate the risk premium as well as how far back to reach into history to collect data for calculating an average that is representative of a forward-looking premium.

It is surprising that, as popular as the risk premium method is in public utility rate cases, the intuitively appealing general consumption-based asset pricing model, with its minimal assumptions and strong theoretical foundation, has not been applied to estimate the cost of common equity capital for public utilities. The model provides projections of the conditional expected risk premium on an asset based on its relation to its predicted conditional volatility. This model generalizes the well known special case asset pricing models such as the Merton (1973) intertemporal capital asset pricing model, Campbell (1993) intertemporal asset pricing model, and the habit-persistence model of Campbell and Cochrane (1999), which are special cases of the general model. The relation of the model to their specialized cases can be found in Cochrane (2006) and Cochrane (2007). The approach of consumption asset pricing models is to make investment decisions that maximize investors' utility from the consumption that they ultimately desire, not returns.

Even if the model is not used to project directly the expected risk premium, it can, at a minimum, be used to verify that the risk premia data chosen for estimating the cost of capital is empirically validated by fitting the model well. The model can be used to predict the equity risk premia net of the risk-free rate (equity risk premium) or to predict the equity-to-debt risk premium for a firm. We perform both of these empirical tests in this paper. The general consumption-based asset pricing model developed in Michelfelder and Pilotte (2011) and based on Cochrane (2004) provides the relationship of the ex ante risk premium to an asset's own volatility in return:

$$E_t[R_{i,t+1}] - R_{f,t} = -\frac{vol_t[M_{t+1}]}{E_t\left[M_{t+1}\right]} vol_t[R_{i,t+1}] corr_t[M_{t+1}, R_{i,t+1}]. \quad (1)$$

[1] GARCH refers to the generalized autoregressive conditional heteroskedasticity regression model which is discussed below.

where $vol_t$ is the conditional volatility, $corr_t$ is the conditional correlation, and $M_{t+1}$ is the stochastic discount factor (SDF).

The SDF is the intertemporal marginal rate of substitution in consumption, or, $M_{t+1} = \beta \frac{U_{c,t+1}}{U_{c,t}}$, where the $U_c$'s are the marginal utilities of consumption in the next period, $t+1$, and the current period, $t$, and $\beta$ is the discount factor for period $t$ to $t+1$. Equation 1 shows that the algebraic sign of the relation between the expected risk premium and the conditional volatility of an asset's risk premium is determined by the correlation between the asset's return and the SDF. That is, the direction of the relation between the asset return and the ratio of intertemporal marginal utilities in consumption inversely determines the relation between the expected risk premium and conditional volatility. When the correlation is equal to negative one, the asset's conditional expected risk premium is perfectly positively correlated with its conditional volatility. A positive relation between the conditionally expected risk premium and volatility obtains when $-1 < corr_t < 0$. A negative relation obtains when $0 < corr_t < 1$. For an asset that represents a perfect hedge against shocks to the marginal utility of consumption, with $corr_t = 1$, there will be a perfect negative correlation between the conditionally expected risk premium and its volatility.[2] Therefore, estimates of the relation between the first two conditional moments of a public utility stock's returns provide a direct test of the effectiveness of a public utility stock, or any asset, as a consumption hedging asset. In Eq. 1, $vol_t[M_{t+1}]/E_t[M_{t+1}]$ is the slope of the mean-variance frontier. If this slope changes over time, the estimated relation between the stock's risk and return will vary over time. This model can also be viewed simplistically as the projected expected risk premium as a function of its own projected risk, given information available at time $t$.

Note that the model allows for the expected risk premium to be negative if the asset hedges shocks to the marginal utility of consumption. Investors are willing to accept an expected rate of return lower than the risk-free rate of return if the pattern of volatility is such that returns are expected to rise with expected reductions in consumption. Simply, investors are willing to *pay* a premium for a higher level of returns volatility that has the desired pattern of returns. These desired returns patterns have a tendency to offset drops in consumption. Therefore, this model shows that investors may not be averse to volatility, but rather to the timing of expected changes in returns.

Summarizing, several conclusions can be drawn from the general model of asset pricing. First, the sign of the relation between a stock's risk premium and conditional volatility depends on the extent to which the stock serves as an intertemporal hedge against shocks to the marginal utility of consumption. Second, the relation between stock risk and return may be time-varying depending on changes in the slope of the mean-variance frontier. Third, hedging assets have desired patterns of volatility that result in expected rates of return that are less than the risk-free rate. We do not expect

[2] A hedging asset is one that has a positive increase in returns that is coincident with a positive shock in the ratio of intertemporal marginal utilities of consumption. Note that if we assume a concave utility function in consumption, as consumption declines, the marginal utility of consumption rises relative to last period marginal utility. If we think of a decline in consumption as a contraction in the business cycle, the hedging asset delivers positive changes in returns when the business cycle is moving into a contraction, and therefore the asset is a business cycle hedge.

that public utility stocks serve as a hedging asset as they are not viewed as defensive stocks (they do not rise in value during downturns in the stock market) due to asymmetric regulation and returns as discussed in detail in Kolbe and Tye (1990). Under asymmetric regulation, utility regulators have a tendency to allow the return on equity to fall below the allowed return during downturns in the business cycle and to reduce the return should it rise above the allowed return during expansions. Therefore we expect that the parameter estimates of the return-risk relationship to be positive as utility stocks are hypothesized to not be hedges.

We use the GARCH model to estimate the general asset pricing model since the GARCH model accommodates ARCH effects that improve the efficiency of the parameter estimates. It also provides a volatility forecasting model for the conditional volatility of the asset's risk premium. The conditional volatility projection is used, in turn to predict the expected risk premium. We also use the GARCH-in-Mean model (GARCH-M) since it specifies that the conditional expected risk premium is a linear function of its conditional volatility. There is a vast body of literature that estimates asset pricing models with the GARCH and GARCH-M methods and therefore we will not attempt to summarize them here.

The GARCH-M model was initially developed and tested by Engle et al. (1987) to estimate the relationship between US Treasury and corporate bond risk premia and their expected volatilities. The GARCH-M model is specified as:

$$R_{t+1} - R_{f,t+1} = \alpha\sigma_{t+1}^2 + \varepsilon_{t+1} \tag{2}$$

$$\sigma_{t+1}^2 = \beta_0 + \beta_1\sigma_t^2 + \beta_2\varepsilon_t^2 + \eta_{t+1} \tag{3}$$

$$\varepsilon_t \,|\psi_{t-1} \sim T(0, \sigma_t^2) \tag{4}$$

where $R_{t+1}$ is the expected total return on the public utility stock index or individual utility stock; $R_{f,t+1}$ is the risk-free rate of return or the yield on an index of public utility bonds of a specified bond rating for the equity-to-debt premium; $\sigma_{t+1}^2$ is the conditional or predicted variance of the risk premium that is conditioned on past information ($\psi_{t-1}$); and $\varepsilon_t$ is the error term that is conditional on $\psi_{t-1}$.

The conditional distribution of the error term is specified as the non-unitary variance T-distribution due to the thick-tailed distribution of the risk premia data. If the error distribution is thick-tailed, using an approximating distribution that accommodates thick tails improves the efficiency of the estimates. The parameter, $\alpha$, is the return-to-risk coefficient as specified in Eq. 1 as:

$$\alpha = -\frac{vol_t[M_{t+1}]}{E_t\left[M_{t+1}\right]} corr_t[M_{t+1}, R_{i,t+1}] \tag{5}$$

Note that the coefficient will be positive if the conditional correlation between the SDF and the asset return is negative, indicating that the stock is not a hedging asset. Recall that the SDF is the ratio of intertemporal marginal utilities. Assuming a concave utility function, an upward shock in the ratio implies falling consumption, therefore an associated rise (positive correlation) in the return ($R_i$) would offset the reduction

in consumption, thereby causing the sign of $\alpha$ to be negative. The parameter, $\alpha$, is also the ratio of risk premium to variance, or, the Sharpe ratio.

The intercept in Eq. 2 is restricted to zero as specified by the general asset pricing model specification. The restriction on the intercept equal to zero has been found to be robust in producing consistently positive and significant relationships between equity risk premia and risk in GARCH-M models. This is discussed in Lanne and Saikkonen (2006) and Lanne and Luoto (2007). We have found the same results in our modeling in this paper, although we have excluded these results for brevity (available upon request). Therefore we specify the prior assumption that the intercept or the "excess" return, i.e., the return not associated with risk to be equal to zero and drop the intercept from the model.

The consumption asset pricing model is estimated in the empirical section of the paper and applied in the applications section of the paper. The model is tested to (1) determine if equity-to-debt risk premium indices for utilities of differing risk specified by differing bond ratings are validated by the asset pricing model and therefore have some empirical support for risk premium prediction and application to utility cost of capital estimation, (2) determine whether equity risk premia can be predicted and fit the model and therefore be used to estimate the cost of common equity, (3) empirically test the consumption asset pricing model, and (4) ascertain whether utility stocks are assets that hedge shocks to the marginal utility of consumption.

If utility stocks are hedging assets then the cost of common equity should reflect a downward adjustment to a specified risk-free rate to reflect investors' preferences for a hedge and the compensation that they are willing to pay for it.

## 3 Data and empirical results

We use portfolios as represented by public utility stock and bond indices to estimate the conditional return-risk relationship for the equity-to-debt premium. The equity-to-debt risk premium data employed for estimating Eq. 1 with the GARCH-M conditional return-risk regressions are monthly total returns on the Standard and Poor's Public Utilities Stock Index (utility portfolio), and the monthly Moody's Public Utility Aa, A, and Baa yields for the debt cost. We also obtained equity risk premia for the utility portfolio using the Fama-French specified risk-free rate of return, which is the holding period return on a 1-month US Treasury Bill. The data range from January 1928 to December 2007 with 960 observations. The return-risk relationships for the equity-to-debt premia are risk-differentiated by their own bond rating.

As a check, we also estimate Eq. 1 with the GARCH-M for large common stock returns using the monthly Ibbotson Large Company Common Stocks Portfolio total returns and the Ibbotson US Long-Term Government income returns as the risk-free rate. Additionally, as another check, we do the same for the University of Chicago's Center for Research in Security Prices value-weighted stock index (CRSP) using the Fama-French risk-free rate. This is the Fama-French specification of the market equity risk premium. The data range from January 1926 to December 2007 with 984 observations for the Large Company Common Stock estimation and the data ranges

**Table 1** Descriptive statistics: public utility and large company common stocks equity-to-debt and equity risk premia

| Utility bond rating | Mean | Std. Dev. | Skewness | Kurtosis | JB |
|---|---|---|---|---|---|
| Aa | 0.0037 | 0.0568 | 0.0744 | 10.07 | 2,001.2*** |
| A | 0.0035 | 0.0568 | 0.0632 | 10.06 | 1,991.8*** |
| Baa | 0.0031 | 0.0568 | 0.0375 | 10.02 | 1,973.6*** |
| Ibbotson | | | | | |
| Large common stocks | 0.0054 | 0.0554 | 0.4300 | 12.84 | 3,954.7*** |
| CRSP value-weighted stock index | 0.0062 | 0.0544 | 0.2309 | 10.92 | 2,519.1*** |

The public utility equity-to-debt risk premia monthly time series is from January 1928 to December 2007 with 960 observations. The equity risk premium monthly time series for the Large Common Stocks and the CRSP index are January 1926 to December 2007 with 984 observations, and January 1926 to December 2007 with 984 observations, respectively. The public utility stocks equity-to-debt risk premia are calculated as the total return on the S&P Public Utilities Index of stocks minus the Moody's Public Utility Aa, A, and Baa Indices yields to maturity. The Large Company Common Stock equity risk premia are the monthly total returns on the Ibbotson Large Company Common Stocks Portfolio minus the Ibbotson Long-Term US Government Bonds Portfolio income yield. The CRSP equity risk premia, or the Fama-French market risk premia are the CRSP total returns on the value-weighted equity index minus the 1-month holding period return on a 1 month Treasury Bill. The Jarque-Bera (JB) statistic is a goodness-of-fit measure of the departure of the distribution of a data series from normality, based on the levels of skewness and excess kurtosis. The JB statistic is $\chi^2$ distributed with 2° of freedom. *** Significant at 0.01 level, one-tailed test

from January 1928 to January 2007 with 960 observations (same as the utilities) for the CRSP estimation.

Table 1 displays the descriptive statistics for these data. We have estimated the mean, standard deviation, skewness and kurtosis parameters, as well as the Jarque-Bera (JB) statistic to test the distribution of the data. The means of the utility equity-to-debt risk premia fall as the risk (bond rating) declines. This is consistent with the notion that larger yields are subtracted from stock returns the lower the bond rating. Intertemporally, there is an inverse relationship between risk premia and interest rates (See Brigham et al. (1985) and Harris et al. (2003)). The mean for risk premia will have a tendency to be larger during low interest rate periods.

Not surprisingly, large company common stocks have the highest mean risk premia as the majority of these firms are not rate-of-return regulated firms with a ceiling on their ROE's close to their cost of capital. Interestingly, the standard deviations of the utility stock returns are similar and slightly higher than large company common stocks. Skewness coefficients are small and positive except for Ibbotson large company common stock returns and CRSP returns that have large positive skewness. This suggests that large unregulated stocks have a tendency to have more and larger positive shocks in returns than do utilities that are rate of return regulated. The kurtosis values show that all of the risk premia are thick-tail distributed. This is also found in the significant JB statistics that test the null hypothesis that the data are normally distributed. The null hypothesis is rejected for all assets. The high kurtosis, low skewness, and significant JB statistics show that the risk premia data are substantially thick-tailed, except for non-utility stocks that are both skewed and thick-tailed. Therefore, robust estimation methods are required to produce efficient regression estimates with non-normal data. Additionally, although not shown but available upon request, the serial correlation and

ARCH Lagrange Multiplier tests show that residuals from OLS regressions of risk premia on volatilities follow an ARCH process. Therefore, the GARCH-M method will improve the efficiency of the estimates. We specify the regression error distribution as a non-unitary variance T-distribution so that thick-tails could be accommodated in the estimation and therefore produce increasingly efficient parameter estimates.

We used maximum likelihood estimation with the likelihood function specified with the non-unitary-variance T-distribution as the approximating distribution of the residuals to accommodate the thick-tailed nature of the error distribution. The equations are estimated as a system using the Marquardt iterative optimization algorithm. The chosen software for estimating the model was EViews© version 6.0 (2007).

Table 2 shows the GARCH-M estimations for the consumption asset pricing Eq. 1. We have estimated Eq. 1 for the utility equity risk premia using the Fama-French risk-free rate in addition to the equity-to-debt risk premia risk-differentiated by bond ratings and the two measures of the market equity risk premium. The chosen measure of volatility is the variance of risk premium (in contrast to other such measures such as the standard deviation or the log of variance. Although these results are not shown for brevity, they are robust to these other measures of volatility). The slope, which is the predicted return-to-predicted risk coefficient and Sharpe ratio, is positive and significant at the 99% level for all assets except the utility stock returns with Baa bonds, which is significant at the 95% level. Given that all slopes are positive, public utility stocks are not found to hedge shocks to the marginal utility of consumption. Note that the reward-to-risk slope rises as bond rating rises. This suggests that lower risk utility stocks provide a higher incremental risk-premium for an increase in conditional volatility. This is consistent with other studies that find that lower risk assets, such as shorter maturity bonds, have higher Sharpe Ratios than long-term bonds and stocks. See Pilotte and Sterbenz (2006) and Michelfelder and Pilotte (2011).

The variance equation shows that all GARCH coefficients ($\beta$'s) are significant at the 1% level and the sums of $\beta_1$ and $\beta_2$ are close to, but less than 1.0, indicating that the residuals of the risk premium equation follow a GARCH process and that the persistence of a volatility shock on returns and stock prices for utility stocks is temporary. The estimates of the non-unitary variance T-distribution degrees of freedom parameter are low and statistically significant, indicating that the residuals are well approximated by the T. Similar values for the log-likelihood functions (Log-L) show that each of the regressions has a similar goodness-of-fit. Chi-squared distributed likelihood ratio tests (not shown but available upon request) that compare the goodness of fit among the T and normal specifications of the likelihood function of the GARCH-M regressions show that the T has a significantly better fit than the normal distribution.

The GARCH-M results for the large company common stocks portfolio are similar to those of the utility stocks. Not surprisingly, large company common stocks do not hedge shocks to the marginal utility of consumption and volatility shocks temporarily affect their valuations. The exception is that the return-risk slope is substantially higher than utility stock slopes. This is partially due to the risk-free nature of the risk-free rates used with the non-utility equity risk premia compared to the

**Table 2** Estimation of return-risk relation: public utility and large company common stocks

| Utility bond rating | $\alpha$ | $\beta_0$ | $\beta_1$ | $\beta_2$ | Log-L | T dist. D.F. |

| Ibbotson | | | | | | |
| Large company common stocks | 2.7753*** (0.5513) | 0.0001*** (0.0000) | 0.8381*** (0.0269) | 0.1186*** (0.0332) | 1,620.8 | 8.8457*** (2.1613) |
| CRSP value-weighted stock index | 3.3873*** (0.5673) | 0.0001*** (0.0000) | 0.8330*** (0.0270) | 0.1149*** (0.0358) | 1,598.9 | 8.8571*** (1.9505) |

The results below are the GARCH-in-Mean regressions for the risk premium ($R_{t+1} - R_{f,t+1}$) on the conditional variance of the risk premium ($\sigma^2_{t+1}$) in the mean equation. The intercept in the mean equation is restricted to be equal to zero. The public utility equity-to-debt risk premia monthly time series is from January 1928 to December 2007 with 960 observations. The equity risk premium monthly time series for the Large Company Common Stocks and the CRSP index are January 1926 to December 2007 with 984 observations, and January 1926 to December 2007 with 984 observations, respectively. The public utility stocks equity-to-debt risk premia are calculated as the total return on the S&P Public Utilities Index of stocks minus the Moody's Public Utility Aa, A, and Baa Indices yields to maturity. The Large Company Common Stock equity risk premia are the monthly total returns on the Ibbotson Large Company Common Stocks Portfolio minus the Ibbotson Long-Term US Government Bonds Portfolio income yield. The CRSP equity risk premia, or the Fama-French market risk premia are the CRSP total returns on the value-weighted equity index minus the 1-month holding period return on a 1 month Treasury Bill. The estimated model is:

$$R_{t+1} - R_{f,t+1} = \alpha\sigma^2_{t+1} + \varepsilon_{t+1} \text{ where } \alpha = -\frac{vol_t[M_{t+1}]}{E_t[M_{t+1}]} corr_t[M_{t+1}, R_{i,t+1}]$$

$$\sigma^2_{t+1} = \beta_0 + \beta_1\sigma^2_t + \beta_2\varepsilon^2_t + \eta_{t+1}$$

The conditional distribution of the error term is the non-unitary variance T-distribution to accommodate the kurtosis of the risk premia and error term. Standard errors are in parentheses. ***, **, * denote significance at the 0.01, 0.05, and 0.10 levels, respectively for two-tail tests

utility bond yields that reflect risk. The utility stocks slope value of 2.1428 using the Fama-French risk-free rate is closer to the higher CRSP value of 3.3873 that is also based on the Fama-French risk-free rate. This is inconsistent with previous results herein and in other papers that find that Sharpe Ratios are lower for higher risk assets unless this finding can be interpreted as utility stocks having more risk than non-regulated stocks. The standard deviations on Table 1 suggest that utility stock return volatilities are as high as the stock returns of non-regulated firms. However, similar model estimates of portfolios of common stocks yield unstable results, such as negative as well as positive return-risk slopes when the intercept is not restricted to zero. See Campbell (1987), Glosten et al. (1993), Harvey (2001), and Whitelaw (1994).

Stock market results are highly sensitive to empirical model specification. Many studies do not consider the impact of a zero-intercept prior restriction on the stability of their results. This simple innovation has led to more consistent results in modeling stock market risk-return relationships, and therefore we have included it in this paper.

The estimation of the consumption asset pricing model for utility stock equity-debt risk premia shows that the use of bond-rating risk-differentiated risk premia are validated as their risk-return relationships are well-fitted by theoretical and empirical models of risk and return. Therefore, these data impound good representations of the risk and reward relationship.

One concern is the intertemporal stability of the alphas. Figure 1 plots the utility stock portfolio alpha (using the Fama-French $R_f$ to calculate the premium) and its standard error for 240 month rolling regressions of the model estimated with GARCH-M in the same manner as described above to review the intertemporal stability of the alpha. A 20-year period was used for each estimation to trade off timeliness with sufficient observation of up and down stock market regimes and business cycles. This resulted in 720 estimated alphas from 1947 to 2007. The results show that the utility alpha is stable to the extent that the algebraic sign is always positive and generally significant, therefore the nature of utility stocks are assets that are not and have never been hedges during the second half of the twentieth century up to the present. The value of the alpha does change substantially. The mean of the alpha is 4.40 with a range from −0.11 (insignificantly different from 0) to 11.66. As a comparison, the alpha for the CRSP value-weighted stock index was also estimated with rolling regressions in the same manner and for the same time period. Figure 2 is a plot of the CRSP alpha and standard error. Note that the general stock market alpha is similar to that of utility stocks. They are all positive and almost all statistically significant and follow a strikingly similar cycle. Figure 3 plots both the utility and stock market alphas and demonstrates the similarity. The correlation coefficient between the utility and stock market alphas is 0.88. Recalling that the alpha is a Sharpe Ratio, we see that return to risk ratio does change substantially. This is consistent with the results in Pilotte and Sterbenz (2006).

One other interesting observation is that the standard errors of the alphas are highly stable over the study period and are very similar in magnitude regardless of the size of the corresponding alpha. Whereas the alpha follows a cyclical pattern, the volatility in alpha is highly stationary around a constant, long-run mean.

The GARCH-M model estimations of the consumption asset pricing model were specified with variance as the measure of volatility. We also performed the same model estimations with alternative specifications of volatility such as the standard deviation and the log of variance and the results were not sensitive to this specification.

## 4 Application

We apply the model in this section to compare the cost of common equity capital estimates with the DCF and CAPM models. Using EViews© Version 6.0, we estimated the model coefficients ($\alpha$, $\beta's$) over rolling 24 month periods ending December 2008.

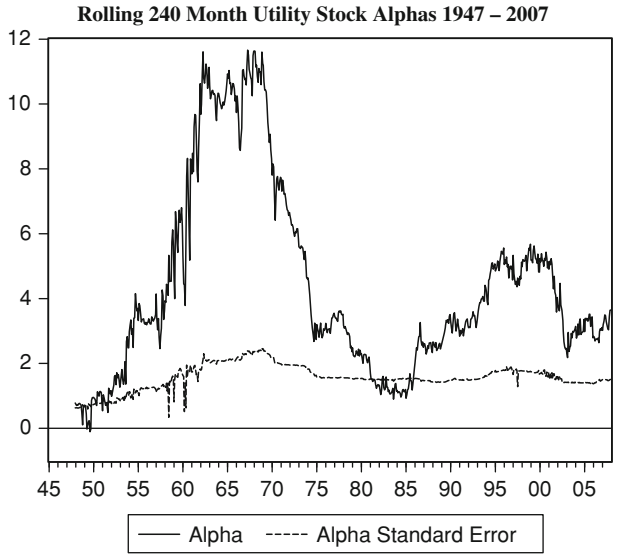

**Fig. 1** Rolling 240 month utility stock alphas 1947–2007

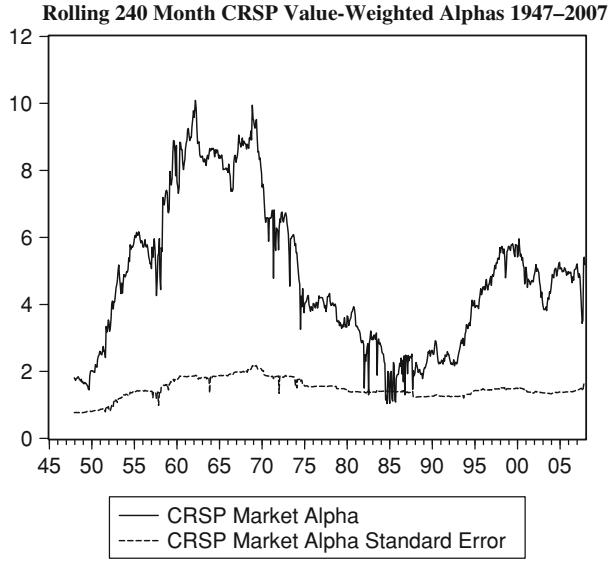

**Fig. 2** Rolling 240 month CRSP value-weighted alphas 1947–2007

We repeated the estimation over 5, 10, 15, 20 and 79 year periods.[3] Predicted monthly variances ($\sigma^2_{t+1}$) were generated from these estimations to produce predicted risk premiums that were calculated by multiplying the predicted variance by the "$\alpha$" slope

[3] We did not include the results of the 10 and 15 year estimations to abbreviate the amount of empirical results presented since they added no material insights beyond those already presented.

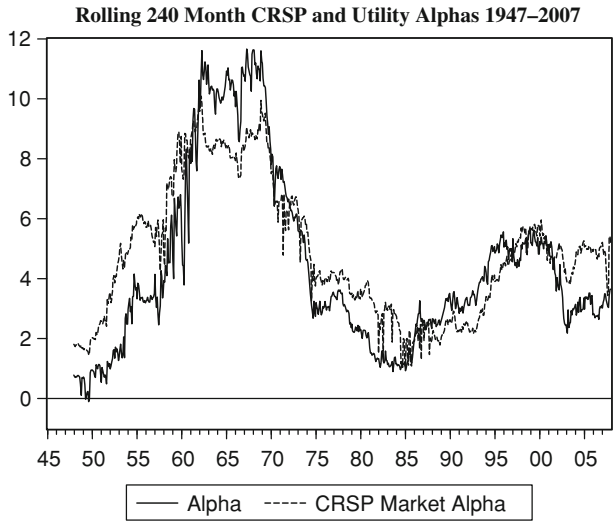

**Fig. 3** Rolling 240 month CRSP and utility alphas 1947–2007

**Table 3** Estimates of expected risk premia

| 5-years | 31.82 | 326.63 | 7.77–156.97 | 6.12–6465.74 | 31.47 | 1283.51 |

coefficient. To test the stability of the predicted risk premia over time, the predicted risk premia were calculated using either the predicted variance over each entire time period or the last monthly (spot) predicted variance. Table 3 presents the mean predicted risk premia, the range of predicted premia and the standard deviations for each time period. It is clear from the results that the risk premia are more stable over the rolling 24 month period when calculated using the average predicted variance compared with using the spot variance. Secondly, the 20 and 79 year means are substantially more stable and reasonable in magnitude than the 5 year means.

Next, given the lessons from the analyses above, we apply the model to mechanically[4] estimate the cost of common equity for 8 utility companies using the model and

[4] The term "mechanically" in this context means that the resulting values have been developed in a consistent manner with the same inputs across all utility stocks but no subjective judgment was used to develop final values for each specific utility stock application.

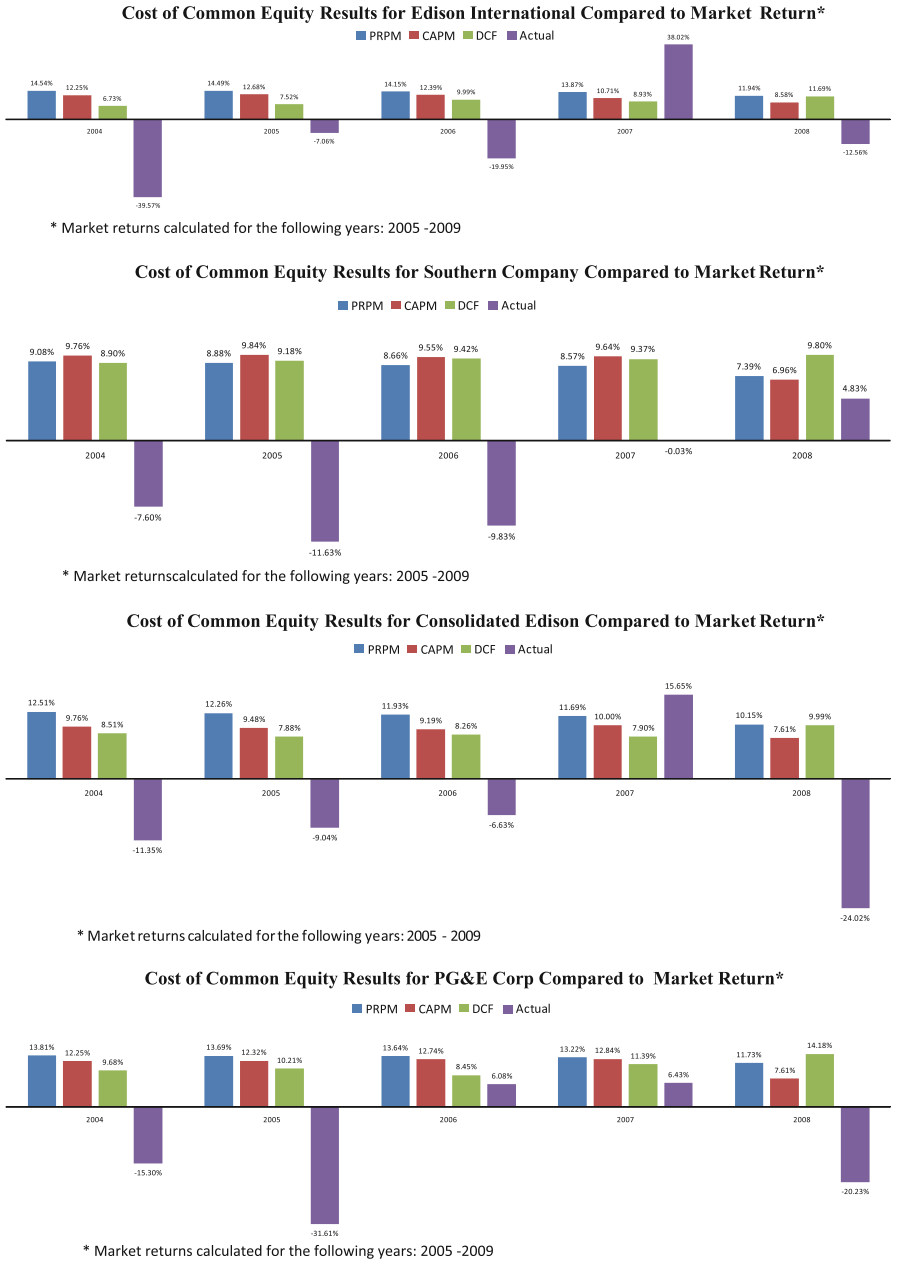
the DCF and CAPM as comparisons. We also calculated the realized market return for comparison. Two publicly-traded electric, electric and gas combination, gas, and water utilities respectively were chosen for the application. The Gordon (1974) DCF and CAPM models are used in many utility regulatory jurisdictions in the US.

The DCF was applied using a dividend yield, $D_0/P_0$, derived by dividing the year-end indicated dividend per share ($D_0$) by the year-end spot market price ($P_0$). The dividend yield is grown by the year-end I/B/E/S five year projected earnings per share growth rate ($g$) to derive $D_0(1+g)/P_0$. The one-year predicted dividend yield is then added to the I/B/E/S five-year projected EPS growth rate to obtain the DCF estimate of the cost of common equity capital, $k$. This study was conducted for the 5 years ending 2008.

The CAPM was applied by multiplying the Value Line beta ($\beta$) available at year-end for each company by the long-term historic arithmetic mean market risk premium ($R_m - R_f$). $R_m - R_f$ is derived as the spread of the total return of large company common stocks over the income return on long-term government bonds from the Ibbotson SBBI 2009 Valuation Yearbook. The resulting company-specific market equity risk premium is then added to a projected consensus estimate of the yield on 30-year U.S. Treasury rate provided by Blue Chip Financial Forecasts as the risk-free rate ($R_f$) to obtain the CAPM result. This study was also conducted over the 5 years ending 2008.

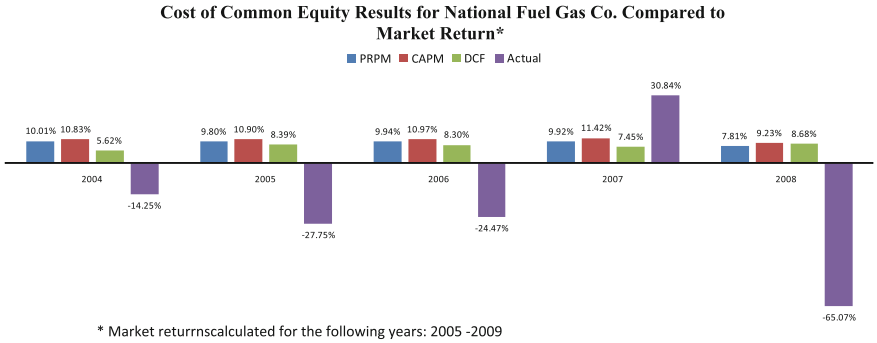
Figures 4–11 show the histograms of the cost of common equity capital estimations for each of the eight public utility stocks and the realized market returns in the forthcoming year. The consumption asset pricing model appears to track more consistently with the CAPM than with the DCF which seems to produce generally lower values than the other methods. The consumption asset pricing model results are similar to the CAPM. The model and the CAPM compete as the best predictor of the rate of return on the book value of common equity (not shown but available upon request), but none of the expected returns were good predictors of market returns. That does not infer that they were not good predictors of *expected* market returns. These results are an initial indicator that the consumption asset pricing model provides reasonable and stable results. This paper does not suggest at this early juncture that the consumption asset pricing model is superior to the CAPM or DCF, although it is based on far less restrictive assumptions than these other models. For example, both the DCF and CAPM assume that markets are efficient. Many assume that the DCF requires that the market-to-book ratio to always equal one, whereas the long-term value for the Standard and Poor's 500 is equal to 2.34. The CAPM assumes that investors demand higher returns for higher volatility and that the minimum required return is the risk-free rate, whereas the consumption asset pricing model allows for investors to require returns less than the risk-free rate for stocks that may have relatively higher volatility but are hedging assets that have desirable return fluctuation patterns that offset downturns in the business cycle. Unlike the CAPM, the model prices the risk to which investors are actually exposed, whether it's systematic risk or not. Some investors are diversified and some are not; the model prices whatever risk to which the aggregate of investors of the specific stock is exposed.

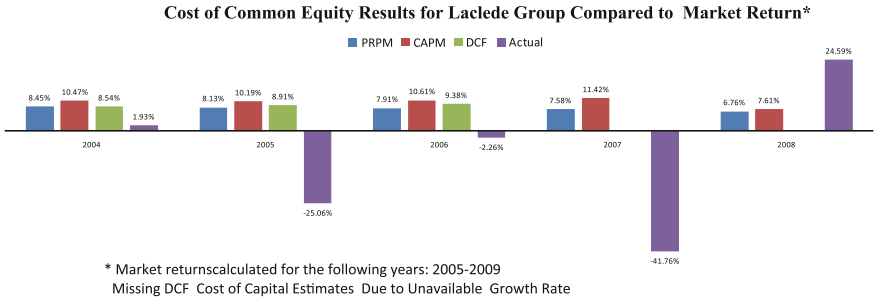
We find that the consumption asset pricing model should be used in combination with other cost of common equity pricing models as additional information in the devel-

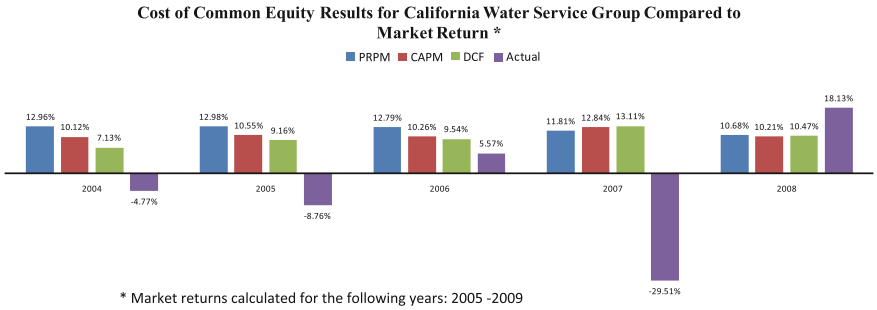


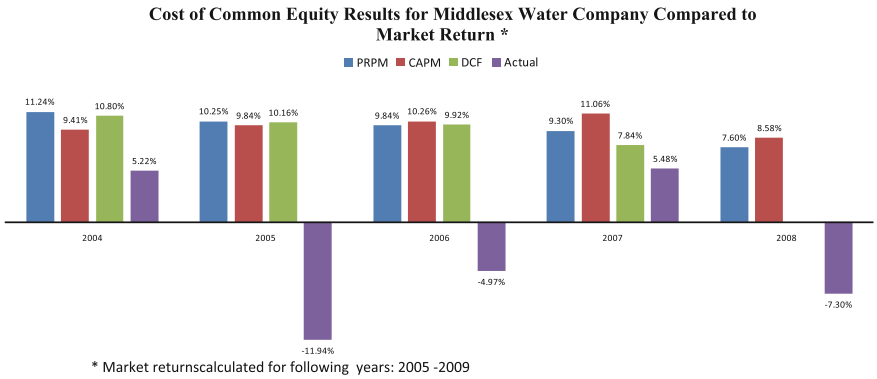
**Figs. 4–11** Comparison of the cost of common equity estimates and market

opment of a cost of common equity capital recommendation. Practitioners may find the modeling methods and the use of relatively advanced econometric methods rather cumbersome. The software for performing these estimations is readily available from EViews© and SAS©; two commonly available software packages at utilities, consult-









**Figs. 4–11** continued

ing firms and financial firms. Recent Ph.D. and M.S. holding members of research departments of investment and consulting firms have ready access to the model and methods discussed in this paper, although it will require years for these tools, like any "new" technology, to diffuse into standard use. Another problem is that the model requires a substantial time series history on stock returns data to develop stable estimates of risk premia This is problematic especially for the electric and gas utility industries that have consolidated with many mergers in the recent past. This problem can be addressed by developing and predicting the value-weighted risk premium of a portfolio of similar stocks such as electric utilities that have nuclear generating assets. The specific stock in question would be included in the returns index with a weight based on market capitalization that would go to 0 when the stock price history is no longer existent reaching back into the past.

## 5 Conclusion

The purpose of this paper is to introduce, test empirically and apply a general consumption based asset pricing model that is based on a minimum of assumptions and restrictions that can be used to predict the risk premium to be applied in estimating the cost of common equity for public utilities in regulatory proceedings. The results support the simple consumption-based asset pricing model that predicts the ex ante risk premium with a conditionally predicted volatility in risk premium. The estimates of the cost of common equity from the consumption asset pricing model compare well with rates of return on the book value of common equity and with the CAPM, although both the model and the CAPM results are substantially higher than the DCF. This is quite common in the practice of the cost of common equity in the utility industry. The results of the model are stable and consistent over time. Therefore the model should be considered as it provides additional evidence on the cost of common equity in general and specifically in public utility regulatory proceedings. Secondly, the use of bond-rated yields to predict risk differentiated equity-to-debt risk premia is supported by the empirical evidence and therefore should be applied in estimating the cost of common equity. Finally, the robust empirical evidence on the positive risk-return relationship also shows that utility stocks are not a consumption hedge and are not good hedging securities against contractions in the economy. The model and estimation methodology presented in this paper provide a relatively simple tool to determine whether any asset is a hedge to adverse changes in the business cycle through the level of consumption in the economy.

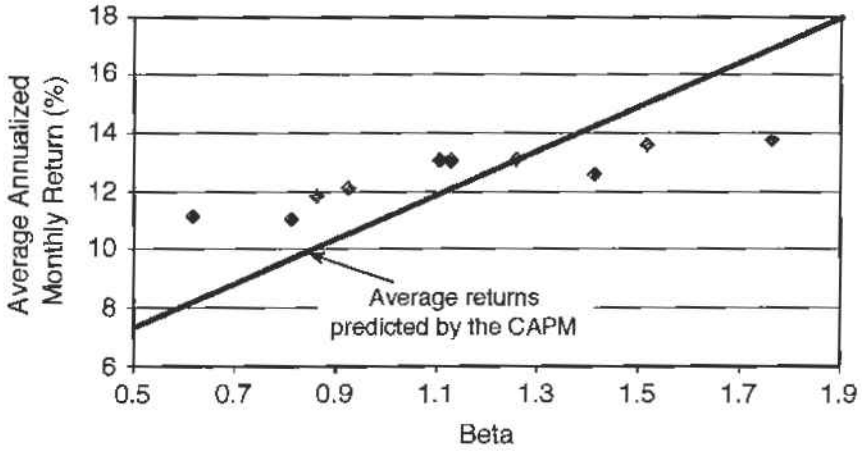
on low-beta stocks are higher than predicted by the CAPM, and realized returns on high-beta stocks are lower than predicted by the CAPM. Stocks with the lowest beta estimates had average returns of 11.1% per year, but the CAPM says the expected return was 8.3% per year. Stocks with the highest beta estimates had average returns of 13.7% per year, but the CAPM says the expected return was 16.8% per year.

**Figure 7-1**
Average Returns vs Beta Over An Extended Time Period (1928-2003)



Brealey, Myers, and Allen (2017), among many others,[9] provide more recent empirical evidence very similar to the relationship depicted in Figure 7-1. In fact, Brealey, Myers and Allen (2017) extend previous analyses to the end of 2014, and provide a similar chart to that presented by Fama and French (2004). The upward-sloping line on Figure 7-1 represents the relationship between beta and return that is implied by the CAPM and each dot represents the observed return for a particular portfolio. Clearly, the low-beta portfolios still earn higher returns than the CAPM would imply. Goyal (2011) also found a security market line flatter than that predicted by the CAPM.[10] With few exceptions, the empirical studies agree that the implied intercept term exceeds the risk-free rate and the slope term is less than predicted by the CAPM. That is, low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted. This is one of the most well-known results in finance, and is particularly pertinent for public utilities whose betas are typically less than 1.00.

9. For a summary of the empirical evidence on the CAPM, see Jensen (1972) and Ross (1978). The major empirical tests of the CAPM were published by Friend and Blume (1975), Black, Jensen, and Scholes (1972), Miller and Scholes (1972), Blume and Friend (1973), Blume and Husic (1973), Fama and Macbeth (1972), Basu (1977), Reinganum (1981B), Litzenberger and Ramaswamy (1979), Banz (1981), Gibbons (1982), Stambaugh (1982), Shanken (1985), Black (1993), and Brealey, Myers, and Allen (2017). Evidence in the Canadian context is available in Morin (1980, 1981).

constant $\alpha$, which must be estimated econometrically from market data.[21] Table 7-3 drawn from Villadsen, Vilbert, et. al. (2017) summarizes the empirical evidence on the magnitude of alpha.[22]

For an alpha in the range of 1% – 2% and for reasonable values of the MRP and the risk-free rate, Equation 7-5 reduces to the following more pragmatic form:

$$K = R_F + 0.25\,(R_M - R_F) + 0.75\,b(R_M - R_F) \qquad (7\text{-}6)$$

Using reasonable data inputs for the risk-free rate and the MRP, Equation 7-6 produces results that are indistinguishable from the ECAPM of Equation 7-5.[23]

An alpha range of 1% - 2% is somewhat lower than that estimated empirically. The use of a lower value for alpha leads to a lower estimate of the cost of capital for low-beta stocks such as regulated utilities. This is because the use of a long-term risk-free rate rather than a short-term risk-free rate already incorporates some of the desired effect of using the ECAPM. That is, the long-term risk-free rate version of the CAPM has a higher intercept and a flatter slope than the short-term risk-free version which has been tested. Thus, it is reasonable to apply a conservative alpha adjustment.

21. The technique is formally applied by Litzenberger, Ramaswamy, and Sosin (1980) to public utilities in order to rectify the CAPM's basic shortcomings. Not only do they summarize the criticisms of the CAPM insofar as they affect public utilities, bnt they also describe the econometric intricacies involved and the methods of circumventing the statistical problems. Essentially, the average monthly returns over a lengthy time period on a large cross-section of securities gronped into portfolios, are related to their corresponding betas by statistical regression techniques; that is, Equation 6-4 is estimated from market data. The utility's beta value is substituted into the equation to produce the cost of equity figure. Their results demonstrate how the standard CAPM underestimates the cost of equity of pnblic utilities because of ntilities' high dividend yield and return skewness.

22. Table 7-3 is drawn from Villadsen, B., Vilbert, M. J., Harris, D., and Kolbe, A. L., "Risk and Return for Regulated Industries," The Brattle Group, Elsevier Academic Press, 2017.

23. Typical of the empirical evidence on the validity of the CAPM is a study by Morin (1989) who found that the relationship between the expected return on a security and beta over the period 1926-1984 was given by:

$$\text{Return} = 0.0829 + 0.0520$$

Given that the risk-free rate over the estimation period was approximately 6% and that the MRP was 8% during the period of study, the intercept of the observed relationship between return and beta exceeds the risk-free rate by about 2%, or 1/4 of 8%, and that the slope of the relationship is close to 3/4 of 8%. Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:

$$K = R_F + x\,(R_M - R_F) + (1 - x)\,b(R_M - R_F)$$

where x is a fraction to be determined empirically. The value of x that best explains the observed relationship Return = 0.0829 + 0.0520 is between 0.25 and 0.30. If x = 0.25, the equation becomes:

$$K = R_F + 0.25\,(R_M - R_F) + 0.75\,b(R_M - R_F)$$

# Chapter 11
# Flotation Cost Adjustment

This chapter demonstrates that an adjustment to the market-based cost of capital is necessary for flotation costs associated with the procurement of equity capital, and discusses the mechanics and controversies involved in applying this adjustment.[1]

A typical utility is continuously issuing stock through its dividend reinvestment plan and employee stock option plan, and/or is selling new shares to the public on a regular basis in order to maintain its construction program and meet its mandated service requirements. The costs of issuing these securities are just as real as operating and maintenance expenses or costs incurred to build utility plants, and fair regulatory treatment must permit the recovery of these costs.

## 11.1 Flotation Cost Allowance

The simple fact of the matter is that common equity capital is not free. Flotation costs associated with common stock issues are very similar to the flotation costs associated with bonds and preferred stocks. Flotation costs are incurred, and if they are not expensed at the time of issue, they must be recovered through a rate of return adjustment. This is routinely done for bond and preferred stock issues by most regulatory commissions. To illustrate the conventional regulatory practice, consider this example. A utility company issues $100 million of 10-year bonds at an interest rate of 5%. Flotation costs are 2% of the amount of the proceeds, $2 million. The interest paid each year is $100 million × 5% = $5 million. The flotation cost of $2 million is amortized over the 10-year life of the bond, so that the amortization each year equals $2M/10 = $0.2 million. The cost of debt $K_d$ is then:

$$K_d = \frac{\text{Interest + Amortization of flotation costs}}{\text{Principal – Unamortized flotation costs}} = \frac{\$5{,}000{,}000 + \$200{,}000}{\$100{,}000{,}000 - \$2{,}000{,}000} = 5.31\%$$

The cost of debt needs to be increased by 31 basis points in order to allow for the recovery of flotation costs. The recovery process is very similar for preferred stock issues.

In the case of issues of new common equity, flotation costs represent the discounts that must be provided to issue the new securities. Flotation costs have three major components:

1. Vander Weide (2013) provides an excellent comprehensive treatment of the flotation cost issue in regulatory proceedings.

## Flotation Cost Application

In this section, we demonstrate: (1) why it is necessary to apply a flotation cost allowance to the dividend yield component of the DCF model in order to obtain the fair return on equity capital; (2) why the flotation adjustment is permanently required to avoid confiscation even if no further stock issues are contemplated; and (3) why flotation costs are only recovered if the rate of return is applied to total equity, including retained earnings, in all future years.

An analogy with bond issues is useful here in order to understand the treatment of issue costs in the case of common stock issues.[7] In the case of bonds as seem earlier in the chapter, flotation costs are recovered over the life of the bond in two steps: (1) flotation costs are amortized over the life of the bond and the annual amortization charge is incorporated into revenue requirements, in much the same way that funds invested in utility plant are recovered through depreciation charges; (2) the unamortized portion of flotation costs is included in rate base, and a return is earned on the unamortized costs, in the same way that a return is earned on the undepreciated portion of a utility's plant. The recovery continues year after year until the recovery process is terminated, regardless of whether the utility raises new debt capital. This is analogous to the process of depreciation, which allows the recovery of funds invested in utility plant. The recovery continues whether the utility constructs new facilities or not.

Since flotation costs of common stock issues cannot be amortized because they have no finite maturity, they must be recovered by way of an upward adjustment to the allowed return on equity. It would be inappropriate to amortize a company's flotation costs over a finite number of years. As such, rather than seeking a "return of" its flotation costs over some arbitrarily selected amortization period, it is more appropriate for a utility to seek a "return on" its flotation costs, as these costs constitute a permanent equity contribution by investors.

In theory, flotation costs could be expensed and recovered through rates as they are incurred. This procedure, although simple in implementation, is not considered appropriate, however, because the equity capital raised in a given stock issue remains on the utility's common equity account and continues to provide benefits to ratepayers indefinitely. As discussed earlier, it would be unfair to burden the current generation of ratepayers with the full costs of raising capital when the benefits of that capital extend indefinitely. The common practice of capitalizing rather than expensing eliminates the intergenerational transfers that would prevail if today's ratepayers were asked to bear the full burden of flotation costs of bond/stock issues in order to finance capital projects designed to serve future as well as current generations. Moreover, expensing flotation costs requires an estimate of the market pressure effect for each individual issue, which is likely to prove unreli-

7. See Brigham, Aberwald, and Gapenski (1985)

able. A more reliable approach is to estimate market pressure for a large sample of stock offerings rather than for one individual common stock issue.

An alternative regulatory treatment is to incorporate flotation costs into the rate base as an intangible asset. While this solves the intergenerational problem and compensates investors fairly for their investment, the method clashes with the "used and useful" principle of rate base inclusions. An intangible asset related to flotation costs is unlikely to be viewed as a used and useful asset in public service by regulators.

The following illustration adapted from Brigham, Aberwald, and Gapenski (1985) shows that: (a) even if no further stock issues are contemplated, the flotation adjustment is still permanently required to keep shareholders whole, and (b) flotation costs are only recovered if the rate of return is applied to total equity, including retained earnings, in all future years, even if no future financing is contemplated. The flotation cost adjustment process is shown in Tables 11-3 through 11-5 using illustrative market data.

The assumptions used in the computation are displayed in Table 11-3. The stock is selling in the market for $100, and investors expect the firm to pay a dividend of $4.00, which will grow at a rate of 5% thereafter. The traditional DCF cost of equity is thus $k = D/P + g = 4/100 + 0.05 = 9\%$, or $9.00 in the first year. 4% of the 9%, or $4.00, will come from dividends, so that the remaining 5%, or $5.00, must then come from capital gains. To get a capital gain of $5.00 from $4.75 of retained earnings, the earnings retained must clearly earn more than 9%. Therefore, if the firm sells one share of stock, incurring a flotation cost of 5%, the traditional DCF cost of equity adjusted for flotation cost is thus $ROE = D/P(1 - f) + g = 0.04 / 0.95 + 0.05 = 9.21\%$.

**Table 11-3**
Assumptions

| | |
|---|---|
| Issue Price = | $100.00 |
| Flotation Cost = | 5.00% |
| Expected Dividend Yield = | 4.00% |
| Growth = | 5.00% |
| Equity Return = (D/P + g) | 9.00% |
| Allowed Return On Equity = (D/P(1-f) + g) | 9.21% |

As shown in Table 11-4, the initial book value (rate base) is the net proceeds from the stock issue, which are $95, that is, the market price of $100 less the 5% flotation cost. The table demonstrates that only if the company is allowed to earn 9.21% on rate base will investors earn their cost of equity of 9.00%. Column 1 shows the ini-

tial common stock account, while Column 2 shows the cumulative retained earnings balance, starting at zero, and steadily increasing from the retention of earnings. Total equity in Column 3 is the sum of common stock capital and retained earnings. The stock price in Column 4 is obtained from the seminal DCF formula: $D_1/(k - g)$. Earnings per share in Column 6 is simply the allowed return of 9.21% times the total common equity base. Dividends start at $4.00 and grow at 5% thereafter, which they must do if investors are to earn a 9% return. The dividend payout ratio remains constant, as per the assumption of the DCF model. All quantities, stock price, book value, earnings, and dividends grow at a 5% rate, as shown at the bottom of the relevant columns.

Only if the company is allowed to earn 9.21% on equity do investors earn 9.00%. For example, if the company is allowed only 9.00%, the stock price drops from $105.00 to $104.79 in the second year, inflicting a loss on shareholders. This is shown in Table 11-5. The growth rate drops from 5.0% to 4.8%. Thus, investors only earn 8.8% on their investment. It is noteworthy that the adjustment is always required each and every year, whether or not new stock issues are sold in the future, and that the allowed return on equity must be earned on total equity, including retained earnings, for investors to earn the cost of equity.

Note also that the 9.21% return must be applied to the total equity capital invested, including the retained earnings component. To see this, consider the following scenario. In year 1, investors require 9% on their $100 investment, that is, $9.00. But the company only earns $8.75, of which it pays out $4.00 in dividends and retains the balance of $4.75. To give investors the $5.00 change in market value (5% capital gain) needed to add to the $4.00 dividend to produce the $9.00 total DCF return of 9%, the $4.75 must earn more than 9.00%, that is, it must earn 9.21%.

**Table 11-4**
Company Earns Flotation-Adjusted Cost of Equity
Applied on All Common Equity Beginning of Year

| Year | Common Stock A | Retained Earnings B | Total Equity C | Stock Price D | M/B Ratio E | EPS F | DPS G | Payout H | Ret. Earn. I |
|---|---|---|---|---|---|---|---|---|---|
| 1 | $95.00 | $0.00 | $95.00 | $100.00 | 1.053 | $8.75 | $4.00 | 45.71% | $4.75 |
| 2 | $95.00 | $4.75 | $99.75 | $105.00 | 1.053 | $9.19 | $4.20 | 45.71% | $4.99 |
| 3 | $95.00 | $9.74 | $104.74 | $110.25 | 1.053 | $9.65 | $4.41 | 45.71% | $5.24 |
| 4 | $95.00 | $14.97 | $109.97 | $115.76 | 1.053 | $10.13 | $4.63 | 45.71% | $5.50 |
| 5 | $95.00 | $20.47 | $115.47 | $121.55 | 1.053 | $10.64 | $4.86 | 45.71% | $5.77 |

# The Capital Asset Pricing Model: Theory and Evidence

Eugene F. Fama and Kenneth R. French

The capital asset pricing model (CAPM) of William Sharpe (1964) and John Lintner (1965) marks the birth of asset pricing theory (resulting in a Nobel Prize for Sharpe in 1990). Four decades later, the CAPM is still widely used in applications, such as estimating the cost of capital for firms and evaluating the performance of managed portfolios. It is the centerpiece of MBA investment courses. Indeed, it is often the only asset pricing model taught in these courses.[1]

The attraction of the CAPM is that it offers powerful and intuitively pleasing predictions about how to measure risk and the relation between expected return and risk. Unfortunately, the empirical record of the model is poor—poor enough to invalidate the way it is used in applications. The CAPM's empirical problems may reflect theoretical failings, the result of many simplifying assumptions. But they may also be caused by difficulties in implementing valid tests of the model. For example, the CAPM says that the risk of a stock should be measured relative to a comprehensive "market portfolio" that in principle can include not just traded financial assets, but also consumer durables, real estate and human capital. Even if we take a narrow view of the model and limit its purview to traded financial assets, is it

[1] Although every asset pricing model is a capital asset pricing model, the finance profession reserves the acronym CAPM for the specific model of Sharpe (1964), Lintner (1965) and Black (1972) discussed here. Thus, throughout the paper we refer to the Sharpe-Lintner-Black model as the CAPM.

■ *Eugene F. Fama is Robert R. McCormick Distinguished Service Professor of Finance, Graduate School of Business, University of Chicago, Chicago, Illinois. Kenneth R. French is Carl E. and Catherine M. Heidt Professor of Finance, Tuck School of Business, Dartmouth College, Hanover, New Hampshire. legitimate to limit further the market portfolio to U.S. common stocks (a typical choice), or should the market be expanded to include bonds, and other financial assets, perhaps around the world? In the end, we argue that whether the model's problems reflect weaknesses in the theory or in its empirical implementation, the failure of the CAPM in empirical tests implies that most applications of the model are invalid.

We begin by outlining the logic of the CAPM, focusing on its predictions about risk and expected return. We then review the history of empirical work and what it says about shortcomings of the CAPM that pose challenges to be explained by alternative models.

## The Logic of the CAPM

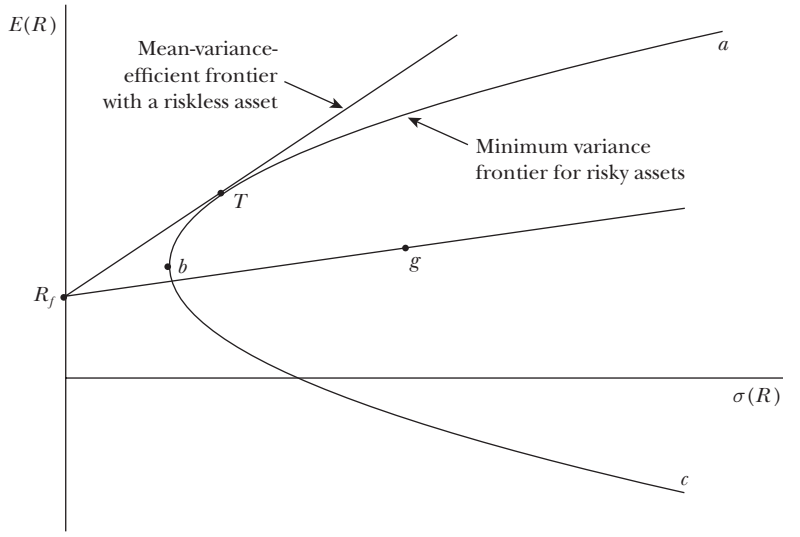
The CAPM builds on the model of portfolio choice developed by Harry Markowitz (1959). In Markowitz's model, an investor selects a portfolio at time $t - 1$ that produces a stochastic return at $t$. The model assumes investors are risk averse and, when choosing among portfolios, they care only about the mean and variance of their one-period investment return. As a result, investors choose "mean-variance-efficient" portfolios, in the sense that the portfolios 1) minimize the variance of portfolio return, given expected return, and 2) maximize expected return, given variance. Thus, the Markowitz approach is often called a "mean-variance model."

The portfolio model provides an algebraic condition on asset weights in mean-variance-efficient portfolios. The CAPM turns this algebraic statement into a testable prediction about the relation between risk and expected return by identifying a portfolio that must be efficient if asset prices are to clear the market of all assets.

Sharpe (1964) and Lintner (1965) add two key assumptions to the Markowitz model to identify a portfolio that must be mean-variance-efficient. The first assumption is *complete agreement*: given market clearing asset prices at $t - 1$, investors agree on the joint distribution of asset returns from $t - 1$ to $t$. And this distribution is the true one—that is, it is the distribution from which the returns we use to test the model are drawn. The second assumption is that there is *borrowing and lending at a risk-free rate*, which is the same for all investors and does not depend on the amount borrowed or lent.

Figure 1 describes portfolio opportunities and tells the CAPM story. The horizontal axis shows portfolio risk, measured by the standard deviation of portfolio return; the vertical axis shows expected return. The curve *abc*, which is called the minimum variance frontier, traces combinations of expected return and risk for portfolios of risky assets that minimize return variance at different levels of expected return. (These portfolios do not include risk-free borrowing and lending.) The tradeoff between risk and expected return for minimum variance portfolios is apparent. For example, an investor who wants a high expected return, perhaps at point $a$, must accept high volatility. At point $T$, the investor can have an interme-

*Figure 1*
**Investment Opportunities**



diate expected return with lower volatility. If there is no risk-free borrowing or lending, only portfolios above *b* along *abc* are mean-variance-efficient, since these portfolios also maximize expected return, given their return variances.

Adding risk-free borrowing and lending turns the efficient set into a straight line. Consider a portfolio that invests the proportion $x$ of portfolio funds in a risk-free security and $1 - x$ in some portfolio *g*. If all funds are invested in the risk-free security—that is, they are loaned at the risk-free rate of interest—the result is the point $R_f$ in Figure 1, a portfolio with zero variance and a risk-free rate of return. Combinations of risk-free lending and positive investment in *g* plot on the straight line between $R_f$ and *g*. Points to the right of *g* on the line represent borrowing at the risk-free rate, with the proceeds from the borrowing used to increase investment in portfolio *g*. In short, portfolios that combine risk-free lending or borrowing with some risky portfolio *g* plot along a straight line from $R_f$ through *g* in Figure 1.[2]

[2] Formally, the return, expected return and standard deviation of return on portfolios of the risk-free asset *f* and a risky portfolio *g* vary with $x$, the proportion of portfolio funds invested in *f*, as

$$R_p = xR_f + (1 - x)R_g,$$

$$E(R_p) = xR_f + (1 - x)E(R_g),$$

$$\sigma(R_p) = (1 - x)\sigma(R_g),\ x \leq 1.0,$$

which together imply that the portfolios plot along the line from $R_f$ through *g* in Figure 1.

To obtain the mean-variance-efficient portfolios available with risk-free borrowing and lending, one swings a line from $R_f$ in Figure 1 up and to the left as far as possible, to the tangency portfolio $T$. We can then see that all efficient portfolios are combinations of the risk-free asset (either risk-free borrowing or lending) and a single risky tangency portfolio, $T$. This key result is Tobin's (1958) "separation theorem."

The punch line of the CAPM is now straightforward. With complete agreement about distributions of returns, all investors see the same opportunity set (Figure 1), and they combine the same risky tangency portfolio $T$ with risk-free lending or borrowing. Since all investors hold the same portfolio $T$ of risky assets, it must be the value-weight market portfolio of risky assets. Specifically, each risky asset's weight in the tangency portfolio, which we now call $M$ (for the "market"), must be the total market value of all outstanding units of the asset divided by the total market value of all risky assets. In addition, the risk-free rate must be set (along with the prices of risky assets) to clear the market for risk-free borrowing and lending.

In short, the CAPM assumptions imply that the market portfolio $M$ must be on the minimum variance frontier if the asset market is to clear. This means that the algebraic relation that holds for any minimum variance portfolio must hold for the market portfolio. Specifically, if there are $N$ risky assets,

$$\text{(Minimum Variance Condition for } M) \quad E(R_i) = E(R_{ZM}) + [E(R_M) - E(R_{ZM})]\beta_{iM},\ i = 1, \ldots, N.$$

In this equation, $E(R_i)$ is the expected return on asset $i$, and $\beta_{iM}$, the market beta of asset $i$, is the covariance of its return with the market return divided by the variance of the market return,

$$\text{(Market Beta)} \quad \beta_{iM} = \frac{\text{cov}(R_i, R_M)}{\sigma^2(R_M)}.$$

The first term on the right-hand side of the minimum variance condition, $E(R_{ZM})$, is the expected return on assets that have market betas equal to zero, which means their returns are uncorrelated with the market return. The second term is a risk premium—the market beta of asset $i$, $\beta_{iM}$, times the premium per unit of beta, which is the expected market return, $E(R_M)$, minus $E(R_{ZM})$.

Since the market beta of asset $i$ is also the slope in the regression of its return on the market return, a common (and correct) interpretation of beta is that it measures the sensitivity of the asset's return to variation in the market return. But there is another interpretation of beta more in line with the spirit of the portfolio model that underlies the CAPM. The risk of the market portfolio, as measured by the variance of its return (the denominator of $\beta_{iM}$), is a weighted average of the covariance risks of the assets in $M$ (the numerators of $\beta_{iM}$ for different assets).

Thus, $\beta_{iM}$ is the covariance risk of asset $i$ in $M$ measured relative to the average covariance risk of assets, which is just the variance of the market return.[3] In economic terms, $\beta_{iM}$ is proportional to the risk each dollar invested in asset $i$ contributes to the market portfolio.

The last step in the development of the Sharpe-Lintner model is to use the assumption of risk-free borrowing and lending to nail down $E(R_{ZM})$, the expected return on zero-beta assets. A risky asset's return is uncorrelated with the market return—its beta is zero—when the average of the asset's covariances with the returns on other assets just offsets the variance of the asset's return. Such a risky asset is riskless in the market portfolio in the sense that it contributes nothing to the variance of the market return.

When there is risk-free borrowing and lending, the expected return on assets that are uncorrelated with the market return, $E(R_{ZM})$, must equal the risk-free rate, $R_f$. The relation between expected return and beta then becomes the familiar Sharpe-Lintner CAPM equation,

$$\text{(Sharpe-Lintner CAPM)} \quad E(R_i) = R_f + [E(R_M) - R_f)]\beta_{iM},\ i = 1, \ldots, N.$$

In words, the expected return on any asset $i$ is the risk-free interest rate, $R_f$, plus a risk premium, which is the asset's market beta, $\beta_{iM}$, times the premium per unit of beta risk, $E(R_M) - R_f$.

Unrestricted risk-free borrowing and lending is an unrealistic assumption. Fischer Black (1972) develops a version of the CAPM without risk-free borrowing or lending. He shows that the CAPM's key result—that the market portfolio is mean-variance-efficient—can be obtained by instead allowing unrestricted short sales of risky assets. In brief, back in Figure 1, if there is no risk-free asset, investors select portfolios from along the mean-variance-efficient frontier from $a$ to $b$. Market clearing prices imply that when one weights the efficient portfolios chosen by investors by their (positive) shares of aggregate invested wealth, the resulting portfolio is the market portfolio. The market portfolio is thus a portfolio of the efficient portfolios chosen by investors. With unrestricted short selling of risky assets, portfolios made up of efficient portfolios are themselves efficient. Thus, the market portfolio is efficient, which means that the minimum variance condition for $M$ given above holds, and it is the expected return-risk relation of the Black CAPM.

The relations between expected return and market beta of the Black and Sharpe-Lintner versions of the CAPM differ only in terms of what each says about $E(R_{ZM})$, the expected return on assets uncorrelated with the market. The Black version says only that $E(R_{ZM})$ must be less than the expected market return, so the

[3] Formally, if $x_{iM}$ is the weight of asset $i$ in the market portfolio, then the variance of the portfolio's return is

$$\sigma^2(R_M) = Cov(R_M, R_M) = Cov\left(\sum_{i=1}^{N} x_{iM}R_i, R_M\right) = \sum_{i=1}^{N} x_{iM}Cov(R_i, R_M).$$

premium for beta is positive. In contrast, in the Sharpe-Lintner version of the model, $E(R_{ZM})$ must be the risk-free interest rate, $R_f$, and the premium per unit of beta risk is $E(R_M) - R_f$.

The assumption that short selling is unrestricted is as unrealistic as unrestricted risk-free borrowing and lending. If there is no risk-free asset and short sales of risky assets are not allowed, mean-variance investors still choose efficient portfolios—points above *b* on the *abc* curve in Figure 1. But when there is no short selling of risky assets and no risk-free asset, the algebra of portfolio efficiency says that portfolios made up of efficient portfolios are not typically efficient. This means that the market portfolio, which is a portfolio of the efficient portfolios chosen by investors, is not typically efficient. And the CAPM relation between expected return and market beta is lost. This does not rule out predictions about expected return and betas with respect to other efficient portfolios—if theory can specify portfolios that must be efficient if the market is to clear. But so far this has proven impossible.

In short, the familiar CAPM equation relating expected asset returns to their market betas is just an application to the market portfolio of the relation between expected return and portfolio beta that holds in any mean-variance-efficient portfolio. The efficiency of the market portfolio is based on many unrealistic assumptions, including complete agreement and either unrestricted risk-free borrowing and lending or unrestricted short selling of risky assets. But all interesting models involve unrealistic simplifications, which is why they must be tested against data.

## Early Empirical Tests

Tests of the CAPM are based on three implications of the relation between expected return and market beta implied by the model. First, expected returns on all assets are linearly related to their betas, and no other variable has marginal explanatory power. Second, the beta premium is positive, meaning that the expected return on the market portfolio exceeds the expected return on assets whose returns are uncorrelated with the market return. Third, in the Sharpe-Lintner version of the model, assets uncorrelated with the market have expected returns equal to the risk-free interest rate, and the beta premium is the expected market return minus the risk-free rate. Most tests of these predictions use either cross-section or time-series regressions. Both approaches date to early tests of the model.

### Tests on Risk Premiums

The early cross-section regression tests focus on the Sharpe-Lintner model's predictions about the intercept and slope in the relation between expected return and market beta. The approach is to regress a cross-section of average asset returns on estimates of asset betas. The model predicts that the intercept in these regressions is the risk-free interest rate, $R_f$, and the coefficient on beta is the expected return on the market in excess of the risk-free rate, $E(R_M) - R_f$.

Two problems in these tests quickly became apparent. First, estimates of beta

for individual assets are imprecise, creating a measurement error problem when they are used to explain average returns. Second, the regression residuals have common sources of variation, such as industry effects in average returns. Positive correlation in the residuals produces downward bias in the usual ordinary least squares estimates of the standard errors of the cross-section regression slopes.

To improve the precision of estimated betas, researchers such as Blume (1970), Friend and Blume (1970) and Black, Jensen and Scholes (1972) work with portfolios, rather than individual securities. Since expected returns and market betas combine in the same way in portfolios, if the CAPM explains security returns it also explains portfolio returns.[4] Estimates of beta for diversified portfolios are more precise than estimates for individual securities. Thus, using portfolios in cross-section regressions of average returns on betas reduces the critical errors in variables problem. Grouping, however, shrinks the range of betas and reduces statistical power. To mitigate this problem, researchers sort securities on beta when forming portfolios; the first portfolio contains securities with the lowest betas, and so on, up to the last portfolio with the highest beta assets. This sorting procedure is now standard in empirical tests.

Fama and MacBeth (1973) propose a method for addressing the inference problem caused by correlation of the residuals in cross-section regressions. Instead of estimating a single cross-section regression of average monthly returns on betas, they estimate month-by-month cross-section regressions of monthly returns on betas. The times-series means of the monthly slopes and intercepts, along with the standard errors of the means, are then used to test whether the average premium for beta is positive and whether the average return on assets uncorrelated with the market is equal to the average risk-free interest rate. In this approach, the standard errors of the average intercept and slope are determined by the month-to-month variation in the regression coefficients, which fully captures the effects of residual correlation on variation in the regression coefficients, but sidesteps the problem of actually estimating the correlations. The residual correlations are, in effect, captured via repeated sampling of the regression coefficients. This approach also becomes standard in the literature.

Jensen (1968) was the first to note that the Sharpe-Lintner version of the

[4] Formally, if $x_{ip}$, $i = 1, \ldots, N$, are the weights for assets in some portfolio $p$, the expected return and market beta for the portfolio are related to the expected returns and betas of assets as

$$E(R_p) = \sum_{i=1}^{N} x_{ip}E(R_i), \text{ and } \beta_{pM} = \sum_{i=1}^{N} x_{ip}\beta_{pM}.$$

Thus, the CAPM relation between expected return and beta,

$$E(R_i) = E(R_f) + [E(R_M) - E(R_f)]\beta_{iM},$$

holds when asset $i$ is a portfolio, as well as when $i$ is an individual security.

relation between expected return and market beta also implies a time-series regression test. The Sharpe-Lintner CAPM says that the expected value of an asset's excess return (the asset's return minus the risk-free interest rate, $R_{it} - R_{ft}$) is completely explained by its expected CAPM risk premium (its beta times the expected value of $R_{Mt} - R_{ft}$). This implies that "Jensen's alpha," the intercept term in the time-series regression,

$$\text{(Time-Series Regression)} \quad R_{it} - R_{ft} = \alpha_i + \beta_{iM}(R_{Mt} - R_{ft}) + \varepsilon_{it},$$

is zero for each asset.

The early tests firmly reject the Sharpe-Lintner version of the CAPM. There is a positive relation between beta and average return, but it is too "flat." Recall that, in cross-section regressions, the Sharpe-Lintner model predicts that the intercept is the risk-free rate and the coefficient on beta is the expected market return in excess of the risk-free rate, $E(R_M) - R_f$. The regressions consistently find that the intercept is greater than the average risk-free rate (typically proxied as the return on a one-month Treasury bill), and the coefficient on beta is less than the average excess market return (proxied as the average return on a portfolio of U.S. common stocks minus the Treasury bill rate). This is true in the early tests, such as Douglas (1968), Black, Jensen and Scholes (1972), Miller and Scholes (1972), Blume and Friend (1973) and Fama and MacBeth (1973), as well as in more recent cross-section regression tests, like Fama and French (1992).

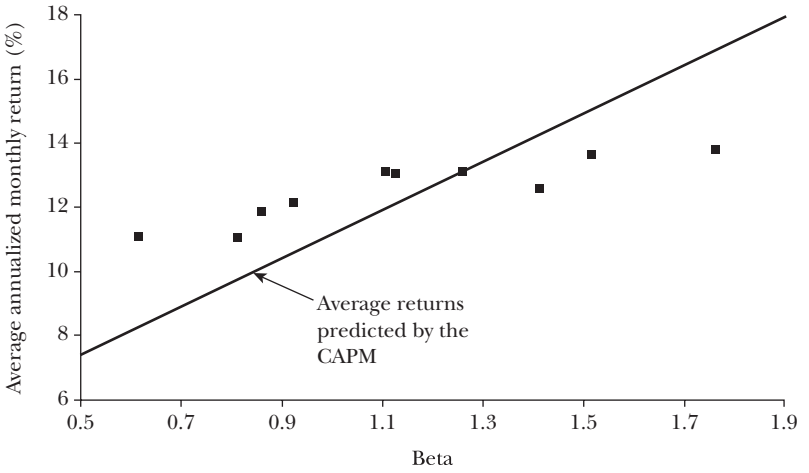
The evidence that the relation between beta and average return is too flat is confirmed in time-series tests, such as Friend and Blume (1970), Black, Jensen and Scholes (1972) and Stambaugh (1982). The intercepts in time-series regressions of excess asset returns on the excess market return are positive for assets with low betas and negative for assets with high betas.

Figure 2 provides an updated example of the evidence. In December of each year, we estimate a preranking beta for every NYSE (1928–2003), AMEX (1963–2003) and NASDAQ (1972–2003) stock in the CRSP (Center for Research in Security Prices of the University of Chicago) database, using two to five years (as available) of prior monthly returns.[5] We then form ten value-weight portfolios based on these preranking betas and compute their returns for the next twelve months. We repeat this process for each year from 1928 to 2003. The result is 912 monthly returns on ten beta-sorted portfolios. Figure 2 plots each portfolio's average return against its postranking beta, estimated by regressing its monthly returns for 1928–2003 on the return on the CRSP value-weight portfolio of U.S. common stocks.

The Sharpe-Lintner CAPM predicts that the portfolios plot along a straight

[5] To be included in the sample for year $t$, a security must have market equity data (price times shares outstanding) for December of $t - 1$, and CRSP must classify it as ordinary common equity. Thus, we exclude securities such as American Depository Receipts (ADRs) and Real Estate Investment Trusts (REITs).

*Figure 2*
**Average Annualized Monthly Return versus Beta for Value Weight Portfolios Formed on Prior Beta, 1928–2003**



line, with an intercept equal to the risk-free rate, $R_f$, and a slope equal to the expected excess return on the market, $E(R_M) - R_f$. We use the average one-month Treasury bill rate and the average excess CRSP market return for 1928–2003 to estimate the predicted line in Figure 2. Confirming earlier evidence, the relation between beta and average return for the ten portfolios is much flatter than the Sharpe-Lintner CAPM predicts. The returns on the low beta portfolios are too high, and the returns on the high beta portfolios are too low. For example, the predicted return on the portfolio with the lowest beta is 8.3 percent per year; the actual return is 11.1 percent. The predicted return on the portfolio with the highest beta is 16.8 percent per year; the actual is 13.7 percent.

Although the observed premium per unit of beta is lower than the Sharpe-Lintner model predicts, the relation between average return and beta in Figure 2 is roughly linear. This is consistent with the Black version of the CAPM, which predicts only that the beta premium is positive. Even this less restrictive model, however, eventually succumbs to the data.

**Testing Whether Market Betas Explain Expected Returns**

The Sharpe-Lintner and Black versions of the CAPM share the prediction that the market portfolio is mean-variance-efficient. This implies that differences in expected return across securities and portfolios are entirely explained by differences in market beta; other variables should add nothing to the explanation of expected return. This prediction plays a prominent role in tests of the CAPM. In the early work, the weapon of choice is cross-section regressions.

In the framework of Fama and MacBeth (1973), one simply adds predetermined explanatory variables to the month-by-month cross-section regressions of

returns on beta. If all differences in expected return are explained by beta, the average slopes on the additional variables should not be reliably different from zero. Clearly, the trick in the cross-section regression approach is to choose specific additional variables likely to expose any problems of the CAPM prediction that, because the market portfolio is efficient, market betas suffice to explain expected asset returns.

For example, in Fama and MacBeth (1973) the additional variables are squared market betas (to test the prediction that the relation between expected return and beta is linear) and residual variances from regressions of returns on the market return (to test the prediction that market beta is the only measure of risk needed to explain expected returns). These variables do not add to the explanation of average returns provided by beta. Thus, the results of Fama and MacBeth (1973) are consistent with the hypothesis that their market proxy—an equal-weight portfolio of NYSE stocks—is on the minimum variance frontier.

The hypothesis that market betas completely explain expected returns can also be tested using time-series regressions. In the time-series regression described above (the excess return on asset $i$ regressed on the excess market return), the intercept is the difference between the asset's average excess return and the excess return predicted by the Sharpe-Lintner model, that is, beta times the average excess market return. If the model holds, there is no way to group assets into portfolios whose intercepts are reliably different from zero. For example, the intercepts for a portfolio of stocks with high ratios of earnings to price and a portfolio of stocks with low earning-price ratios should both be zero. Thus, to test the hypothesis that market betas suffice to explain expected returns, one estimates the time-series regression for a set of assets (or portfolios) and then jointly tests the vector of regression intercepts against zero. The trick in this approach is to choose the left-hand-side assets (or portfolios) in a way likely to expose any shortcoming of the CAPM prediction that market betas suffice to explain expected asset returns.

In early applications, researchers use a variety of tests to determine whether the intercepts in a set of time-series regressions are all zero. The tests have the same asymptotic properties, but there is controversy about which has the best small sample properties. Gibbons, Ross and Shanken (1989) settle the debate by providing an $F$-test on the intercepts that has exact small-sample properties. They also show that the test has a simple economic interpretation. In effect, the test constructs a candidate for the tangency portfolio $T$ in Figure 1 by optimally combining the market proxy and the left-hand-side assets of the time-series regressions. The estimator then tests whether the efficient set provided by the combination of this tangency portfolio and the risk-free asset is reliably superior to the one obtained by combining the risk-free asset with the market proxy alone. In other words, the Gibbons, Ross and Shanken statistic tests whether the market proxy is the tangency portfolio in the set of portfolios that can be constructed by combining the market portfolio with the specific assets used as dependent variables in the time-series regressions.

Enlightened by this insight of Gibbons, Ross and Shanken (1989), one can see

a similar interpretation of the cross-section regression test of whether market betas suffice to explain expected returns. In this case, the test is whether the additional explanatory variables in a cross-section regression identify patterns in the returns on the left-hand-side assets that are not explained by the assets' market betas. This amounts to testing whether the market proxy is on the minimum variance frontier that can be constructed using the market proxy and the left-hand-side assets included in the tests.

An important lesson from this discussion is that time-series and cross-section regressions do not, strictly speaking, test the CAPM. What is literally tested is whether a specific proxy for the market portfolio (typically a portfolio of U.S. common stocks) is efficient in the set of portfolios that can be constructed from it and the left-hand-side assets used in the test. One might conclude from this that the CAPM has never been tested, and prospects for testing it are not good because 1) the set of left-hand-side assets does not include all marketable assets, and 2) data for the true market portfolio of all assets are likely beyond reach (Roll, 1977; more on this later). But this criticism can be leveled at tests of any economic model when the tests are less than exhaustive or when they use proxies for the variables called for by the model.

The bottom line from the early cross-section regression tests of the CAPM, such as Fama and MacBeth (1973), and the early time-series regression tests, like Gibbons (1982) and Stambaugh (1982), is that standard market proxies seem to be on the minimum variance frontier. That is, the central predictions of the Black version of the CAPM, that market betas suffice to explain expected returns and that the risk premium for beta is positive, seem to hold. But the more specific prediction of the Sharpe-Lintner CAPM that the premium per unit of beta is the expected market return minus the risk-free interest rate is consistently rejected.

The success of the Black version of the CAPM in early tests produced a consensus that the model is a good description of expected returns. These early results, coupled with the model's simplicity and intuitive appeal, pushed the CAPM to the forefront of finance.

## Recent Tests

Starting in the late 1970s, empirical work appears that challenges even the Black version of the CAPM. Specifically, evidence mounts that much of the variation in expected return is unrelated to market beta.

The first blow is Basu's (1977) evidence that when common stocks are sorted on earnings-price ratios, future returns on high E/P stocks are higher than predicted by the CAPM. Banz (1981) documents a size effect: when stocks are sorted on market capitalization (price times shares outstanding), average returns on small stocks are higher than predicted by the CAPM. Bhandari (1988) finds that high debt-equity ratios (book value of debt over the market value of equity, a measure of leverage) are associated with returns that are too high relative to their market betas.

Finally, Statman (1980) and Rosenberg, Reid and Lanstein (1985) document that stocks with high book-to-market equity ratios (B/M, the ratio of the book value of a common stock to its market value) have high average returns that are not captured by their betas.

There is a theme in the contradictions of the CAPM summarized above. Ratios involving stock prices have information about expected returns missed by market betas. On reflection, this is not surprising. A stock's price depends not only on the expected cash flows it will provide, but also on the expected returns that discount expected cash flows back to the present. Thus, in principle, the cross-section of prices has information about the cross-section of expected returns. (A high expected return implies a high discount rate and a low price.) The cross-section of stock prices is, however, arbitrarily affected by differences in scale (or units). But with a judicious choice of scaling variable $X$, the ratio $X/P$ can reveal differences in the cross-section of expected stock returns. Such ratios are thus prime candidates to expose shortcomings of asset pricing models—in the case of the CAPM, shortcomings of the prediction that market betas suffice to explain expected returns (Ball, 1978). The contradictions of the CAPM summarized above suggest that earnings-price, debt-equity and book-to-market ratios indeed play this role.

Fama and French (1992) update and synthesize the evidence on the empirical failures of the CAPM. Using the cross-section regression approach, they confirm that size, earnings-price, debt-equity and book-to-market ratios add to the explanation of expected stock returns provided by market beta. Fama and French (1996) reach the same conclusion using the time-series regression approach applied to portfolios of stocks sorted on price ratios. They also find that different price ratios have much the same information about expected returns. This is not surprising given that price is the common driving force in the price ratios, and the numerators are just scaling variables used to extract the information in price about expected returns.

Fama and French (1992) also confirm the evidence (Reinganum, 1981; Stambaugh, 1982; Lakonishok and Shapiro, 1986) that the relation between average return and beta for common stocks is even flatter after the sample periods used in the early empirical work on the CAPM. The estimate of the beta premium is, however, clouded by statistical uncertainty (a large standard error). Kothari, Shanken and Sloan (1995) try to resuscitate the Sharpe-Lintner CAPM by arguing that the weak relation between average return and beta is just a chance result. But the strong evidence that other variables capture variation in expected return missed by beta makes this argument irrelevant. If betas do not suffice to explain expected returns, the market portfolio is not efficient, and the CAPM is dead in its tracks. Evidence on the size of the market premium can neither save the model nor further doom it.

The synthesis of the evidence on the empirical problems of the CAPM provided by Fama and French (1992) serves as a catalyst, marking the point when it is generally acknowledged that the CAPM has potentially fatal problems. Research then turns to explanations.

One possibility is that the CAPM's problems are spurious, the result of data dredging—publication-hungry researchers scouring the data and unearthing contradictions that occur in specific samples as a result of chance. A standard response to this concern is to test for similar findings in other samples. Chan, Hamao and Lakonishok (1991) find a strong relation between book-to-market equity (B/M) and average return for Japanese stocks. Capaul, Rowley and Sharpe (1993) observe a similar B/M effect in four European stock markets and in Japan. Fama and French (1998) find that the price ratios that produce problems for the CAPM in U.S. data show up in the same way in the stock returns of twelve non-U.S. major markets, and they are present in emerging market returns. This evidence suggests that the contradictions of the CAPM associated with price ratios are not sample specific.

## Explanations: Irrational Pricing or Risk

Among those who conclude that the empirical failures of the CAPM are fatal, two stories emerge. On one side are the behavioralists. Their view is based on evidence that stocks with high ratios of book value to market price are typically firms that have fallen on bad times, while low B/M is associated with growth firms (Lakonishok, Shleifer and Vishny, 1994; Fama and French, 1995). The behavioralists argue that sorting firms on book-to-market ratios exposes investor overreaction to good and bad times. Investors overextrapolate past performance, resulting in stock prices that are too high for growth (low B/M) firms and too low for distressed (high B/M, so-called value) firms. When the overreaction is eventually corrected, the result is high returns for value stocks and low returns for growth stocks. Proponents of this view include DeBondt and Thaler (1987), Lakonishok, Shleifer and Vishny (1994) and Haugen (1995).

The second story for explaining the empirical contradictions of the CAPM is that they point to the need for a more complicated asset pricing model. The CAPM is based on many unrealistic assumptions. For example, the assumption that investors care only about the mean and variance of one-period portfolio returns is extreme. It is reasonable that investors also care about how their portfolio return covaries with labor income and future investment opportunities, so a portfolio's return variance misses important dimensions of risk. If so, market beta is not a complete description of an asset's risk, and we should not be surprised to find that differences in expected return are not completely explained by differences in beta. In this view, the search should turn to asset pricing models that do a better job explaining average returns.

Merton's (1973) intertemporal capital asset pricing model (ICAPM) is a natural extension of the CAPM. The ICAPM begins with a different assumption about investor objectives. In the CAPM, investors care only about the wealth their portfolio produces at the end of the current period. In the ICAPM, investors are concerned not only with their end-of-period payoff, but also with the opportunities

they will have to consume or invest the payoff. Thus, when choosing a portfolio at time $t - 1$, ICAPM investors consider how their wealth at $t$ might vary with future *state variables*, including labor income, the prices of consumption goods and the nature of portfolio opportunities at $t$, and expectations about the labor income, consumption and investment opportunities to be available after $t$.

Like CAPM investors, ICAPM investors prefer high expected return and low return variance. But ICAPM investors are also concerned with the covariances of portfolio returns with state variables. As a result, optimal portfolios are "multifactor efficient," which means they have the largest possible expected returns, given their return variances and the covariances of their returns with the relevant state variables.

Fama (1996) shows that the ICAPM generalizes the logic of the CAPM. That is, if there is risk-free borrowing and lending or if short sales of risky assets are allowed, market clearing prices imply that the market portfolio is multifactor efficient. Moreover, multifactor efficiency implies a relation between expected return and beta risks, but it requires additional betas, along with a market beta, to explain expected returns.

An ideal implementation of the ICAPM would specify the state variables that affect expected returns. Fama and French (1993) take a more indirect approach, perhaps more in the spirit of Ross's (1976) arbitrage pricing theory. They argue that though size and book-to-market equity are not themselves state variables, the higher average returns on small stocks and high book-to-market stocks reflect unidentified state variables that produce undiversifiable risks (covariances) in returns that are not captured by the market return and are priced separately from market betas. In support of this claim, they show that the returns on the stocks of small firms covary more with one another than with returns on the stocks of large firms, and returns on high book-to-market (value) stocks covary more with one another than with returns on low book-to-market (growth) stocks. Fama and French (1995) show that there are similar size and book-to-market patterns in the covariation of fundamentals like earnings and sales.

Based on this evidence, Fama and French (1993, 1996) propose a three-factor model for expected returns,

$$\text{(Three-Factor Model)} \quad E(R_{it}) - R_{ft} = \beta_{iM}[E(R_{Mt}) - R_{ft}] + \beta_{is}E(SMB_t) + \beta_{ih}E(HML_t).$$

In this equation, $SMB_t$ (small minus big) is the difference between the returns on diversified portfolios of small and big stocks, $HML_t$ (high minus low) is the difference between the returns on diversified portfolios of high and low B/M stocks, and the betas are slopes in the multiple regression of $R_{it} - R_{ft}$ on $R_{Mt} - R_{ft}$, $SMB_t$ and $HML_t$.

For perspective, the average value of the market premium $R_{Mt} - R_{ft}$ for 1927–2003 is 8.3 percent per year, which is 3.5 standard errors from zero. The

average values of $SMB_t$, and $HML_t$ are 3.6 percent and 5.0 percent per year, and they are 2.1 and 3.1 standard errors from zero. All three premiums are volatile, with annual standard deviations of 21.0 percent ($R_{Mt} - R_{ft}$), 14.6 percent ($SMB_t$) and 14.2 percent ($HML_t$) per year. Although the average values of the premiums are large, high volatility implies substantial uncertainty about the true expected premiums.

One implication of the expected return equation of the three-factor model is that the intercept $\alpha_i$ in the time-series regression,

$$R_{it} - R_{ft} = \alpha_i + \beta_{iM}(R_{Mt} - R_{ft}) + \beta_{is}SMB_t + \beta_{ih}HML_t + \varepsilon_{it},$$

is zero for all assets $i$. Using this criterion, Fama and French (1993, 1996) find that the model captures much of the variation in average return for portfolios formed on size, book-to-market equity and other price ratios that cause problems for the CAPM. Fama and French (1998) show that an international version of the model performs better than an international CAPM in describing average returns on portfolios formed on scaled price variables for stocks in 13 major markets.

The three-factor model is now widely used in empirical research that requires a model of expected returns. Estimates of $\alpha_i$ from the time-series regression above are used to calibrate how rapidly stock prices respond to new information (for example, Loughran and Ritter, 1995; Mitchell and Stafford, 2000). They are also used to measure the special information of portfolio managers, for example, in Carhart's (1997) study of mutual fund performance. Among practitioners like Ibbotson Associates, the model is offered as an alternative to the CAPM for estimating the cost of equity capital.

From a theoretical perspective, the main shortcoming of the three-factor model is its empirical motivation. The small-minus-big (SMB) and high-minus-low (HML) explanatory returns are not motivated by predictions about state variables of concern to investors. Instead they are brute force constructs meant to capture the patterns uncovered by previous work on how average stock returns vary with size and the book-to-market equity ratio.

But this concern is not fatal. The ICAPM does not require that the additional portfolios used along with the market portfolio to explain expected returns "mimic" the relevant state variables. In both the ICAPM and the arbitrage pricing theory, it suffices that the additional portfolios are well diversified (in the terminology of Fama, 1996, they are multifactor minimum variance) and that they are sufficiently different from the market portfolio to capture covariation in returns and variation in expected returns missed by the market portfolio. Thus, adding diversified portfolios that capture covariation in returns and variation in average returns left unexplained by the market is in the spirit of both the ICAPM and the Ross's arbitrage pricing theory.

The behavioralists are not impressed by the evidence for a risk-based explanation of the failures of the CAPM. They typically concede that the three-factor model captures covariation in returns missed by the market return and that it picks

up much of the size and value effects in average returns left unexplained by the CAPM. But their view is that the average return premium associated with the model's book-to-market factor—which does the heavy lifting in the improvements to the CAPM—is itself the result of investor overreaction that happens to be correlated across firms in a way that just looks like a risk story. In short, in the behavioral view, the market tries to set CAPM prices, and violations of the CAPM are due to mispricing.

The conflict between the behavioral irrational pricing story and the rational risk story for the empirical failures of the CAPM leaves us at a timeworn impasse. Fama (1970) emphasizes that the hypothesis that prices properly reflect available information must be tested in the context of a model of expected returns, like the CAPM. Intuitively, to test whether prices are rational, one must take a stand on what the market is trying to do in setting prices—that is, what is risk and what is the relation between expected return and risk? When tests reject the CAPM, one cannot say whether the problem is its assumption that prices are rational (the behavioral view) or violations of other assumptions that are also necessary to produce the CAPM (our position).

Fortunately, for some applications, the way one uses the three-factor model does not depend on one's view about whether its average return premiums are the rational result of underlying state variable risks, the result of irrational investor behavior or sample specific results of chance. For example, when measuring the response of stock prices to new information or when evaluating the performance of managed portfolios, one wants to account for known patterns in returns and average returns for the period examined, whatever their source. Similarly, when estimating the cost of equity capital, one might be unconcerned with whether expected return premiums are rational or irrational since they are in either case part of the opportunity cost of equity capital (Stein, 1996). But the cost of capital is forward looking, so if the premiums are sample specific they are irrelevant.

The three-factor model is hardly a panacea. Its most serious problem is the momentum effect of Jegadeesh and Titman (1993). Stocks that do well relative to the market over the last three to twelve months tend to continue to do well for the next few months, and stocks that do poorly continue to do poorly. This momentum effect is distinct from the value effect captured by book-to-market equity and other price ratios. Moreover, the momentum effect is left unexplained by the three-factor model, as well as by the CAPM. Following Carhart (1997), one response is to add a momentum factor (the difference between the returns on diversified portfolios of short-term winners and losers) to the three-factor model. This step is again legitimate in applications where the goal is to abstract from known patterns in average returns to uncover information-specific or manager-specific effects. But since the momentum effect is short-lived, it is largely irrelevant for estimates of the cost of equity capital.

Another strand of research points to problems in both the three-factor model and the CAPM. Frankel and Lee (1998), Dechow, Hutton and Sloan (1999), Piotroski (2000) and others show that in portfolios formed on price ratios like

book-to-market equity, stocks with higher expected cash flows have higher average returns that are not captured by the three-factor model or the CAPM. The authors interpret their results as evidence that stock prices are irrational, in the sense that they do not reflect available information about expected profitability.

In truth, however, one can't tell whether the problem is bad pricing or a bad asset pricing model. A stock's price can always be expressed as the present value of expected future cash flows discounted at the expected return on the stock (Campbell and Shiller, 1989; Vuolteenaho, 2002). It follows that if two stocks have the same price, the one with higher expected cash flows must have a higher expected return. This holds true whether pricing is rational or irrational. Thus, when one observes a positive relation between expected cash flows and expected returns that is left unexplained by the CAPM or the three-factor model, one can't tell whether it is the result of irrational pricing or a misspecified asset pricing model.

## The Market Proxy Problem

Roll (1977) argues that the CAPM has never been tested and probably never will be. The problem is that the market portfolio at the heart of the model is theoretically and empirically elusive. It is not theoretically clear which assets (for example, human capital) can legitimately be excluded from the market portfolio, and data availability substantially limits the assets that are included. As a result, tests of the CAPM are forced to use proxies for the market portfolio, in effect testing whether the proxies are on the minimum variance frontier. Roll argues that because the tests use proxies, not the true market portfolio, we learn nothing about the CAPM.

We are more pragmatic. The relation between expected return and market beta of the CAPM is just the minimum variance condition that holds in any efficient portfolio, applied to the market portfolio. Thus, if we can find a market proxy that is on the minimum variance frontier, it can be used to describe differences in expected returns, and we would be happy to use it for this purpose. The strong rejections of the CAPM described above, however, say that researchers have not uncovered a reasonable market proxy that is close to the minimum variance frontier. If researchers are constrained to reasonable proxies, we doubt they ever will.

Our pessimism is fueled by several empirical results. Stambaugh (1982) tests the CAPM using a range of market portfolios that include, in addition to U.S. common stocks, corporate and government bonds, preferred stocks, real estate and other consumer durables. He finds that tests of the CAPM are not sensitive to expanding the market proxy beyond common stocks, basically because the volatility of expanded market returns is dominated by the volatility of stock returns.

One need not be convinced by Stambaugh's (1982) results since his market proxies are limited to U.S. assets. If international capital markets are open and asset prices conform to an international version of the CAPM, the market portfolio

should include international assets. Fama and French (1998) find, however, that betas for a global stock market portfolio cannot explain the high average returns observed around the world on stocks with high book-to-market or high earnings-price ratios.

A major problem for the CAPM is that portfolios formed by sorting stocks on price ratios produce a wide range of average returns, but the average returns are not positively related to market betas (Lakonishok, Shleifer and Vishny, 1994; Fama and French, 1996, 1998). The problem is illustrated in Figure 3, which shows average returns and betas (calculated with respect to the CRSP value-weight portfolio of NYSE, AMEX and NASDAQ stocks) for July 1963 to December 2003 for ten portfolios of U.S. stocks formed annually on sorted values of the book-to-market equity ratio (B/M).[6]

Average returns on the B/M portfolios increase almost monotonically, from 10.1 percent per year for the lowest B/M group (portfolio 1) to an impressive 16.7 percent for the highest (portfolio 10). But the positive relation between beta and average return predicted by the CAPM is notably absent. For example, the portfolio with the lowest book-to-market ratio has the highest beta but the lowest average return. The estimated beta for the portfolio with the highest book-to-market ratio and the highest average return is only 0.98. With an average annualized value of the riskfree interest rate, $R_f$, of 5.8 percent and an average annualized market premium, $R_M - R_f$, of 11.3 percent, the Sharpe-Lintner CAPM predicts an average return of 11.8 percent for the lowest B/M portfolio and 11.2 percent for the highest, far from the observed values, 10.1 and 16.7 percent. For the Sharpe-Lintner model to "work" on these portfolios, their market betas must change dramatically, from 1.09 to 0.78 for the lowest B/M portfolio and from 0.98 to 1.98 for the highest. We judge it unlikely that alternative proxies for the market portfolio will produce betas and a market premium that can explain the average returns on these portfolios.

It is always possible that researchers will redeem the CAPM by finding a reasonable proxy for the market portfolio that is on the minimum variance frontier. We emphasize, however, that this possibility cannot be used to justify the way the CAPM is currently applied. The problem is that applications typically use the same

[6] Stock return data are from CRSP, and book equity data are from Compustat and the Moody's Industrials, Transportation, Utilities and Financials manuals. Stocks are allocated to ten portfolios at the end of June of each year $t$ (1963 to 2003) using the ratio of book equity for the fiscal year ending in calendar year $t - 1$, divided by market equity at the end of December of $t - 1$. Book equity is the book value of stockholders' equity, plus balance sheet deferred taxes and investment tax credit (if available), minus the book value of preferred stock. Depending on availability, we use the redemption, liquidation or par value (in that order) to estimate the book value of preferred stock. Stockholders' equity is the value reported by Moody's or Compustat, if it is available. If not, we measure stockholders' equity as the book value of common equity plus the par value of preferred stock or the book value of assets minus total liabilities (in that order). The portfolios for year $t$ include NYSE (1963–2003), AMEX (1963–2003) and NASDAQ (1972–2003) stocks with positive book equity in $t - 1$ and market equity (from CRSP) for December of $t - 1$ and June of $t$. The portfolios exclude securities CRSP does not classify as ordinary common equity. The breakpoints for year $t$ use only securities that are on the NYSE in June of year $t$.

market proxies, like the value-weight portfolio of U.S. stocks, that lead to rejections of the model in empirical tests. The contradictions of the CAPM observed when such proxies are used in tests of the model show up as bad estimates of expected returns in applications; for example, estimates of the cost of equity capital that are too low (relative to historical average returns) for small stocks and for stocks with high book-to-market equity ratios. In short, if a market proxy does not work in tests of the CAPM, it does not work in applications.

## Conclusions

The version of the CAPM developed by Sharpe (1964) and Lintner (1965) has never been an empirical success. In the early empirical work, the Black (1972) version of the model, which can accommodate a flatter tradeoff of average return for market beta, has some success. But in the late 1970s, research begins to uncover variables like size, various price ratios and momentum that add to the explanation of average returns provided by beta. The problems are serious enough to invalidate most applications of the CAPM.

For example, finance textbooks often recommend using the Sharpe-Lintner CAPM risk-return relation to estimate the cost of equity capital. The prescription is to estimate a stock's market beta and combine it with the risk-free interest rate and the average market risk premium to produce an estimate of the cost of equity. The typical market portfolio in these exercises includes just U.S. common stocks. But empirical work, old and new, tells us that the relation between beta and average return is flatter than predicted by the Sharpe-Lintner version of the CAPM. As a

# Size as a Predictor of Equity Returns

The size effect is based on the empirical observation that companies of smaller size are associated with greater risk and, therefore, have greater cost of capital. The "size" of a company is one of the most important risk elements to consider when developing cost of equity capital estimates for use in valuing a business simply because size has been shown to be a *predictor* of equity returns. In other words, there is a significant (negative) relationship between size and historical equity returns – as size *decreases*, returns tend to *increase*, and vice versa.[1]

Traditionally, researchers have used market value of equity (market capitalization, or simply "market cap") as a measure of size in conducting historical rate of return studies. However, as we discuss later in this chapter, market cap is not the only measure of size that can be used to predict return, nor is it necessarily the best measure of size to use.

Much of the research of the size effect relies on the data provided by the Center for Research in Security Prices (CRSP) databases at the University of Chicago. The CRSP database includes U.S. equity total returns (capital appreciation plus dividends) going back to 1926.

The CRSP databases enabled researchers to look at stocks with different characteristics and analyze how their returns differed. One of the first characteristics that researchers analyzed was large-market-capitalization (large-cap) companies versus small-market-capitalization (small-cap) companies.

For example, a 1981 study by Rolf Banz examined the returns of New York Stock Exchange (NYSE) small-cap companies compared to the returns of NYSE large-cap companies over the period 1926–1975.[2] What Banz found was that the returns of small-cap companies were *greater* than the returns for large-cap companies. Banz's 1981 study is often cited as the first comprehensive study of the size effect.

## Possible Explanations for the Greater Returns of Smaller Companies

Some valuation analysts treat small firms as equivalent to scaled-down large firms. This is likely an erroneous assumption.

There are theoretical reasons for the greater returns of smaller companies (i.e., the "size effect"), which might include: (i) small stocks are less liquid (with higher associated

# 9 Capital Budgeting and Risk

Long before the development of modern theories linking risk and expected return, smart financial managers adjusted for risk in capital budgeting. They realized intuitively that, other things being equal, risky projects are less desirable than safe ones. Therefore financial managers demanded a higher rate of return from risky projects, or they based their decisions on conservative estimates of the cash flows.

Various rules of thumb are often used to make these risk adjustments. For example, many companies estimate the rate of return required by investors in their securities and use the **company cost of capital** to discount the cash flows on all new projects. Since investors require a higher rate of return from a very risky company, such a firm will have a higher company cost of capital and will set a higher discount rate for its new investment opportunities. For example, in Table 8-1 we estimated that investors expected a rate of return of .163 or about 16.5 percent from Microsoft common stock. Therefore, according to the company cost of capital rule, Microsoft should have been using a 16.5 percent discount rate to compute project net present values.[1]

This is a step in the right direction. Even though we can't measure risk or the expected return on risky securities with absolute precision, it is still reasonable to assert that Microsoft faced more risk than the average firm and, therefore, should have demanded a higher rate of return from its capital investments.

But the company cost of capital rule can also get a firm into trouble if the new projects are more or less risky than its existing business. Each project should be evaluated at its *own* opportunity cost of capital. This is a clear implication of the value-additivity principle introduced in Chapter 7. For a firm composed of assets A and B, the firm value is

$$\text{Firm value} = PV(AB) = PV(A) + PV(B) = \text{sum of separate asset values}$$

Here PV(A) and PV(B) are valued just as if they were mini-firms in which stockholders could invest directly. Investors would value A by discounting its forecasted cash flows at a rate reflecting the risk of A. They would value B by discounting at a rate reflecting the risk of B. The two discount rates will, in general, be different.

[1]Microsoft did not use any significant amount of debt financing. Thus its cost of capital is the rate of return investors expect on its common stock. The complications caused by debt are discussed later in this chapter.

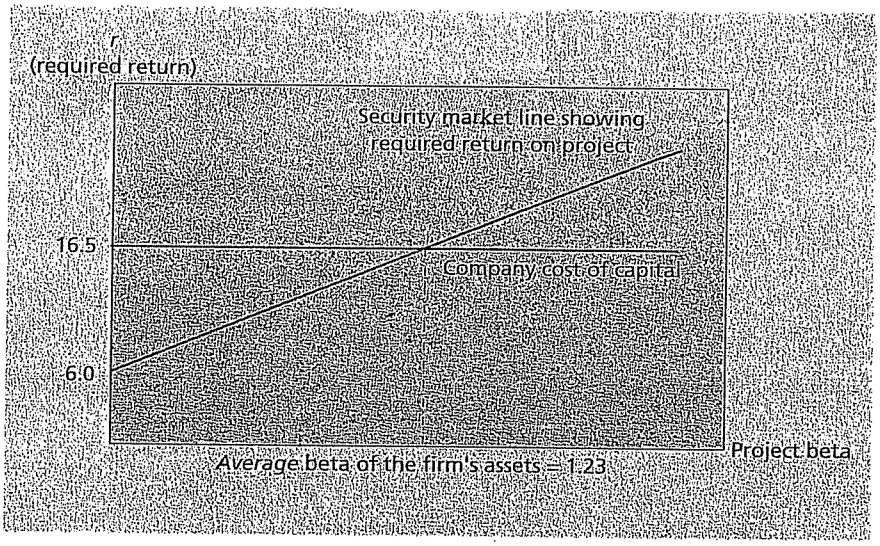

**Figure 9-1** A comparison between the company cost of capital rule and the required return under the capital asset pricing model. Microsoft's company cost of capital is about 16.5 percent. This is the correct discount rate only if the project beta is 1.23. In general, the correct discount rate increases as project beta increases. Microsoft should accept projects with rates of return above the security market line relating required return to beta.

If the firm considers investing in a third project C, it should also value C as if C were a mini-firm. That is, the firm should discount the cash flows of C at the expected rate of return that investors would demand to make a separate investment in C. *The true cost of capital depends on the use to which the capital is put.*

This means that Microsoft should accept any project that more than compensates for the *project's beta*. In other words, Microsoft should accept any project lying above the upward-sloping line that links expected return to risk in Figure 9-1. If the project has a high risk, Microsoft needs a higher prospective return than if the project has a low risk. Now contrast this with the company cost of capital rule, which is to accept any project *regardless of its risk* as long as it offers a higher return than the *company's* cost of capital. In terms of Figure 9-1, the rule tells Microsoft to accept any project above the horizontal cost-of-capital line, i.e., any project offering a return of more than 16.5 percent.

It is clearly silly to suggest that Microsoft should demand the same rate of return from a very safe project as from a very risky one. If Microsoft used the company cost of capital rule, it would reject many good low-risk projects and accept many poor high-risk projects. It is also silly to suggest that just because Duke Power has a low company cost of capital, it is justified in accepting projects that Microsoft would reject. If you followed such a rule to its seemingly logical conclusion, you would think it possible to enlarge the company's investment opportunities by investing a large sum in Treasury bills. That would make the common stock safe and create a low company cost of capital.[2]

The notion that each company has some individual discount rate or cost of capital is widespread, but far from universal. Many firms require different returns from different categories of investment. For example, discount rates might be set as follows:

[2]If the present value of an asset depended on the identity of the company that bought it, present values would not add up. Remember, a good project is a good project is a good project.

| Category | Discount Rate |
|---|---|
| Speculative ventures | 30% |
| New products | 20% |
| Expansion of existing business | 15% (company cost of capital) |
| Cost improvement, known technology | 10% |

The capital asset pricing model is widely used by large corporations to estimate the discount rate. It states

$$\text{Expected project return} = r = r_f + (\text{project beta})(r_m - r_f)$$

To calculate this, you have to figure out the project beta. Before thinking about the betas of individual projects, we will look at some problems you would encounter in using beta to estimate a company's cost of capital. It turns out that beta is difficult to measure accurately for an individual firm: Much greater accuracy can be achieved by looking at an average of similar companies. But then we have to define *similar*. Among other things, we will find that a firm's borrowing policy affects its stock beta. It would be misleading, e.g., to average the betas of Chrysler, which has been a heavy borrower, and General Motors, which has generally borrowed less.

The company cost of capital is the correct discount rate for projects that have the same risk as the company's existing business but *not* for those projects that are safer or riskier than the company's average. The problem is to judge the relative risks of the projects available to the firm. To handle that problem, we will need to dig a little deeper and look at what features make some investments riskier than others. After you know *why* AT&T stock has less market risk than, say, Ford Motor, you will be in a better position to judge the relative risks of capital investment opportunities.

There is still another complication: Project betas can shift over time. Some projects are safer in youth than in old age; others are riskier. In this case, what do we mean by *the* project beta? There may be a separate beta for each year of the project's life. To put it another way, can we jump from the capital asset pricing model, which looks out one period into the future, to the discounted-cash-flow formula that we developed in Chapters 2 and 6 for valuing long-lived assets? Most of the time it is safe to do so, but you should be able to recognize and deal with the exceptions.

We will use the capital asset pricing model, or CAPM, throughout this chapter. But don't infer that the CAPM is the last word on risk and return. The principles and procedures covered in this chapter work just as well with other models such as arbitrage pricing theory (APT). For example, we could have started with an APT estimate of the expected rate of return on Microsoft stock; the discussion of company and project costs of capital would have followed exactly.

## 9-1 MEASURING BETAS

Suppose that you were considering an across-the-board expansion by your firm. Such an investment would have about the same degree of risk as the existing business. Therefore you should discount the projected flows at the company cost of capital. To estimate that, you could begin by estimating the beta of the company's stock.

An obvious way to measure the beta of the stock is to look at how its price has responded in the past to market movements. For example, in Figure 9-2*a* and *b* we have plotted monthly rates of return from AT&T and Hewlett-Packard against mar-

Thus we could view the project as offering an expected payoff of .5(1500) + .5(0) = 750, or $750,000, at $t = 1$ on a $125,000 investment at $t = 0$. Of course, the certainty equivalent of the payoff is less than $750,000, but the difference would have to be very large to justify rejecting the project. For example, if the certainty equivalent is half the forecasted cash flow and the risk-free rate is 7 percent, the project is worth $225,500:

$$\text{NPV} = C_0 + \frac{\text{CEQ}_1}{1 + r_f}$$
$$= -125 + \frac{.5(750)}{1.07} = 225.5, \text{ or } \$225{,}500$$

This is not bad for a $125,000 investment—and quite a change from the negative NPV that management got by discounting all future cash flows at 25 percent.

**A Common Mistake**

You sometimes hear people say that because distant cash flows are "riskier," they should be discounted at a higher rate than earlier cash flows. That is quite wrong: Using the same risk-adjusted discount rate for each year's cash flow implies a larger deduction for risk from the later cash flows. The reason is that the discount rate compensates for the risk borne *per period*. The more distant the cash flows, the greater the number of periods and the larger the *total* risk adjustment.

It makes sense to use a single risk-adjusted discount rate as long as the project has the same market risk at each point in its life. But look out for exceptions like the electric mop project, where market risk changes as time passes.

## 9-6 SUMMARY

In Chapter 8 we set out some basic principles for valuing risky assets. In this chapter we have shown you how to apply these principles to practical situations.

The problem is easiest when you believe that the project has the same market risk as the company's existing assets. In this case, the required return equals the required return on a portfolio of the company's securities. This is called the *company cost of capital*.

Capital asset pricing theory states that the required return on any asset depends on its risk. In this chapter we have defined risk as beta and used the capital asset pricing model to calculate expected returns.

The most common way to estimate the beta of a stock is to figure out how the stock price has responded to market changes in the past. Of course, this will give you only an estimate of the stock's true beta. You may get a more reliable figure if you calculate an industry beta for a group of similar companies.

Suppose that you now have an estimate of the stock's beta. Can you plug that into the capital asset pricing model to find the company's cost of capital? No, the stock beta may reflect both business and financial risk. Whenever a company borrows money, it increases the beta (and the expected return) of its stock. Remember, the company cost of capital is the expected return on a portfolio of all the firm's securities, not just the common stock. You can calculate it by estimating the expected return on each of the securities and then taking a weighted average of these separate returns. Or you can calculate the beta of the portfolio of securities and then plug this *asset beta* into the capital asset pricing model.

The company cost of capital is the correct discount rate for projects that have the same risk as the company's existing business. Many firms, however, use the company cost of capital to discount the forecasted cash flows on all new projects. This is a dangerous procedure. In principle, each project should be evaluated at its own opportunity cost of capital; the true cost of capital depends on the use to which the capital is put. If we wish to estimate the cost of capital for a particular project, it is *project risk* that counts. Of course the company cost of capital is fine as a discount rate for average-risk projects. It is also a useful starting point for estimating discount rates for safer or riskier projects.

We cannot give you a neat formula that will allow you to estimate project betas, but we can give you some clues. First, avoid adding fudge factors to discount rates to offset worries about bad project outcomes. Adjust cash-flow forecasts to give due weight to bad outcomes as well as good; *then* ask whether the chance of bad outcomes adds to the project's market risk. Second, you can often identify the characteristics of a high- or low-beta project even when the project beta cannot be calculated directly. For example, you can try to figure out how much the cash flows are affected by the overall performance of the economy: Cyclical investments are generally high-beta investments. You can also look at the project's operating leverage: Fixed production charges work like fixed debt charges; i.e., they increase beta.

There is one more fence to jump. Most projects produce cash flows for several years. Firms generally use the same risk-adjusted rate $r$ to discount each of these cash flows. When they do this, they are implicitly assuming that cumulative risk increases at a constant rate as you look further into the future. That assumption is usually reasonable. It is precisely true when the project's future beta will be constant, i.e., when risk *per period* is constant.

But exceptions sometimes prove the rule. Be on the alert for projects where risk clearly does *not* increase steadily. In these cases, you should break the project into segments within which the same discount rate can be reasonably used. Or you should use the certainty-equivalent version of the DCF model, which allows separate risk adjustments to each period's cash flow.

## APPENDIX: USING THE CAPITAL ASSET PRICING MODEL TO CALCULATE CERTAINTY EQUIVALENTS

When calculating present value, you can take account of risk in either of two ways. You can discount the expected cash flow $C_1$ by the risk-adjusted discount rate $r$:

$$PV = \frac{C_1}{1 + r}$$

Alternatively, you can discount the certainty-equivalent cash flow $CEQ_1$ by the risk-free rate of interest $r_f$:

$$PV = \frac{CEQ_1}{1 + r_f}$$

In this appendix we show how you can derive $CEQ_1$ from the capital asset pricing model.

We know from our present value formula that $1 + r$ equals the expected dollar payoff on the asset divided by its present value:

traded, then we cannot calculate the firm's beta. For the privately owned firm, we might use the so-called "pure play" CAPM technique. This involves finding a firm in the same line of business that does have public equity, estimating its beta, and then using this beta as a proxy for that of the small business in question.

To illustrate the pure play approach, again consider BTG. The firm is not publicly traded, so we cannot estimate its beta. However, data are available on more established firms, such as Genentech and Genetic Industries, so we could use their betas as representative of the biological and genetic engineering industry. Of course, these firms' betas would have to be subjectively modified to reflect their larger sizes and more established positions, as well as to take account of the differences in the nature of their products and their capital structures as compared to those of BTG. Still, as long as there are public companies in similar lines of business available for comparison, the estimates of their betas can be used to help estimate the cost of capital of a firm whose equity is not publicly traded. Note that a "liquidity premium" as discussed in Chapter 3 would also have to be added to reflect the illiquidity of the small, nonpublic firm's stock.

## Flotation Costs for Small Issues

When external equity capital is raised, flotation costs increase the cost of equity capital beyond what it would be for internal funds. These external flotation costs are especially significant for smaller firms, and they can substantially affect capital budgeting decisions involving external equity funds. To illustrate this point, consider a firm that is expected to pay constant dividends forever, and hence whose growth rate is zero. In this case, if F is the percentage flotation cost, then the cost of equity capital is $k_e = D_1/[P_0(1 - F)]$. The higher the flotation cost, the higher the cost of external equity.

How big is F? According to the latest Securities and Exchange Commission data, the average flotation cost of large common stock offerings (more than $50 million) is only about 4 percent. For a firm that is expected to provide a 15 percent dividend yield (that is, $D_1/P_0 = 15\%$), the cost of equity is 15%/(1 − 0.04), or 15.6 percent. However, the SEC's data on small stock offerings (less than $1 million) show that flotation costs for such issues average about 21 percent. Thus, the cost of equity capital in the preceding example would be 15%/(1 − 0.21), or about 19 percent. When we compare this to the 15.6 percent for large offerings, it is clear that a small firm would have to earn considerably more on the same project than a large firm. Small firms are therefore at a substantial disadvantage because of the effects of flotation costs.

## The Small-Firm Effect

A number of researchers have observed that portfolios of small-firm stocks have earned consistently higher average returns than those of large-firm stocks; this is called the "small-firm effect." On the surface, it would seem to be advantageous to the small firm to provide average returns in the stock market that are higher than those of large firms. In reality, it is bad news for the small firm; what the small-firm effect means is that the capital market demands higher returns on stocks of small firms than on otherwise similar stocks of large firms. Therefore, the cost of equity capital is higher for small firms. This compounds the high flotation cost problem noted above.

It may be argued that stocks of small firms are riskier than those of large ones and that this accounts for the differences in returns. It is true that academic research usually finds that betas are higher on average for small firms than for large ones. However, the larger returns for small firms remain larger even after adjusting for the effects of their higher risks as reflected in their beta coefficients.

The small-firm effect is an anomaly in the sense that it is not consistent with the CAPM theory. Still, higher returns reflect a higher cost of capital, so we must conclude that smaller firms do have higher capital costs than otherwise similar larger firms. The manager of a small firm should take this factor into account when estimating his or her firm's cost of equity capital. In general, the cost of equity capital appears to be about four percentage points higher for small firms (those with market values of less than $20 million) than for large, New York Stock Exchange firms with similar risk characteristics.

## Cost of Newly Issued Common Stock, or External Equity, $r_e$

The **cost of new common equity**, $r_e$, or external equity, is higher than the cost of equity raised internally by reinvesting earnings, $r_s$, because of flotation costs involved in issuing new common stock. What rate of return must be earned on funds raised by selling new stock to make issuing stock worthwhile? To put it another way, what is the cost of new common stock?

The answer for a constant growth stock is found by applying this formula:

$$r_e = \frac{D_1}{P_0(1 - F)} + g \qquad \text{10-9}$$

In Equation 10-9, F is the **percentage flotation cost** incurred in selling the new stock, so $P_0(1 - F)$ is the net price per share received by the company.

Assuming that Axis has a flotation cost of 10 percent, its cost of new outside equity is computed as follows:

$$r_e = \frac{\$1.24}{\$23(1 - 0.10)} + 8.0\%$$

$$= \frac{\$1.24}{\$20.70} + 8.0\%$$

$$= 6.0\% + 8.0\% = 14.0\%$$

Investors require a return of $r_s = 13.4\%$ on the stock.[16] However, because of flotation costs the company must earn *more* than 13.4 percent on the net funds obtained by selling stock if investors are to receive a 13.4 percent return on the money they put up. Specifically, if the firm earns 14 percent on funds obtained by issuing new stock, then earnings per share will remain at the previously expected level, the firm's expected dividend can be maintained, and, as a result, the price per share will not decline. If the firm earns less than 14 percent, then earnings, dividends, and growth will fall below expectations, causing the stock price to decline. If the firm earns more than 14 percent, the stock price will rise.

As we noted earlier, most analysts use the CAPM to estimate the cost of equity. Suppose the CAPM cost of equity for Axis is 13.8 percent. How could the analyst incorporate flotation costs? In the example above, application of the DCF methodology gives a cost of equity of 13.4 percent if flotation costs are ignored and a cost of equity of 14.0 percent if flotation costs are included. Therefore, flotation costs add 0.6 percentage point to the cost of equity (14.0 − 13.4 = 0.6). To incorporate flotation costs into the CAPM estimate, you would add the 0.6 percentage point to the 13.8 percent CAPM estimate, resulting in a 14.4 percent estimated cost of external equity. As an alternative, you could find the average of the CAPM, DCF, and bond-yield-plus-risk-premium costs of equity ignoring flotation costs, and then add to it the 0.6 percentage point due to flotation costs.

[16] If there were no flotation costs, $r_s = \frac{\$1.24}{\$23} + 8.0\% = 13.4\%$.

## CRSP Deciles Size Study - Data as of 12/31/2024

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.94% per year. These returns cover a period from January 1, 1988 through February 3, 2025. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations. Zacks may license the Zacks Mutual Fund rating provided herein to third parties, including but not limited to the issuer.

**BUSINESS:** AbbVie Inc. is a research-based biopharmaceutical company. It is engaged in the development, manufacture, commercialization and sale of innovative medicines and therapies worldwide. Its portfolio is focused in therapeutic areas of immunology, hematologic oncology, aesthetics, neuroscience and eye care. Top-grossing products include *Humira* (27% of 2023 sales), *Skyrizi* (14%), and *Botox* (11%). Created through spin off from Abbott Labs (1/13). Acquired Allergan (5/20). Has 50,000 employees. Off/dirs. own less than 1% of common stock; Vanguard, 9.1%; BlackRock, 8.1% (3/24 proxy). Chairman: Richard A. Gonzalez. CEO: Robert A. Michael. Inc: DE. Addr.: 1 North Waukegan Rd, North Chicago, IL 60064. Tel.: 847-932-7900. Internet: www.abbvie.com.

**AbbVie delivered solid third-quarter results.** The drugmaker reported adjusted earnings of $3.00 a share on sales of $14.46 billion, versus $2.95 on $13.92 billion in the comparable year-ago period. The improvement was driven by a combination of lower production costs and continued strong momentum in its newer immunology drugs *Skyrizi* (sales +51% year over year, to $3.2 billion) and *Rinvoq* (+45%, to $1.6 billion). These performance helped to mitigate further erosion in the company's aging *Humira* franchise (-37%, to $2.2 billion), largely reflecting increased competitive pressures in U.S. markets.

**We have raised our 2024 estimates.** AbbVie's third-quarter results surpassed consensus expectations on the back of stronger demand for *SkyRizi* and *Rinvoq*. Leadership responded by raising its full-year profit forecast for the third time in as many quarters, driven by higher projected sales of the aforementioned immunology standouts. The company now expects 2024 adjusted earnings in a range of $10.90-$10.94 a share (previously $10.67-$10.87) and boosted its total sales outlook by $500 million, to $56 billion.

**The 2025-2026 growth story remains centered on *SkyRizi* and *Rinvoq*.** Development of these assets has been critical in lightening the impact of biosimilar *Humira* in recent quarters. *Skyrizi* is now the company's best-selling product, while *Rinvoq* is #3 and poised to take over the #2 spot soon. AbbVie has also been active on the M&A front in an attempt to bolster its product pipeline for the long term. In February, it closed a $10 billion deal for oncology focused ImmunoGen, and in August it finalized a near-$9 billion purchase of Cerevel Therapeutics. Most recently, it acquired Aliada Pharmaceuticals for $1.4 billion, landing it control of a promising new Alzheimer's drug candidate.

**The stock holds a Below Average (4) rank for Timeliness.** ABBV pulled back sharply last month following disappointing trial results for schizophrenia drug emraclidine. The equity had been trading around all-time highs prior to the announcement, and is still showing a gain of around 12% in calendar 2024. At recent price levels, our projections suggest below average upside potential out to 2027-2029.

*Michael Ratty* *December 27, 2024*

**(A)** Diluted earnings (adjusted). Quarters may not sum due to rounding/change in share count. Excludes nonrecurring items: '13, (58¢); '14, ($2.22); '15, ($1.16); '16, ($1.19); '17, ($2.30); '18, ($4.25); '19, ($3.66); '20, ($7.84); '21, ($6.25); '22, ($7.14); '23, ($8.39). Next egs. report due early February. **(B)** Dividends historically paid in February, May, August, and November. ■ Dividend reinvestment plan available. **(C)** Includes intangibles. In '23: $87.9 billion, $49.78 a share. **(D)** In millions. **(E)** Completed Allergan merger (5/20).

**BUSINESS:** Abbott Laboratories discovers, develops, manufactures, and sells health care products worldwide. The company has four reportable segments: Medical Devices (45% of 2024 sales); Diagnostic Products (22%); Nutritional Products (20%); and Established Pharmaceutical Products (13%). Completed separation of branded pharmaceuticals business AbbVie (1/13). Completed sale of Abbott Medical Optics (2/17). Acquired St. Jude (1/17) and Alere (10/17). Has about 114,000 employees. Officers and directors own less than 1% of common stock; Vanguard Group, 9.0%; BlackRock, 7.7% (3/24 proxy). Chairman, President & Chief Executive Officer: Robert B. Ford. Inc.: IL. Addr.: 100 Abbott Park Road, Abbott Park, IL 60064. Tel.: 847-937-6100. Internet: www.abbott.com.

**Abbott Laboratories closed out 2024 on a positive note.** The healthcare giant reported fourth-quarter adjusted earnings of $1.34 a share on total sales of $10.97 billion, representing year-over-year gains of 13% and 7%, respectively. Indeed, these were the highest growth rates that the company delivered all year, indicating that Abbott had entered 2025 with a good amount of momentum. The December-period performance was highlighted by continued strength in the cornerstone Medical Devices business, where sales increased 14% on the back of healthy demand for its popular glucose monitoring system, *FreeStyle Libre*. Other products contributing to growth included *Navitor*, *TriClip*, *Amplatzer*, *Amulet*, and *AVEIR*.

**We are maintaining our 2025 adjusted earnings call of $5.15 a share.** The figure, which implies year-over-year growth of 10%, is right at the midpoint of leadership's recently announced $5.05-$5.25 forecast. We look for Abbott to continue to lean heavily on the success of *FreeStyle Libre* in 2025, as well as new product launches, to offset lingering weakness in China and expected currency headwinds.

**Foreign exchange pressures are likely to chew into results this year, particularly in the early going.** On its January conference call, the company forecasted a sales hit of 2.5% from a stronger dollar in 2025, including an unfavorable impact of 3.5% in the first quarter. Challenging market dynamics in China are also expected to take a toll on top-line comparisons. All in all, leadership projects organic sales growth to be in the range of 7.5%-8.5% for the full year.

**The stock holds an Average (3) rank for Timeliness.** ABT shares have gotten off to a good start in 2025, rising about 14% in value year to date. While the company's fourth-quarter results (released January 22nd) were a bit shy of consensus expectations, this appeared to be largely overshadowed by a generally positive 2025 outlook. At these price levels, capital appreciation potential over the 18-month and 2028-2030 time frames is below average when compared to the current *Value Line* medians. A favorable risk profile and decent dividend yield may appeal to defensive-minded income seekers.

*Michael Ratty* *February 7, 2025*

**(A)** Diluted earnings. Excludes nonrecurring gain/(losses): '10, ($1.21); '11, ($1.65); '12, ($1.27); '13, (39¢); '14, (79¢); '15, 77¢; '16, ($1.26); '17, ($2.23); '18, ($1.55); '19, ($1.18); '20, ($1.15); '21, ($1.27); '22, ($1.43); '23, ($1.18); '24, $2.97. **BUSINESS:** Assurant, Inc. provides specialized insurance products and related services primarily in North America, South America, and Europe. The company operates in three segments: Global Housing (homeowners insurance); Global Lifestlye (offers domestic and international extended service contracts); Corp. & Other. Exited the health insurance market (2016), sold its Employee Benefits segment (3/16) and Global Preneed business (8/21). Acq'd The Warranty Group (5/18). 13,600 emplys. 12/31/23. President and CEO: Keith W. Demmings. Offs./dirs. own less than 1% of com. stk.; The Vanguard Group, 13.1%; BlackRock, 10.4%; T.Rowe Price, 9.8% (4/24 proxy). Inc.: DE. Addrs.: 260 Interstate North Circle SE, Atlanta, GA 30339. Tel.: 770-763-1000. Internet:www.assurant.com.

**Last year likely shaped up to be a banner year for Assurant.** Granted, the reinsurer should have felt the effects of a higher-than-usual catastrophe loss impact in the December quarter from Hurricane Helene. However, our 2024 estimates call for a share-earnings advance of 16% aided by a 4% increase in revenues and a lower share count. Importantly, lender-placed business products play a critical role in the U.S. mortgage industry. We think healthy premiums should help offset some of the burden from higher claim-related insurance losses. This is especially true as the company has been expanding its property management business, with the rollout of IT innovations (*Assurant TechPro* and *Cover 360* platforms). Overall, management expects adjusted earnings to stem from strong growth across the smaller Global Housing unit and more modest growth within the core Global Lifestyle segment owing to continued investments being made across the connected living arm (more below). Indeed, favorable seasonal trends and the launch of the *iPhone 16* likely lifted the connected living arm in the final stanza of 2024.

**The story will likely play out in a similar fashion this year.** Our expectation for a rise in policy growth from higher placement rates and portfolio transitions across the Housing unit with recent wildfires that hit California on January 7th, as well as commercial momentum across the Lifestyle unit, ought to lift the top line 5%-10% in 2025. In particular, we expect moderating inflation, stabilizing loss ratios in the automotive sector, and investments in a new device care facility, that are expected to pay off down the line in the form of higher revenues and margins. We also expect the company to increase its presence in the homeowners sector, broaden its lineup of voluntary insurance coverage offerings, and improve its supply chain. Greater penetration into the Asia Pacific mobile protection market, should provide an added lift.

**The good-quality stock has moved up a notch in Timeliness, to 2 (Above Average).** Nevertheless, even with the recent dividend hike, the yield is supbar, and appreciation potential over the 2027-2029 period is limited.

*Oriatal J. Haiby* *January 31, 2025*

**(A)** Diluted earnings. Next earnings report due mid-February. Earnings may not sum due to changes in shares outstanding.
**(B)** Dividends historically paid in mid-March, June, September, and December.
**(C)** Includes intangibles. In 2023, $3175.9 million, $61.13 per share.

**BUSINESS:** Akamai Technologies, Inc. provides services for the delivery of content (video streaming) and business processes over the Internet. The company operates the world's largest and most widely used on-demand distributed computing platform, with more than 350,000 servers and approximately 1,200 networks around the world (as of 12/23). Acquired Cotendo, Inc., 3/12. Foreign customers accounted for about 48% of '23 revenues. Has approximately 9,800 employees. Officers and directors own 2.0% of the common stock (4/24 proxy). Chief Executive Officer: Tom Leighton. Chairman of the Board: Frederic V. Salerno. Incorporated: Delaware. Address: 145 Broadway, Cambridge, Massachusetts 02142. Telephone: 617-444-3000. Internet: www.akamai.com.

**Akamai Technologies recently completed the acquisition of certain assets from Edgio Inc., a floundering media firm.** After filing for bankruptcy in September, Edgio put up for auction nearly $400 million worth of assets. Akamai won the bid for the company's video streaming and web security services and completed the transaction subsequent to approval from the U.S. Bankruptcy Court. All told, once the assets and new clients are integrated, Akamai anticipates the deal to contribute roughly $100 million to the top line in 2025, and should eventually be accretive to earnings following near-term transition costs.

**Third-quarter results were somewhat of a mixed bag.** Sales of $1.005 billion came in on par with consensus expectations, driven by strong showings in the Security and Compute divisions. Meanwhile, earnings of $0.38 per share contracted sharply year over year. A combination of pressured operating margins and restructuring costs related to workforce reduction and redeployment efforts weighed on the result. In sum, we now look for modest top-line growth and flat share profits for 2024.

**Long-term business prospects remain bright, in our view.** Looking at the current year, sales ought to improve modestly year over year, to $4.125 billion. On the earnings front, absent further restructuring charges and a rebound in operating margins, our model suggests that healthy double-digit share-net expansion may well be in the cards. Further down the road, we think secular industry trends offer promise. Most notably, the rapidly evolving cyber security arena has aggressively expanded into nearly all aspects of life. Cyber criminals are threatening data from all angles, thus driving increased demand for cyber attack solutions and prevention. Lastly, prospects for a healthier macroeconomic backdrop in the years ahead should also be supportive, in terms of client spending.

**Akamai stock is ranked to mirror the broader market averages over the coming six to 12 months (Timeliness: 3).** That said, the equity boasts attractive price upside potential over the 18 month and 3- to 5-year time frames.

*Nicholas Patrikis* *January 3, 2025*

**(A)** Diluted earnings (GAAP). Quarterly earnings may not sum due to rounding or changes in share count. Next earnings report due early Feb.

**BUSINESS:** A.O. Smith Corp. is a leading manufacturer of residential and commercial water heaters, boilers. and water treatment products. Has two reportable segments: North America (75% of '23 sales); and Rest of World (25%), which primarily serves China, Europe, and India. Brands include A.O. Smith, GSW, Lochinvar, Reliance, and Takagi. As of 12/23, had approximately 12,000 employees and 27 wholly-owned and leased manufacturing facilities. Smith Family Voting Trust owns 96.9% of Class A shares; Officers & directors, 1.8% of regular common; Vanguard Group, 11.6% (2/24 proxy). Chairman & CEO: Kevin J. Wheeler. Incorporated: Delaware. Address: 11270 West Park Place, Milwaukee, WI 53224. Telephone: 414-359-4130. Internet: www.aosmith.com.

**A.O. Smith's earnings may have declined in 2024.** Indeed, in mid-October, management lowered its profit outlook for the maker of water heaters and water purification products, conceding that adjusted earnings will probably rise just 1%, to $3.85 a share, at best and slide roughly 3%, to $3.70 a share, in a worst-case scenario. By comparison, the Milwaukee-based company was previously targeting bottom-line growth of approximately 4%–8% and 2024 share profit of between $3.95 and $4.10.

**Business in China has apparently taken a turn for the worse.** On a local-currency basis, sales there are now seen falling 6%–8% in 2024, not only reversing 2023's decent 4% advance but also trailing leadership's late-July base-line assumption of flat sales and projected 3% top-line growth at best. As we understand it, the downward revision largely reflects a recent uptick in pricing and promotional pressure within the less-premium segments of A.O. Smith's product portfolio. More holistically, it speaks to China's generally weak economy, including its depressed housing market.

**A growing number of investors are questioning whether China should be part of A.O. Smith's long-term plans.** Given the sales volatility and the relatively low profitability of the company's business in China, a strategic review of regional operations doesn't seem off base to us. For his part, CEO Kevin Wheeler recently affirmed A.O. Smith's commitment to its three core markets—the U.S., India, and China. He also expressed cautious optimism that conditions could improve with the roll out of various economic stimulus plans by China. Among them are moves to increase credit access to stalled construction projects and a program that is enabling households to trade in older appliances for credits to buy new ones.

**Shares of A.O. Smith are now ranked 4 (Below Average) for relative year-ahead price performance.** At the recent quotation, they have decent long-term appreciation potential. The company's bread and butter is a stable U.S. market, driven by replacement water heater demand. Still, uncertainty surrounding China gives us pause.

**BUSINESS:** Air Products and Chemicals, Inc. supplies a variety of atmospheric (oxygen, nitrogen) and process (hydrogen, helium) gases to energy, industrial, technology, and healthcare customers worldwide. The company is the world's largest supplier of hydrogen, with leading positions serving the refinery hydrogen, semiconductor materials, and natural gas liquefaction markets. FY2023: R&D: .9% of sales; foreign business: 59% of sales. Has about 23000 employees. Vanguard Group owns 9.4% of shares out.; BlackRock, 8.0%; Capital Research, 6.4%; officers & directors, less than 1% (12/24 Proxy). Chairman, Pres. & CEO: Seifi Ghasemi. Inc.: DE. Addr.: 7201 Hamilton Blvd, Allentown, PA 18195. Telephone: 610-481-4911. Internet: www.airproducts.com.

**Shareholders were to select from alternative slates of directors at Air Products' annual virtual shareholder meeting on January 23rd.** As we discussed in our October report, two investment firms, Mantle Ridge and D.E. Shaw (DESCO), approached the board and executive management on succession planning and capital allocation. There were concerns CEO Seifi Ghasemi had little interest in ceding his position. Moreover, they viewed the company's planned large investments in blue and green hydrogen as unrelated to its core industrial gas business. The board met with both firms at length, to the apparent satisfaction of DESCO, which has withdrawn objections.

**Air Products has acted to ameliorate concerns.** The search for a successor had commenced late in the summer, and management is committed to ceasing additional investment in capacity until existing projects are 75% loaded. It seems these concerns have been addressed. Air Products is the world's largest producer of hydrogen and is working hard to facilitate the transition to green and blue hydrogen (produced by electrolysis and the reduction of natural gas, respectively) from petroleum powered transportation. The company has signed a 15-year agreement to supply green hydrogen to TotalEnergies' northern European oil refineries to avoid the creation of 700,000 tons of carbon dioxide each year. It is also awaiting permits for blue hydrogen production in Louisiana, and is negotiating with potential off-take partners. There is a profound need to decarbonize energy production and Air Products sees a path forward.

**Fiscal first-quarter results were likely fairly static.** Our sales estimate for the quarter is $2.96 billion, a bit below the previous year's $2.98 billion. Yet net income of $630 million, or $2.84 per diluted share, would be an improvement from the prior-year's $609.3 million, or $2.73 per share. While sales growth is governed by both volume and pricing, profitability is a function of execution, as the company understands, given its performance.

**Air Products shares are ranked 4 (Below Average) for Timeliness, though potential gains to 2027-2029 are surely of interest to some.**

**BUSINESS:** Booz Allen Hamilton Corp. provides management, technology consulting, and engineering services to the U.S. government, major corporations, institutions, and not-for-profit organizations. In fiscal 2023, 98% of revenues were derived from contracts where the end client was an agency or department of the U.S. government, with the Department of Veterans Affairs accounting for 13% of the top line. Has had contracts with the U.S. Army and Navy for more than 70 years. At 12/31/24, total backlog was $39.4 bill. Has about 35,900 employees. CEO & Pres.: Horacio Rozanski. Off./dir. own 1.6% of common stock; The Vanguard Group 10.2% (6/24 Proxy). Inc.: DE. Address: 8283 Greensboro Dr., McLean, VA 22102. Telephone: (703) 902-5000. Internet: www.boozallen.com.

**Booz Allen Hamilton stock is down nearly 30% since our last full-page report.** Most of the damage was done in November, with investors spooked by two events. The stock fell on post-Presidential election uncertainty about government spending on military and defense projects. Shareholders also were unnerved by reports of Booz Allen's strategic investment in Starfish Space, a satellite servicing company that specializes in satellite life extension and disposal services. Investors are worried about the potential financial impact of a joint venture in a relatively uncertain space sector. However, given the Trump Administration's focus on strengthening the nation's military capabilities and expanding its Space Force, we think these two events will ultimately prove prosperous for Booz Allen.

**The company continues to deliver strong results.** In the December quarter, Booz Allen posted adjusted earnings per share of $1.55. That figure exceeded both our and Wall Street's forecasts of around $1.50 and was up 10% from the previous-year period. The main catalyst was a healthy year-over-year top-line advance of 13.5%, with nearly all of the gain driven by organic revenue growth. The company is a leading provider of artificial intelligence (AI) services to the U.S. government. Booz Allen Hamilton, via in-house expertise and acquired businesses, also is playing a big role in providing the tools and services used to protect the United States from cyber-security attacks. We expect these two areas to be big profit-growth drivers for Booz Allen over the next three to five years. On point, the company's total backlog expanded to a record $39.4 billion in the fiscal third quarter and its overall client staff headcount climbed 6% from the year-earlier period. Based on this strong demand, we have raised our fiscal 2024 and 2025 earnings-per-share estimates. (Fiscal years end March 31st of the following calendar year.)

**We think the recent sharp pullback in price presents a golden buying opportunity for investors looking to gain a stake in this timely, good-quality stock.** This issue is now trading at a price-to-earnings multiple more in line with its historical norm.

**BUSINESS:** Balchem Corp. develops, manufactures, markets, and distributes specialty performance ingredients and products for the nutritional, food, pharmaceutical, animal health, medical device sterilization, plant nutrition, and industrial markets. Its operating segments are: Human Nutrition & Heath (58% of 2023 sales), Animal Nutrition & Health (26%), and Specialty Products (14%), Other (2%). International sales comprised 25% of 2023 sales. Has 1,302 employees. Off./dir. own 1.3% of stock; BlackRock, 15.4%; Vanguard, 11.7%; APG Asset Management, 9.0%; Wasatch Advisors, 5.9% (4/24 proxy). Inc.: MD. Chairman/President/CEO: Theodore L. Harris. Addr.: 52 Sunrise Park Road, New Hampton, NY 10958. Tel.: 845-326-5600. Internet: www.balchem.com.

**Balchem probably put in a solid performance for 2024.** Note: Full-year results were scheduled to be released shortly after we went to press with this report. Momentum at the company's Human Health & Nutrition and Specialty Products divisions likely underscored its success for the full year, more than offsetting softer results from its Animal Health & Nutrition segment. A favorable portfolio mix and ongoing sales growth likely bolstered the top line, while lower input and operating costs aided margins and helped boost profits.

**Business prospects for the near term are encouraging.** Higher sales within the minerals and nutrients sector and food and beverage markets should continue to lift totals at Balchem's Human Health & Nutrition arm. And the company will probably exhibit strength in the plant nutrition and performance gases businesses, supporting results at its Specialty Products arm. Better sales volume from the ruminant species market ought to drive the Animal Health & Nutrition segment, even if the monogastric species category remains a soft spot. Cost controls and productivity improvements should also serve to counter higher input and operating expenses. In all, earnings per share will probably advance 5%-10% this year. Looking out to 2026, the bottom lines ought to grow between 10% and 15%. The top line may well climb at a 3%-5% clip both this year and next.

**The company has been expanding its reach.** Product innovation will probably remain a key priority, and Balchem has launched several new offerings over the past few quarters. The company has also grown nicely with the help of tuck-in acquisitions, and management should continue to eye accretive asset purchases.

**This good-quality stock seems fairly valued at the recent quotation.** These shares are neutrally ranked for year-ahead relative price performance. Moreover, the issue offers below-average capital appreciation potential over the 18-month and 3- to 5-year spans. BCPC boasts strong scores for Price Stability, Financial Strength, and Safety. And conservative investors might like the equity's steady, albeit not spectacular, total returns.

*Orly Seidman* *February 21, 2025*

**(A)** Based on diluted shares. Next earnings report due late April. Quarterly EPS may not sum due to rounding.
**(B)** Annual dividend, historically paid early Jan.
**(C)** Includes intangibles. In 2023: $970.1 mill., $30.10/sh.
**(D)** In millions.

**BUSINESS:** Becton, Dickinson & Co. operates in three segments: Medical (50% of FY'24 sales) manufactures medical devices which include Medication Delivery and Pharmaceutical Systems; Life Sciences (26%) includes Integrated Diagnostic Solutions and Biosciences; Interventional (24%) includes Surgery, Peripheral Intervention and Urology and Critical Care. '24 R&D: $1190 mill, 5.9% of sales. Acquired C.R Bard 12/17. Divested Diabetes Care business 3/22. Employs about 74,000. Officers & directors own less than 1.0% of comm. stock; Vanguard Group, 9.2%; BlackRock, 7.7%. (12/24 proxy). Chairman, CEO and President: Thomas E. Polen. Inc.: New Jersey. Address: One Becton Drive, Franklin Lakes, NJ 07417. Telephone: 201-847-6800. Internet: www.bd.com.

**We are forecasting decent results for Becton, Dickinson (BD) in fiscal 2025.** (Year ends September 30th). Our top-line estimate stands at $22.0 billion, which would represent an advance of 9% year over year. Organic growth will be closer to 4%, however, as a full year of the Edwards Lifesciences Critical Care unit (acquired last September) will be included. We are anticipating moderate growth across all of BD's operating segments. In BD Medical, the company's largest division, the medication management solutions business has been seeing nice gains. The BD Interventional unit has also been doing well, thanks in part to solid performance from its peripheral vascular disease portfolio. Meanwhile, our bottom-line estimate of $14.40 per share would represent a 10% bump year over year. Margins should be in line with fiscal 2024.

**We are calling for solid growth for fiscal 2026 and beyond.** We are introducing our respective top- and bottom-line estimates for next year at $23.0 billion and $15.75 per share. Sales should continue to rise nicely in the Interventional unit and margins should tick up a bit thanks to recently implemented efficiency measures. The long-term outlook is also sound, as we are forecasting mid-single-digit sales and earnings gains out to late decade. BD has been proficient at keeping the pipeline fresh, and has over 25 new offerings slated for fiscal 2025, including the next-generation *HemoSphere Alta Monitor* and *FACSDiscover Analyzer*. We expect the company will continue to be active on the acquisition front and has ample financial resources to complete major deals.

**These shares are ranked 3 (Average) for Timeliness.** The stock has advanced 4% in value since our last full-page review in November, and is ranked to mirror the broader market averages in the next six to 12 months. Although capital appreciation potential out to 2028-2030 does not stand out, it is more attractive when considering the low risks here. BDX remains a blue chip holding for risk-averse investors seeking exposure to the medical technology space. Too, the company recently raised the dividend payout by nearly 10%, although the yield remains below the *Value Line* median.

*Kevin P. O'Sullivan* *February 7, 2025*

**(A)** Fiscal years end September 30th.

**BUSINESS:** BWX Technologies has two reporting segments: Government (propulsion, materials, fuel, components, services, TRISO technology); Commercial (medicine, environmental, disposal, laboratory, research, advanced technologies). BWX derives a significant portion of its revenues and earnings from the U.S. Government (82% of 2024 sales & 84% of operating income). Off & Dir own less than 1% of common stock; Vanguard, 9.5%; William Blair Investment Management, 5.1%; Wellington Management, 5.3%; BlackRock, 10.3%; (3/24 Proxy). Has about 6,115 employees. President & CEO: Rex D. Geveden. Executive Chairman: John A. Fees. Inc.: DE. Address: 800 Main Street, 4th Fl., Lynchburg, VA 24504. Tel.: (434) 522-3800. Internet: www.bwxt.com.

**In late January, BWX Technologies' stock price ended its long bull run.** The equity had been sawtoothing upward since May, 2022. But news that Chinese AI startup DeepSeek could operate much more cheaply and efficiently than U.S. AI companies sent the stock down over 10%. The same type of fall occurred to many other domestic energy and AI stocks. We think the drop was overblown. We don't doubt DeepSeek's viability, but we question its incredibly low running costs. Still, even if partially true, ultimately, the more AI companies there are in business, the more energy will be needed to serve them. Consequently, we think that this source of energy demand will not be lacking for BWX.

**The recent price drop presents an opportunity for the long-term investor.** The fundamental positive investment thesis remains the same. Despite temporary setbacks, global clean energy adoption should continue. More energy of all stripes will be required to power an AI-spearheaded future. BWXT is the only company that gives investors undiluted exposure to the nuclear power industry. It can also easily supply the components necessary to make small modular nuclear reactors (SMRs), which are cheaper and quicker to build than traditional ones, and are being ordered by Amazon and Google to power their AI endeavors. Growing potential worldwide conflicts between a Russia/China/North Korea/Iran axis and western nations will require U.S. and Canadian naval power (nuclear-powered aircraft carriers and submarines), which falls right into BWXT's ballywick.

**Meanwhile, the company has been expanding its base business.** Last November, it agreed to buy L-3Harris Technologies' Aerojet Ordnance Tennessee's business. It also hammered out contracts with the NNSA, and partnered with NASA and Lockheed Martin (LMT) to supply fuel and components for spaceships to Mars. And recently, it won contracts worth just under $700 million to support Ontario Power Generation's nuclear projects, and to build an SMR for the Pickering Life extension program. As a disclaimer, patient investors should expect setbacks in the form of cancellations and deferments.

**BUSINESS:** CACI International Inc is a provider of expertise and technology to government enterprise and mission customers, supporting national security missions and government modernization/transformation in the intelligence, defense, and federal civilian sectors. Fiscal 2024 revenue by customer type: Department of Defense (74%), Federal Civilian Agencies (21%) and Commercial and other (5%). Has about 24,000 employees. The Vanguard Group, Inc. owns 10.0% of common stock; BlackRock, Inc., 9.4%; Morgan Stanley, 6.5%; FMR LLC, 5.9%; officers and directors, 1.4% (9/24 proxy). President & CEO: John S. Mengucci. Incorporated: Delaware. Address: 12021 Sunset Hills Road, Reston, VA 20190. Tel.: 703-841-7800. Internet: www.caci.com.

**Despite posting solid sales and earnings growth, CACI International shares have fallen sharply since our last report.** In the recently reported second fiscal quarter (years end June 30th), revenues increased 14.5% on a reported basis to record levels. Excluding acquisitions, organic top-line growth was a healthy 8.1%. Earnings also jumped 30%. Guidance for the fiscal year was also raised slightly. However, the shares have fallen 30% in the past three months. Investors are concerned about what the new presidential administration will do to the government spending environment. In addition, there may be a risk that contract terms shift to reflect commercial fixed cost models, rather than cost plus a profit margin that comprise the current portfolio. Such a change would greatly change the risk in the business, especially considering the inflationary environment that was just experienced. Many of the programs that CACI works on are multiyear in length and predicting costs may be difficult over such a span.

**The December quarter wasn't without blemishes.** First, the bottom line has fallen sequentially for the past two quarters. We attribute this more to merger integration than any deterioration operationally. Furthermore, the results were slightly below our estimate of $5.00 per share. Management also shifted the guidance for the remainder of the fiscal year to more back-end loaded. In fact, we now expect another sequential drop in earnings for the March quarter compared to our previous expectation for growth. Leadership is confident of a sharp rebound in the final June quarter.

**The backlog fell slightly.** After a very strong book-to-bill to start the year in the September quarter, the figure fell to .7 in the December period. The backlog now stands at $32 billion, which is about four years of revenues at the current rate. Contract wins fluctuate quarter to quarter and are not too concerning. Over the past 12 months, the backlog is up 18%.

**These timely shares may interest intrepid investors.** There is risk, with 94% of revenues coming from the federal government, but from the current quotation, return potential looks attractive out to 2028-2030.

*Tom Mulle, CFA* *February 14, 2025*

**(A)** Fiscal year ends June 30th.
**(B)** Diluted earnings. Includes stock option expense. Excludes a nonrecurring gain of $4.09 in '18. May not sum to total due to rounding.
Next quarterly earnings report due late April.
**(C)** Includes intangibles. In fiscal 2024: $4.6 billion, or $207.58/share.
**(D)** In millions.

**BUSINESS:** Casey's General Stores operates convenience stores in sixteen Midwestern states, primarily in Iowa, Missouri, and Illinois. Stores sell gasoline and food (including pizza, doughnuts, hamburgers, etc.), beer and other beverages, and non-food items. In fiscal 2023, Casey's had 2,658 company-owned locations (vs 2,521 in 2022); gasoline accounted for 63% of net sales (vs 67% in 2022); nonfuel retail sales generated 35% of revenue, 66% of gross profit over past three years. Has 20,935 full-time employees, 24,424 part time. Off. & Dir. own less than 1% of common stock out. (7/24 Proxy). Chair.: H. Lynn Horak. Pres. & CEO: Darren M. Rebelez. Incorporated: IA. Address: One Convenience Blvd., Ankeny, IA 50021. Tel.: 515-965-6100. Internet: www.caseys.com.

**Casey's reported a mixed performance in the October fiscal quarter.** (Year ends April 30th.) Sales of $3.95 billion declined 3% year over year and missed our target of $4.1 billion. This was the first sales decline in three quarters. On the other hand, earnings per share grew more than 14% to reach $4.85, exceeding our $4.40 call. Gross profit expanded 8%, driven by a 9% increase in total inside sales. Prepared food and beverages, grocery, and general merchandise all increased significantly. Fuel sales declined due to lower prices, but volumes were up by 6%, outperforming peers. This reflects the business' market strength, as its complementary mix of in store retail and fuel sales is driving traffic to Casey's locations.

**Results are up against challenging comparisons in the back half of fiscal 2024.** The company's profit growth over the past two years makes incremental gains even more significant. Full-year share profits grew 31% in fiscal 2022 and 13% in 2023. We have forecasted full-year profit growth of 9%, and earnings per share through the first half have increased more than 10%. We don't see much room for margins to expand further, which would limit comparisons in the back half. Additionally, Casey's acquisition of Fikes will likely add to administrative costs and pressure profits over the near term. However, we expect profit growth to accelerate in fiscal 2025.

**Casey's closed on the acquisition of Fikes Wholesale.** Fikes, the owner of CEFCO Convenience Stores, brings about 150 stores in Texas, and 50 more stores across Alabama, Mississippi, and Florida. It should add roughly $200 million of inside sales, and 200 million gallons of fuel volumes. The acquisition brings Casey's store count to around 2,900.

**Ongoing store-count expansion is likely to drive long-term growth.** We expect the company's core business model to be fairly steady, with most of Casey's expansion potential coming from new stores and further strategic acquisitions.

**The stock is fairly expensive after a strong performance in 2024.** It now trades near the low end of our 3- to 5-year projections, creating limited appeal here.

*Earl B. Humes* *January 17, 2025*

**(A)** Fiscal year ends April 30th of the following calendar year. Sales figures exclude royalty income and the revenues from franchised stores.
**(B)** Diluted egs. Excludes nonrecurring gain/(loss): '17, $4.61. Next earnings report due early March.
**(C)** Dividends historically paid early February, May, August, and November.
**(D)** In millions.
**(E)** Includes only company-owned stores.

**BUSINESS:** Chemed Corporation operates two wholly owned subsidiaries: VITAS Healthcare Corp. (58% of '23 sales) and Roto-Rooter (42%). VITAS provides end-of-life care in about 170 locations in 16 states and the District of Columbia. Over 95% of sales are derived from Medicare/Medicaid. Roto-Rooter, through company-owned and independent franchise operations, provides plumbing, drain cleaning, and water restoration services. Sold Service America, 12/04. Has 15,087 employees. Offs. & dirs. own 3.3% of stock; Vanguard, 11.3%; BlackRock, 9.4% (4/24 proxy). Chrmn.: George J. Walsh III. Pres. and CEO: Kevin J. McNamara. Incorporated: DE. Addr.: 255 East Fifth Street, Suite 2600, Cincinnati, OH 45202. Tel.: 513-762-6690. Internet: www.chemed.com.

**Chemed's September-quarter financials fell short of our revenue and earnings targets.** The top line missed our estimate by about $10 million, while share earnings were a dime below what we were looking for.

**From an operations perspective, the song remains the same.** That said, the company is seeing strong results from its VITAS Healthcare arm, and struggling when its come to the Roto-Rooter side of the portfolio. Digging deeper, demand has been on the rise for VITAS' end-of-life care, and bolt-on acquisitions to this segment are pitching in quickly once assimilated into the fold. This branch saw net patient revenues spike more than 17% year over year, powered by a 15.5% increase in the average daily census. Conversely, Roto-Rooter's revenues dipped nearly 7% year over year and the decline was broad-based. Both the commercial and residential service lines were off from year-earlier tallies, with plumbing and excavation activity coming in below both our and Wall Street's expectations. In turn, we are slashing our 2024 headline figures by $10 million and $0.50 a share, respectively. These numbers now sit at $2.43 billion and $23.10.

**The current belief is that VITAS can spark growth for 2025.** We simply do not see a catalyst on the Roto-Rooter front, as that division did not perform well even during periods of increased poor weather and catastrophic storms. Still, the pandemic painted nursing homes in a bleak way, and since then, end-of-life care has been thriving. VITAS should continue to grow its top line at a handsome rate, cushioned by the purchase of Covenant Health's hospice assets. With that in mind, we think revenues can reach $2.6 billion, translating to share earnings in the vicinity of $24.90. A strong, debt-free balance sheet gives management levers to pull if it seeks to make another move of the bolt-on variety.

**We are not recommending these top-quality shares at recent price points.** CHE is neutrally ranked for year-ahead relative price performance. Additionally, capital appreciation potential three to five years hence is subpar. The small yield is best viewed as a sweetener.

*Erik M. Manning* *January 3, 2025*

**(A)** Diluted earnings. Excl. nonrecurring & disc. ops.: '17, ($2.57); '18, 30¢; '19, (64¢); '20, $1.40; '21, ($2.50); '22, ($3.23); '23, ($3.52). Quarterly figures may not sum to total due to rounding. Next earnings report due early March.
**(B)** Div'ds historically paid in early March, June, Sept. & Dec. ■ Div'd reinvest. plan avail.
**(C)** In millions.

**BUSINESS:** Check Point Software Technologies Ltd. develops, markets, and supports Internet security solutions, including firewall and virtual private networking solutions. The NGX platform delivers unified security architecture for perimeter, internal, web, and endpoint security solutions that protect business communications, offers resources for corporate networks and applications, remote employees, and branch offices. Employs 6,450. Officers and directors own 25.1% of common stock; Massachusetts Financial Services, 6.3% (6/24 proxy). CEO: Nadav Zafrir. Inc: DE. Address: 5 Shlomo Kaplan St., Tel Aviv, Israel, 6789159. Telephone: 972-3-753-4555. U.S. Address: 959 Skyway Rd., Suite 300, San Carlos, CA 94070 Telephone: 650-628-2000. Internet: www.checkpoint.com.

**Check Point Software's top line is trending higher.** Revenues have increased, thanks to a surge in demand for the company's *Infinity* platform and *Harmony Email & Collaboration* security solution. The recently completed acquisition of Cyberint Technologies Ltd., a provider of external risk management solutions, has also provided a boost. We believe the top line expanded 6%, to $2.56 billion, in 2024. A more moderate 4% gain, to $2.66 billion, seems to be in the cards for 2025, assuming demand continues to grow.

**Management has announced the launch of a new product, the *Check Point Quantum Firewall Software R82.*** As organizations face a 75% surge in cyber-attacks worldwide, *R82* delivers new AI (artificial intelligence)-powered engines to protect against zero-day threats. These threats include phishing, malware, and domain name system (DNS) exploits. *R82* provides over 50 new capabilities for enterprise customers. Management has also announced additional innovations for the *Infinity* platform.

**Despite facing several obstacles, the bottom line should advance.** Research & development and sales & marketing expenses have increased because of a spike in cloud infrastructure and workforce-related outlays. General & administrative expenditures have risen due to higher insurance and legal costs. On a more upbeat note, operating expenses are declining, as a percentage of sales. Share earnings probably improved 8%, to $9.10, in 2024. The bottom line ought to step up by a stronger 11%, to $10.10 a share, this year.

**Since our October report, this stock's Timeliness rank has dropped one notch, to 2 (Above Average).** Nonetheless, we are optimistic about Check Point's long-term prospects. Companies and governments are sure to bolster their cyber security spending, as new threats arise. In September, the Federal Reserve began to cut interest rates. This ought to help to support economic growth. Share-price appreciation potential to 2027-2029 is attractive. This top-quality issue (Safety:1) may be appealing to conservative investors seeking a stability component to their portfolios.

*Keith R. Foldesi* *January 10, 2025*

**(A)** Diluted earnings. Next earnings report due early February. Earnings may not sum to total due to rounding.

**(B)** Includes intangibles. In 2023: $1748.5 mill., roughly $14.47 a share.

**(C)** In millions.

**BUSINESS:** Cencora (formerly AmerisourceBergen) was created by the merger of AmeriSource Health and Bergen Brunswig. The company is a full-service wholesale distributor of pharmaceutical products and related health-care services in the U.S. The company changed its name to Cencora in Aug., '23. It operates in two segments: U.S. Healthcare Solutions and International Healthcare Solutions. Acq'd. Alliance Healthcare in June '21; PharmaLax Holding GmbH, January, '23. 2023 deprec. rate: 8.8%. Vanguard owns 10.6% of common; Walgreens Boots Alliance, 10.3% (1/25 Proxy). Has about 46,000 employees. Inc.: DE. President & CEO: Steven H. Collis. Addr.: 1 West First Avenue, Conshohocken, PA 19428. Tel.: 610-727-7000. Internet: www.cencora.com

**Cencora looks poised to set record top- and bottom-line results in 2025.** (The company was slated to release first-quarter financials shortly after this Issue went to press.) We estimate that it posted December-period earnings of $3.55 per share, well above the previous year's tally, on a 9% year over year rise in sales. The company will likely continue to benefit from elevated demand for its extensive line of products through 2025 and beyond as a global pharmaceutical service leader. Volume growth in GLP-1 weight loss medicine, as well as a favorable sales mix and reduced interest expense should also remain strong throughout this year. Accordingly, we have raised our fiscal 2025 profit estimate by $0.35 a share, implying growth of 10% to reflect an improved operating environment, resilient consumer spending, and drug making volume growth.

**We have introduced our 2026 top- and bottom-line estimates.** We expect Cencora to post profits of $16.50 a share on revenues of $340 billion, representing 9% and 6% growth from our 2025 projections. Cencora is well positioned in the specialty market, which creates opportunities to partner with those early in the drug development process through its consulting arm (AmerisourceBergen). But, the main drivers should remain strong growth in sales to physician practices and health systems, along with volume growth in GLP-1s and other drugs.

**These shares are up nicely in value since our early November report.** The stock is up nearly 10% over that interim as buyers take notice of the company's strong prospects and dedication to boosting shareholder value. Notably, Cencora recently raised its quarterly dividend by 8%, to $0.55 a share.

**This issue is best suited for accounts with a near-term investment horizon.** The stock is ranked 1 (Highest), making it a strong selection for the year ahead. After rolling out another year to 2028-2030, intermediate- and long-term capital appreciation potential is decent. We look for the stock to trade between $285-$390 over that interim. Plus, income-oriented investors should note Cencora has raised its dividend for 21 consecutive years.

*Zachary J. Hodgkinson* *February 7, 2025*

**(A)** Fiscal year ends Sept. 30th. **(B)** Diluted earnings. Excludes n/r (losses)/gains: '10, $0.06. Next egs. report due early May. EPS may not tally due to rounding.

**(C)** Dividend historically paid in early March, June, September, and Dec. **(D)** In millions.

**BUSINESS:** CSG Systems International, Inc. provides business support solutions and services to the majority of the global communications service providers, including Comcast, DISH, Charter, and AT&T, among many others. Broadband/Cable/Satellite (51% of '23 revenues); Telecommunications (21%); Other (28%). Acquired U.K-based Intec Telecom, 11/10. Has about 5,700 employees. R&D spending: 12% of 2023 revenues. The Vanguard Group, Inc owns 13.1% of common stock; BlackRock, Inc., 17.3%; Officers & directors, 3.1% (4/24 proxy). Incorporated: Delaware. Chairman: Ron Cooper. President & CEO: Brian Shepherd. Address: 6175 S. Willow Drive, 10th Floor, Greenwood Village, CO 80111. Telephone: 303-200-2000. Internet: www.csgi.com.

**CSG Systems International probably registered decent top- and bottom-line growth in 2024.** Third-quarter revenue and earnings results came in slightly below consensus expectations, as challenging macroeconomic conditions likely weighed on consumer IT spending budgets. However, we think the company wrapped up the year on a strong note in the December period. Further, it appears that global communications service providers may well be poised to reopen the purse strings. Moreover, operating costs, namely restructuring expenses, are apt to continue to subside from here. All in all, we think CSG Systems posted revenues of $1.21 billion and earnings of $2.75 per share last year. For 2025, our current top- and bottom-line estimates suggest that healthy double-digit year-over-year advances are in the cards.

**Shareholder-friendly policies ought to remain in place, but the balance sheet is worth keeping an eye on.** First, the company repurchased roughly $15 million worth of stock in the third quarter of 2024, and the board of directors intends to allocate an additional $100 million in total shareholder returns in 2025. Note that this figure includes dividend distributions. To that end, we think an increase to the quarterly dividend payment is imminent. That said, the company has taken on some debt in recent years, and the capital structure is nearly two-thirds debt at the moment. Cash reserves are also depleted.

**CSG Systems is well positioned for the long haul, in our view.** Our sanguine stance is underpinned by prospects for a healthier macroeconomic landscape further out, which ought to support greater customer IT spending. Moreover, demand for more-efficient cloud, data, and business support solutions from cable/satellite and telecommunications providers should also drive revenue growth over the pull to late decade.

**CSG Systems shares hold some investment appeal at this juncture.** The stock is favorably ranked (2) for Timeliness, and is a solid selection for subscribers with a short-term horizon. Meanwhile, total return potential out to 2027-2029 is attractive. Thus, buy-and-hold accounts can find something to like here, as well.

*Nicholas Patrikis* *January 31, 2025*

On September 30, 2015, Capital Southwest spun off its industrial subdidiaries to form a company called CSW Industrials. On November 15, 2015, the company became an independent publicly-traded entity when it issued 15 million shares to the public at $35.20 a share. The underwriting syndicate included BoFA Merril Lynch, Wells Fargo, and Citibank. The stock trades on the NASDAQ under the symbol CSWI.

**BUSINESS:** CSW Industrials, Inc., is a diversified industrial holding company. It has three business segments: Contractor Solutions (67% of fiscal 2023 sales and 77% of operating income), Specialized Reliability (19% and 14%), and Engineered Building (14% and 9%). Serves the following markets; HVAC, refrigeration, coatings and sealants, railroad, industrial, plumbing, building safety, energy, mining, and specialty lubricants. CSW has about 2,400 employees. Incorp.: DE. Off. & Dir. own 1.4% of stock; T. Rowe Price, 7.3%; Neuberger Berman, 7.1%; BlackRock, 7.3%; Vanguard, 5.6% (7/24 Proxy). C.E.O.: Joseph B. Armes. Address: 5420 Lyndon B. Johnson Freeway, Ste. 500, Dallas, TX 75240. Tel.: (214) 884-3777. Internet: www. cswindustrials.com.

**We hope our readers took heed of the advice we gave them about CSW Industrials stock in our mid-December report.** In that missive, we told investors to take some profits off the table because we thought that the price of the equity was abnormally high. The issue always sells at a premium, but at that time, it was selling at a multiple of almost 50 times next 12-month earnings. Since that report, the stock has fallen over 20%.

**What happened?** To start with, many institutional investors did take some profits in order to make their year-end portfolios look attractive to their clients. Second, although fiscal third-quarter income grew 11%, share net only rose a penny, to $1.60, due to a 7% dilution of the meager share base (shares outstanding increased 7.7% to 16.8 million). Third, the sales outlook for the company has declined due to anxieties regarding potential and actual tariffs on imports that CSW's clients need.

**We are scaling back our sales and earnings estimates for the next few quarters.** This is due to the aforementioned tariff pressures, as well as the fact that CSW is a relatively small player in what will probably become an increasingly competitive sector. The company will be feeling more selling price pressures. Also, although there is a great need for it, new home building activity is becoming scarce, especially for affordable starter homes. This will probably mean that existing home sales will be moribund. All this is expected to reduce demand for CSW's plumbing, electrical, construction, and HVAC/R supplies emanating from its flagship Contractor Solutions division (67% of fiscal 2023 sales).

**We don't advise that readers take a new position in this stock.** The issue is already trading within our 3- to 5-year Target Price Range. Don't forget that the average P/E multiple for this segment of the construction business is 22.5. Existing shareholders may want to think about temporarily cycling out of this stock and entering the value and defensive sectors. Consumer services may also be a sphere worth considering. We look for the company to use more long-term debt and cash flow (rather than equity) to help fund minor add-on acquisitions.

*Jeremy J. Butler* *March 14, 2025*

**BUSINESS:** CVS Health Corp. is the nation's foremost integrated health-care services provider, combining a leading pharmacy benefit manager and a leading health insurer with the U.S.'s largest pharmacy chain (8,060 locations). It fills or manages 4 bill. prescriptions per year via its Pharmacy & Consumer Wellness (34% of '24 revenue before intersegment eliminations) and Health Services (47%) segments. The Health Care Benefits segment (35%) covered 27.1 million medical members. Acq'd Caremark in 11/06 and Aetna in 11/18. Has roughly 300,000 empl. Off./Dir. own less than 1.0% of common stock; Vanguard, 8.9%; BlackRock, 7.4% (4/24 proxy). CEO: Karen S. Lynch. Inc.: DE. Addr: One CVS Drive, Woonsocket, RI 02895. Telephone: 401-765-1500. Internet: www.cvs.com.

**CVS Health shares rose by more than 15% since we went to press three months ago.** On February 12th, the company posted December-period revenue growth of 4.2% year over year, to $97.7 billion, beating the Wall Street consensus estimate by $826 million. Share earnings declined some 44%, to $1.19, versus the consensus forecast of $0.92. Management provided its 2025 adjusted earnings-per-share forecast of $5.75-$6.00, reflecting a 6%-11% gain from 2024's $5.42. That's partly thanks to improvements in Aetna's Medicare Advantage margins, with management expecting a 100-basis-point decline in the medical benefits ratio (MBR) to 91.5%. This is especially encouraging given the increased healthcare utilization by its Medicare Advantage (MA) members and higher acuity among its Medicaid members. CVS' multiyear $2 billion cost efficiency efforts should continue to contribute to the earnings gains. Investors, happy with the fourth quarter's outperformance and management's confidence, drove the share price up more than 20% over the next two days.

**Management provided more specifics about the performance of each segment.** Pharmacy & Consumer Wellness' margins should benefit from a new "cost-plus" model for drug pricing. But the segment's revenue may continue to be negatively impacted by pharmacy reimbursement pressures and front-store (non-script) sales weakness. Health Benefits' coverage adjustments will likely result in the individual exchange (commercial) membership losses and a high-single-digit reduction in MA membership from year-end 2024. Those factors should be outweighed by its Medicare Advantage program changes and growth in other products and yield, as well as modest growth in segment revenues. Medicaid rate updates and improvements in the Star (quality) ratings for its MA health plans ought to benefit margins. Health Services revenues are expected to grow by more than 6%, as the loss of a major client will have lapped and the Caremark pharmacy benefit management unit attracts more business.

**CVS shares are timely for the year ahead and possess worthwhile 18-month upside potential.**

**BUSINESS:** Quest Diagnostics provides diagnostic testing, information, and services to patients, physicians, hospitals, insurers, employers, government agencies, and other commercial clinical labs. It operates a network of patient-service centers and principal labs, and phlebotomists in physicians offices. Offers routine tests, anatomic pathology services, and central laboratory testing performed with clinical research trials. Annual patient volume approximates one-third of the U.S. adult population. Has 48,000 employees. Vanguard owns 12.1% of common; BlackRock, 9.4%; offs. & dirs. own less than 1.0% (4/24 proxy). Chairman and CEO: James E. Davis. Inc.: DE. Addr.: 500 Plaza Drive, Secaucus, New Jersey 07094. Tel.: 973-520-2700. Internet: www.questdiagnostics.com.

**Quest Diagnostics' in-house outlook for 2025 calls for revenues of $10.70 billion-$10.85 billion with adjusted share earnings in a band of $9.55 to $9.80.** Our estimates for a top line of $10.78 billion and earnings of $9.70 a share fall within these parameters and represent year-over-year gains of 9% and 8%, respectively.

**The highlight of 2024 was the LifeLabs acquisition, which is expected to start contributing in earnest this year.** Subscribers will recall that Quest paid $1 billion to buy Canada's leading provider of laboratory diagnostic information and digital health connectivity systems. We look for the marriage to flourish on many fronts, as each party can help with the shortcomings of the other. LifeLabs, continuing on as is, will have greater access to specialized testing, while online scheduling and processing should improve at the purchaser. Separately, DGX has expanded its health plan access to over 90% of its in-network lives and made moves to broaden its advanced diagnostics portfolio. All these factors have the company set up to thrive this year.

**The capital allocation plan over the next couple of years is very cut and dry.** Funds are going to be primarily used for merger & acquisition activity whenever leadership sees a good fit. Secondly, it was made clear that capital expenditures are ramping up in 2025 to near the $500 million mark. Lastly, a 6.7% dividend hike starting with the April stipend ($0.80) shows a commitment to returning money to shareholders and gives it a leg up in the investment world to its duopoly partner, Labcorp. That competitor's yield lags DGX's by a noticeable margin, and it has yet to raise its quarterly payout since its 2022 introduction, though the full 2025 plan has not been laid out yet.

**Quest Diagnostics shares are good quality (Safety: 2), but investment appeal is minimal.** For starters, the equity is neutrally ranked for year-ahead relative price performance. Also, the stock's quotation is trading near the bottom rung of our Target Price Range out to 2028-2030, thus appreciation potential is below average. Too, the yield may have Labcorp beat, but it is still a tick below our median.

*Erik M. Manning* *February 28, 2025*

**(A)** Diluted earnings. Excludes nonrecurring: '11, d$1.61; '12, d8¢; '13, $1.58; '17, 17¢; '18, $1.02; '19, 43¢; '20, d71¢; '21, $1.31; '22, $1.98; '23, d$1.22. Excludes disc. operations gain: '19, 15¢. Quarterly figures may not sum due to rounding. Next earnings report due late April.
**(B)** Dividends historically paid mid-January, April, July, October.

**BUSINESS:** Danaher Corp. is a global science and technology innovator committed to accelerating the power of science and technology to improve human health. The company uses a growth-via-acquisition strategy and is constituted of 15 operating companies divided into three segments: Biotechnology, Life Sciences, and Diagnostics. In 2023, acquired Abcam plc for $5.6 billion. Made 7 acquisitions in 2022 ($582 million); 11 in 2021, $1.3 billion; 1 in 2020 (GE's Biopharma unit, $21 billion. Foreign sales were 60% of '23 revenues. Offs. and dirs. own 10.9% of common; Vanguard, 7.6%; BlackRock, 6.9% (3/24 Proxy). CEO: Rainer M. Blair. Inc.: DE. Addr.: 2200 Pennsylvania Ave., N.W., Suite 800W, Wash., D.C. 20037-1701. Tel.: 202-828-0850. Web: www.danaher.com.

**Danaher had an underwhelming finish to last year.** While December-period revenues exceeded expectations by $100 million, they rose a modest 2%, year over year. The medical technology company disappointed on the bottom line, too. GAAP earnings per share (which is the metric we use) came in flat, falling short of our call by some $0.20; on an adjusted basis, share profit of $2.14 missed the consensus by $0.03. The Life Sciences and Biotechnology segments posted solid top-line gains, but were offset by a decline in the Diagnostics category. Even so, comparisons for full-year 2024 were unspectacular, with revenues flat and earnings per share down.

**While we expect some improvement in the business, visibility remains hazy at this point.** We recall that Danaher completed the separation of its environmental and applied solutions operations (known as Veralto) over a year ago. Despite a few bright spots within the existing business, demand has remained sluggish, reflecting weak funding, which has essentially forced customers to reprioritize drug-development activities. The company is forecasting a decline in core revenues in the initial quarter of 2025, but sees growth of 3% for the year. For our part, we've tempered our 2025 revenue estimate (from $25.0 billion), but are keeping our share-earnings call unchanged. We see profits climbing higher, as post-spinoff operations get on a steadier footing.

**The horizon looks brighter further down the road.** Given its reconfigured product portfolio focused on life sciences and diagnostics, Danaher seems well positioned to benefit from opportunities for higher core revenue growth, wider margins, and additional strategic acquisitions, with the help of its solid cash flow.

**At this juncture, the Timeliness rank on Danaher shares remains suspended.** This will be reinstated once the company establishes a track record under its new configuration. Although the dividend yield is nothing to write home about, the stock's appreciation potential 3 to 5 years out is decent on a risk-adjusted basis. Indeed, the issue's top-notch Safety rank of 1, Financial Strength of A+, and good Price Stability score make DHR an alluring choice for conservative types.

*J. Susan Ferrara* *February 7, 2025*

**BUSINESS:** Fastenal Company sells and delivers industrial and construction supplies through stores in the U.S., Puerto Rico, Canada, Mexico, Singapore, China, and the Netherlands. Sells threaded fasteners; tools and equipment; cutting tool blades and abrasives; components and accessories for hydraulics, pneumatics, plumbing and HVAC; metals; and janitorial, welding, safety and electrical supplies. At 12/31/24 it had 1,644 stores, 1,856 Onsite locations, 99,341 vending machines, and 18,453 employees. Off. & dir. own less than 1% of stock; Vanguard, 12.6%; BlackRock, 8.2%; BONY Mellon, 5.1% (2/25 proxy). Chrmn.: Willard D. Oberton. Pres. & CEO: Daniel L. Florness. Inc.: MN. Addr.: 2001 Theurer Boulevard, Winona, MN 55987. Tel.: 507-454-5374. Web: www.fastenal.com.

**Fastenal's stock price is down 10% since our mid-December report.** This was because the stock was selling at too high a premium, and when final-quarter share earnings failed to beat consensus, the issue price dropped. Moreover, as we pointed out in that last report, investors appeared to be conveniently overlooking the fact that fastener sales to manufacturers had been in a downward trend over the last five quarters, as customers weren't replenishing their inventories.

**Fastenal provides a vital link in the supply chain.** It purchases a wide variety of products from many manufacturers, and then distributes them to retailers or other bulk buyers such as offices, businesses, and schools. Fastenal therefore eliminates the hassle of retailers having to order from dozens of manufacturers, and makes delivery fast, efficient, and easy. Too, Fastenal has its own brick-and-mortar stores where the average homeowner can walk in and buy whatever they need. The company also provides vending machines and onsite locations at their customers' place of business, lending them additional convenience. The business model has worked well for many years. Hence, the top marks for Earnings Predictability and the premium stock price valuation.

**Regardless of where the economy takes us this year, Fastenal's attributes ought to allow it to perform well.** There is no reason to assume otherwise. After all, even during the pandemic year of 2020, Fastenal's sales increased. The company provides a very wide range of both expensive and inexpensive products to numerous sources. This means that its sales and earnings should remain buoyant. Based on current backlog, which stretches for the next two quarters, we look for 2025 sales and share earnings $7.72 billion and $2.30, respectively. We should note that These figures are very close to both management and Wall Street's expectations.

**Our 2028-2030 Target Price Range (TPR) should be pretty accurate.** The stock' Safety rank has been 1 (Highest) for many years. The higher the Safety rank the tighter the TPR. Current investors should hold onto their positions, and anyone seeking a stake in the wholesale delivery sector should buy these shares.

*Jeremy J. Butler* *March 14, 2025*

**(A)** Basic earnings. Next earnings report due late April. May not sum due to rounding.
**(B)** Dividends historically paid in late February, May, August, and November. Switched from semi-annual dividend to quarterly dividend in April, 2011. Special dividends paid: $0.27 on 12/15/08, $0.42 on 12/6/10, $0.50 on 12/21/12, $0.40 on 12/22/20.
**(C)** In millions, adjusted for splits.

**BUSINESS:** Franklin Electric Company, Inc. designs, manufactures, and distributes water and fuel pumping systems. Operating segments: Water Systems (58% of '23 sales) produces groundwater and surface pumps, motors, and controls for residential, agricultural, and industrial markets; Fueling Systems (14%) provides products for fuel pumping, containment, monitoring, and control; Distribution (28%) sells groundwater equipment products to well installation contractors. Foreign sales: 30% of '23 total. Has about 6,400 employees. Offs. & dirs. own 2.7% of stock; BlackRock, 16.0%; Vanguard, 10.2% (3/24 Proxy). Chrmn. & CEO: Gregg C. Sengstack. Inc.: IN. Addr.: 9255 Coverdale Road, Fort Wayne, IN 46809. Tel.: 260-824-2900. Internet: www.franklin-electric.com.

**Investor support for Franklin Electric has strengthened over the past three months.** At the recent quotation, FELE shares have increased almost 15% in value, and are in the vicinity of their all-time high. The positive sentiment is a bit surprising, given disappointing third-quarter results. During the September period, sales and earnings fell at a single-digit pace, to $531.4 million and $1.17 a share, respectively. Given persistently weak demand trends the company has lowered full-year guidance, and both the top and bottom lines are expected to decline in 2024. However, investors have perhaps shrugged off the latest results, and are instead, looking forward to 2025, where sales and earning should recover.

**There are a number of tailwinds that ought to work in the company's favor.** First, the investment community appears largely optimistic that economic conditions will improve. Data has been supportive, and further interest-rate cuts are likely to spark investments in many of the industries Franklin Electric serves, including infrastructure and construction. Indeed, demand for many products and services provided by the company, such as rental equipment, have been burdened by restrained customer spending and project deferrals. However, demand ought to perk up from next year.

**The company continues to implement initiatives geared toward increasing market share.** Operational efficiencies are being targeted through portfolio reconfigurations and innovation. Such actions are intended to facilitate a migration toward high-growth markets both at home and abroad. Emphasis is also being placed on addressing critical water needs in specific markets. For example, new products in wastewater and water treatment have resonated with customers.

**We would advise investors to consider other selections, for now.** The equity is neutrally ranked for year-ahead relative price performance. Also, although we envision healthy annual earnings growth 3- to 5-years hence, capital appreciation potential over this time frame is only about average. And although a dividend sweetens the pot for income-oriented types, the yield is below the *Value Line* average.

*Nira Maharaj* *December 20, 2024*

**(A)** Year ends Dec. 31st.
**(B)** Diluted earnings. Excludes nonrecurring losses: '17, 20¢; '18, 3¢; '19, 4¢; '20, 4¢. Next earnings report due late February.
**(C)** Dividends historically paid in mid-February, May, August, and November.
**(D)** Includes intangibles. In 2023: $572.4 mill., or $12.42 per share.
**(E)** In millions, adjusted for split.

**BUSINESS:** Alphabet Inc. is the successor and parent holding company of Google Inc., which operates the world's leading Internet search engine. The company derives revenues primarily through delivering targeted advertising. Revenues are also derived from the licensing of search technology and solutions to enterprises. Revenues in 2023: United States, 47%; International, 53%. Has 182,502 employees. Off. & dir. own less than 1% of Class A common stock, 89.4% of Class B; The Vanguard Group, 8.4%; BlackRock, 7.1% of Class A (6/24 Proxy). CEO & Dir.: Sundar Pichai. Co-founder & Dir.: Larry Page. Co-founder & Dir.: Sergey Brin. Inc.: DE. Addr.: 1600 Amphitheatre Parkway, Mountain View, CA 94043. Telephone: 650-253-0000. Internet: www.google.com.

**Shares of Alphabet have increased in price by roughly 20% since our November review.** The majority of this gain came after the tech giant revealed its new quantum chip, called *Willow*. Developed by Google, the chip received a flurry of attention for its potentially revolutionary qualities, and helped launch the stock to an all-time high intraday price of $202.88 on December 17, 2024. Although *Willow* may drastically reduce computation times, and may lead to breakthroughs in drug discovery through its reduced error tendencies, it might not be widely available for commercial use until 2030. The application delay is partly due to *Willow's* required operating conditions, including extremely low temperatures. Long term, this innovation could provide Alphabet with a strong competitive advantage.

**Alphabet will probably post solid results this year.** (Note: Alphabet was scheduled to issue its 2024 fourth-quarter earnings release shortly after this report went to press.) The California-based company likely closed out 2024 on a high note, building on a healthy performance from the third quarter. We expect the impressive earnings results from last year to continue in 2025, supported by top-line advances led by *Google Cloud* and *Google Services*. *Google Cloud* revenue ought to continue its climb this year, driven by growth in Generative AI solutions and Google Cloud Platform. The company has benefited by incorporating more AI features throughout its lines of business. This approach likely led to greater consumer engagement and improved efficiency in 2024. We expect these ongoing efficiencies to continue in 2025.

**The legal battles are still a concern.** Although the Trump Administration will likely take a business friendly approach to Big Tech, it's uncertain how the DOJ will carry out the antitrust cases against Google. Nonetheless, the trial probably won't begin before April. At this point, time may be on the side of Alphabet.

**Shares of Alphabet hold our Highest (1) rank for Timeliness.** Our current projections point to above-average upside potential over the 3- to 5-year time frame. Also note the top-notch grades for Financial Strength (A++) and Safety (1).

*Kathleen Uckert* *January 31, 2025*

**(A)** Diluted earnings per share for Class A and B common stock and Class C capital stock. Excludes nonrecurring gains/(losses): '08, ($0.17); '14, ($0.03); '17, ($0.90); '18, ($0.15); '19, (0.12). Qtly egs. may not sum. Next earnings report due early February. **(B)** In millions. **(C)** Class A common stock entitled to one vote per share. Class B common stock entitled to 10 votes per share. Class C common stock is nonvoting. **(D)** Quarterly dividends initiated with first payment on 6/17/24.

**BUSINESS:** Jack Henry & Associates, Inc. provides integrated computer systems and services to banks and financial institutions. It has developed several banking application software systems that it markets, along with computer hardware, to financial institutions. Also performs data conversion, software installation, and software customization for the implementation of its systems. Acquired BancData Solutions, 4/00; Symitar Systems, 6/00; Transcend Systems, 3/02. Has a business partnership with SEDONA, an IBM Advanced Business Partner. Has about 7,120 employees. Off. & dir. own less than 1% of stock (10/24 Proxy). Chairman, Pres., and CEO: Dave Foss. Inc.: DE. Addr.: 663 Highway 60, P.O. Box 807, Monett, MO 65708. Tel.: 417-235-6652. Web: www.jackhenry.com.

**Jack Henry is on track for solid operating results in fiscal 2025.** (Fiscal years conclude on June 30th; the company was scheduled to release fiscal second-quarter financials shortly after this Issue went to press.) Revenues increased 5.2% in the September interim, and probably advanced 5%–6% in the second quarter, to $574 million. The recent progress was attributed to demand for data processing and hosting services, as well as Jack Henry digital revenues (including Banno). Management has done a good job of keeping expenses in check, with operating costs rising 2.5% in the first quarter, and likely up by a similar amount in the December term. Earnings per share jumped 17.3% in the opening period, and may have improved another 10%-plus in the second quarter, to $1.40. For full-year fiscal 2025, we expect revenues and earnings to climb 5%–6% and 12%–13%, respectively, to $2.345 billion and $5.85 per share.

**The addressable market for the company's services is large and growing.** Jack Henry provides technology solutions and payment processing services, primarily to community and regional financial institutions. Smaller companies, such as credit unions, often lack the scale for efficient data processing systems, creating a sizable opportunity for service providers like Jack Henry. One caveat is the progress we foresee is partly dependent on the health of the domestic economy.

**Despite possessing a number of positive attributes, Jack Henry shares lack investment appeal at this time.** On the one hand, the stock and the company have stellar ranks for Safety (1, Highest) and Financial Strength (A+), respectively. In addition, the equity has an excellent score for Price Stability and a below-market Beta coefficient, which are desirable qualities during times of elevated stock market volatility. On the other hand, the share price has pulled back about 5% since our last full-page review in November, and the stock is ranked to only mirror the market in the coming six to 12 months. Too, upside in the 18-month window is underwhelming and total return potential to late decade is limited. Finally, although dividend coverage is sound, the yield does not stand out.

**BUSINESS:** L3Harris Technologies was formed in 2019 via a merger of Harris Corp. and L3 Technologies. It operates in four business segments: space & airborne sys. (32% of 2024 sales), integrated mission sys. (32%), communications sys. (25%), and Aerojet Rocketdyne (11%), which was acquired for $4.7 billion in mid-2023, and deals in solid rocket motors and tactical, air defense, and missile defense sys.. R&D was 2% of sales in '24. Has 50,000 employees. Offs. and dirs. own 1.0% of common; Vanguard, 10.7%; BlackRock, 9.2%; Capital World Inv. 8.5%; T.Rowe Price, 5.1% (3/24 proxy). Chairman & CEO: Christopher E. Kubasik. Incorporated: DE. Address: 1025 West NASA Boulevard, Melbourne, Fl. 32919. Telephone: 321-727-9100. Internet: www.l3harris.com.

**L3Harris' sales growth for 2024 came in right around our 10% projection.** The Space & Airborne Systems arm had a relatively flat showing, while contributing just shy of $6.9 billion to the top line. The divestiture of the antenna arm here skewed the figures. Integrated Mission Systems and Communication Systems, on the other hand, pitched in handsomely. The former benefited from higher aircraft missionization volume, and the latter gained from lofty demand for communication equipment and night vision devices. Still, the largest year-over-year jump in receipts was realized at the company's newest unit, Aerojet Rocketdyne, which was acquired in July of 2023. Therefore, 2024 represents the segment's first full year within the portfolio. Here, increases in production volume at key missile programs was evident. The missile division carried the load, as space propulsion spending was lesser on program-related delays and a decrease of in-space propulsion work.

**We think an annual earnings gain north of 10% is in the cards for 2025.** The top-line band has been set by management from $21.8 billion to $22.2 billion. Our estimate, at just over $22.1 billion, is near the top of that stretch, but still only represents an annual gain of between 3%-4%, now that comparisons will show Aerojet's completed entry into the fold. The Space and Mission System branches should bring in sales of around $7 billion each, with a good portion of the growth provided by Communications and Aerojet. All the while, the LHX Next program should continue to squeeze out cost savings from operations. The original $400 million target was upped to $600 million and came in at $800 million. Now, leadership expects to push that needle to $1.2 billion by the close of 2025. In turn, we see GAAP share earnings climbing to $8.75.

**These good-quality shares (Safety: 2) are better suited for accounts with a long-term view.** The stock is neutrally ranked for year-ahead relative price performance. Conversely, a recent pullback has enhanced capital appreciation potential out to 2028-2030. The lower divisor has also lifted the yield above the *Value Line* median.

*Erik M. Manning* *February 28, 2025*

**(A)** Fiscal years end around December 31st.
**(B)** Fully diluted earnings. Next earnings report due late April.
**(C)** Quarterly dividends historically paid mid-March, June, September, and December.
**(D)** In millions.
**(E)** 2019 data only includes financials from post merger, which was completed on July 1st.
**(F)** Includes intangible assets. In 2024: $28.0 million, $0.15 a share.

**BUSINESS:** Lockheed Martin provides a broad range of products and services to the world's governments and commercial customers. Areas of concentration include space and missile systems, electronics, and aeronautics. Program base includes F-16, F-22, F-35 aircraft, ballistic and other missile systems, C-130 transport planes, and Titan launch vehicles. Sold its IS&GS business to Leidos 8/16. More than 70% of sales are to the U.S. Government. Has 121,000 employees. Off./dir. own less than 1% of common stock; State Street, 14.9%; Vanguard, 8.9%; BlackRock, 7.4% (3/24 proxy). Chrmn., Pres. & CEO: James D. Taiclet. Inc.: MD. Addr.: 6801 Rockledge Drive, Bethesda, MD 20817-1877. Tel.: 301-897-6000. Internet: www.lockheedmartin.com.

**Lockheed Martin should make solid sales progress this year.** Last year, the top line advanced 5%, and we expect that rate to be sustained in 2025. The United States and its allies are seeing heightened threats around the globe, and are fortifying defenses. Lockheed's air, land, and sea solutions are in demand, as are its intelligence and cyber security offerings. Due to contract completions and starts, sales can be volatile over time. Currently, the Aerospace and Missiles & Fire Control (MFC) segments, representing 58% of business, are posting good growth. The F-35 fighter-jet program, along with related government funding, is ramping up. F-16 production is also rising. Tactical and strike missile operations are busy, as well. On the minus side, Rotary and Mission Systems is reporting soft, but still decent, sales, as volumes on multimission and combat & rescue helicopters step down and integrated warfare systems & sensors business trails off. Too, Space has seen a slackening in classified military and civilian needs. We conservatively estimate consolidated growth of 3.5%-4.0% in 2026.

**Share earnings likely will rebound.** In the final quarter of 2024, Lockheed took a $1.7 billion earnings hit. Performance adjustments on low-priced classified contracts at Aerospace and MFC led to the recognition of losses. Management believes that it has accounted the bulk of these issues. We view this situation as temporary. Ahead, as volume rises across the company's diverse asset base, operating leverage ought to rebound. Earnings may well return to the $27-a-share range this year, up from $22.31 a share in 2024, and strengthen to over $29 a share in 2026.

**Annual cash flow is reliable.** Even with the above-mentioned earnings hit and a $990 million pension contribution, free cash flow amounted to a hefty $5.3 billion in 2024. The capital-spending budget and distribution to stockholders are well covered. We expect dividend hikes and share buybacks to continue.

**Lockheed's recent share-price setback is an opportunity.** Heightened Pentagon budget review is on investors' minds. Still, the U.S. clearly needs to bolster defenses, given potential threats from Russia and China. Total returns look to be favorable.

*David M. Reimer* *February 28, 2025*

**(A)** Diluted earnings. Excludes nonrecurring gains/(losses): '10, 76¢; '11, (4¢); '13, (44¢); '17, ($6.69); '21, ($4.72); '22, ($4.43). Excludes discontinued operations: '16, $5.11; '20, ($0.20). **BUSINESS:** Landstar System, Inc. provides integrated transportation management solutions in the United States and internationally. Its Transportation Logistics segment provides truckload and less-than-truckload transportation, rail intermodal, air cargo, ocean cargo, and air delivery of time-critical freight. It serves the automotive products, building products, metals, chemicals, machinery, retail, and electronics industries. Has about 1,400 employees. Officers & directors own less than 1% of stock; Vanguard, 9.7%; BlackRock, 9.4%; Kanye Anderson, 9.0%; Morgan Stanley, 7.6% (3/24 Proxy). CEO & President: James Gattoni. Inc. DE: Address: 13410 Sutton Park Drive South NA, Jacksonville FL 32224. Telephone: (904) 398-9400. Internet: www.landstar.com.

**Profitability at Landstar System finished 2024 on a down note.** Fractional growth in revenues, to $1.21 billion from $1.2 billion in the prior year, was its first comparative increase since late 2022. Driven by strength in the admittedly small Ocean/Air segment, overall rate hikes modestly offset further unit-volume erosion. Cost pressures accelerated, and the 150 basis point (bp) and 100 bp declines in the operating and net margins, to 5.8% and 3.8%, respectively, marked the lowest quarterly levels in several years. More moderate tax rates had little impact on the 19% decline in earnings per share, to $1.31, and a narrower share count had even less of an effect. Although the result was well short of our $1.47 view, it was just a few cents shy of consensus figures. As such, the stock sold off by less than 5% immediately after the results, even as analysts have cut their 2025 forecasts.

**Helped by a low-cost, asset-light business model, Landstar scores very well on most financial measures.** By sourcing the bulk of its drivers from agents and other third-parties, the logistic company ensures minimal capital needs, amid an asset-intense trucking industry. Thus, cash of more than $500 million to start 2025, easily exceeds debt. Free cash flow, which is significant (above $200 million in 2024) but depressed compared to past levels (e.g., about $325 million in 2022), is mainly spent on share buybacks and dividends. With these factors in mind, the stock earns our highest Safety ranking and boasts a top score for Price Stability.

**We recommend investors take a longer-term view on high-quality Landstar shares.** We do not expect a broader recovery in 2025. But, over the next three to five years, we think industrywide trucking demand will rebound to past levels. That ought to support roughly a doubling in per-share profitability at Landstar to 2028-2030, as the operating margin returns to mid-cycle levels of around 9%. On that basis, we believe that investors will reward the shares with an earnings multiple of 20 times, where the modest premium to the *Value Line* average is consistent with past treatment. Given its low risk, long-term returns appear attractive.

*William Mack, CFA* *February 14, 2025*

**(A)** Based on diluted shares. Next earnings report due late April. **(B)** Dividend is paid in March, May, August, and December. The company paid special dividends of $2.00 each January from 2020-2025. **(C)** In millions.

**BUSINESS:** McKesson Corporation provides supply, information, and care management products and services designed to reduce costs and improve quality across the healthcare industry. It reports financial results in four reportable segments: U.S. Pharmaceutical (90% of 2023 sales), International (4%), Medical-Surgical Solutions (4%), and Prescription Technology Solutions (2%). New reporting structure began in September, 2020. Has about 51,000 employees The Vanguard Group owns 9.3% of common stock; BlackRock, Inc., 9.0%; officers & directors, less than 1% (6/24 proxy). Chairman: Donald Knauss, CEO: Brian Tyler. Incorporated: Delaware. Address: 6555 State Hwy 161, Irving, Texas 75039. Telephone: (800) 826-9360. Internet: www.mckesson.com.

**McKesson has given investors reason to cheer of late.** After falling from their 52-week high of nearly $638 to around $465, shares of the provider of medical supplies, services, and technology rallied; MCK is up some 15% since our November report. Sales and adjusted share earnings in the second quarter of fiscal 2024 (year ends March 31st) jumped 21% and 13%, respectively, year over year, handily beating expectations. The U.S. Pharmaceutical segment again led the way, on higher prescription volume from retail national account customers, specialty products, and GLP-1 drugs, as well as the onboarding of a new strategic partner. Gains in the Prescription Tech, Medical-Surgical, and International units also helped. The back half of the year should impress, too, as momentum ought to continue. (December-quarter results were due out after press.)

**Leadership again raised its fiscal 2024 financial outlook, and we've upped our view accordingly.** The company now expects full-year adjusted share-profit to be in a range of $32.40-$33.00 (representing 18%-20% growth), versus $31.75-$32.55 before. This includes year-to-date investment gains of $0.53. It also lifted its stock-repurchase target to $3.2 billion, from $2.8 billion. For our part, we've hiked our sales and share-earnings calls (from $350 billion and $32.00, respectively).

**Recent strategic moves should bolster the business portfolio.** In September, McKesson agreed to buy a 70% stake in CORE Ventures, a service organization set up by the Florida Cancer Specialists & Research Institute (FCS), which should be highly accretive to profit. This will give access to FCS' 530 providers on McKesson's oncology network. The company also added 118 cancer-care providers from Tennessee and Illinois to its network. Too, it launched its InspiroGene offering focused on cell/gene therapies, while it just sold a couple of Canadian units, and will soon divest its remaining operations in Europe. The moves should permit expansion in key growth areas of oncology and biopharma.

**The stock is ranked 1 (Highest) for Timeliness.** Despite a top-notch Safety rank, reflecting superb scores for Financial Strength and Price Stability, total return potential to 2028-2030 doesn't stand out.

**BUSINESS:** McCormick & Company, Inc. is a manufacturer, marketer, and distributor of spices, seasonings, flavorings, mixes, and condiments for the consumer, industrial, and foodservice markets. Has two segments: Consumer (accounted for 57% of total sales in fiscal 2023) and Flavor Solutions (43%). Acq. Reckitt Benckiser's Food Division (French's Mustard and Frank's RedHot), 8/17; Cholula Hot Sauce, 11/20; FONA Int'l, 12/20. For'gn operations were 39% of sales in 2023. Has 13,800 employees. Off./dir. own 23% of common stock, (including Lawrence E. Kurzius, 12.3%) (2/24 Proxy). Chrmn. Lawrence Kurtzius. CEO & Pres.: Brendan Foley. Inc.: MD. Addr.: 24 Schilling Road, Suite 1, Hunt Valley, MD 21031. Tel.: 410-771-7301. Internet: www.mccormick.com.

**McCormick's ongoing margin expansion is offsetting its stagnant top line.** Third quarter earnings per share came in at $0.83, up 28% year over year. Sales were flat compared to the year-ago period with a slight volume bump being offset by a 1% decline in pricing. A significant cost cutting program is driving profitability, though. Third-quarter gross margins surged 170 basis points to 38.7% thanks partly to mix. And lower distribution costs helped operating expenses as a percentage of sales dive 60 basis points to 21.5%. A notable decline in the tax rate (from 21.4% to 16.8%) also helped the annual comparison, though it is expected to revert back to 21% for the full year. Management raised its fiscal 2024 (ended November 30th) adjusted earnings per share target range by a nickel on both ends to between $2.85 to $2.90.

**We look for fiscal 2025 earnings to come in around $3.10.** McCormick has an broad set of offerings in both its flavor and consumer segments, and it sells its products in 150 countries. Considering the strength of the dollar and all the dynamics within its individual categories, it is noteworthy that all of the profit progress in 2024 was non-revenue related. We project just 2% sales growth in the coming year and doubt a return to mid-single-growth anytime soon. On the negative side, economic woes in China have caused high-single-digit regional sales declines. There may be some opportunity in Flavor Solutions to penetrate the foodservice market, but meaningful gains will take time. Notably, brand marketing spending has been up in the high-single digits, while cost savings have been achieved. More successful campaigns may eventually stimulate less mature markets.

**The quarterly dividend was hiked.** A $0.45 payout on January 13th will be distributed to shareholders of record on December 30th. The dividend has been raised 39 consecutive years.

**The stock looks fairly valued at present.** McCormick's industry-leading status and high Financial Strength ranks support MKC's premium valuation. Still, appreciation prospects over the 18-month and 3- to 5-year time horizons appear uninspiring.

*Charles C. Moran* *January 10, 2025*

**BUSINESS:** Altria Group, Inc. is the parent company of Philip Morris USA, John Middleton and Philip Morris Capital Corp. In 2023, the company operated 2 segments: Smokeable Products (89% of total revenues) include *Marlboro, Benson & Hedges, Parliament, Virginia Slims*; and Oral Tobacco (11%). Sold the wine business, 10/21. Has a 10.0% interest in *Anheuser-Busch InBev*. Spun off Philip Morris International, 3/08; Acq'd, UST, 1/09; NJOY Holdings, 6/23. Has 6,400 employees. Vanguard Group owns 9.3% of common shares; BlackRock owns 7.4%; officers and directors own less than 1.0% (4/24 proxy). CEO: William F. Gifford, Jr. Incorporated: VA. Address: 6601 West Broad Street, Richmond, Virginia 23230. Telephone: 804-274-2200. Internet: www.altria.com.

**Altria Group reported mixed 2024 third-quarter results.** Sales of $6.26 billion were roughly $90 million below our estimate and decreased slightly compared to the previous-year tally. The decline was due to lower revenues at the Smokeable Products group. That business was hurt by a 9% drop in domestic cigarette volumes, largely because of continued softness in the overall industry and ongoing pressure on consumers' discretionary incomes. This was only partially offset by a 5% rise in the much smaller Oral Tobacco Products division, which benefited from higher pricing and increased shipment volumes. However, despite the decline in sales for the period, share earnings of $1.38 increased 8% compared to the previous-year figure. The bottom line benefited from higher pricing and lower SG&A expense. Share earnings also got a boost from ongoing stock repurchases.

**We think Altria closed out 2024 with solid results.** December-quarter sales likely rose modestly compared to the previous-year tally thanks to ongoing good results from the Oral Tobacco Products division. That group is seeing good demand for *on!* nicotine pouches and the *NJOY* e-vapor product portfolio. Gains there should more than offset ongoing declines in volumes and revenues at the Smokeable Products group, as traditional cigarette volumes continue to decrease. Management has set a plan to increase the company's efficiency and effectiveness by centralizing work, streamlining processes, and using AI and automation. These actions should be largely complete in the coming 12 to 18 months. The initial phase of the initiative is expected to deliver at least $600 million in cumulative cost savings over the next five years. These actions should help drive solid earnings gains in 2025 and beyond. Additional share repurchases should also provide a boost.

**Shares of Altria are ranked to track the broader market averages in the coming six to 12 months.** The primary draw here continues to be the exceptional dividend yield of roughly 7.8%. Over the 3- to 5-year period, the stock also offers decent total return potential at the recent quotation, which is up modestly since our October report.

*Iason Dalavagas* *January 10, 2025*

**(A)** Diluted earnings. Excl. nonrecur. gains (losses): '08, (17¢); '09, (21¢); '11, (21¢); '16, $4.55; '17, $1.92; '18, (31¢); '20, ($1.96). Next egs. rpt due early February. Quarterly totals may not sum due to changes in share count. **(B)** Divd's historically paid in early Jan., late Apr., early Jul., and early Oct. ■ Div'd reinvestment plan available. **(C)** Incl. intangibles. '23: $20.48 bill., $11.60/sh. **(D)** In millions.

**BUSINESS:** Microsoft Corp. is the largest independent maker of software. It develops and sells software products for a wide range of computing environments in consumer and enterprise markets. Hardware products include the *Xbox* video game console and *Surface* laptops. Revenue sources in fiscal 2024: Productivity & Business Processes, 32%; Intelligent Cloud, 43%; More Personal Computing, 25%. R&D, 12.0% of 2024 revenues. Employed 228,000 at 6/30/24. Stock owners: Offs. & dirs., less than 1%; The Vanguard Group, 8.95%; BlackRock, Inc., 7.30%. (10/24 proxy). Chairman & CEO: Satya Nadella. Incorporated: Washington. Addr.: One Microsoft Way, Redmond, Washington 98052-6399. Telephone: 425-882-8080. Internet: www.microsoft.com.

**Data center investments remain a top priority for Microsoft.** The software giant has been making significant investments in AI technology, and recently indicated that it would spend roughly $80 billion in fiscal 2025 (year ends June 30th) to construct AI-enabled data centers. It's necessary to build more data centers due to the growing demand for data storage and processing power, both used to support cloud computing and large volumes of data needed to run AI applications. By investing heavily in data centers, Microsoft ought to maintain its competitive edge in the market. Furthermore, the long-term nature of these investments indicates that Microsoft is building a foundation for sustained growth. The data centers are expected to support monetization over the next 15 years, providing a steady stream of revenue as more customers adopt Microsoft's cloud and AI offerings.

**Through its strategic partnership with OpenAI, Microsoft appears well positioned for further growth this year.** Specifically, it stands to benefit from The Stargate Project. Stargate is a new company, launched at the end of January, which intends to invest $500 billion, over the course of four years, to build new AI infrastructure for OpenAI. The project received support from the Trump Administration, as the infrastructure will be located in the U.S. Microsoft is a major investor in OpenAI and the two companies have been working together since 2019. As part of Stargate, OpenAI will build on its existing partnership with Microsoft, and continue to increase its consumption of *Azure* (a cloud platform that offers services to help users build, run, and manage applications). This is encouraging news for the Intelligent Cloud segment, which includes *Azure*. We think Microsoft will post solid results for the December period (fiscal year ends June 30th), building on a healthy performance from the September interim. (Microsoft was scheduled to issue its second-quarter earnings release shortly after this report went to press.)

**These timely shares offer broad appeal.** Our current projections point to above-average capital appreciation potential over both the 18-month and 3- to 5-year time frames.

*Kathleen Uckert* *January 31, 2025*

**(A)** Fiscal year ends June 30th.
**(B)** Diluted earnings. Quarters may not sum to total due to rounding. Excl. nonrec. items: '12, d72¢; '13, d7¢; '15, d$1.17; '16, d70¢; '17, d37¢; '18, d$1.75; '19, d33¢; '22, 44¢; '23, 13¢. Next earnings report due late April.
**(C)** In mill.
**(D)** Includes intangibles. In fiscal 2024: $146.8 billion, $19.75 a share.
**(E)** Dividends historically paid in March, June, Sept., and Dec. ■Dividend reinvestment plan available.

**MSC Industrial Direct is on track for a difficult fiscal 2025 (ends August 31st).** Challenges in the metalworking and heavy manufacturing end markets have been compounded by weaker execution in the technology area. Softer volumes and higher costs have placed pressure on the top and bottom lines. Management noted in its last release that unexpected gross margin pressure and slower average daily sales, particularly within the Core segment, were problematic. Although there has been improvement in the process of upgrading the company's online catalog, management has noted that there is still "fine-tuning" that will delay a full launch of recent enhancements until the second quarter of this fiscal year. Meanwhile, internal channel inefficiencies have also contributed to sluggish volumes and backlogs have begun to level out. This is largely due to the continued strain from inflationary conditions, higher borrowing costs, and the related slowdown in capital spending.

**We do not expect a recovery to take shape until later this fiscal year.** Although the company's leadership assured that actions are being taken to ease gross margin pressure, we do not expect these benefits to fully materialize in the bottom line until the fourth quarter. Accordingly, we have lowered our full fiscal-year earnings call to $3.75 a share, down from $5.00 previously.

**On the upside, the longer-term picture holds promise.** The recent string of interest rate cuts by the Federal Reserve offer some promise that economic conditions will stabilize and improve before long. This should help to revive demand and boost performance beyond fiscal 2025. In addition, the company's efforts to enhance its vending programs with artificial intelligence, along with strong growth in its implant solutions business, should pay off. Furthermore, MSC Industrial Direct's new pricing, platform, and related marketing programs, ought to help revive sales growth, while greater emphasis on margins will enable a relatively swift bottom-line rebound, as well.

**Although these untimely shares offer decent recovery potential over the long haul, investors should wait until earnings stabilize.**

*Simon R. Shoucair* *January 3, 2025*

**(A)** Fiscal year ends the Sat. closest to Aug. 31st. **(B)** Dil. egs. Q1 egs. set to be reported after this review went to press. Next egs. report due early April. **BUSINESS:** NewMarket Corporation develops, manufactures, and blends chemical additives through its Afton Chemical and Ethyl Corp. units. Has two segments: Petroleum Additives (99% of '23 revenues) provides lubricant, engine oil, driveline, industrial, and fuel additives under the HiTEC, GREENBURN, TecGARD, BioTEC, and MMT brands and TEL name. Other (1%) sells high-octane fuel. Has about 2,120 employees. Bruce C. Gottwald owns 12.0% of stock; Thomas Gottwald, 5.9%; Floyd Gottwald, 4.9%; Bank of America, 9.4%; Vanguard, 7.5%; BlackRock, 6.3%; The London Co., 6.9% (3/24 Proxy). Chairman, Pres. & CEO: Thomas E. Gottwald. Incorp.: VA. Address: 330 South Fourth St, Richmond, VA 23219-4350. Tel.: 804-788-5000. Internet: www.newmarket.com.

**NewMarket isn't very friendly to the average retail investor.** To wit, it's difficult to obtain the stock. As of October 28th, there were only 9.6 million shares outstanding, and 99% of them were owned by insiders and large institutions. In addition, because of the aforementioned, it's very tough to buy or sell shares at the price desired. No wonder monthly trading volume currently tallies only 8% (see graph above). Moreover, the price of an individual share is prohibitive at over $500. Lastly, to our knowledge *Value Line* is the only research firm that covers NewMarket. Therefore, there are no analyst estimates other than our own for readers to make an investment decision on.

**And regarding our estimates, we don't look for much more margin improvement.** It took some time, but the operating efficiencies Newmarket installed between 2015 and 2017 (see high capital spending) paid off in the form of higher earnings in 2023 and 2024. Higher sales from greater use of internal combustion engines, industrial production, mining, and agricultural activities in 2022 and 2023 also helped. This year, however, we expect global demand for NewMarket's petroleum additives to be tempered somewhat due to weakness in Europe, China, and parts of South America. Meantime, margins are probably as wide as they will ever be, now that supply-chain inefficencies have been ironed out, raw material costs are relatively low, and employment expenses are down (due to recent layoffs). As a result, we look for 2025 sales and share earnings of $28.1 billion, and $47.25, respectively.

**The company continues to shrink the already tiny share base.** In December, the board of directors announced a share repurchase authorization of $500 million through 2027. This announcement, plus the uneven operating outlook, probably led to the stock price swoon of 12% over the past three months.

**We aren't enamored with the stock's long-term outlook.** About 91% of sales emanate from petroleum additives, which are used in internal combustion engines. These engines are gradually being phased out, and the existing ones use fewer lubricants and additives due to their increased efficiency.

*Jeremy J. Butler* *February 21, 2025*

**(A)** Diluted earnings. Excl. non-recurring gains/(losses): '13, $1.65. Next earnings report due late April.
**(B)** Dividends historically paid in first week of January, April, July, and October. Special cash dividend of $.90 a share paid in 4Q, 2012.
**(C)** Incl. intangibles: At 12/31/23, $124.6 mill., $12.99/share.
**(D)** In millions.

**BUSINESS:** Oracle Corporation provides products and services that adresss all aspects of corporate information technology environments. Oracle's products are delivered via a range of deployment models, including on-premise, cloud-based, and hybrid. 2024 revenue breakdown: cloud services and license support, 84%; hardware systems, 6%; Services, 10%. Foreign sales, 38%. R&D, 16.8% of 2024 sales. Employed 159,000 at 5/31/24. Stock owners: Lawrence J. Ellison, 41.6%; other officers & directors, 0.6%; Vanguard Group: 5.4%. (9/24 proxy). Chairman & CTO: Lawrence J. Ellison; Chief Executive Officer: Safra A. Catz. Inc.: Delaware. Address: 2300 Oracle Way, Austin, TX 78741. Telephone: 737-867-1000. Internet: www.oracle.com.

**We estimate that Oracle's earnings per share will advance by 12% in fiscal 2025 (ends May 31st).** November-period results were $0.03 shy of expectations (dollar strength clipped about $0.02 from the bottom line). Cloud application revenue grew 10% to $3.5 billion, while infrastructure revenue soared 52% to $2.4 billion, but non-GAAP operating margins expanded just 58 basis points, well below the 228 basis point year-over-year rise seen in the August period. Note: The Safety Rank is now Average (3).

**Demand for artificial intelligence applications continues to fuel the cloud infrastructure business.** A few years ago, management's infrastructure build out strategy was given relatively little attention. Its potential growth was questioned in light of Amazon's and Microsoft's market dominance. However, not only has the overall market growth exceeded many observers' expectations, but Oracle's offerings have proven to be competitive from both a pricing and performance perspective. In fact, a recent major joint venture announcement has led many to believe that Oracle is encroaching on Microsoft's strong relationship with OpenAI. Indeed,

**The Stargate joint venture should further fuel AI development.** The joint venture between Oracle, SoftBank, and OpenAI, named the Stargate Project will invest $500 billion in AI infrastructure over the next four years.

**Oracle's valuation has soared over the past year and a half.** Our initial earnings-per-share estimate for fiscal 2025 debuted last May at $6.25 when the stock price was $114 per share. It now stands a nickel below that level, but the price to earnings ratio has risen markedly in recent quarters. The share price will likely remain volatile, since news surrounding infrastructure build is viewed favorably from a long-term perspective, but the rising capital expenditures are increasingly pressuring free cash flow.

**We would not be surprised to see the stock price bounce a bit.** After peaking at $198 in December, the share price has fallen 17%. The 18-month projection is now above average, though long-term appreciation potential is still uninspiring, assuming the P/E ratio declines.

**BUSINESS:** O'Reilly Automotive, Inc. supplies aftermarket autoparts, tools, equipment, and accessories to both "do-it-yourself" (DIY) customers and professional mechanics or service technicians. Also offers services, including used oil/battery recycling and wiper/bulb replacement. As of Dec. 31, 2023, operated 6,157 stores in 47 states, Mexico, and Puerto Rico. Acquired Canada's Groupe Del Vasto, 1/22/24. At 1/31/24, had 90,302 employees, including 14,688 part-timers. Offs./dirs. own 1.2% of common stock; Vanguard Group, 8.5%; BlackRock, 6.9% (3/24 Proxy). CEO: Brad Beckham; Chairman: Greg Henslee. Incorporated: Missouri. Address: 233 South Patterson, Springfield, Missouri 65802. Telephone: 417-862-6708. Internet: www.oreillyauto.com.

**Management slightly tempered its 2024 outlook for O'Reilly Automotive in late October.** Indeed, at that time, leadership conceded that the retailer and distributor of autoparts would likely generate full-year sales of $16.8 billion at best, up roughly 6% from 2023's $15.81 billion tally but $100 million shy of the high end of its previous target range. In a worst-case scenario, it said that it still saw the top line increasing around 5%, to $16.6 billion, on the year.

**As we understand it, the less-positive stance reflects a likely shortfall within the company's DIY (Do-It-Yourself) business.** To that point, DIY comparable-store sales fell about 1% in the September quarter, versus a mid-single-digit advance for the company's DIFM (Do-It-For-Me) segment. Generally speaking, the typical DIY customer can less afford the services of auto-repair shops and, out of financial necessity, maintains his/her car himself/herself. That said, with lower income households disproportionately affected by stubbornly high food costs and the like, a growing number of DIY'ers appear to be putting off less-essential repairs these days.

**The company recently unveiled its 2025 expansion plans.** If leadership has it right, O'Reilly will increase its overall store count by 200 to 210 this year, up from 195 or so in 2024. In the U.S., the focus will apparently be generally low-penetrated markets within the upper Mid-Atlantic states. We also expect O'Reilly to aggressively expand its footprint south of the border. To wit, it recently had fewer than 50 locations in Mexico, where the industry remains highly fragmented even as an early mover like AutoZone boasts more than 800 stores.

**O'Reilly's share price was recently the seventh-highest within the S&P 500 Index.** With that in mind, we think that a stock split could be a catalyst for higher trading volume and more attractive shareholder returns, even as several brokerages already enable investors to buy fractional stakes in many high-priced stocks.

**We continue to like these shares for nimble trading accounts.** Buy-and-hold investors should probably wait for a better entry point.

*Nils C. Van Liew* *January 17, 2025*

**(A)** Next earnings report due early February. Earnings may not sum due to rounding. Excludes nonrecurring charges: '10, $0.14; '11, $0.11.

**BUSINESS:** OSI Systems designs and manufactures electronic systems and components for homeland security, healthcare, defense, and aerospace markets worldwide. Operates in three segments: Security, Healthcare, and Optoelectronics & Manufacturing. The Security segment (Rapidscan) offers baggage and parcel inspection systems. Healthcare offers patient, cardiology, and remote monitoring systems. Optoelectronics & Manufacturing offers specialized components and manufacturing services. Has 6,425 empls. Off. & Dir. own 5.3% common stock; BlackRock, 15.8%; Vanguard Group, 12.6% (10/24). Chairman, CEO & President: Deepak Chopra. Inc.: DE. Addr.: 12525 Chadron Ave., Hawthorne, CA 90250. Tel.: (310) 978-0516. Internet: www.osi-systems.com.

**OSI Systems delivered a record-breaking fiscal second-quarter for revenues and earnings.** (Years end June 30th.) The specialized electronic components and systems provider posted sales of $419.8 million, a 12% increase over the same year-ago period. For the bottom line, reported earnings clocked in at $2.22 per share, compared to $2.11 per share last year, which topped our estimate by 3%. Although strong performance was witnessed across each division, the most notable was in the Security division, which saw revenues increase 16% year-over-year, and is benefitting from an expanding order book and continued strong adoption of its solutions. In fact, management said that it's company-wide book-to-bill ratio finished the December-period at 1.2x, implying that orders are outpacing fulfilled shipments and suggests that total sales will continue to expand moving forward.

**The security market is seeing significant growth, driven by increasing concerns around terrorism, cybersecurity threats, and geopolitical instability.** OSI should continue to advance its strategic objectives due to its one-stop-shop advantage and broad portfolio of security solutions. The company's ability to develop and operate comprehensive large-scale solutions, operate screening systems, train and deploy staffing, and deliver around-the-clock maintenance further strengthen its competitive advantage.

**OSI has established itself as a dominant player with Customs and Border Protection (CBP).** Through its Security division, which houses its Security Detection business and Rapidscan Systems subsidiary, the company has become a leading provider of X-ray screening, explosives detection, vehicle and cargo inspection products, and advanced imaging technologies for the CBP. This dominance stems from a combination of cutting-edge offerings and strategic contracts, paired with a proven track record of reliability, performance, and ability to handle high volume traffics that are scalable.

**These shares are ranked 2 (Above Average) on *Value Line's* Timeliness scale.** However, at the current valuation, capital appreciation potential is limited over all time frames out to 2028-2030.

*Michal Worth* *February 7, 2025*

**(A)** Fiscal years end June 30th.

**BUSINESS:** Prestige Consumer Healthcare, Inc., engages in the marketing, sale, and distribution of over-the-counter (OTC) healthcare and household cleaning products, primarily in the United States, Canada (North America) and Australia. The company has two operating segments: North American OTC Healthcare (85% of '23 sales) and International OTC Healthcare (15%). Prestige Consumer distributes its products through various retail channels. Has about 560 employees. All directors and officers own 1.6% of common stock; BlackRock, 18.3%; Vanguard, 11.6% (6/24 proxy). Chairman, CEO & President: Ronald M. Lombardi. Address: 660 White Plains Road NA, Tarrytown, NY 10591. Telephone: (914) 524-6800. Internet: www.prestigebrands.com.

**Although Prestige Consumer Healthcare had a bumpy first half in fiscal 2024 (year ends March 31, 2025), performance has picked up.** The December period saw earnings rise to a quarterly record of $1.22 a share, up 15% from a year ago. Sales increased by approximately 3% to $290 million, versus the previous year's fiscal third quarter. While the North American segment's sales faced some headwinds due to supply chain constraints and seasonal factors, international sales grew robustly, reinforcing the diversified nature of the company's revenue streams. Strong international growth (notably with the *Hydralyte* brand) and incremental sales improvements in North American segment brands such as *Summer's Eve* and *Clear Eyes* were beneficial. Over the first nine months of this fiscal year, the company generated $184.9 million in free cash flow, with expectations to exceed $240 million for the full year. We expect these trends to drive solid results in the fiscal fourth quarter, as well. Our forecast is for earnings to rise to $1.29 a share, on sales of $290 million.

**Operating prospects for fiscal 2025 and 2026 are solid.** Management asserted in its recent report that consumption remains healthy for its portfolio. This reinforces conviction in our sales and earnings outlook over the next two years. We expect supply-chain challenges to gradually improve as the year progresses, enabling year-to-year adjusted earnings per share growth of approximately 7% and 6% in fiscal 2025 and fiscal 2026, respectively.

**The outlook for the long term is also favorable.** The emphasis on brand development — demonstrated by continuous innovations such as the new *Dramamine Advanced* herbals — and the expansion into adjacent market segments signal that the company is focused on building a resilient growth trajectory. As well, Prestige's core over-the-counter portfolio continues to benefit from relatively resilient demand in its channels. Too, sticky pricing actions and effective cost controls should bolster margins.

**The stock holds appeal for the 18-month stretch.** However, appreciation potential out to late decade is limited from the current quotation.

*Simon R. Shoucair* *March 14, 2025*

**(A)** Fiscal year ends March 31st of the following calendar year. Diluted non-GAAP earnings. Next earnings report due mid-May.

**BUSINESS:** Pfizer Inc. is a research-based, global biopharmaceutical company engaged in the discovery, development, manufacture, and distribution of healthcare products. Its core Biopharma operating segment includes three customer groups; Primary Care (internal medicine, migraine, vaccines, and COVID-19 products); Specialty Care (inflammation & immunology, rare disease, and hospital products); and Oncology. Completed spinoff of consumer healthcare (8/19); Upjohn generics (11/20). Acq. Seagen (12/23). Has 88,000 employees. Off./dirs. own less than 1% of comm. stock; Vanguard, 9.0%; BlackRock, 7.7%; State St., 5.1% (3/24 proxy). Chrmn./CEO: Albert Bourla. Inc.: DE. Addr.: 66 Hudson Boulevard East, New York, NY 10001. Tel.: 212-733-2323. Internet: www.pfizer.com.

**Pfizer performed well in the third quarter.** The drugmaker delivered solid year-over-year improvement in both earnings and sales, fueled by strength across its core Primary Care, Specialty Care, and Oncology portfolios, as well as significant benefits from leadership's cost-reduction strategy. The company highlighted that it was on track to achieve around $4 billion in savings from the program in 2024.

**The near-term outlook has improved.** Pfizer's September-period results soared past consensus expectations on the back of the aforementioned cost cuts and stronger-than-anticipated demand for *Paxlovid*. The COVID-19 therapeutic generated $2.7 billion in sales during the third quarter, well ahead of analysts' targets calling for less than $500 million, owing to a late-summer spike in COVID-19 cases in the U.S. Due to strength in the underlying business and higher modeled COVID-19 sales, leadership raised its bottom-line forecast for the third time this year. It now expects adjusted earnings of $2.75-$2.95 a share, implying annual improvement of 55% at the midpoint. Subscribers should be aware that this non-GAAP metric excludes items such as the amortization of intangible assets and certain acquisition-related costs.

**Our presentation suggests that growth will continue in 2025.** An aggressive cost-reduction strategy should remain highly supportive of earnings growth in the coming quarters. Continued momentum in Pfizer's top-grossing *Eliquis* franchise (roughly 12% of total sales) also represents a key catalyst, as the popular blood thinner medication maintains patent protection until at least 2026.

**The stock holds an Average (3) rank for Timeliness.** PFE has been a notable underperformer in the large pharma space over the last few years. Much of this can be attributed to reduced expectations for the long-term COVID-19 market, but a series of disappointing pipeline developments also appear to have taken a toll on sentiment. With the equity currently trading around a multi-year low, we see some opportunity here for investors with a buy-and-hold mindset. Our projections suggest attractive risk-adjusted total return potential out to 2027-2029, underpinned by the stock's near-7% dividend yield.

*Michael Ratty* *December 27, 2024*

**(A)** Diluted earnings (GAAP). May not sum due to change in share count. Excludes tax gain of $1.79/sh. in '17; Discontinued ops. of $0.47/sh in '20. Next earnings report due late January.
**(B)** Dividends paid in early Mar., Jun, Sep., Dec.■ Div'd reinvest. plan.
**(C)** Includes intangibles. In '23: $132.68 bill., $23.50/sh.
**(D)** In millions.
**(E)** Completed spinoff of Upjohn (11/20).

**BUSINESS:** RLI Corp., through its subsidiaries RLI Insurance and Mt. Hawley, writes multiple lines of insurance on an admitted basis in all 50 states. Also underwrites specialty property and casualty insurance on an admitted basis and excess and surplus business on a non-admitted basis. Underwrites earthquake risks (in California). Other companies in the group include: Replacement Lens, Inc.; License Express Services, Inc. Has 1,001 employees. The Vanguard Group owns 10.0% of common stock; State Street 9.5%; BlackRock 7.8%; officers & directors, 4.9% (3/24 proxy). President and Chief Executive Officer: Craig Kliethermes. Incorporated: Illinois. Address: 9025 North Lindbergh Drive, Peoria, Illinois 61615. Telephone: 309-692-1000. Internet: www.rlicorp.com.

**RLI's earnings declined on a year-over-year basis during the December quarter, however, it ended up with a solid profit gain for the full year.** Looking at it with more granularity, earnings from operations, which excludes capital gains and losses from the investment portfolio, checked in at $0.40 a share during the December quarter. Though the figure was markedly below the previous year's tally, this was due to losses stemming from Hurricane Milton, which resulted in a $42.4 million decrease in underwriting profits for the quarter. Underwriting income was $22.2 million during the fourth quarter, which resulted in a still-profitable combined ratio of 94.4%. This figure implies that RLI generated $5.60 in pretax income for every $100 in policies insured. Other metrics were strong for the period, as net premiums earned and investment income both advanced double digits on a year-over-year basis.

**We look for gradual positive bottom-line momentum to continue over the next two years.** Our optimism is based on a normalized level of catastrophes over that period, which would help boost the underwriting margin. Another factor to keep an eye on is investment income per share. We look for this line item to trend higher this year, thanks to an improved asset base. Yields, on the other hand, will likely be constrained by lower interest rates relative to last year.

**What about the stock?** These shares have declined moderately in price since the beginning of this year, underperforming the S&P 500 Index. We believe this is due to investor concern over the large number of catastrophes the sector is dealing with and not company-specific issues.

**We have rolled out our projections and now look for earnings in the vicinity of $5.50 a share by the 2028-2030 time frame.** A good economy underpins our growth assumptions.

**Though unfavorably ranked for Timeliness, these shares offer above average capital appreciation potential relative to the *Value Line* median.** Although the dividend is below average, the company does pay a special distribution from time to time. While this isn't etched in stone, it is an added bonus.

*Alan G. House* *February 28, 2025*

**BUSINESS:** Service Corp. International is the largest funeral services provider and cemetery operator in North America. The company owns and operates 1,483 funeral service locations and 489 cemeteries across 44 states in USA, 8 Canadian Provinces, and Puerto Rico (12/31/23). It also owns and operates flower shops, limousine services, and burial vaults. Acquired Keystone North America in March, 2010. Approximately 24,922 employees. Baillie Gifford & Co. owns 9.5% of common stock; The Vanguard Group, 10.1%; BlackRock, Inc., 9.2%. Officers & Directors, 4.6% (3/24 proxy). Chairman, President & CEO: Thomas L. Ryan. Incorporated: Texas. Address: 1929 Allen Parkway, Houston, Texas 77019. Telephone: 713-522-5141. Internet: www.sci-corp.com.

**Service Corp. International is expected to generate favorable top- and bottom- line results in the final stanza of 2024, versus the prior-year comparison.** (December-interim earnings were set to be released while this Issue went to press.) Fourth-quarter revenues likely advanced 2.4% from the like quarter a year ago to $1.08 billion, due to favorable pricing strategies and an increased demand for deathcare services. Meanwhile, we are optimistic about the potential for profit margin expansion, which could allow for favorable earnings-per-share comparisons on a full-year basis.

**The company should do well in the year ahead.** Leadership had allocated about $123 million to add new locations, which should augur well for top-line prospects. We also think the continued usage of favorable pricing strategies will persist. This should help offset fixed-cost expenses, and allow for profit margin recovery. In all, we look for 2025 revenues to reach nearly $4.33 billion, with share earnings approaching $4.00.

**Our long-term view is more favorable.** Demographic trends suggest an increasing demand for deathcare services due to an aging population. We think Service Corp. International will continue to commit funds towards acquisitions and expansion initiatives to support the anticipated demand. Meanwhile, its diversified portfolio of deathcare offerings should provide aid against shifting consumer preferences of cremation and burial ceremonies. Therefore, we look for revenues to climb at a healthy clip out to 2028-2030. Since this industry generates a significant amount of cash, we expect dividend hikes and share repurchases to persist throughout the foreseeable future, too.

**The equity should continue to complement a diversified portfolio well.** The stock has a strong track record for growth, and we do not expect a reversal anytime soon. Our 3- to 5-year Target Price Range suggests solid capital appreciation potential over that span, and its strong score for Price Growth Persistence should appeal towards conservative investors. Moreover, the growing dividend payout could interest income-oriented accounts. Overall, investors could do well at this juncture.

*Collin Cicconi* *February 14, 2025*

**BUSINESS:** Selective Insurance Group, Inc. is a holding company for ten property/casualty insurance companies. (Main subsidiary: Selective Insurance Company of America.) Markets products primarily in the East and Midwest. New Jersey accounted for 18% of premiums written in '24. Mix of 2024 premiums written: personal lines, 27%; commercial lines, 73%. Commercial premiums by industry (as percentage of total): automobile, 29%; general liability, 33%; workers' compensation, 12%; other, 26%. Has 2,650 employees. Officers/directors own 1.0% of common stock; BlackRock, 12.8% (4/24 Proxy). Chairman, President & CEO: John J. Marchioni. Inc.: NJ. Address: 40 Wantage Ave., Branchville, NJ 07890. Telephone: 973-948-3000. Internet: www.selective.com.

**Selective Insurance's solid top-line momentum should continue in the coming quarters.** Net premiums written and earned have increased, thanks to new business growth and rising average renewal pure prices. Selective has exceeded $500 million in net premiums written in Excess & Surplus lines. The Investments segment generated 12.8 points of ROE (return on equity) by the end of 2024, as net investment income was $363 million, up 17% from 2023. Management has advanced several important strategic initiatives. Selective has added five states to its Standard Commercial Lines operating footprint, achieved significant repositioning in Personal Lines, and enhanced its technology foundation to support Excess and Surplus Lines. Since the company has no Personal Lines or Standard Commercial exposure in California, management expects that the recent wildfires in the Los Angeles area will not significantly impact first-quarter 2025 results.

**The bottom line is currently under stress, but will likely rebound this year.** Selective's combined ratio increased to 103% in 2024, up 6.5 points from 96.5% in the previous year, due to higher catastrophe losses. Losses from Hurricane Helene totaled $85 million. Social inflation remains a headwind for the business and the insurance industry, as a whole. However, management is making an effort to bolster profitability. Selective has implemented price increases, taken underwriting actions to address underperforming business, and continued transitioning to the mass affluent market. The company has also made underwriting refinements, including managing limits and coverage grants in challenging jurisdictions. This has driven improved terms and conditions. In addition, management has focused production on better-performing classes of business.

**These shares are neutrally ranked for year-ahead relative price performance.** This equity offers attractive recovery potential out to late decade. Selective also has a below-market Beta coefficient of .90. This good-quality issue, ranked 2 for Safety, may be appealing to accounts with a long-term investment horizon.

**BUSINESS:** Thermo Fisher Scientific is a leading provider of analytical instruments and services for life sciences, drug discovery, and industrial applications. Is the result of Thermo Electron's 11/9/06 acquisition of Fisher Scientific. Has four business segments: Laboratory Products and Biopharma Services (52% of '23 sales), Life Sciences Solutions (22%), Analytical Instruments (16%), and Specialty Diagnostics (10%). '23 R&D: 3.1% of sales. Acq'd contract research organization PPD, 12/21. As of 12/31/23, had approx. 122,000 employees. Offs./dirs. own less than 1% of shares (4/24 Proxy). Chrmn., Pres. & CEO: Marc Casper. Incorporated: DE. Address: 168 3rd Ave., Waltham, MA 02451. Telephone: 781-622-1000. Internet: www.thermofisher.com.

**Thermo Fisher Scientific probably eked out little, if any, top-line growth last year.** Indeed, if management had it right, the lab equipment maker generated overall sales of between $42.4 billion and $43.3 billion in 2024, up 1% at best from the prior year's $42.857 billion tally and down a like percentage in a worst-case scenario. Underpinning leadership's fairly muted stance was partly an expected further run-off of the company's COVID-19 business. Notably, sales of test kits and vaccine-related offerings were expected to total just $400 million–$500 million last year, down more than 70% from $1.8 billion in 2023. That said, comparisons are bound to be much easier going forward, which augurs well for top-line growth. Too, Thermo stands to benefit, as it transitions much of its sterile fill-finish capacity from COVID-vaccine suport to GLP-1 (diabetes/weight loss drug) support.

**We are penciling in top- and bottom-line growth of 4% and 12%, respectively, for 2025.** With respect to the former, demand across key pharmaceutical end markets is generally expected to improve, as political and economic uncertainty wanes (post-election) and the drug industry moves past a cyclical low in equipment spending.

**At a recent investor-day conference, management sized the markets that Thermo serves at a cumulative $235 billion.** Furthermore, it figured they ought to expand, on average, 4%–6% annually for the foreseeable future. A key driver should be growing demand for therapeutics, coinciding with aging populations in key markets, including the United States.

**The company ought to generate a growing amount of excess cash.** We look for adjusted annual free cash flow (excluding working capital changes) to approach $11.3 billion by 2028-2030, up 43% from $7.92 billion in 2023. The surplus should give Thermo plenty of financial flexibility to, among other things, make additional acquisitions and buy back stock.

**Shares of Thermo Fisher are ranked 3 (Average) for relative year-ahead price performance.** What's more, at present, their appeal as a long-term holding is fairly limited.

**BUSINESS:** UniFirst Corp. is a leading company in the industrial laundry business. Manufactures, rents, cleans, and delivers uniforms, as well as some non-garment items. Serves over 300,000 customer locations in the United States, Canada, and Europe. Sales breakdown: U.S. & Canadian Rental and Cleaning and Corporate segments, 88% of 2024 revenues; Specialty Garments, 8%; and First Aid, 4%. '24 depreciation rate: 5.8%. Employs about 14,000. Ronald Croatti Trust has 20.1% of voting rights. Off. & dirs. own 1.2% of common stock; BlackRock, Inc., 12.7%; Vanguard Group, 9.1% (12/24 proxy). Chrmn.: Raymond C. Zemlin. Pres. & CEO: Steve Sintros. Inc.: MA. Addr.: 68 Jonspin Road, Wilmington, MA. 01887. Telephone: 978-658-8888. Internet: www.unifirst.com.

**Shares of UniFirst were up sharply after receiving a buyout offer from Cintas Corporation in early January.** Under the terms of the proposal, UNF stakeholders would have received $275 per share held. But, this offer was rejected by the board via unanimous decision, stating that it would not have been in the best interest of its shareholders. Nonetheless, the offer set the stage for just how highly Cintas views UniFirst, and the stock had remained at elevated levels. We should add that this was not the first time Cintas had made an effort to expand operations by acquiring UniFirst, either. Therefore we find it likely that a more-aggressive offer will be made in the upcoming quarters. Given the escalating buyout offers, we no longer think the stock is trading on fundamentals, and we have suspended the Timeliness rank for this equity.

**The company released good results in the fiscal 2025 first quarter.** (Years end on the last Saturday in August.) UniFirst advanced November-interim net revenues by 1.9% year over year, to about $605 million. To wit, all three of the operating segments generated top-line growth, versus the comparable prior-year period. The company also benefited from lower merchandise costs and other production costs, which offset growing technology investments, and improved the operating margin by 30 basis points, to 14.9%.

**UniFirst will likely expand profitability over the long-term horizon.** The company has made significant investments in customer relationship management and enterprise resource planning, which constitute UniFirst's key initiatives. While spending in these programs are expected to deduct from earnings in the year ahead, we think it has the potential to significantly improve profitability over the long term.

**Investors should be careful here.** Readers that are optimistic about a pending buyout approval could have much to gain by entering a position here. Moreover, the company's strong cash flow generation, and no debt, could provide ample opportunities for inorganic growth, or shareholder incentives. However, as it stands, the aforementioned run up in price discounts much of the capital growth we envision out to 2028-2030.

*Collin Cicconi* *February 14, 2025*

**(A)** Fiscal year ends last Saturday in August.
**(B)** Diluted earnings. Excludes nonrec. gains/(losses): '12, 21¢; '15, (11¢); '16, 47¢; '17, ($1.84); '18, 76¢; '19, 81¢. Next earnings report due early April.
**(C)** Amount listed is for comm. stock. Class B shares receive 80% of comm. div'd. Div'd. payment dates are typically in late March, June, September, and December.
**(D)** Incl. intangibles in '24: $768.8 mill., $41.16/sh.
**(E)** In millions.

**BUSINESS:** Universal Corporation (formerly Universal Leaf Tobacco) is the largest leaf tobacco exporter/importer in the world. Engaged in the purchasing, processing, and selling of tobacco to cigarette, pipe tobacco, and cigar manufacturers. Tobacco sales consist primarily of flue-cured and burley tobaccos. Conducts business in more than 30 countries and employs more than 25,000 permanent and seasonal workers. Sold lumber and building products business, 9/06; majority of agri-products division, 9/06. Officers & directors own 3.1% of stock; BlackRock, Inc., 16.3% (6/24 Proxy). Chairman, President, and CEO: Preston Wigner. Inc.: VA. Address: 9201 Forest Hill Avenue, Richmond, VA 23235. Telephone: 804-359-9311. Internet: www.universalcorp.com.

**In spite of some obstacles, Universal's top line should advance.** In the most recent quarter, uncommitted tobacco inventory levels remained low at about 10%. Nevertheless, revenues have risen, thanks to strong tobacco sales volumes and prices. The Tobacco Operations segment has benefited from solid customer demand and larger, higher quality, and better yielding crops in Africa. Accelerated shipment timing per certain customers' requests and a spike in sales of carryover crops has also been a plus. The company continues to grow its ingredients' market presence and has seen increased interest from new and existing customers, despite higher food costs creating pricing pressures. Universal expects that its newly expanded ingredients manufacturing facility in Lancaster, Pennsylvania will help to boost production. Management is focused on identifying additional ways for its tobacco and ingredients businesses to work together. We think the top line will step up 9%, to $3.0 billion, in fiscal 2024. In fiscal 2025, sales should improve by a more modest 3%, to $3.1 billion.

**The bottom line is currently under pressure, but ought to rebound soon.** The cost of good sold has increased largely due to higher green tobacco outlays. Universal has initiated a plan to consolidate its European sheet tobacco operations into its facility in the Netherlands. As part of this plan, the company is winding down its sheet operations in Germany. Management believes that this consolidation will optimize Universal's sheet operations and generate efficiencies. As a result of the consolidation, Universal has incurred restructuring and impairment costs. On a more positive note, operating expenses are declining as a percentage of sales. We predict the bottom line will improve 4%, to $4.95 a share, in fiscal 2024, as healthy volume should ensure solid operating leverage. In fiscal 2025, share earnings will probably expand by a stronger 20%, to $5.95.

**Since our October report, this stock's Timeliness rank has moved up one notch, to 3 (Average).** The equity offers attractive recovery potential out to late decade. This issue may be appealing to buy-and-hold investors.

**BUSINESS:** VeriSign, Inc. is a global provider of domain name registry services and Internet infrastructure. The company enables the security, stability, and resiliency of important Internet infrastructure and services, and provides Root Zone Maintainer services. VeriSign has one reportable segment. The company's international sales approximated 33% of the total for 2023. Berkshire Hathaway, Inc. owns 12.8% of common stock; BlackRock, Inc., 10.8%; The Vanguard Group, 10.3%; officers & directors, less than 1.0% (4/24 Proxy). Had 908 employees at 12/31/23. Executive Chairman & Chief Executive Officer: D. James Bidzos. Incorporated: Delaware. Address: 12061 Bluemont Way, Reston, Virginia 20190. Telephone: 703-948-3200. Internet: investor.verisign.com.

**VeriSign reported solid operating results for the September quarter, despite a fairly modest decline in domain name registrations.** The top line advanced moderately over the prior-year figure. Expenses remained in check, and earnings per share rose 13%, to $2.07. VeriSign finished the period with 169.6 million .com and .net registrations in the domain name base, which marked a 2.5% decrease from the year-ago level. During the third quarter, the company processed 9.3 million new domain name registrations for .com and .net, compared with 9.9 million in the prior-year period. Nevertheless, we anticipate greater sales and earnings per share for the December period. All told, we look for sales and share earnings to increase 4% and 11%, respectively, for full-year 2024.

**Growth ought to continue in the coming years.** The company should further benefit from solid industry fundamentals going forward. VeriSign is a global provider of critical infrastructure and domain name registry services for the Internet, and we expect that demand for its services will remain healthy in the years ahead. Efforts by the company to control expenses should keep profit margins robust. Share repurchases ought to continue to support earnings per share, as well.

**This stock is ranked to outperform the broader market averages for the coming six to 12 months.** We anticipate solid growth in sales and earnings per share for the company over the pull to late decade. From the recent quotation, this equity offers decent risk-adjusted capital gains potential for the coming 18 months as well as the 3- to-5 year stretch. Investors looking for exposure to the Internet Industry may want to consider these good-quality shares. But it is worth mentioning that shareholders' equity is in negative territory here, which makes the debt-to-equity and return on capital statistics meaningless. The reason for this is the company's active share repurchase program over a long time scale. Working capital is also negative, due to fairly large deferred revenues on the current liabilities side. That said, the cash balance remains fairly healthy and interest expense is well covered by earnings.

**BUSINESS:** Werner Enterprises, Inc. is a truckload carrier of general commodities throughout the continental U.S., Canada, and Mexico. Targets service-sensitive segment of dry-van, flatbed, and temperature-controlled truckload market. Provides dedicated and regional carriage. As of 12/23, the company had 8,000 trucks (7,740 company-owned) and about 30,810 trailers. 2023 depr. rate was 10.1%. Werner has 13,809 employees. Officers/directors, own 1.2% of common stock; BlackRock, 13.1%; Vanguard Group, 9.0%; Macquarie Group, 7.0% (4/24 proxy). Chairman, President, and CEO: Derek J. Leathers. Incorporated: Nebraska. Address: 14507 Frontier Rd., P.O. Box 45308, Omaha, NE 68145. Telephone: 402-895-6640. Internet: www.werner.com.

**Operationally, Werner had a tough 2024.** We expect that the trucker continued to face challenges in the fourth quarter. Our earnings estimate of $0.24 represents a 38% year-to-year decline in per-share profits, on $764 million in revenues, which would mark a 7% dip from a year ago. Soft freight market conditions have continued to hamper performance for the trucker. In addition, a weaker used equipment market, rate pressures in One-Way Truckload and Logistics, and higher interest expenses have weighed on margins. Management noted that weaker volumes have been exacerbated by higher expenses. Some pushback on price hikes has also contributed to the top- and bottom-line strain. All told, the company's full-year earnings probably fell to $0.70 a share, on revenues of $3.04 billion.

**Management's efforts to right the ship should bear fruit this year.** Current difficulties, such as elevated healthcare claims, increased driver school costs, and higher interest expenses are likely temporary headwinds. We expect firmer market trends to help offset the pressure from these factors. What's more, efforts to improve cost controls with better utilization, fleet consolidation, and emphasis on higher-margined freight will likely help to fuel an operational recovery in 2025. Werner is consolidating freight onto a unified platform, EDGE TMS, to enhance operational efficiency and visibility across business segments. The company expects this integration to unlock synergies and drive incremental revenue, particularly as market conditions improve. We also look for growth initiatives to gain traction as the year progresses.

**Werner's long-term prospects are also favorable.** The company's ongoing investments in trucks, trailers, terminals, talent, and technology aim to position it for growth once market conditions improve. The trucker should experience improved performance in Logistics through higher rates, increased volumes, and transactional opportunities as demand returns. These factors ought to drive revenues and profits higher out to late decade.

**The current stock price offers above average capital gains potential over the next 3 to 5 years.**

**BUSINESS:** Watsco, Inc. distributes heating, ventilation, and air conditioning (HVAC) equipment, as well as related parts and supplies, in the United States and overseas. Its HVAC equipment includes residential central ACs; light commercial ACs; gas, electric, and oil furnaces; commercial AC and heating equipment and systems; and other specialized equipment. Officers and directors own 0.7% of Class A stock; BlackRock, Inc., 11.7%; The Vanguard Group, 9.4%; Albert H. Nahmad owns 75.9% of Class B shares (4/24 proxy). Has about 7,295 employees. Chairman & Chief Executive Officer: Albert H. Nahmad. Incorporated: Florida. Address: 2665 South Bayshore Drive, Suite 901, Miami, Florida 33133. Telephone: 305-714-4100. Internet: www.watsco.com.

**Watsco put together an impressive quarter to close out 2024, achieving record sales, earnings, and cash flow.** The strong performance was driven by robust HVAC equipment sales, particularly residential units, which benefited from strong demand, new customer acquisition, and market share gains. Commercial equipment sales were also solid, rising 9%. Additionally, the company recaptured sales lost in 2023 due to an Original Equipment Manufacturer's (OEM) supply chain issues. Watsco's technology initiatives continue to be a competitive advantage, with digital engagement driving higher customer retention and sales growth in the period. Margins expanded due to pricing optimization, as well, while strong cash flow allowed for an 11% increase to the dividend, to $12.00 per share on an annualized basis.

**The ongoing transition to A2L refrigerants is a significant shift for Watsco.** Leadership has been actively managing inventory to phase out R-410A and expects to fully discontinue its sales by the end of 2025. While A2L adoption did not meaningfully impact fourth-quarter results, pricing actions tied to tariffs and manufacturer increases contributed to an 8% price rise. As the transition accelerates, gross profit dollars should get a boost due to the higher-cost systems, but will likely remain stable as a percentage of sales initially, due to temporary costs related to distribution, warehousing and training. For this reason, we expect an incremental gain in 2025 profit and a more meaningful advance next year.

**Long-term business prospects for Watsco are encouraging.** Investments in inventory management should continue to enhance supply-demand alignment and reduce excess costs. The company's growing ecommerce platform, *OnCall Air*, which accounted for 35% of total sales in 2024, should also boost sales and operating efficiency. Lastly, management's ongoing acquisition strategy, targeting small and medium-sized distributors, looks to further expand its market share and economies of scale.

**Watsco's robust financial and competitive position makes the stock a worthy pick for conservative investors.**

*Lucas Vanarthos* *March 14, 2025*

**(A)** Diluted earnings based off of earnings allocated to Watsco shareholders, which is net income less earnings attributed to noncontrolling interest. Excludes nonrecurring gains/(losses): '12, (33¢); '17, 27¢. Next earnings report due late April. May not sum due to change in shares outstanding. **(B)** In millions. **(C)** Dividend historically paid late-Jan., April, July, and Oct. Excludes $5/share special dividend paid 10/31/12. **(D)** Includes intangibles. In 2024: $660.3 million, $16.35/sh.

**Aqua Texas Field Visit (Central Region) Notes**

**April 7-8, 2025**

- Briar Creek WWTP:
  - Will have replaced all WWTP in central region by the end of next year – Briar Creek is next on the list
  - Acquired this plant, assuming 20 years old
  - Replaced bar system in last 10 years, in last couple of years added new stainless steel drops for aeration, rehab work on filter
  - Phosphorous removal, chlorine filter as well, mostly biological filter
- Round Mountain WTP:
  - Pumps to Big Sandy, so no hydro tank here
  - Have replaced pumps since acquired in 2004
  - Different types of structures throughout the system due to acquisitions, but have a concrete standard for all builds/rebuilds
  - Two 32,280 gallon tanks
  - Most plants have hydro tanks, but not this because it pumps directly to Big Sandy
- Big Sandy WTP:
  - 4 wells, 2 new wells installed in last 5 years because of growth and loss of aquafer
  - Standpipe in stalled in 2016 – added other support tank in 2016 as well, pumps and hydro tank
- Main replacement project – 1-2 miles per year
- More recent focus on main replacements – lots of old pipe that is at high risk for leaking
- Chapparall WTP:
  - Upgrades to the pumps
  - Hydro tank installed in 2024 and tank was replaced at same time
  - 28,000 gallon tank
  - Phosphate compound to remove iron from the water
- Summit View WTP:
  - Relatively new pumps
  - Added a tank, was supposed to replace existing tank, but it was easier to add a tank instead
  - 33,549 gallon tank
  - Have added lots of wells to the Sandy Creek system due to drying up of aquafer

- Rock Cliff WTP:
    - New tank went in this year
    - New well was drilled
- Cherry Hollow WTP 1:
    - Full rehab, just finished last year, some piping still the same but that is it
    - Well was already here
    - Tank replaced in 2024
    - 53,000 gallon tank, a little bigger than the old tank
- Hill Country Northwest Standpipe and Booster Station:
    - Pump, building, and hydro tank installed in 2021, added transmission valve
- Cherry Hollow WTP 2:
    - Radium removal – wells have natural radium, so they need to remove, change out medium every 5-10 years based on amount of water treated
    - Concrete structure here – current standard/preference
    - Standpipe rehabbed – sand blasted, taken down, painted
    - 3 wells
- Barton Creek Lakeside Surface Water Plant:
    - Treat rain water with sulfuric acid because it's a limestone lake so need to bring ph level down
    - Built in 2021
    - Run this as well as the adjacent treatment plant, not at the same time though
    - Chemical components have heavy wear and tear due to use of sulfuric acid
    - Rely more on this plant than the groundwater plant because it is more reliable and has better output
- Barton Creek Groundwater Plant:
    - Redid the fence recently
    - Tank replaced in 2023, was two smaller tanks, but now one bigger tank, one of the prior tanks was from 1980s the other was somewhat newer
- Quail Point WTP:
    - Will be replaced soon, leaks on both tanks
    - At the top of the community, serves customers within community
    - There will be a pump station at the current location, and this will be moved slightly
    - Replacement station will have two tanks, but double capacity
    - Hydro tank installed in 1996
- Barton Creek WWTP:
    - Replaced in last couple of years, original facility built in 1980s

    - Steel facility, requires more maintenance than concrete
- Woodcreek WTP 1:
    - On the upper end of system
    - 125,000 gallon tank
    - Tank installed in 1980s
- Doolittle Drive Tank:
    - Likely to be rehabbed or replaced in the next few years
- Woodcreek WWTP:
    - New blower system installed a little over 5 years ago
    - Plant will be replaced and built over where the office is, another retention pond will be here – type 1, the one they have now is type 2
- Woodcreek WTP 2:
    - New tank this past year
    - Pumps up to elevated storage site and maintains pressure
- Sunset Oaks WWTP:
    - Built a few years ago
    - Added building for the blowers due to noise complaints
    - Building a modular plant within the fence
    - Done all work by 2026

ITINERARY FOR

JOHN SPANOS AND SAMUEL POWERY

April 7 – 10

Monday, April 7, 2025

**American Airlines – Confirmation: AUXHQS (JJS); GLEJOA (SEP)**

| | | | |
|---|---|---|---|
| Leave | Harrisburg, PA | AA #977 | 6:00 am |
| Arrive | Dallas, TX | Seat 12C | 8:33 am |
| | | | |
| Leave | Philadelphia, PA | AA #583 | 6:23 am |
| Arrive | Dallas, TX | Seat 30C | 9:10 am |

CAR: Enterprise Rent A Car **CONFIRMATION: 1479105177COUNT**

HOTEL: Hilton Garden Inn Granbury **CONFIRMATION: 3234967358 (JJS)**
635 Pearl Street **3235129894 (SEP)**
Granbury, TX 76048
1-817-579-3800

10:30am meet at Fort Worth Texas office – 3201 Curtis Dr., Ft. Worth, TX 76116

Tuesday, April 8, 2025

8:00am Meet at office – 2306 Christine Drive, Granbury, TX

PURPOSE: Aqua Texas site visit of North Texas region

CONTACTS: Joseph McDaniel – 903-408-0885 (w)
Rich McCorkle – 682-229-1417
Greg Long – 817-776-2659

HOTEL: Doubletree Airport North **CONFIRMATION: 83946963 (JJS)**
2441 W. John Carpenter Freeway
Irving TX 75063
1-972-929-8181

**American Airlines – Confirmation: GLEJOA (SEP)**

| | | | |
|---|---|---|---|
| Leave | Dallas, TX | AA #2542 | 6:50 pm |
| Arrive | Philadelphia, PA | Seat 26C | 11:00 pm |

HANDY ACRES WELL STATION 11100 DALEY WAY

2 WELLS

WOOD STRUCTURE

STORAGE TANK - STEEL BOLTED 10,000 GALLON

2 PUMPS - 7.5 HP

CHLORINE TREATMENT

OLDER SITE

HYDROPNEUMATIC TANK - NOT NEEDED

PVC FOR PIPING - 2" & 3" PRIMARILY

FOXBANE WATER PLANT #1 11170

2 - 20,000 GALLON GROUND STORAGE TANKS

- STEEL BOLTED

EMERGENCY GENERATOR

1 OF 4 PLANTS IN THIS SYSTEM

HYDROPNEUMATIC TANK

2 BOOSTER PUMPS - 10 HP EACH

WOOD BOOSTER STRUCTURE

VFDS FOR PUMPS

SEPARATE CHLORINE BLDG

ONE WELL

FOOTHILL WATER PLANT #3 12:10

NEW HYDROPNEUMATIC TANK - 2020

2 - 20,000 GALLON STORAGE TANKS

OLD WOODEN BOOSTER BLDG

ONE WELL

3 BOOSTER PUMPS

HYDROPNEUMATIC TANK - 2021

INTERCONNECT PUMP W/ FT. WORTH

EMERGENCY GENERATOR

## Eagle's Nest Water Plant #1 4:10

2 wells

Very old - needs upgrade

Very small area for site

Storage tank

Wood structure

Chlorine section of bldg

Control Pressure Tank

2 small booster pumps - 3 hp

Booster tank

## Granbury Operations Office 8:00 Clear Lake

Two structures

Wood Cabin - metal roof

Office

Was a shop for electrical shop

Rebuilt in 2015, then remodeled

Small bldg for SCE - storage

## Canyon Creek Pump Station 8:10

6 wells

one on site - oldest 1970s

2 ground storage tanks

- one 1970s - 150,000 gallon
- second one - 2017 150,000 gallon

Built new pump house - 2023 - original 1974 was wood

Connection to Chlorine Liquid within last 2 yrs

Control house bldg + emergency generator

Phosphate + Chlorine

3 booster pumps - soft w/ VFDs

2 hydropneumatic tanks

## Canyon Creek Water Reclamation Plant 7150

All customers have taken over Lot 5000

Conventional Digester and Equalization Tank

5000 to Remain entire new Facility on Land next Lot

Added Wood Structure Lab

2 Blowers

42,000 Gallon/Day

Emergency Generator - Added Last for the

Aerated Train

Rectangle Clarifier

480 Customers - Had 1st Water Area Purchased

## Mountain View Water Plant #2 8150

1998 Construction

Hydropneumatic tank - 5000 Gallon

2 Wells into Plant - one w/in House

Liquid Chlorine - conducted from Gas

Wood Building

Does not have SCADA

Wire glands in Electric

3 Booster Pumps - Small 3 HP or Less

Ground Storage - Steel Bolted

New Hydropneumatic since Storage Tank is not elevated

Most wells injection - 200' to 400'

Mountain View Water Plant #1 9:05

Wells 2, 3 + 4

2006 Construction

Cement Pump Building

Chlorine Facility Enhanced

Hydropneumatic Tank

2 Original Ground Storage Tanks

One Larger Tank Added in 2006

SCADA Equipment Added 2024

3 Booster Pumps

VFDs

Liquid Chlorine

Emergency Generator

Well #9 off site feeds into Plant

Whippoorwill Bay Water Plant #2 9:30

Hydropneumatic Tank - 2018

Built New in 2018

Emergency Generator - 2024

Cement Block Building

2 Ground Storage Tanks

- 2024 Tank - Coated and Circulated
- 2018 Tank - Soon to be Replaced

2 Wells - one w/in Feet

Small Chlorine Bldg - Used

3 Booster Pumps - 2 Replaced in Last Years (20+x)

VFDs

350 Customers

Lake County Acres Pump #1 10:00

Well #1

4 Wells into System

Wells 1 on site, Well #2 just in next lot

Well #3 & #5 in field

2024 - Generator

2024 - Pump Mod (cement slab)

3 Booster Pumps - 15HP

VFDs

SCADA Equipment

2 Ground Storage Tanks - 2018 + 2014

Hydropneumatic Tank - #1994

Storage Tank - 2014

Recirculating Pumps for Tanks

North Fork Creek II Water Plant 10:30

Well #1

Hydropneumatic Tank - 2000

Ground Storage Tank - Steel Bolted

Wood Pump Mod

Chlorine - Liquid converted from Gas

3 Pumps

Added VFDs in 2024

Almost all Mains PVC

Sobrato Water Plant #1 1975

Well #1

Under site - 1970

Wood Structure

2 Small Pumps

2 Small Hydropneumatic Tank - 1000 Gallon Each

Ground Storage Tank

Chlorine Treatment

One Other Well Feeds into Site

Blue Water Shores Wastewater Plant 1990

Built 2010

All Wood Structure for Lab

3 Blowers

Chlorine Treatment - Low Content Bleach

Used to Have Package Plant

Clarifier - Circular

Digester

Aeration

Equalization Tank

30,000 Gallon/Day

Chlorine Contact/Filters

Splitter Box

Blue Water Shores Water Plant 1990

2 Tanks

Hydropneumatic Tank

Pump House

4/7/2025

## Hanby Acres (water)

- two wells
- 10,000 gallon tank
- 3 inch PVC pipe

## Photos

1. well #1
2. booster pumps
3. sodium hypochlorite tanks
4. water storage tank (ground storage tank)
5. hydro tank
6. well #2
7. well house

## Foxbase Water Plant #1 (water)

- 2 20,000 gallon tanks
- 153 gallons/minute on well
- 10 hp boosters
- just the one well that feeds into this plant

1. generator
2. ground storage tank 1
3. hydro tank
4. well house
5. ground storage tank 2
6. booster pump
7. VFD controls
8. well
9. sodium hypochlorite tank
10. chemical tanks building

## Foxbase Water Plant #3 (water)

- hydro tank built in 2020
- 2 20,000 gallon tanks

1. hydro tank
2. well
3. ground storage tank 1
4. ground storage tank 2
5. chlorine gas tanks
6. well house
7. booster pumps
8. 
9. 

## Shale Creek Wastewater Plant #1 (ww)

1. blower controls
2. blowers
3. chlorine gas tanks
4. lab
5. aeration tank
6. EQ tank
7. clarifier

## Shale Creek Wastewater Lift Station #3 (ww)

- two pumps
- 10 ft deep wet well

1. wet well w/ pumps
2. controls
3. wet well w/ valves
4. 

4/7/2025

## Shale Creek Water Plant

- 1 50 hp booster
- 2 40 hp boosters
- site has 4 wells that feed it
- 2019 + 2023 for ground storage tanks
- facility was struck by lightning

① hydro tank
② generator
③ well 1
④ well 2
⑤ booster pumps
⑥ ground storage tank
⑦ chlorine gas building
⑧ ground storage tank
⑨ chlorine gas tanks

## Shale Creek Remote Wells 3+4

- reworked both well #4 & #3
- 260 gpk/min – well #3
- 140 gpk/min – well #4

① well #3
② well #4
③ well controls

## Trail Creek #3 Water Plant

① hydro tank
② 3 ground storage tanks
③ two wells
④ chlorine tank
⑤ booster pumps
⑥ well house

## Chisholm Springs Water Plant #1

- work being done right now

① well
② hydro tank
③ pump house
④ booste pumps
⑤ pump controls
⑥ polyphosphate tank
⑦ chloring gas tank
⑧ ground storage tank
⑨ ground storage tank

## Chisholm Spring Wastewater Plant

- 40 hp on both blowers

① lab
② chemical tanks
③ filter and backwash basin
④ sand filter
⑤ blowers
⑥ clarifier
⑦ aeration tank
⑧ EQ tank
⑨ digester

## The Resort Wastewater Plant

- probably one of their older plants
- has had several upgrades

① lab
② chemical tank
③ booster pumps for backwash tank
④ backwash tank
⑤ clarifier
⑥ aeration tank
⑦ generator
⑧ blowers
⑨

## The Resort Water Plant #2

- got redone inside/out
- 3 brand new boosters – 30 hp each
- interconnection w/ Ft. Worth

① hydro tank
② well 1
③ well 2
④ ground storage tank
⑤ chemical tanks
⑥ booster pumps
⑦ booster pump for interconnection
⑧ delete (electric asset)
⑨ generator

## Eagle's Nest Water

- two 3hp pumps

① well
② ground storage tank
③ Sodium hypochlorite tank
④ pressure tank
⑤ bladder tank
⑥ booster pumps
⑦ controls

4/8/2025

## Aqua TX Operations Office

① Operations office

- 10 years old, used to be a shop
- they have a meter shed
- they have an ice maker

## Canyon Creek (water)

- 6 wells that feed into here
- tank is 20 yrs old, 150 gal
- 2 year old pump house
- all liquid chlorine – beginning of this year
- hydro tanks – couple years old

① well
② ground storage tank
③ ground storage tank
④ generator
⑤ chlorine tank
⑥ booster pumps
⑦ controls
⑧ VFD controls
⑨ hydro tanks
⑩ pump house

## Canyon Creek Wastewater

- a lot of dead
- building new facility here (new)
- about 500 customers

① digester
② EQ tank
③ lab
④ blower
⑤ generator
⑥ clarifier
⑦ EQ tank
⑧
⑨

4/8/2025

## Mountain View Water Plant #2

- 1980 hydro tank
- 27 yr old pumphouse
- GST ~ 27 yrs old

(1) hydro tank (pressure tank)
(2) chlorine tank
(3) booster pumps
(4) ground storage tank
(5) pump house
(6) well

## Mountain View Plant #1, Wells #2, #3, #4

- 2006 for hydro tank
- building was probably 2006 as well

(1) hydro tank
(2) pump house
(3) ground storage tanks
(4) SCADA
(5) booster pumps
(6) VFD controls
(7) chlorine tank
(8) generator
(9) ground storage tank
(10) well
(11) well

## Whippoorwill Bay Water Plant #2

- 2018 hydro tank
- Aqua built everything at site
- older GST replaced next year
- newer GST put in last year
- booster pump #2 replaced last year
- ~ 380 customers

(1) hydro tank
(2) well
(3) chlorine tank
(4) generator
(5) GST (old)
(6) GST (new)
(7) booster pumps
(8) VFD controls
(9) pump house

## Lake Country Acres Plant #1, Well #1

- 4 wells as part of this system
- brand new building (renovated)
- 1994 – hydro tank
- GSTs – 2014 + 2018

(1) pump house
(2) generator
(3) chlorine tanks
(4) booster pumps
(5) VFD controls
(6) SCADA
(7) hydro tank
(8) ground storage tanks
(9) well #1

## North Fork Creek II Water Plant #1

(1) well
(2) hydro tank
(3) GST
(4) chlorine tank
(5) booster pumps
(6) VFD
(7) pump house

1/8/2025

## Boynton Plant #1, Well #1

- at least 1998 for plant
- two wells that feed into here

1. booster pumps
2. chlorine tank
3. pump house
4. well
5. GST
6. hydro tanks
7. 

## Blue Water Shores WW Plant

- Aqua built this
- 10-15 yrs old

1. blowers
2. chlorine tanks
3. clarifier
4. aeration tank
5. digester
6. EQ tank
7. lab (outside) - building
8. bladder tank
9. lab (inside)

# TRANSACTION CODE DESCRIPTIONS

| Code | Description |
|---|---|
| 0 | Regular Retirement. All retirements from plant which occur in the course of normal operations for causes that are to be covered by depreciation accruals. Typically, these include all causes other than those listed below. |
| 1 | Reimbursed Retirement. Retirement for which the Company received payment approximating or exceeding the depreciated original cost of the property, and such payment was recorded as a credit to the depreciation reserve account. Reimbursed retirements are usually related to extraordinary circumstances such as fire or other accidents for which the loss is covered by insurance, and to property moved or abandoned due to the requirements or requests of outside parties, for which the Company is reimbursed. |
| 2 | Sale. Transfer of ownership of property for which the Company received payment approximating or exceeding the depreciated original cost, and the property would not have been retired at or near that time if the sale had not occurred. Sales are generally related to circumstances in which the property has not actually been retired, but continues in public service following the transaction. Sales in lieu of abandonment are classified as regular retirements. |
| 3 | Transfer. Transfer of property between accounts or property groups. Use for both transfers-in and transfers-out, and for intraaccount transfers. |
| 4 | Beginning-of-Interval Transfer. Transfer of property between accounts or property groups that is to be considered as occurring at the beginning rather than the end of the age interval. Includes major transfers of property into the account or property group, such as to initiate an account or to substantially increase the size of an existing account. |
| 5 | Acquisition. Purchase, trade, or similar transaction where property previously in public service was acquired. |
| 6 | Adjustment. Used for control purposes in Plant Accounting data, and for adjustments, special appropriations, or transfers to or from the Depreciation Reserve account in Cost of Removal and Salvage data. |
| 7 | Outlier Retirement. A retirement that occurs under unusual circumstances such that the analyst deems it appropriate that it be excluded from the retirements used in the service life or salvage study. |
| 8 | Ending Balance. The balance of plant in service as of December 31 of the most recent year included in the Experience Band, or as of a specific calculation date. |
| 9 | Beginning Balance. The balance of plant in service as of December 31 of the year preceding the first year included in the Experience Band. |
| 9 | Gross Addition. Placements of plant in service as replacements of plant retired or as additions to plant in service. |

Note: Corrections should be assigned the same code as the transaction being corrected.

# SOI EXHIBIT H
# Proposed Protective Order

**PUC DOCKET NO. 58124**

| | | |
|---|---|---|
| **APPLICATION FOR AQUA TEXAS, INC. FOR AUTHORITY TO CHANGE RATES** | **§ § §** | **PUBLIC UTILITY COMMISSION OF TEXAS** |

**PROTECTIVE ORDER**

This Protective Order governs the use of all information deemed confidential (Protected Materials) or highly confidential (Highly Sensitive Protected Materials), including information whose confidentiality is currently under dispute, by a party providing information to the Public Utility Commission of Texas (Commission) or to any other party to this proceeding.

It is ORDERED that:

1. **Designation of Protected Materials.** Upon producing or filing a document, including, but not limited to, records on a computer disk or other similar electronic storage medium in this proceeding, the producing party may designate that document, or any portion of it, as confidential pursuant to this Protective Order by typing or stamping on its face "PROTECTED PURSUANT TO PROTECTIVE ORDER ISSUED IN DOCKET NO. 58124" (or words to this effect) and consecutively Bates Stamping each page. Protected Materials and Highly Sensitive Protected Materials include the documents so designated, as well as the substance of the information contained in the documents and any description, report, summary, or statement about the substance of the information contained in the documents.

2. **Materials Excluded from Protected Materials Designation.** Protected Materials must not include any information or document contained in the public files of the Commission or any other federal or state agency, court, or local governmental authority subject to the Public Information Act.[1] Protected Materials also must not include documents or information which at the time of, or prior to disclosure in, a proceeding is or was public

[1] Tex. Gov. Code § 552.001-.353.

knowledge, or which becomes public knowledge other than through disclosure in violation of this Protective Order.

3. **Reviewing Party.** For the purposes of this Protective Order, a "Reviewing Party" is any party to this docket.

4. **Procedures for Designation of Protected Materials.** On or before the date the Protected Materials or Highly Sensitive Protected Materials are provided to the Commission, the producing party is required to file with the Commission and deliver to each party to the proceeding a written statement, which may be in the form of an objection, indicating: (a) any exemptions to the Public Information Act claimed to apply to the alleged Protected Materials; (b) the reasons supporting the producing party's claim that the responsive information is exempt from public disclosure under the Public Information Act and subject to treatment as protected materials; and (c) that counsel for the producing party has reviewed the information sufficiently to state in good faith that the information is exempt from public disclosure under the Public Information Act and merits the Protected Materials designation.

5. **Persons Permitted Access to Protected Materials.** Except as otherwise provided in this Protective Order, a Reviewing Party may access Protected Materials only through its "Reviewing Representatives" who have signed the Protective Order Certification Form (see Attachment A). Reviewing Representatives of a Reviewing Party include its counsel of record in this proceeding and associated attorneys, paralegals, economists, statisticians, accountants, consultants, or other persons employed or retained by the Reviewing Party and directly engaged in this proceeding. At the request of the PUC Commissioners, copies of Protected Materials may be produced by Commission Staff. The Commissioners and their staff must be informed of the existence and coverage of this Protective Order and will observe the restrictions of the Protective Order.

6. **Highly Sensitive Protected Material Described.** The term "Highly Sensitive Protected Materials" is a subset of Protected Materials and refers to documents or information that a producing party claims is of such a highly sensitive nature that making copies of such

documents or information or providing access to such documents to employees of the Reviewing Party (except as specified herein) would expose a producing party to unreasonable risk of harm. Highly Sensitive Protected Materials include but are not limited to: (a) customer-specific information protected by § 32.101(c) of the Public Utility Regulatory Act,[2] (b) contractual information pertaining to contracts that specify that their terms are confidential or that are confidential pursuant to an order entered in litigation to which the producing party is a party; (c) market-sensitive fuel price forecasts, wholesale transactions information and/or market-sensitive marketing plans; or (d) business operations or financial information that is commercially sensitive. Documents or information so classified by a producing party shall bear the designation "HIGHLY SENSITIVE PROTECTED MATERIALS PROVIDED PURSUANT TO PROTECTIVE, ORDER ISSUED IN DOCKET NO. 58124" (or words to this effect) and shall be consecutively Bates Stamped. The provisions of this Protective Order pertaining to Protected Materials also apply to Highly Sensitive Protected Materials, except where this Protective Order provides for additional protections for Highly Sensitive Protected Materials. In particular, the procedures herein for challenging the producing party's designation of information as Protected Materials also apply to information that a producing party designates as Highly Sensitive Protected Materials.

7. **Restrictions on Copying and Inspection of Highly Sensitive Protected Material.** Except as expressly provided herein, only one copy may be made of any Highly Sensitive Protected Materials except that additional copies may be made to have sufficient copies for introduction of the material into the evidentiary record if the material is to be offered for admission into the record. The Reviewing Party is required to maintain a record of all copies made of Highly Sensitive Protected Material and must send a duplicate of the record to the producing party when the copy or copies are made. The record must specify the location and the person possessing the copy. Highly Sensitive Protected Material must be made available for inspection only at the location or locations provided by the producing party, except as specified by Paragraph 9. Limited notes may be made of Highly Sensitive Protected Materials, and such notes must themselves be treated as Highly

[2] Tex. Util. Code Ann. §§ 11.001-66.016 ("PURA").

Sensitive Protected Materials unless such notes are limited to a description of the document and a general characterization of its subject matter in a manner that does not state any substantive information contained in the document.

8. **Restricting Persons Who May Have Access to Highly Sensitive Protected Material.** With the exception of Commission Staff, the Office of the Attorney General (OAG), and the Office of Public Utility Counsel (OPC), and except as provided herein, the Reviewing Representatives for the purpose of access to Highly Sensitive Protected Materials may be persons who are (a) outside counsel for the Reviewing Party, (b) outside consultants for the Reviewing Party working under the direction of Reviewing Party's counsel, or (c) employees of the Reviewing Party working with and under the direction of Reviewing Party's counsel who have been authorized by the presiding officer to review Highly Sensitive Protected Materials. The Reviewing Party must limit the number of Reviewing Representatives that review Highly Sensitive Protected Materials to the minimum number of persons necessary. The Reviewing Party is under a good faith obligation to limit access to each portion of any Highly Sensitive Protected Materials to two Reviewing Representatives whenever possible. Reviewing Representatives for Commission Staff, OAG, and OPC, for the purpose of access to Highly Sensitive Protected Materials, must consist of their respective counsel of record in this proceeding and associated attorneys, paralegals, economists, statisticians, accountants, consultants, or other persons employed or retained by them and directly engaged in these proceedings.

9. **Copies Provided of Highly Sensitive Protected Material.** A producing party is required to provide one copy of Highly Sensitive Protected Materials specifically requested by the Reviewing Party to the person designated by the Reviewing Party who must be a person authorized to review Highly Sensitive Protected Material under Paragraph 8. Representatives of the Reviewing Party who are authorized to view Highly Sensitive Protected Material may review the copy of Highly Sensitive Protected Materials at the office of the Reviewing Party's representative designated to receive the information. Any Highly Sensitive Protected Materials provided to a Reviewing Party may not be copied except as provided in Paragraph 7. The restrictions contained herein

do not apply to Commission Staff, OPC, and the OAG when the OAG is a representing a party to the proceeding.

10. **Procedures in Paragraphs 10-14 Apply to Commission Staff, OPC, ERCOT, and the OAG and Control in the Event of Conflict.** The procedures in Paragraphs 10 through 14 apply to responses to requests for documents or information that the producing party designates as Highly Sensitive Protected Materials and provides to Commission Staff, OPC, and the OAG in recognition of their purely public functions. To the extent the requirements of Paragraphs 10 through 14 conflict with any requirements contained in other paragraphs of this Protective Order, the requirements of these Paragraphs control.

11. **Copy of Highly Sensitive Protected Material to be Provided to Commission Staff, OPC and the OAG.** When, in response to a request for information by a Reviewing Party, the producing party makes available for review documents or information claimed to be Highly Sensitive Protected Materials, the producing party is required to also deliver one copy of the Highly Sensitive Protected Materials to the Commission Staff OPC (if OPC is a party), and the OAG (if the OAG is representing a party) in Austin, Texas. Provided however, that in the event such Highly Sensitive Protected Materials are voluminous, the materials will be made available for review by Commission Staff, OPC (if OPC is a party), and the OAG (if the OAG is representing a party) at the designated office in Austin, Texas. The Commission Staff, OPC (if OPC is a party), and the OAG (if the OAG is representing a party) may request such copies as are necessary of such voluminous material under the copying procedures specified herein.

12. **Delivery of the Copy of Highly Sensitive Protected Material to Commission Staff and Outside Consultants.** The Commission Staff, OPC (if OPC is a party), and the OAG (if the OAG is representing a party) may deliver the copy of Highly Sensitive Protected Materials received by them to the appropriate members of their staff for review, provided such staff members first sign the certification specified by Paragraph 15. After obtaining the agreement of the producing party, Commission Staff OPC (if OPC is a party), and the OAG (if the OAG is representing a party) may deliver the copy of Highly Sensitive

Protected Materials received by it to the agreed, appropriate members of their outside consultants for review, provided such outside consultants first sign the certification in Attachment A.

13. **Restriction on Copying by Commission Staff, OPC and the OAG.** Except as allowed by Paragraph 7, Commission Staff OPC and the OAG may not make additional copies of the Highly Sensitive Protected Materials furnished to them unless the producing party agrees in writing otherwise, or, upon a showing of good cause, the presiding officer directs otherwise. Commission Staff, OPC, and the OAG may make limited notes of Highly Sensitive Protected Materials furnished to them, and all such handwritten notes will be treated as Highly Sensitive Protected Materials as are the materials from which the notes are taken.

14. **Public Information Requests.** In the event of a request for any of the Highly Sensitive Protected Materials under the Public Information Act, an authorized representative of the Commission, OPC, or the OAG may furnish a copy of the requested Highly Sensitive Protected Materials to the Open Records Division at the OAG together with a copy of this Protective Order after notifying the producing party that such documents are being furnished to the OAG. Such notification may be provided simultaneously with the delivery of the Highly Sensitive Protected Materials to the OAG.

15. **Required Certification.** Each person who inspects the Protected Materials must, before such inspection, agree in writing to the following certification found in Attachment A to this Protective Order:

> I certify my understanding that the Protected Materials are provided to me pursuant to the terms and restrictions of the Protective Order in this docket, and that I have been given a copy of it and have read the Protective Order and agree to be bound by it. I understand that the contents of the Protected Materials, any notes, memoranda, or any other form of information regarding or derived from the Protected Materials must not be disclosed to anyone other than in accordance with the Protective Order and unless I am an employee of the Commission or OPC will be used only for the purpose of the proceeding in Docket No. [__]. I acknowledge that the obligations imposed by this certification are pursuant to such Protective Order. Provided, however, if the information

> contained in the Protected Materials is obtained from independent public sources, the understanding stated herein must not apply.

In addition, Reviewing Representatives who are permitted access to Highly Sensitive Protected Material under the terms of this Protective Order must, before inspection of such material, agree in writing to the following certification found in Attachment A to this Protective Order:

> I certify that I am eligible to have access to Highly Sensitive Protected Material under the terms of the Protective Order in this docket.

The Reviewing Party is required to provide a copy of each signed certification to Counsel for the producing party and serve a copy upon all parties of record.

16. **Disclosures between Reviewing Representatives and Continuation of Disclosure Restrictions after a Person is no Longer Engaged in the Proceeding.** Any Reviewing Representative may disclose Protected Materials, other than Highly Sensitive Protected Materials, to any other person who is a Reviewing Representative provided that, if the person to whom disclosure is to be made has not executed and provided for delivery of a signed certification to the party asserting confidentiality, that certification must be executed prior to any disclosure. A Reviewing Representative may disclose Highly Sensitive Protected Material to other Reviewing Representatives who are permitted access to such material and have executed the additional certification required for persons who receive access to Highly Sensitive Protected Material. In the event that any Reviewing Representative to whom Protected Materials are disclosed ceases to be engaged in these proceedings, access to Protected Materials by that person must be terminated and all notes, memoranda, or other information derived from the protected material must either be destroyed or given to another Reviewing Representative of that party who is authorized pursuant to this Protective Order to receive the protected materials. Any person who has agreed to the foregoing certification is required to continue to be bound by the provisions of this Protective Order so long as it is in effect, even if no longer engaged in these proceedings.

17. **Producing Party to Provide One Copy of Certain Protected Material and Procedures for Making Additional Copies of Such Materials.** Except for Highly Sensitive Protected Materials, which must be provided to the Reviewing Parties under Paragraph 9, and voluminous Protected Materials, the producing party is required to provide a Reviewing Party one copy of the Protected Materials upon receipt of the signed certification described in Paragraph 15. Except for Highly Sensitive Protected Materials, a Reviewing Party may make further copies of Protected Materials for use in this proceeding according to this Protective Order, but a record must be maintained as to the documents reproduced and the number of copies made, and upon request the Reviewing Party is required to provide the party asserting confidentiality with a copy of that record.

18. **Procedures Regarding Voluminous Protected Materials.** 16 Texas Administrative Code (TAC) § 22.144(h) will govern production of voluminous Protected Materials. Voluminous Protected Materials will be made available in the producing party's voluminous room, in Austin, Texas, or at a mutually agreed upon location, Monday through Friday, 9:00 a.m. to 5:00 p.m. (except on state or Federal holidays), and at other mutually convenient times upon reasonable request.

19. **Reviewing Period Defined.** The Protected Materials may be reviewed only during the Reviewing Period, which will commence upon entry of this Protective Order and continue until the expiration of the Commission's plenary jurisdiction. The Reviewing Period will reopen if the Commission regains jurisdiction due to a remand as provided by law. Protected materials that are admitted into the evidentiary record or accompanying the evidentiary record as offers of proof may be reviewed throughout the pendency of this proceeding and any appeals.
20. **Procedures for Making Copies of Voluminous Protected Materials.** Other than Highly Sensitive Protected Materials, Reviewing Parties may take notes regarding the information contained in voluminous Protected Materials made available for inspection or they may make photographic, mechanical or electronic copies of the Protected Materials, subject to the conditions in this Protective Order; provided, however, that before photographic, mechanical or electronic copies may be made, the Reviewing Party seeking photographic, mechanical or electronic copies must provide written confirmation of the receipt of copies

listed on Attachment B of this Protective Order identifying each piece of Protected Materials or portions thereof the Reviewing Party will need.

21. **Protected Materials to be Used Solely for the Purposes of These Proceedings.** All Protected Materials must be made available to the Reviewing Parties and their Reviewing Representatives solely for the purposes of these proceedings. Access to the Protected Materials may not be used in the furtherance of any other purpose, including, without limitation: (a) any other pending or potential proceeding involving any claim, complaint, or other grievance of whatever nature, except appellate review proceedings that may arise from or be subject to these proceedings; or (b) any business or competitive endeavor of whatever nature. Because of their statutory regulatory obligations, these restrictions do not apply to Commission Staff or OPC.

22. **Procedures for Confidential Treatment of Protected Materials and Information Derived from Those Materials.** Protected Materials, as well as a Reviewing Party's notes, memoranda, or other information regarding or derived from the Protected Materials are to be treated confidentially by the Reviewing Party and must not be disclosed or used by the Reviewing Party except as permitted and provided in this Protective Order. Information derived from or describing the Protected Materials must be maintained in a secure place and must not be placed in the public or general files of the Reviewing Party except in accordance with the provisions of this Protective Order. A Reviewing Party must take all reasonable precautions to ensure that the Protected Materials including notes and analyses made from Protected Materials that disclose Protected Materials are not viewed or taken by any person other than a Reviewing Representative of a Reviewing Party.

23. **Procedures for Submission of Protected Materials.** If a Reviewing Party tenders for filing any Protected Materials, including Highly Sensitive Protected Materials, or any written testimony, exhibit, brief motion or other type of pleading or other submission at the Commission or before any other judicial body that quotes from Protected Materials or discloses the content of Protected Materials, the confidential portion of such submission must be filed and sewed in sealed envelopes or other appropriate containers endorsed to

the effect that they contain Protected Material or Highly Sensitive Protected Material and are sealed pursuant to this Protective Order. If filed at the Commission, such documents must be marked "PROTECTED MATERIAL" and must be filed under seal with the presiding officer and served under seal to the counsel of record for the Reviewing Parties. The presiding officer may subsequently, on his/her own motion or on motion of a party, issue a ruling respecting whether or not the inclusion, incorporation or reference to Protected Materials is such that such submission should remain under seal. If filing before a judicial body, the filing party: (a) must notify the party which provided the information within sufficient time so that the producing party may seek a temporary sealing order; and (b) must otherwise follow the procedures in Rule 76a, Texas Rules of Civil Procedure.

24. **Maintenance of Protected Status of Materials during Pendency of Appeal of Order Holding Materials are not Protected Materials.** In the event that the presiding officer at any time in the course of this proceeding finds that all or part of the Protected Materials are not confidential or proprietary, by finding, for example, that such materials have entered the public domain or materials claimed to be Highly Sensitive Protected Materials are only Protected Materials, those materials will nevertheless be subject to the protection afforded by this Protective Order for three (3) full working days, unless otherwise ordered, from the date the party asserting confidentiality receives notice of the presiding officer's order. Such notification will be by written communication. This provision establishes a deadline for appeal of a presiding officer's order to the Commission. In the event an appeal to the Commissioners is filed within those three (3) working days from notice, the Protected Materials must be afforded the confidential treatment and status provided in this Protective Order during the pendency of such appeal. Neither the party asserting confidentiality, nor any Reviewing Party waives its right to seek additional administrative or judicial remedies after the Commission's denial of any appeal.

25. **Notice of Intent to Use Protected Materials or Change Materials Designation.** Parties intending to use Protected Materials must notify the other parties prior to offering them into evidence or otherwise disclosing such information into the record of the proceeding. During the pendency of Docket No. 58124 at the Commission, in the event that a Reviewing Party wishes to disclose Protected Materials to any person to whom disclosure

is not authorized by this Protective Order, or wishes to have changed the designation of certain information or material as Protected Materials by alleging, for example, that such information or material has entered the public domain, such Reviewing Party must first file and serve on all parties written notice of such proposed disclosure or request for change in designation, identifying with particularity each of such Protected Materials. A Reviewing Party will at any time be able to file a written motion to challenge the designation of information as Protected Materials.

26. **Procedures to Contest Disclosure or Change in Designation.** In the event that the party asserting confidentiality wishes to contest a proposed disclosure or request for change in designation, the party asserting confidentiality must file with the appropriate presiding officer its objection to a proposal, with supporting affidavits, if any, within five (5) working days after receiving such notice of proposed disclosure or change in designation. Failure of the party asserting confidentiality to file such an objection within this period will be deemed a waiver of objection to the proposed disclosure or request for change in designation. Within five (5) working days after the party asserting confidentiality files its objection and supporting materials, the party challenging confidentiality may respond. Any such response must include a statement by counsel for the party challenging such confidentiality that he or she has reviewed all portions of the materials in dispute and, without disclosing the Protected Materials, a statement as to why the Protected Materials should not be held to be confidential under current legal standards, or that the party asserting confidentiality for some reason did not allow such counsel to review such materials. If either party wishes to submit the material in question for in camera inspection, it must do so no later than five (5) working days after the party challenging confidentiality has made its written filing.

27. **Procedures for Presiding Officer Determination Regarding Proposed Disclosure or Change in Designation.** If the party asserting confidentiality files an objection, the appropriate presiding officer will determine whether the proposed disclosure or change in designation is appropriate. Upon the request of either the producing or Reviewing Party or upon the presiding officer's own initiative, the presiding officer may conduct a preheating conference. The burden is on the party asserting confidentiality to show that such proposed

disclosure or change in designation should not be made. If the presiding officer determines that such proposed disclosure or change in designation should be made, disclosure must not take place earlier than three (3) full working days after such determination unless otherwise ordered. No party waives any right to seek additional administrative or judicial remedies concerning such presiding officer's ruling.

28. **Maintenance of Protected Status during Periods Specified for Challenging Various Orders.** Any party electing to challenge, in the courts of this state, a Commission or presiding officer determination allowing disclosure or a change in designation will have a period of ten (10) days from: (a) the date of an unfavorable Commission order; or (b) if the Commission does not rule on an appeal of an interim order, the date an appeal of an interim order to the Commission is overruled by operation of law, to obtain a favorable ruling in state district court. Any party challenging a state district court determination allowing disclosure or a change in designation will have an additional period of ten (10) days from the date of the order to obtain a favorable ruling from a state appeals court. Finally, any party challenging a determination of a state appeals court allowing disclosure or a change in designation will have an additional period of ten (10) days from the date of the order to obtain a favorable ruling from the state supreme court, or other appellate court. All Protected Materials must be afforded the confidential treatment and status provided for in this Protective Order during the periods for challenging the various orders referenced in this paragraph. For purposes of this paragraph, a favorable ailing of a state district court, state appeals court, Supreme Court or other appellate court includes any order extending the deadlines in this paragraph.

29. **Other Grounds for Objection to Use of Protected Materials Remain Applicable.** Nothing in this Protective Order precludes any party from objecting to the use of Protected Materials on grounds other than confidentiality, including the lack of required relevance. Nothing in this Protective Order constitutes a waiver of the right to argue for more disclosure, provided, however, that unless the Commission or a court orders such additional disclosure, all parties will abide by the restrictions imposed by the Protective Order.

30. **Protection of Materials from Unauthorized Disclosure.** All notices, applications, responses or other correspondence must be made in a manner which protects Protected Materials from unauthorized disclosure.

31. **Return of Copies of Protected Materials and Destruction of Information Derived from Protected Materials.** Following the conclusion of these proceedings, each Reviewing Party must, no later than thirty (30) days following receipt of the notice described below, return to the party asserting confidentiality all copies of the Protected Materials provided by that party pursuant to this Protective Order and all copies reproduced by a Reviewing Party, and counsel for each Reviewing Party must provide to the party asserting confidentiality a letter by counsel that, to the best of his or her knowledge, information, and belief, all copies of notes, memoranda, and other documents regarding or derived from the Protected Materials (including copies of Protected Materials) that have not been so returned, if any, have been destroyed, other than notes, memoranda, or other documents which contain information in a form which, if made public, would not cause disclosure of the substance of Protected Materials. As used in this Protective Order, "conclusion of these proceedings" refers to the exhaustion of available appeals, or the running of the time for the making of such appeals, as provided by applicable law. If, following any appeal, the Commission conducts a remand proceeding, then the "conclusion of these proceedings" is extended by the remand to the exhaustion of available appeals of the remand, or the conning of the time for making such appeals of the remand, as provided by applicable law. Promptly following the conclusion of these proceedings, counsel for the party asserting confidentiality will send a written notice to all other parties, reminding them of their obligations under this Paragraph. Nothing in this Paragraph prohibits counsel for each Reviewing Party from retaining two (2) copies of any filed testimony, brief, application for rehearing, hearing exhibit or other pleading which refers to Protected Materials provided that any such Protected Materials retained by counsel will remain subject to the provisions of this Protective Order.

32. **Applicability of Other Law.** This Protective Order is subject to the requirements of the Public Information Act, the Open Meetings Act,[3] the Texas Securities Act[4] and any other applicable law, provided that parties subject to those acts will notify the party asserting confidentiality, if possible, under those acts, prior to disclosure pursuant to those acts. Such notice is not required where the Protected Materials are sought by governmental officials authorized to conduct a criminal or civil investigation that relates to or involves the Protected Materials, and those governmental officials aver in writing that such notice could compromise the investigation, and that the governmental entity involved will maintain the confidentiality of the Protected Materials.

33. **Procedures for Release of Information under Order.** If required by order of a governmental or judicial body, the Reviewing Party may release to such body the confidential information required by such order; provided, however, that: (a) the Reviewing Party must notify the producing party of the order requiring the release of such information within five (5) calendar days of the date the Reviewing Party has notice of the order; (b) the Reviewing Party must notify the producing party at least five (5) calendar days in advance of the release of the information to allow the producing party to contest any release of the confidential information; and (c) the Reviewing Party must use its best efforts to prevent such materials from being disclosed to the public. The terms of this Protective Order do not preclude the Reviewing Party from complying with any valid and enforceable order of a state or federal court with competent jurisdiction specifically requiring disclosure of Protected Materials earlier than contemplated herein. The notice specified in this section is not required where the Protected Materials are sought by governmental officials authorized to conduct a criminal or civil investigation that relates to or involves the Protected Materials, and those governmental officials aver in writing that such notice could compromise the investigation and that the governmental entity involved will maintain the confidentiality of the Protected Materials.

34. **Best Efforts Defined**. The term "best efforts" as used in the preceding paragraph requires that the Reviewing Party attempt to ensure that disclosure is not made unless

[3] Tex. Gov. Code §§ 551.001-.146
[4] Tex. Rev. Civ. Stat. Ann. Arts. 581-1 to 581-43.

such disclosure is pursuant to a final order of a Texas governmental or Texas judicial body, the written opinion of the Texas Attorney General sought in compliance with the Public Information Act, or the request of governmental officials authorized to conduct a criminal or civil investigation that relates to or involves the Protected Materials. The Reviewing Party is not required to delay compliance with a lawful order to disclose such information but is simply required to timely notify the party asserting confidentiality, or its counsel, that it has received a challenge to the confidentiality of the information and that the Reviewing Party will either proceed under the provisions of §552.301 of the Public Information Act, or intends to comply with the final governmental or court order. Provided, however, that no notice is required where the Protected Materials are sought by governmental officials authorized to conduct a criminal or civil investigation that relates to or involves the Protected Materials, and those governmental officials aver in writing that such notice could compromise the investigation and that the governmental entity involved will maintain the confidentiality of the Protected Materials.

35. **Notify Defined.** "Notify" for purposes of Paragraphs 32, 33 and 34 means written notice to the party asserting confidentiality at least five (5) calendar days prior to release; including when a Reviewing Party receives a request under the Public Information Act. However, the Commission, OAG, OPC, or ERCOT may provide a copy of Protected Materials to the Open Records Division of the OAG as provided herein.

36. **Requests for Non-Disclosure.** If the producing party asserts that the requested information should not be disclosed at all, or should not be disclosed to certain parties under the protection afforded by this Protective Order, the producing party must tender the information for in camera review to the presiding officer within ten (10) calendar days of the request. At the same time, the producing party is required to file and serve on all parties its argument, including any supporting affidavits, in support of its position of non-disclosure. The burden is on the producing party to establish that the material should not be disclosed. The producing party must serve a copy of the information under the classification of Highly Sensitive Protected Material to all parties requesting the

information that the producing party has not alleged should be prohibited from reviewing the information.

Parties wishing to respond to the producing party's argument for non-disclosure must do so within five working days. Responding parties should explain why the information should be disclosed to them, including why disclosure is necessary for a fair adjudication of the case if the material is determined to constitute a trade secret. If the presiding officer finds that the information should be disclosed as Protected Material under the terms of this Protective Order, the presiding officer will stay the order of disclosure for such period of time as the presiding officer deems necessary to allow the producing party to appeal the ruling to the Commission.

37. **Sanctions Available for Abuse of Designation.** If the presiding officer finds that a producing party unreasonably designated material as Protected Material or as Highly Sensitive Protected Material, or unreasonably attempted to prevent disclosure pursuant to Paragraph 36, the presiding officer may sanction the producing party pursuant to 16 TAC § 22.161.

38. **Modification of Protective Order.** Each party will have the right to seek changes in this Protective Order as appropriate from the presiding officer.

39. **Breach of Protective Order.** In the event of a breach of the provisions of this Protective Order, the producing party, if it sustains its burden of proof required to establish the right to injunctive relief, will be entitled to an injunction against such breach without any requirements to post bond as a condition of such relief The producing party will not be relieved of proof of any element required to establish the right to injunctive relief In addition to injunctive relief, the producing party will be entitled to pursue any other form of relief to which it is entitled.

**ATTACHMENT A**

**Protective Order Certification**

I certify my understanding that the Protected Materials are provided to me pursuant to the terms and restrictions of the Protective Order in this docket and that I have received a copy of it and have read the Protective Order and agree to be bound by it. I understand that the contents of the Protected Materials, any notes, memoranda, or any other form of information regarding or derived from the Protected Materials must not be disclosed to anyone other than in accordance with the Protective Order and unless I am an employee of the Commission or OPC will be used only for the purpose of the proceeding in Docket No. 58124. I acknowledge that the obligations imposed by this certification are pursuant to such Protective Order. Provided, however, if the information contained in the Protected Materials is obtained from independent public sources, the understanding stated here will not apply.

**DOCKET NO. 58124**

| | | |
|---|---|---|
| **APPLICATION OF AQUA TEXAS, INC. FOR THE AUTHORITY TO CHANGE RATES** | **§ § §** | **PUBLIC UTILITY COMMISSION OF TEXAS** |

**STATEMENT UNDER SECTION 4 OF THE PROTECTIVE ORDER AND LIST OF CONFIDENTIAL/HIGHLY SENSITIVE INFORMATION**

Aqua Texas, Inc.'s ("Aqua Texas" or the "Company") filing package includes customer-specific information, confidential employee related information, proprietary information, commercially or competitively sensitive information, and/or trade secret information, or information whose public disclosure would be contrary to contractual obligations to which Aqua Texas is bound. The public disclosure of this information would cause substantial competitive harm to Aqua Texas, Aqua Texas's parent and affiliates, or third parties with whom Aqua Texas has an ongoing business relationship. Therefore, this information is protected under the Public Information Act, Tex. Gov't Code §§ 552.101, 552.102 and 552.110. The following is a list of schedules, exhibits, and workpapers that include such information, along with the sponsoring witness, the designation of the information, and applicable legal exemption. Each schedule listed below, and any workpapers used to develop or support the schedule, merit the Protected Material designation or Highly Sensitive Protected Material designation.

**Confidential and Highly Sensitive Information**

| Witness | Exempt Material | Designation | Exempt Under Ted. Gov't Code |
|---|---|---|---|
| Trey Reginelli | Workpaper II-B | Confidential | §§ 552.101, 552.110 |
| Brian Gresehover | Schedule II-B-1.1 | Confidential | §§ 552.101, 552.110 |
| Bobby Estep | Schedule II-C-7 | Confidential | §§ 552.101, 552.110 |
| Dylan D'Ascendis | Schedule II-C-10 | Confidential | §§ 552.101, 552.110 |
| Trey Reginelli | Schedule II-D-9.1.c | Confidential/HSPM | §§ 552.101, 552.102, 552.110 |
| Trey Reginelli | Schedule II-D-9.1.d | Confidential/HSPM | §§ 552.101, 552.102, 552.110 |
| Trey Reginelli | Schedule II-D-9.1.e | Confidential/HSPM | §§ 552.101, 552.102, 552.110 |
| Trey Reginelli | Schedule II-D-9.1.f | Confidential/HSPM | §§ 552.101, 552.102, 552.110 |
| Trey Reginelli | Schedule II-D-9.1.g | Confidential/HSPM | §§ 552.101, 552.102, 552.110 |

| | | | |
|---|---|---|---|
| Trey Reginelli | Schedule II-D-9.2.b | Confidential | §§ 552.101, 552.110 |
| Trey Reginelli | Schedule II-D-9.3.a | Confidential | §§ 552.101, 552.110 |
| Trey Reginelli | Schedule II-D-9.3.d | Confidential/HSPM | §§ 552.101, 552.102, 552.110 |
| Trey Reginelli | Schedule II-D-9.3.d Short Term Incentive Plan | Confidential | §§ 552.101, 552.110 |
| Trey Reginelli | Schedule II-D-9.3.d Stock Grant Terms | Confidential | §§ 552.101, 552.110 |
| Bobby Estep | Schedule II-E-3.19 | Confidential | §§ 552.101, 552.110 |
| Bobby Estep | Schedule II-E-3.23 Federal Tax Returns | Confidential | §§ 552.101, 552.110 |
| Trey Reginelli | Workpaper II-E-4.4 | Confidential | §§ 552.101, 552.110 |
| Bobby Estep | Schedule IV-4.1 | Confidential | §§ 552.101, 552.110 |
| Bobby Estep | Workpaper IV-14.1 | Confidential | §§ 552.101, 552.110 |
| Trey Reginelli | Schedule V-1 | Confidential | §§ 552.101, 552.110 |
| Trey Reginelli | Schedule V-2 | Confidential | §§ 552.101, 552.110 |
| Trey Reginelli | Schedule V-3 | Confidential | §§ 552.101, 552.110 |
| Brian Gresehover | Exhibit BSG-3 | Confidential | §§ 552.101, 552.110 |

I certify that I have reviewed the information sufficiently to state in good faith that the information is exempt from public disclosure under the Public Information Act or Tex. Util. Code § 32.101 (c) and merits the applicable designations of Confidential (Protected) Materials or Highly Sensitive (Highly Sensitive Protected) Materials detailed in the Protective Order accompanying this Application.
