**STATEMENT OF INTENT**
**FOR AUTHORITY TO CHANGE RATES**

Aqua Texas, Inc. ("Aqua Texas" or the "Company") files this Application for Authority to Change Rates (Application or Rate Filing Package ("RFP"), and in support of this filing respectfully shows the following.

## I. INTRODUCTION

Aqua Texas is a Class A water and wastewater utility with its principal office located in Austin, Texas. Aqua Texas has been providing water and wastewater services to customers within Texas since 2003 and currently serves approximately 76,000 water and 25,300 wastewater customer connections in various service area locations throughout Texas under water Certificate of Convenience and Necessity ("CCN") Nos. 13201, 13203, 13254 and sewer CCN Nos. 21059, 21065, and 21116.[1] To provide this water and wastewater service, Aqua Texas employs approximately 145 people and operates 377 water systems and 66 sewer systems across 56 counties throughout Texas. The systems that Aqua Texas operates are not large water and wastewater treatment plants that service large towns and cities. Rather, almost a quarter of these systems serve fewer than 50 customers and only fifteen of the Company's systems serve more than 1,000 customers.

Aqua Texas' service territory is comprised of three geographic regions, North, Southeast, and Southwest, which include eleven operating divisions. The North Texas Region covers the entirety of the northern portion of the state with divisional offices in Fort Worth, Granbury, Waco, and Lake Palestine. Counties served include Anderson, Bosque, Camp, Cherokee, Cooke, Denton, Erath, Grayson, Gregg, Henderson, Hood, Hunt, Johnson, Marion, McLennan, Parker, Rockwall, Smith, Somervell, Tarrant, Taylor, Wise and Wood. The Southeast Region covers the Houston metropolitan area and is divided into four geographical divisions, all working out of the regional

[1] Other utility company entities in Texas that are affiliates of Aqua Texas, Inc. because they are also 100% owned by Essential Utilities, Inc. are Aqua Utilities, Inc., Aqua Development, Inc., Harper Water Company, Inc. and Kerrville South Water Company, Inc. However, those entities are no longer actively involved in water or sewer utility service and have transferred all their system assets to Aqua Texas, Inc.

office in Spring, Texas. Counties served include Brazoria, Chambers, Fort Bend, Grimes, Harris, Jefferson, Liberty, Matagorda, Montgomery, Polk, San Jacinto, Trinity, and Wharton. The Southwest Region covers central Texas, including Austin and San Antonio. Divisional offices are in Kerrville, Wimberley, and West Austin. Counties served include Bandera, Bexar, Blanco, Burnet, Comal, Gillespie, Hays, Kendall, Kerr, Kimble, Live Oak, Llano, Medina, Nueces, Travis, Williamson, Wilson, and Victoria. Aqua Texas currently serves its customers under six different tariffs: North Water, North Sewer, Southeast Water, Southeast Sewer, Southwest Water, and Southwest Sewer. Each tariff reflects a consolidated, regional rate structure and also includes adopted rates, listed by system, for each acquisition since the last rate case.

Aqua Texas has and continues to make sizeable capital investments in its water and wastewater facilities. Between 2020 and 2023, Aqua Texas made $292 million in capital investments in its water and wastewater systems. In 2024, the Company made capital investments of $132.6 million to improve reliability in its systems, enhance water quality, and accommodate economic development in its service territory. These improvements have enhanced the efficiency, reliability, and the quality of service to customers.

Aqua Texas also continues to work with the Public Utility Commission of Texas ("Commission"), the Texas Commission on Environmental Quality, and small system owners across the state to acquire and rehabilitate troubled water and wastewater systems. The Company has a long history of acquiring distressed systems and invested $136 million in infrastructure upgrades in 2024. Prior to 2024, Aqua Texas invested nearly $300 million in the prior four-year period (2020 – 2023). Much of this investment was earmarked for systems acquired by Aqua to bring those systems into compliance with regulatory standards and improve service for customers in its service territory.

Overall, Aqua Texas is focused on providing safe and reliable service to its customers and making prudent and necessary investments in its infrastructure to serve these customers. A decision in this case that is supportive of these capital investments coupled with a fair return on equity will allow Aqua Texas to continue to address the formidable tasks of rehabilitating its infrastructure, acquiring and repairing aging and troubled systems, and maintaining quality service.

## II. AUTHORIZED REPRESENTATIVES

Aqua Texas' authorized representative for service of pleadings, orders, and other matters related to this Application is:

Trey V. Reginelli
Rasool Ahmadibeni

In addition, please serve all pleadings, orders, and other matters related to this Application on Ms. Nora Mata Pendergrass at nora.mata@bakerbotts.com.

## III. STATEMENT OF JURISDICTION

The Commission has jurisdiction over this Application pursuant to Texas Water Code ("TWC") §§ 13.041, 13.042, 13.305, and 13.187 and 16 Texas Administrative Code ("TAC") § 24.27. Pursuant to TWC § 13.002(4-a) and 16 TAC § 24.3(5), Aqua Texas is a Class A water and sewer utility that provides service to approximately 76,000 water and 25,300 wastewater customer

connections located in 56 counties. The majority of Aqua Texas' customers are residential.

## IV. PARTIES AFFECTED

This Application affects all retail water and wastewater utility customers located within the territory of water CCN Nos. 13201, 13203, 13254 and sewer CCN Nos. 21059, 21065, and 21116, which are all held by Aqua Texas. In addition, Aqua Texas provides retail water and wastewater services within the corporate boundaries of the Cities of Alvin, Austin, Beach City, Boerne, Brownsboro, Cedar Park, Chandler, Conroe, Cove, Cut N Shoot, Dayton, Elmendorf, Granbury, Granite Shoals, Houston, Ingram, Kerrville, Kyle, Lakewood Village, Little Elm, New Fairview, Old River Win-Free, Pearland, Port Arthur, Rhome, Shady Shores, Stagecoach, Stockton Bend, Weston Lakes, Wimberley, and Woodcreek, which have original jurisdiction over retail water and wastewater rates pursuant to Tex. Water Code Ann. § 13.042. Aqua Texas has simultaneously filed a rate change application with its municipal regulators to effectuate a change in rates and facilitate the proposed statewide consolidation of its water and wastewater systems under a single water tariff and a single wastewater tariff.

## V. OVERVIEW OF RATE FILING PACKAGE

The Company prepared the filing using actual test year books and records information, adjusted for known and measurable changes, and using traditional and widely accepted ratemaking principles. The Company's filing reflects and includes the requirements set forth in the Texas Water Code, the Commission's Substantive and Procedural Rules, and the Class A Rate/Tariff Change Application. In addition to the Statement of Intent, the filing includes the sworn direct testimony of nine (9) internal and external witnesses, direct testimony workpapers, proposed tariffs, required schedules, and schedule workpapers. The filing also includes the Company's public notice, proposed protective order, and other supporting materials, including an external hard drive that contains 224 GB of invoices support for the capital investment that the Company has made in its water and wastewater systems since the test year in the Company's last rate case. The direct testimony of the Company's witnesses is described below.

- **Mr. Daniel Ramirez-Cisneros,** Director of Operations –Aqua Texas, describes the Company's operations and corporate structure and provides an overview of the Company's rate filing package and requested relief. Mr. Ramirez-Cisneros also describes the primary drivers of the requested rate increase, including increasing costs

of operations and investment needs within the systems. Mr. Ramirez-Cisneros explains that the requested rate relief is necessary to support the Company's continuing investment in its water and wastewater systems and to help ensure the Company can continue to provide safe and reliable service. Mr. Ramirez-Cisneros also supports the Company's requested operations and maintenance expense, statewide consolidation of Aqua Texas' rate zones, and the Company's request for recovery of rate case expenses. Finally, Mr. Ramirez-Cisneros describes the impact of Aqua Texas's acquisition and rehabilitation of troubled systems and the Company's employee compensation package.

- **Mr. Trey V. Reginelli,** Controller II of Aqua Texas**,** in conjunction with Company witnesses Bobby D. Estep and Rasool Ahmadibeni, presents the Company's requested revenue requirements contained in the provided schedules and workpapers. Specifically, Mr. Reginelli provides a comparison of the final revenue requirements with the Company's adjusted test year revenues. Mr. Reginelli, in addition to Mr. Estep, also sponsors and supports the Company's affiliated expenses. Mr. Reginelli also supports the Company's recovery of certain of its regulatory asset amounts. In conjunction with Company witness Brian D. Gresehover, Mr. Reginelli explains and supports the Company's capitalization policy. Finally, Mr. Reginelli discusses and supports the Company's request for system consolidation and its overall requested water and sewer rates and proposed water and sewer tariffs.

- **Mr. Bobby D. Estep,** Regional Controller, Essential Utilities, Inc., identifies and supports the federal income tax and accumulated deferred income tax amounts included in the Company's RFP. Mr. Estep identifies the Company's requested return on invested capital, which makes up the Company's overall requested cost of service and final revenue requirements. Mr. Estep also supports the Company's requested recovery of affiliate expenses and demonstrates that these costs satisfy the applicable Commission requirements for cost recovery.

- **Mr. Rasool Ahmadibeni,** Manager Rates and Planning of Aqua Texas, identifies and supports the Company's request to recover certain regulatory asset and rate case expense amounts. Mr. Ahmadibeni also explains the Company's request to establish system improvement charge baseline amounts as part of this case.

- **Mr. Brian D. Gresehover**, Vice President – Engineering, describes Aqua's system and operations and identifies improvements and capital expenditures recently made and placed in service in the Company's water and wastewater systems to assure reliable, adequate, environmentally safe, and cost-efficient service to its customers. Mr. Gresehover supports the reasonableness and necessity of the capital investment included in this filing and the related capitalization policy used by the Company to determine whether a project is eligible for inclusion in rate base. He also addresses the requested prudence finding for capital investment. Finally, Mr. Gresehover sponsors the Affidavit of Patwardhan Gautam, a licensed Professional Engineer in Texas, who attests to the fact that all non-retired assets for which original costs are

claimed as a part of rate base in this proceeding are currently used and useful in providing utility service.

- **Mr. Harold Walker, III**, Manager – Financial Studies – Gannett Fleming Valuation and Rate Consultants, LLC, testifies to the appropriate level of cash working capital for Aqua to be used in this proceeding.

- **Mr. Dylan W. D'Ascendis**, Partner of ScottMadden, Inc. testifies concerning the appropriate cost of equity, capital structure, and overall rate of return to be set in this proceeding.

- **Mr. John J. Spanos**, President – Gannett Fleming Valuation and Rate Consultants, LLC, sponsors and supports the depreciation study conducted for the Company's water and wastewater assets, as well as the resulting depreciation rate changes proposed for adoption.

- **Mr. Gregory R. Herbert**, Associate Analyst – Gannett Fleming, Inc., provides testimony concerning class cost allocation and rate design. Mr. Herbert also sponsors the billing determinate analysis.

From the Company's perspective, this filing presents the opportunity to:

- Secure a prudence finding regarding Aqua Texas's rate base in the amount of $613.7 million;

- Incorporate Aqua's acquisitions into its consolidated revenue requirement, base rates and fees and adopt a uniform, statewide set of water and wastewater rates and tariffs, including miscellaneous service charges and terms of service, to simplify its in-state operations and regulatory obligations;

- Establish the cost-of-service base lines required to use the provisions of 16 Texas Administrative Code ("TAC") § 24.76, relating to system improvement charges;

- Authorization for the opportunity to earn an overall 7.45% return on rate base, based on a 53.00% equity and 47.00% long-term debt capital structure, comprised of a 10.60% return on equity and a 3.90% cost of debt;

- Discontinue the monthly surcharge credit associated with the Tax Cuts and Jobs Act of 2017;

- Recovery of regulatory assets, including COVID-19, Winter Storm Uri, Hurricane Beryl, and Hurricane Nicholas, as well as costs related to the Company's acquisitions of Southern Oaks and the Commons;

- Recovery of reasonable and necessary rate case expenses for the instant filing and two previous System Improvement Charges proceedings.

## VI. REQUESTED RELIEF

The Company has water and wastewater systems that need repair and infrastructure replacement. The rate relief requested in this proceeding will allow the Company to initiate timely recovery of costs related to the much-needed improvements and replacement of facilities and equipment for Aqua Texas' water and wastewater systems. Considering the natural regulatory lag that the Company faces as a result of using a historical test year to establish rates, it is imperative that the Company be allowed to recover the millions of net investments it has already made in its systems to support and incentivize the proactive repair and replacement of aging systems in Texas.

### A. Test Year

Aqua Texas based its proposed rates on a test year ending on December 31, 2024, adjusted for known and measurable changes ("Test Year"), as defined in 16 TAC § 24.3(36). The operating costs in the Test Year are indicative of an ongoing level of costs to operate and maintain the facilities used and useful in providing water and wastewater service.

### B. Effective Date

The July 25, 2025 effective date for the proposed increase is at least 35 days after required notice in compliance with 16 TAC § 24.27(c)(1). If the proposed rates are suspended pursuant to 16 TAC § 24.33(a)(1), Aqua Texas reserves the right to seek interim rates during the pendency of this proceeding in accordance with 16 TAC § 24.37.

### C. Revenue Requirement

With regard to its wastewater system, the Company is asking the Commission to recognize that the reasonable and necessary investment that has been made in Aqua Texas wastewater systems, as well as the costs of operating these systems, requires a total revenue requirement for the Company's water operations of approximately $87.7 million, which represents an annual increase of approximately $17.8 million over revenues collected under current rates. In addition, Aqua Texas is seeking a revenue requirement for wastewater operations of approximately $35.8 million, which represents an increase of approximately $11.4 million over revenues collected under current rates. The specific elements of the revenue requirement and how it was derived are discussed in detail in the direct testimonies of Company witnesses Bobby Estep and Trey V. Reginelli. These amounts reflect capital investment of $693.8 million that the Company has made

in water and wastewater systems. Aqua Texas's proposed increase to its combined water and wastewater cost of service is designed to ensure recovery of its cost of operating and maintaining its facilities and also have a reasonable opportunity to earn a reasonable return on its used and useful capital investments.

**D. Rate Base**

Aqua Texas is seeking to have the Commission determine its rate base amount during the review of this Application. This rate base determination will be used as the baseline for any subsequent requests for a system improvement charge pursuant to 16 TAC § 24.76. Aqua Texas used a depreciation study to determine depreciation expense in revenue requirement and is requesting approval of service lives determined therein. Aqua Texas has invested an additional $693.8 million into water and wastewater systems since its last consolidated base rate case. Aqua Texas has also acquired the assets and systems through Sale, Transfer, or Merger filings. Aqua Texas's requested combined water and wastewater rate base in this case is $613.7 million. Thus, Aqua Texas requests the opportunity to earn an overall 7.45% return on rate base. This return is based on a 53.00% equity and 47.00% long-term debt capital structure, comprised of a 10.60% return on equity and a 3.90% cost of debt.

**E. Other Substantive Requests**

Aqua Texas requests that its approved tariffs implement specific provisions of various franchise agreements the Company has entered into with municipalities that are covered under its existing consolidated tariff, notably, the inclusion of franchise fees and the recovery of such fees on behalf of the municipality. Aqua Texas is also requesting revisions to establish designated amounts for water and sewer tap fees and other revisions to make the tariff internally consistent. Finally, Aqua Texas is proposing to include certain regulatory asset amounts related to COVID-19, Winter Storm Uri, Hurricane Beryl, and Hurricane Nicholas into its rate base and to amortize these expenses over a 20-year period. This Application will have no impact on the pass-through charges that are currently pending in Docket Nos. 57783, 57784, and 57785.

## VII. SYSTEM CONSOLIDATION

Aqua Texas proposes to consolidate all of its regulated operations, consistent with the requirements of 16 TAC § 24.25(l) and (k), into one statewide water consolidated system and one statewide wastewater system. This is a critical component of the Company's request. As mentioned previously, there are more than 440 systems currently within the Company's footprint, more than

500 water treatment facilities, more than 60 sewer treatment facilities, and more than 700 individual wells. Many systems only serve a handful of customers. To provide some context, twelve (12) of these systems serve fewer than ten customers and almost a quarter of all Aqua Texas systems serve fewer than 50 customers. Forty-five percent of the Company's systems serve fewer than 100 customers. Importantly, the Company cannot and does not operate these systems on a stand-alone basis with their own revenue requirement, books and records, and tariff. In fact, the Commission has already approved the system consolidation into the three regions mentioned previously.

In this case, the Company is requesting that the Commission take the final step toward consolidation by allowing Aqua Texas to:

- consolidate the systems across the state into one water and one wastewater revenue requirement going forward;
- consolidate its books and records so that the Company is operated as one water division and one wastewater division; and
- Adopt a single tariff rate for water service and a single tariff for wastewater service.

## VIII. RATE CASE EXPENSES

Pursuant to 16 TAC § 24.44, Aqua Texas seeks to recover all reasonable and necessary rate case expenses that it incurs in connection with this and related proceedings, including Docket Nos. 55577 and 53428.[2] Aqua Texas proposes to recover reasonable and necessary rate case expenses through a surcharge assessed over a 24-month period. As part of the Application, Aqua Texas is providing invoice support, as well as the affidavit of Ann M. Coffin to support the reasonableness of the rate case expenses the Company seeks to recover. Company witnesses Messrs. Ramirez-Cisneros and Ahmadibeni also provide direct testimony in support of the Company's rate case expense request. Further, Aqua Texas reserves the right to supplement this testimony with evidence of additional rate case expenses incurred as the case progresses.

## IX. NOTICE

Pursuant to 16 TAC § 24.27(c), Aqua Texas is providing notice of this Application to all customers of Aqua Texas affected by the rate change and to the Office of Public Utility Counsel.

[2] Docket No. 55577, *Application of Aqua Texas to Amend its System Improvement Charges under 16 Texas Administrative Code § 24.76*; Docket No. 53428, *Application of Aqua Texas, Inc. for System Improvement Charges*.

Aqua Texas will mail separate notice to each affected customer. Aqua Texas is providing notice on the Commission-approved form and will include instructions on how a ratepayer may file a protest or intervene. Along with this filing, Aqua Texas is providing proof of notice pursuant to 16 TAC § 24.27(b)(5), which consists of an affidavit attesting to the completion of notice.

## X. MOTION FOR ENTRY OF A PROTECTIVE ORDER

Aqua Texas requests that a Protective Order of the standard form used by the Commission be entered promptly in this case. A draft Protective Order is included in the RFP. Until a protective order is issued in this proceeding, Aqua Texas will provide access to such confidential materials only to parties that agree in writing to be bound by the proposed Protective Order as if it had been issued by the Commission.

## XI. PRAYER

Aqua Texas respectfully requests that the Commission approve Aqua Texas' requested change in rates to be effective July 25, 2025. Additionally, Aqua Texas requests all other and further relief, general or special, at law or in equity, to which Aqua Texas may show itself to be justly entitled.

Respectfully submitted,

BAKER BOTTS, LLP

STATE OF TEXAS

COUNTY OF Travis

I, Trey Reginelli being duly sworn, file this **NOTICE OF PROPOSED RATE CHANGE**

as Controller of Aqua Texas, Inc. (indicate relationship to Utility that is, owner, member of partnership, title as officer of corporation, or other authorized representative of Utility); that, in such capacity, I am qualified and authorized to file and verify such notice; and that all statements and matters set forth herein are true and correct.

I further represent that a copy of the attached notice was provided by U.S. Mail
(method of delivery)

to each affected customer, each affected municipality, the Office of Public Utility Counsel, and any other affected party on or about June 18, 20 25

AFFIANT
(Utility's Authorized Representative)

Aqua Texas, Inc.
NAME OF UTILITY

If the Affiant to this form is any person other than the sole owner, partner, officer of the Utility, or its attorney, a properly verified Power of Attorney must be enclosed.

SUBSCRIBED AND SWORN TO BEFORE
this the 11 day of June, 20 25, to certify which witness my hand and seal of office.

SEAL

**PUCT DOCKET NO. 58124**

# How To Read This Notice

## How to Read the Index of Pages (Table of Contents)

Attached is a copy of the Notice of Proposed Rate Change as required by the Public Utility Commission of Texas (PUCT). Please review this notice carefully, as it provides additional information about Aqua Texas' request and the processing of our application by the PUCT. Below is more information outlining how to read and understand this notice for your service area.

**Step 1: Identify your System and Rate Comparison:** Locate your water or sewer system on pages **5-22**. Water Systems are listed on pages **5-19** and sewer systems are listed on pages **20-22**. The List of Water / Sewer Systems contain the PWS ID #, System Name, Subdivisions and Areas Served and Counties (in Alphabetical order). If you are still unsure, please locate the PWS ID # on the upper right of your bill below your account number. This number begins with a "TX" and corresponds with the PWS ID number in the first column of the list of water systems and list of sewer systems.

**Step 2: Identify your system codes:** Once you have located your water or sewer system on the list of water / sewer systems (pages **5** through **22**), identify the Rates Code and Pass-Through Code in the 5th and 6th columns of the systems list. You will need these two codes to calculate the average rate comparisons and average pass-through comparisons. (N/A indicates not applicable). The last column indicates the page number for your rate comparison.

**Step 3: Find your rate comparisons (Water and/or Sewer):** From Step 1, identify the page for your rate comparison in the last column. Go to the Rate Comparisons pages on pages **32** through **131**. These pages compare the current rates to the proposed rates. The first page contains the base facility fee and the volumetric fee comparison, and the second page contains the miscellaneous fees comparisons. A detailed explanation of the fees is below:

- **Monthly Minimum and Gallonage Rates:** The monthly minimum fee makes up the majority of most customers' bills and, for water, generally recovers the cost of system infrastructure that allows you to turn on your tap at any time and receive water. The gallonage rate generally recovers the variable cost of providing the water you receive and, for most systems, is tiered such that customers who use less water pay less per gallon. Similarly, the wastewater monthly minimum fee recovers the cost of the infrastructure while the wastewater gallonage charge recovers costs that are more variable and depend on actual wastewater flow.
- **Pass-throughs:** A pass-through rate is a rate added to your monthly bill to recover the cost of purchased water, groundwater district fees or purchased wastewater treatment. The pass-through rate will not change as a result of this filing.
- **Miscellaneous Service Fees:** Miscellaneous fees are charged only on a case-by-case basis (e.g., returned check charge or meter relocation fee). The Company is requesting the adoption of uniform miscellaneous service fees that will apply to all areas that it serves.

**Your current customer bill also includes the following charges:**

- **Federal Tax Change Credit Rider:** This monthly credit from the Federal Tax Cuts and Jobs Act of 2017 has been used to pass savings on to customers. Aqua Texas proposes to eliminate the credit, as the estimated savings previously included in the credit will be captured in the calculation of the proposed monthly minimum and gallonage rates.
- **System Improvement Charge (SIC):** The system improvement charge (SIC) is a rate based on meter size that is currently added to your monthly bill to recover the cost of system improvements. Aqua Texas proposes to include the current system improvement charge for all systems in the base rate.

**Step 4: Calculate the Average Comparison:** Rates code and Pass-Through code you identified in Step 2 will allow you to get the average comparisons of your current rates and proposed rates at usage rates 5,000 gallons and 10,000 gallons per month. Identify the Rates Code you found in Step 2 and locate the code on the average comparison pages **23-29**. This code is below the current rate averages. Identify the appropriate line. This comparison does not include the Pass-Through charges. The Pass-Through charges can be found by identifying the Pass-Through code from Step 2 and locating the appropriate line on the pass-through comparison pages (pages **30-31**). The last two columns contain the average comparison for 5,000 gallons and 10,000 gallons for the pass-through component of your bill. This number will need to be added to the average comparison from above to get the total average comparison at 5,000 gallons and 10,000 gallons of monthly average usage.

***A protest allows customers to provide comments to help inform the PUC's decision-making during the rate review. A request to intervene makes a customer a party to the rate case. Customers electing to intervene may be required to attend PUC hearings and asked to provide evidence, as well as testimony.*

***Monthly minimum charge and gallonage charge only– for residential customers with a 5/8-inch meter using 5,000 gallons of water a month and 10,000 gallons of water a month as well as for 5,000 gallons of wastewater*

**PUCT DOCKET NO. 58124**

# Notice of Proposed Rate Change

Pursuant to Texas Water Code § 13.187

| Aqua Texas | 13201, 13203, 13254, 21059, 21065, 21116 |
|---|---|
| Company Name | CCN Number(s) |

has filed a rate change application with the Public Utility Commission of Texas (Commission or PUCT). The application may be reviewed online at interchange.puc.texas.gov. You may also inspect a copy of the rate change application at your utility's office at the address below or at the Commission's office (1701 N. Congress Ave, Austin, TX 78701). The proposed rates will apply to service received after the effective date provided below, unless modified or suspended by the Commission. If the Commission receives a sufficient number of protests, separately or in a combined protest letter, from at least 7,897 ratepayers (10 percent of the utility's customers over whose rates the Commission has original jurisdiction) or from any affected municipality before the 91st day after the proposed effective date, the matter will be set for hearing. See Protest Form on the next page for instructions on how to protest.

**EFFECTIVE DATE OF PROPOSED INCREASE:** July 25, 2025

**(must be at least 35 days after notice is provided to customers and 35 days after application is filed)**

(Proposed rates requested by the utility are not final. The Commission may modify the rates and order a refund or credit against future bills all sums collected during the pendency of the rate proceeding in excess of the rate finally ordered plus interest.)

## Reason(s) for Proposed Rate Change:

The proposed rate change is being requested in order to recover capital investments Aqua Texas has made to maintain and improve its systems since the last rate case(s) and to reflect inflationary increases to Aqua Texas' operating costs.

# Ratepayer Comments/Requests To Intervene

## Use this form to speak out if you disagree with the filing or want to get involved in the case.

If you wish to PROTEST the proposed rate change, you must complete this form and file it electronically using the PUC Interchange Filer (http://www.puc.texas.gov/industry/filings/E-FilingInstructions.pdf) or mail the original to

**Filing Clerk**
**Public Utility Commission of Texas**
**1701 North Congress Avenue**
**P.O. Box 13326**
**Austin, Texas 78711-3326:**

No hearing will be held and the rates will be effective as proposed unless protests are received from at least 10% of ratepayers or from any affected municipality, or the Commission Staff requests a hearing.

CUSTOMER INFORMATION (please provide all of the requested information)

First Name:_____ Last Name: _____

Phone Number: _____ Fax Number: _____

Email Address: _____

Address, City, State: _____

Location where service is received: _____
*(if different from mailing address)*

Please fill out the following:

**I wish to PROTEST the following proposed rate action/s:**

☐ I wish to be a COMMENTER. I understand that: I am NOT a party to this case; my comments are not considered evidence in this case; and I have no further obligation to participate in the proceeding. Public comments may help inform the PUCT of the public concerns and identify issues to be explored. Please provide comments below. Attach a separate page, if necessary.

☐ **I am requesting to INTERVENE in this proceeding.** As an INTERVENOR, I understand that: I am a party to the case; I am required to respond to all discovery requests from other parties; I may be required to attend hearings, and if I file testimony, I may be cross-examined in the hearing; if I file any documents in the case, I must provide a copy to every other party in the case; and I acknowledge that I am bound by the Procedural Rules of the PUCT and the State Office of Administrative Hearings (SOAH).

Signature of Ratepayer _____ Date: _____

IX. CONCLUSION....55

## LIST OF EXHIBITS

Exhibit DRC-1 – Corporate Organization Chart

Exhibit DRC-2 – Service Area Map

Exhibit DRC-3 – Rate Case Expense Supporting Affidavit of Ann M. Coffin

# DIRECT TESTIMONY OF DANIEL RAMIREZ-CISNEROS

## I. INTRODUCTION AND BACKGROUND

**Q. WHAT IS YOUR NAME AND BUSINESS ADDRESS?**

A. Daniel Ramirez-Cisneros, 1106 Clayton Lane, Suite 400W, Austin, Texas 78723.

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am the Director of Operations for Aqua Texas Inc. ("Aqua" or the "Company"), the applicant in this proceeding.

**Q. PLEASE DESCRIBE YOUR EDUCATION AND BUSINESS EXPERIENCE.**

A. I hold a Bachelor of Arts in Economics from the University of Texas at Austin and a Master of Environmental Management in Water Resources Management from Duke University. My professional career began at the Bank of Montreal, where I started as an analyst and later advanced to the position of associate in the bank's Institutional Asset Management division. After earning my Master's Degree, I managed the water and sewer sector working team for the Federal Oversight and Management Board for Puerto Rico during the Commonwealth's bankruptcy and reconstruction. I also worked for an environmental services company, 374Water, which specializes in perfluoroalkyl and polyfluoroalkyl substances, known as PFAS, remediation and destruction. Currently, I am the Director of Operations at Aqua, a position I have held for over a year.

**Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?**

A. My testimony describes the Company's corporate structure and provides an overview of the Company's water and wastewater systems, as well as the capital investment the Company is making in those systems. I also provide an overview of the Company's rate filing package, the requested relief the Company is seeking, and a description of the

primary drivers of the requested rate increase, including increasing costs of operation and investment needs within the systems. I explain that the requested rate relief is necessary to support the Company's continuing investment in its water and wastewater systems and to help ensure the Company can continue to provide safe and reliable service. I also support the proposed statewide consolidation of Aqua's rate zones, the Company's Operations and Maintenance ("O&M") expense request and the Company's request for recovery of rate case expenses along with Aqua Witness Ahmadibeni. Additionally, I discuss: (i) the business risk associated with Aqua's commitment to acquiring and rehabilitating troubled systems across the state; (ii) the importance of providing our employees with a competitive compensation package, which includes incentive compensation; and (iii) other proposed tariff changes. Finally, I introduce the other witnesses who are filing direct testimony in support of the Company's rate filing.

**Q. ARE YOU SPONSORING ANY EXHIBITS OR SCHEDULES IN CONNECTION WITH YOUR TESTIMONY?**

A. Yes. I have prepared and sponsor the exhibits listed in the Table of Contents to my testimony. A listing of the schedules and any related schedule workpapers is provided as part of the Cost of Service Model supporting the Company's rate request.

**Q. WERE YOUR TESTIMONY, EXHIBITS, AND SCHEDULES YOU SPONSOR PREPARED BY YOU OR UNDER YOUR DIRECT SUPERVISION?**

A. Yes.

## II. OVERVIEW OF AQUA'S CORPORATE STRUCTURE AND WATER AND WASTEWATER SYSTEMS

**Q. PLEASE DESCRIBE AQUA'S CORPORATE STRUCTURE.**

A. Aqua is a Class A water and wastewater utility, and our principal office is located in Austin, Texas. Essential Utilities, Inc. ("Essential") is the parent company of Aqua, and has offices in Bryn Mawr, Pennsylvania. Essential provides water, wastewater, and natural gas services to approximately 5 million people across nine states. Attached as Exhibit DRC-1 to my direct testimony is a chart depicting Essential's corporate structure. Under the Essential companies, Aqua falls within the Aqua Companies. The Aqua Companies provide water and wastewater services across eight states.

**Q. PLEASE DESCRIBE AQUA'S GENERAL OPERATIONS WITHIN TEXAS.**

A. Aqua has been providing water and wastewater services to customers within Texas since 2003 and currently serves approximately 76,000 water and 25,300 wastewater customer connections in various service area locations throughout Texas under water Certificate of Convenience and Necessity ("CCN") Nos. 13201, 13203, 13254 and sewer CCN Nos. 21059, 21065, and 21116.[1]

To provide this water and wastewater service, Aqua employs approximately 145 people and operates 377 water systems and 66 sewer systems across 56 counties throughout the State of Texas. The systems that Aqua operates are not large water and wastewater treatment systems that service large towns and cities. Rather, *almost a quarter of these systems serve fewer than 50 customers. In fact, only fifteen of the Company's systems serve*

[1] Other utility company entities in Texas that are affiliates of Aqua because they are also 100% owned by Essential are Aqua Utilities, Inc., Aqua Development, Inc., Harper Water Company, Inc. and Kerrville South Water Company, Inc. However, those entities are no longer actively involved in water or sewer utility service and have transferred all their system assets to Aqua.

*more than 1,000 customers.* A service area map is attached as Exhibit DRC-2 to my testimony.

**Q. PLEASE DESCRIBE THE TYPES OF FACILITIES THAT COMPRISE THE WATER AND WASTEWATER SYSTEMS AQUA OPERATES.**

A. The Company's water systems range from surface water intake structures and treatment plants to single or multi-well systems with wellhead treatment, hydro-pneumatic tanks for pressure regulation, and a distribution network. Most wastewater systems are collection systems with engineered treatment plants.

**Q. WHAT ARE THE TOP PRIORITIES OF AQUA?**

A. Water quality and continuous service are our highest priorities. We strive to listen to our customers and invest in the safest, up-to-date technology and infrastructure improvements and enhancements that benefit our customers. We strive to employ the best licensed treatment operators, scientists, engineers, and experts to meet state and federal regulations, increase operational effectiveness, and invest in our infrastructure to provide safe, quality water and wastewater services. Aqua prioritizes the acquisition, investment, and consolidation of underinvested and neglected utilities. Aqua uses these core values every day in making sound decisions to ensure the highest level of customer satisfaction, operational excellence, environmental compliance, and a safe working environment.

## III. AQUA SERVICE TERRITORIES AND CAPITAL INVESTMENT

**Q. PLEASE DESCRIBE HOW THE COMPANY'S SERVICE TERRITORY IS CURRENTLY ORGANIZED.**

A. Aqua's service territory is currently comprised of three geographic regions, North, Southeast, and Southwest, which include eleven operating divisions.

- The North Texas Region covers the entirety of the northern portion of the state with divisional offices in Fort Worth, Granbury, Waco, and Lake Palestine. Counties served include Anderson, Bosque, Camp, Cherokee, Cooke, Denton, Erath, Grayson, Gregg, Henderson, Hood, Hunt, Johnson, Marion, McLennan, Parker, Rockwall, Smith, Somervell, Tarrant, Taylor, Wise and Wood.
- The Southeast Region covers the Houston metropolitan area and is divided into four geographical divisions, all working out of the regional office in Spring. Counties served include Brazoria, Chambers, Fort Bend, Grimes, Harris, Jefferson, Liberty, Matagorda, Montgomery, Polk, San Jacinto, Trinity, and Wharton.
- The Southwest Region covers central Texas, including Austin and San Antonio. Divisional offices are in Kerrville, Wimberley, and West Austin. Counties served include Bandera, Bexar, Blanco, Burnet, Comal, Gillespie, Hays, Kendall, Kerr, Kimble, Live Oak, Llano, Medina, Nueces, Travis, Williamson, Wilson, and Victoria.

**Q. DO ALL SYSTEMS WITHIN EACH OPERATING REGION TAKE SERVICE UNDER A SINGLE TARIFF?**

A. No. Aqua currently serves its customers under six different tariffs:

- North Water
- North Sewer

- Southeast Water
- Southeast Sewer
- Southwest Water
- Southwest Sewer

Each tariff reflects a consolidated, regional rate structure, as well as a listing of each system acquired since the Company's last rate case. This consolidated regional rate structure was first approved by the Texas Commission on Environmental Quality ("TCEQ") in TCEQ Docket Nos. 2004-1671-UCR and 2004-1120-UCR. This regional rate structure was also subsequently approved by the TCEQ in SOAH Docket No. 582-05-2770 and SOAH Docket No. 582-05-2771.[2] This rate filing represents the first time the Public Utility Commission of Texas ("Commission") will decide a base rate case involving Aqua Texas.

**Q. PLEASE DESCRIBE THE SOUTHEAST, SOUTHWEST, AND NORTH REGIONS.**

A. The Southeast Texas service area includes approximately 31,595 water customers and 16,871 wastewater customers. It includes both residential and commercial accounts and is comprised of 146 water systems and 44 wastewater systems, including 232 wells, 145 ground storage tanks and 587 miles of distribution mains and 201 miles of collection networks.

The Southwest Texas service area includes approximately 19,936 water customers and 5,342 wastewater customers. It includes both residential and commercial accounts and is comprised of 83 water systems and 8 wastewater systems, including 184 wells, 135

[2] TCEQ Docket Nos. 2004-1671-UCR and 2004-1120-UCR; SOAH Docket Nos. 582-05-2770 and 582-05-2771, Order Approving the Application of Aqua Utilities, Inc. and Aqua Development Company d/b/a Aqua Texas, Inc. to Change Water and Sewer Rates (issued Sept. 23, 2008).

ground storage tanks and 556 miles of distribution mains and 77 miles of collection networks.

The North Texas service area includes approximately 24,491 water customers and 3,161 wastewater customers. It includes both residential and commercial accounts and is comprised of 154 water systems and 9 wastewater systems, including 371 wells, 286 ground storage tanks and 820 miles of distribution mains and 39 miles of collection networks.

**Q. PLEASE DESCRIBE FURTHER THE SYSTEMS THAT AQUA OPERATES?**

A. The Company's systems in Texas are very small, fragmented, and geographically dispersed. The Company's operations span over 50 counties. There are 377 water systems and 66 wastewater systems currently within Aqua's footprint, more than 500 water treatment facilities, 60 sewer treatment facilities, and more than 700 individual wells. Many systems only serve a handful of customers. In fact, twelve of these systems serve less than ten customers and almost a quarter of all Aqua systems serve less than 50 customers. Forty-five percent of the Company's systems serve less than 100 customers. Of the Aqua water and wastewater systems in the state, only fifteen serve more than 1,000 customers.

**Q. WHAT IMPACT DOES THIS HAVE ON AQUA FROM AN OPERATIONS STANDPOINT?**

A. From both a capital investment and an operations standpoint, Aqua's water and wastewater systems require a comprehensive approach that includes investment in infrastructure, technology, and regulatory compliance to ensure reliable and efficient service. From an operational perspective, the complexity of this effort is illustrated by the fact that our

employees annually drive almost three million miles to operate and maintain hundreds of small and geographically dispersed water and sewer facilities.

## IV. CAPITAL INVESTMENT OVERVIEW

**Q. IN TERMS OF CAPITAL PROJECTS, HOW MUCH IS THE COMPANY INVESTING IN ITS TEXAS WATER AND WASTEWATER SYSTEMS ON AN ANNUAL BASIS?**

A. Aqua invested $292 million in our systems between 2020–2023. In 2024, the Company invested $132.6 million to improve reliability in our systems, enhance water quality, and accommodate economic development in our service territory. These improvements have enhanced the efficiency, reliability, and quality of service to customers.

**Q. WHAT ARE SOME SPECIFIC EXAMPLES OF THE INVESTMENTS AQUA HAS MADE IN ITS WATER AND WASTEWATER SYSTEMS?**

A. The main categories of capital investment are summarized below:

- Aqua is proactively replacing its water mains based on historical break rate data, frequency of the breaks, if it is a purchased water system, pumping fees, and age of the distribution system. Aqua replaced approximately 77,725 linear feet (0.749% replaced) in 2023 and 96,270 linear feet (0.927% replaced) in 2024.
- For wastewater treatment facilities, Aqua invested over $18 million in 2023 and over $34 million in 2024 to expand, rehabilitate or replace existing wastewater treatment plants. Expansion of facilities have been a result of organic growth and developers tying into our existing systems.
- For water treatment facilities, Aqua invested over $21 million in 2023 and over $31 million in 2024. This includes drilling new wells for reliability and redundancy;

rehabilitating, installing or replacing Ground Storage Tanks ("GST"), Standpipes, and Hydro Pneumatic Tanks ("HPT"); upgrading pumps and pumphouses; and installing additional filtration/treatment as required to meet TCEQ and American Water Works Association ("AWWA") drinking water standards.

Aqua has also invested in software to provide its customers with a mobile application that enables customers to view their account, manage it, and access their consumption data. Customers can have real-time updates on service outages and visibility into service orders. Aqua has also made investments to provide a redundant electrical supply to its facilities through the purchase of on-site and portable generators. Facilities with non-redundant, isolated electrical supplies need to plan for alternative sources of power in case of outages. This requires investment in backup power systems and infrastructure to maintain uninterrupted service.

**Q. DOES THE COMPANY EXPECT TO CONTINUE TO MAKE INVESTMENT IN ITS WATER AND WASTEWATER SYSTEMS?**

A. Yes. Aqua intends to make sizeable capital investments for the foreseeable future. The Company has budgeted $100 million in 2025 and will likely continue at that pace over the upcoming years to conduct main replacements, upgrade water and wastewater systems, develop new wells, and improve treatment technologies.

**Q. DOES THE COMPANY INVEST IN DISTRESSED WATER AND WASTEWATER SYSTEMS IN TEXAS?**

A. Yes. Aqua works with the Commission, TCEQ, and small system owners across the state to acquire and rehabilitate troubled water and wastewater systems. The Company has a long history of acquiring distressed systems and will continue to do so.

**Q. CAN YOU PROVIDE AN EXAMPLE OF A RECENT DISTRESSED SYSTEM THAT AQUA HAS AGREED TO ASSUME RESPONSIBILITY FOR?**

A. Yes. Recently, Aqua was assigned Temporary Manager status for a distressed system in Wise County named T L Water Jones Acres ("Jones Acres") Public Water System ("PWS") #2490018. Jones Acres provided water service to approximately 40 connections. Numerous complaints were filed over the years regarding the service provided and the Company stepped in as Temporary Manager on July 19, 2024; to provide a licensed operator and management oversight to ensure the quality of water and operate the water system in a safe and reliable manner.

**Q. HOW MUCH INVESTMENT IS AQUA MAKING TO IMPROVE SERVICE IN THE SYSTEMS THAT IT OPERATES?**

A. As noted above, Aqua has invested capital to improve service in the systems that it operates. Using the Jones Acres systems as an example, in the first few months that Aqua has served as Temporary Manager, the following actions were completed:

- Disinfection mechanisms were installed to protect public health and ensure water quality;
- A booster pump was replaced to ensure system-wide water pressure;
- A new well pump was installed to ensure reliable service and help prevent disruptions;
- All water lines and customer meter boxes were located to ensure accurate meter readings;
- A preventative maintenance program was implemented; and,
- Improvements and upgrades were made to ensure employee safety.

**Q. HAS THE QUALITY OF SERVICE THESE SYSTEMS RECEIVE IMPROVED SINCE AQUA ACQUIRED THESE SYSTEMS?**

A. Yes. The Company has improved both quality of service and customer experience since acquiring these systems. Each of the acquired systems provides safer and more reliable service today than it did prior to acquisition:

- Canyon Creek Addition, Granbury – Upon taking over ownership and operations, the system was experiencing system wide disruptions due to ongoing water main breaks in 2015. Improvements such as better pressure maintenance and the addition of valves in 2022 have resulted in only two reported disruptions. Aqua undertook major water main replacement beginning in 2023 to further improve service and reduce water loss.
- Veranda wastewater treatment plant ("WWTP"), Cove – Upon acquiring the facilities, Aqua began the process of updating the discharge permit for the WTTP, and engineering and replacing the corroded and failing WWTP. The new WWTP was commissioned in 2014 and ensured adequate wastewater service and protection of the environment.
- Long Creek, Granbury – Following acquisition, Aqua replaced the main water storage tank servicing the system. The tank that was in operation at the time of purchase was very close to failure and represented both a risk to customer service but also a safety risk to the operations. This upgrade protected the quality of the water and service reliability.

**Q. HAS THE COMPANY MADE TECHNOLOGICAL IMPROVEMENTS TO ENHANCE OPERATIONS AND IMPROVE QUALITY OF SERVICE?**

A. Yes, Aqua has invested in technologies and systems to improve its operations and quality of service. Examples include Supervisory Control and Data Acquisition ("SCADA"), software programs to provide secure and reliable remote monitoring and control of treatment systems, Geographical Information System ("GIS") asset tracking, computerized maintenance systems for operators to tabulate their daily functions/results, and other asset management systems to track and manage the performance of physical assets over time. These systems improve monitoring and operational efficiency by providing real-time data on water usage and system performance. They also enhance customer service through better data management and real-time alerts, allowing for quicker response to issues such as leaks or high usage. In particular, SCADA systems automatically record data from process instrumentation, provide process control capabilities, facilitate process decisions, and communicate system issues to appropriate stakeholders. This provides operations a higher level of contextual/situational awareness and increases effectiveness and efficiencies associated with operating a public water/wastewater system. This is especially important in light of the scale, complexity, and varied composition of Aqua's water and wastewater systems.

**Q. WHAT IMPORTANCE WILL THE COMMISSION'S DECISION IN THIS CASE HAVE ON THE COMPANY'S FUTURE CAPITAL INVESTMENT DECISIONS?**

A. The Commission's decision is critical to determining the future capital investments that the Company can make in Texas, for multiple reasons. First, Aqua is in a period in which a significant level of investment in plant and related improvements is required. It is not

possible to continue to make these investments without timely, full recovery of those investments. Due to the nature of these investments, which the Company must undertake to ensure safe drinking water for its customers, it is not possible to synchronize the in-service dates of all projects with the test year, which includes the projects in the utility's rate base. Accordingly, the Company is required to incur significant costs to cover the carrying charges necessary to finance improvements between the time that they are placed in service and the time that the cost is ultimately reflected in rates.

Similarly, the acquisition of troubled systems carries an unusual amount of risk for Aqua. The Company has long been active in acquiring and rehabilitating troubled systems across the state. There is a significant amount of business risk associated with both the documented and undocumented needs of acquired systems, as well as any unresolved environmental compliance deficiencies. The Company has worked diligently with TCEQ to identify system deficiencies and plan for necessary improvements in advance of an acquisition; however, significant financial risk remains in mitigating any unforeseen deficiencies. There is risk associated with conducting these rehabilitation efforts. Aqua takes seriously its obligation to meet customer needs and expectations; however, providing those services is not without cost and not exempt from economic trends or unfunded federal government mandates. In addition, Aqua's operating expenses have also experienced inflationary increases. To recover these costs, it is important that a utility file for rate relief when its ability to earn a fair rate of return is compromised.

## V. OPERATIONS AND MAINTENANCE EXPENSE

**Q. WHAT ARE O&M EXPENSES?**

A. O&M are expenses that relate to the normal operating, maintenance, and administrative activities of a business. Among other items, these expenses include costs associated with labor, regulatory compliance activities, facility maintenance, emergency response, purchase water, and the operation and maintenance of distressed and aging systems that Aqua has acquired over the years.

**Q. WHY ARE O&M EXPENSES INCURRED?**

A. The key driver for O&M expenditures is the provision of continuous, adequate, safe, and reliable service through effective and efficient operations, maintenance, and customer service. Every day, operations personnel verify that treatment systems are performing correctly, that the water supply is adequate, and that regulatory requirements are met. In addition, staff repair broken components and purchase chemicals, or other supplies consumed by water and sewer treatment processes. All of these activities are O&M expenses.

**Q. HOW ARE O&M COSTS IDENTIFIED AND BUDGETED?**

A. O&M activities are identified through the annual budgeting process and as needs arise or can be anticipated throughout the year. Funding is provided primarily through the accounts payable process and allocation of shared services administered by Aqua's parent company.

**Q. WHAT EFFORTS DOES THE COMPANY UNDERTAKE TO CONTROL O&M EXPENSES?**

A. The Company focuses on cost saving measures and maximizing its purchasing power using national contracts, consolidated procurement efforts, and operating efficiency. Despite

these efforts, the Company's costs, like many other utilities, have increased consistent with the nationwide inflation trend.

**Q. DOES THE NATURE OF AQUA'S SYSTEMS IMPACT ITS O&M EXPENSE?**

A. Yes. Managing hundreds of systems over a huge footprint is different than operating one large water treatment plant that serves a geographically concentrated number of customers. As mentioned earlier in my testimony, on a yearly basis Aqua's field operators cover more than three million miles to ensure that its systems are operating safely and reliability. To achieve as much efficiency as possible, Aqua has implemented several initiatives to control transportation and labor costs. For example, Aqua optimizes routes for field operators in an effort to reduce travel time, lower fuel costs, and improve response times to customer issues. The Company has also implemented staggered shifts on weekends to reduce overtime.

In addition, ensuring that each facility meets regulatory standards includes maintaining proper treatment processes, monitoring water quality, and adhering to environmental regulations. As I discuss below, Aqua adheres to the Safe Drinking Water Act ("SDWA") and the Clean Water Act ("CWA") to ensure the quality of water provided to customers. Moreover, implementing advanced technologies such as Advanced Metering Infrastructure ("AMI") and SCADA systems across multiple facilities can be challenging, yet are essential for efficient operation and monitoring. These systems require significant investment in both hardware and software.

**Q. WHAT OTHER EFFORTS DOES THE COMPANY TAKE TO CONTROL O&M COSTS ON AN ONGOING BASIS?**

A. One of the key efforts has been the buildout of the aforementioned SCADA systems. This technology allows for real-time monitoring and control of water and wastewater processes, providing valuable data that helps Aqua make informed decisions, reduce response times to system failures, and optimize resource use. Another major initiative is the implementation of AMI. AMI provides real-time data on water consumption, which is crucial for accurate billing and early detection of issues such as leaks. Implementation of this technology was necessary to improve customer service and support water conservation efforts. For example, in the Wimberley Valley, AMI has been implemented for approximately 2,400 customers, allowing them to view hourly usage and receive alerts for leaks or high usage. This has not only improved customer satisfaction but also contributed to more efficient water use.

**Q. WHAT O&M AMOUNT WAS NECESSARY TO OPERATE THE AQUA WATER AND WASTEWATER SYSTEMS DURING THE TEST YEAR?**

A. Approximately $45 million was spent on O&M in the 2024 Test Year.

**Q. IS THIS LEVEL OF O&M EXPENSE REPRESENTATIVE OF THE COMPANY'S ONGOING COSTS TO OPERATE AND MAINTAIN ITS WATER AND WASTEWATER SYSTEMS?**

A. Yes. The level of requested O&M expense, which includes certain adjustments that are known and measurable with reasonable accuracy, is reflective of the ongoing cost associated with the operation and maintenance of these systems.

**Q. IS THE LEVEL OF O&M EXPENSE REQUESTED IN THIS FILING REASONABLE AND NECESSARY?**

A. Yes. The O&M activities performed by Aqua are necessary to the provision of utility service. These activities ensure the reliability and longevity of infrastructure, help minimize disruptions and prevent failures, and are essential to maintaining adequate service.

### A. Labor

**Q. HOW DOES AQUA STAFF ITS OPERATIONS IN TEXAS?**

A. Aqua uses a combination of both internal Aqua employees and outside contractors to operate and maintain its water and sewer systems. Aqua also relies on support from a service company model and Company witness Bobby D. Estep discusses the services that Aqua Texas receives from these service companies in his direct testimony.

**Q. PLEASE DESCRIBE THE SERVICES AQUA RECEIVES FROM THIRD PARTY CONTRACTORS.**

A. Contractors play a vital role in supporting Aqua's O&M activities, ensuring efficient and cost-effective operations across its extensive network of water and wastewater systems. They are involved in various aspects of O&M, providing specialized expertise and resources that complement the company's internal capabilities. For example, Aqua relies significantly on outside contractors to haul and mobilize generators during disruptions, as most of its staff are dedicated to the day-to-day operations.

**Q. DOES THE COMPANY'S PROCUREMENT PROCESS HELP TO CONTROL O&M EXPENSES?**

A. Procurement plays a crucial role in helping Aqua control O&M expenses by ensuring efficient and cost-effective sourcing of goods and services. One of the Company's key

strategies is negotiating bulk purchasing agreements. For instance, Aqua conducted a statewide bid on sludge hauling and ancillary services, which resulted in reduced pricing compared to 2024 unit prices. These prices were locked in through the end of 2026, providing long-term cost savings.

**Q. PLEASE DESCRIBE THE COMPANY'S COMPENSATION PHILOSOPHY WITH REGARD TO ITS EMPLOYEES.**

A. The Company's goal is to ensure that Aqua can compete in the marketplace to attract and retain the caliber of employees necessary to operate a high quality, safe, and reliable water and wastewater systems. The Company aims to maintain a pay program that is externally competitive with employers with whom the Company competes for talent, internally equitable among the Company's employees, and allows the Company to attract, retain, and motivate a quality workforce.

**Q. WHY IS IT IMPORTANT TO OFFER COMPENSATION PACKAGES THAT ARE COMPETITIVE WITHIN THE INDUSTRY?**

A. To attract and retain the types of employees and skill sets necessary to operate the utility, the Company must offer compensation that is competitive in the market in which the Company competes for personnel. Operating a utility requires a skilled labor force from operational, administrative, and management perspectives. A company is only as good as its employees, and a skilled and dedicated workforce is critical to the safe and reliable operation of the water and wastewater systems.

**Q. HOW IS THE COMPANY'S COMPENSATION PLAN STRUCTURED?**

A. Aqua's compensation program is comprised of several pay components that together form a comprehensive compensation package. The pay portion includes a combination of a

fixed component in the form of base salary and the variable component, which is comprised of short-term incentive compensation ("STI") and long-term incentive compensation ("LTI"). Compensation that is comprised of fixed and variable components is common in the markets in which we compete for talent. The fixed component is a necessary part of the Company's compensation program because paying employees some level of fixed salary or base pay is expected in our industry. The variable component is not guaranteed and is only paid if the Company and the individual meet certain, established criteria that relate to the safe, reliable, and cost-effective operation of the systems. These criteria include safety, customer service, financial performance, and individual performance goals. The use of incentive compensation allows the Company to structure an employee's compensation in a way that helps focus and motivate employee performance for the benefit of customers and the Company.

**Q. DOES THE COMPANY SEEK TO RECOVER COSTS RELATED TO EMPLOYEE COMPENSATION AS PART OF THIS RATE FILING?**

A. Yes. The Company is requesting recovery of all forms of compensation paid to employees, including incentive compensation, which are a necessary part of the Company's overall compensation structure. All of the Company's requested compensation costs are reasonable and should be recovered in rates. As to incentive compensation, Aqua is not unique in making incentive compensation part of the overall compensation package that it provides to its employees. It is important for regulators to realize that "total compensation" does not represent only base salary, but also includes bonuses, benefits, 401K options, and other required components of a total compensation package. Aqua employees do not have a pension.

**Q. IN GENERAL, DO CUSTOMERS BENEFIT FROM THE INCENTIVE PAY PLANS THAT AQUA OFFERS?**

A. Yes. An employee's receipt of incentive compensation is closely tied to individual employee performance. Employees understand that maintaining compliance with applicable laws and regulations, minimizing safety incidents, and controlling expenses benefits customers in the form of a high-quality water and wastewater systems and reliable service at a reasonable cost. The Company's incentive compensation plans are not intended to be a standard "bonus," but rather a reflection of each individual's contribution to the Company and the Company's performances. To operate water and wastewater systems that provide quality service to customers, every employee who provides services that support Aqua's operations must perform well. Encouraging employees to focus on the principal facets of Aqua's business, which include safety, customer service, productivity and operational performance creates a balanced approach that serves the communities in which the Company operates, its customers, employees and shareholders.

**Q. HAS THE TEXAS LEGISLATURE RECOGNIZED THAT INCENTIVE COMPENSATION IS A NECESSARY COMPONENT OF A UTILITY'S OVERALL COMPENSATION POLICY?**

A. Yes. The Legislature has recognized that incentive compensation is a reasonable component of the total compensation package offered by both electric utilities and natural gas utilities and that such costs are to be presumed reasonable and necessary if they are consistent with market compensation studies issued within three years.[3]

[3] *See* Tex. Util. Code §§ 36.067 (relating to electric utilities) and 104.060 (relating to natural gas utilities). The only employee compensation and benefits specifically excluded from the presumption set forth in Tex. Util. Code § 36.067 are (1) pension and other postretirement benefits and (2) incentive compensation related to attaining financial metrics or (2) metrics adverse to customers' interests as determined by the Commission. The only employee compensation

**Q. SHOULD THE COMMISSION EVALUATE WATER AND WASTEWATER UTILITY EMPLOYEE COMPENSATION AND BENEFITS USING THE SAME STANDARDS AS THOSE IN TEX. UTIL. CODE §§ 36.067 AND 104.060?**

A. Yes. It is logical and reasonable that the Commission should evaluate the compensation and benefits of water and wastewater utility employees using the same standard employed for electric and natural gas utilities. Like electric and gas utilities, it is important that water and wastewater utilities be able to attract talented and dedicated labor who will operate their systems safely and efficiently to support the provision of safe, reliable, and affordable water and wastewater treatment service to customers. This is made possible through competitive compensation and benefits consistent with the market and through appropriate recovery of those costs.

**Q. SHOULD THE COMMISSION APPROVE AQUA'S REQUEST TO RECOVER COMPENSATION COSTS, INCLUDING INCENTIVE COMPENSATION?**

A. Yes. As I have explained, the Company's plans are reasonable because they are structured consistently with those offered in the market and need to be offered to attract and retain qualified employees. In addition, the Company's incentive compensation plans are a regular component of the Company's payroll expense, create a motivation and incentive for all employees to exceed expectations in their performance of the day-to-day activities that are necessary for Aqua's operations and are directly linked to achieving goals that benefit customers, shareholders, and employees. Therefore, the requested costs are consistent with the principles set forth in Tex. Util. Code §§ 36.069 and 104.060.

and benefits specifically excluded from the presumption set forth in Tex. Util. Code § 104.060 are (1) pension and other postretirement benefits and (2) incentive compensation for an executive officer whose compensation is required to be disclosed under 17 C.F.R. Section 229.402(a).

### B. Regulatory Requirements

**Q. DO REGULATORY REQUIREMENTS IMPACT AQUA'S O&M EXPENSE?**

A. Absolutely. Aqua's operations are structured to satisfy all applicable regulatory requirements, and this has a direct impact on the Company's operation of both its small and distressed water and wastewater systems. These regulatory requirements also inform how the Company prepares for and successfully responds to emergencies.

**Q. PLEASE ELABORATE.**

A. Aqua personnel perform inspections and maintenance programs to meet state and federal guidelines and to ensure delivery of safe and reliable drinking water. For example, GSTs and HPTs are inspected regularly, consistent with procedures recommended by the AWWA. The inspections consist of a visual inspection of both the interior and exterior of the tanks and may include ultrasonic tank measurements. If the GST cannot be taken out of service, third-party divers will perform the inspection. Similarly, hydrants and valves are regularly operated and maintained to keep them functional. Lift stations must also be cleaned regularly to prevent the buildup of fats and grease that interfere with normal operations. Standby generators are tested at least every six months to ensure they are operable and maintained in good condition. Vegetation must be maintained at all plant sites to eliminate habitats for snakes and other animals that could be harmful to the operation of the system.

**Q. WHAT LAWS GOVERN AQUA'S PROVISION OF WATER AND SEWER SERVICE?**

A. Aqua adheres to the SDWA and the CWA, which are the primary federal laws governing water quality. The Environmental Protection Agency ("EPA") sets standards for drinking water quality and oversees the states, localities, and water suppliers who implement those

standards. TCEQ administers permits for wastewater dischargers and treatment facilities, establishing specific discharge limits, monitoring, and reporting requirements. Similarly, TCEQ regulates public water systems through a comprehensive set of rules outlined in Title 30 Texas Administrative Code ("TAC"), Chapter 290. These rules cover various aspects such as water treatment plant design, operations, maintenance, and water quality standards.

**Q. PLEASE LIST THE REGULATIONS THE COMPANY IS REQUIRED TO COMPLY WITH TO ENSURE PROTECTION OF PUBLIC HEALTH.**

A. Under the SDWA, EPA sets standards for drinking water quality and oversees the states, localities, and water suppliers who implement those standards. Other rules issued by EPA include:

- Filter Backwash Recycle Rule;
- Arsenic Rule;
- Unregulated Contaminant Monitoring Rule;
- Radionuclides Rule;
- Public Notification Rule;
- Lead and Copper Rule;
- Revised Total Coliform Rule;
- Interim Enhanced Surface Water Treatment Rule;
- Stage 1 Disinfectants and Disinfectants By-Products Rule;
- Consumer Confidence Rule;
- Variance and Exemptions Rule;
- Long Term 1 Enhanced Surface Water Treatment Rule and Filter Backwash Rule;
- Groundwater Rule;
- Long Term 2 Enhanced Surface Water Treatment Rule; and
- Stage 2 Disinfectants/Disinfection Byproducts Rule

Aqua operates its systems in a manner that complies with the standards listed above.

**Q. DOES TCEQ ALSO REGULATE THE QUALITY OF DRINKING WATER AND DISCHARGE OF WASTEWATER IN TEXAS?**

A. Yes. EPA has delegated to TCEQ much of the responsibility to ensure compliance with the SDWA and the CWA. For example, TCEQ administers permits for wastewater dischargers and treatment facilities. These permits establish specific discharge limits, monitoring and reporting requirements, and may require facilities to undertake special measures to protect the environment from harmful pollutants. TCEQ also regulates sanitary sewer overflows, the wastewater pretreatment program, and the biosolids program. Additionally, TCEQ is responsible for determining if a system is financially stable and technically sound, and can supply adequate quantities of safe drinking water. The agency is responsible for ensuring that systems operate in compliance with TCEQ rules (including Maximum Concentration Limits), conducting required monitoring, and providing required public notifications. TCEQ conducts Comprehensive Compliance Investigations of each community PWS every three years and conducts design reviews for proposed improvements to water and wastewater systems.

The agency also maintains the Texas Drinking Water Watch website, which publishes the compliance status and sampling results for PWS, as well as annual compliance reports that provide an overview of each PWS's characteristics and compliance status.

**Q. WHAT OTHER STATUTES OR REGULATIONS MUST AQUA COMPLY WITH?**

A. There are a number. Some prominent examples include:

- In 1985, 1997 and 2001, the Texas Legislature passed laws to encourage the establishment of Groundwater Conservation Districts ("GCDs"). This legislation is codified in Chapter 36 of the Texas Water Code ("TWC"). The GCDs are responsible for developing and implementing comprehensive management plans to conserve and protect groundwater resources. When Aqua drills a well within the boundary of one of Texas' 99 GCDs, it must comply with the district rules.
- A surface water supply requires that Aqua obtain a "water right" from TCEQ or a water rights holder willing to lease the right. We can acquire surface water rights through outright purchase as well. Each water right has specific reporting and accounting requirements with which Aqua must comply.
- Laws regulating the use, transport, storage, release, and generation of hazardous waste include the Comprehensive Environmental Response, Compensation, and Liability Act (commonly known as Superfund), and the Resource Conservation and Recovery Act.
- The Toxic Substances Control Act of 1976 ("TSCA") provides EPA with authority to require reporting, recordkeeping, and testing requirements, and restrictions relating to chemical substances and/or mixtures. TSCA addresses production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls, asbestos, radon and lead-based paint. Asbestos and lead-based paint are often found in older water and wastewater systems.
- The Endangered Species Act ("ESA") provides a program for conservation of threatened and endangered plants and animals and the habitats in which they are

found. When Aqua is constructing a project in an area where an endangered species exists, it must comply with the ESA.

- The Noise Control Act of 1972 establishes a national policy to promote an environment free from noise that jeopardizes health and welfare. The primary responsibility for control of noise rests with state and local governments and Aqua must comply with noise standards.
- The Occupational Safety and Health Administration ("OSHA") ensures worker and workplace safety. OSHA regulations play a significant role in Aqua operations and safety practices.

**Q. ARE THERE ANY NEW FEDERAL REGULATIONS THAT WILL AFFECT AQUA AND THE OPERATION OF ITS SYSTEMS?**

A. Yes. EPA has recently responded to the emerging threats to drinking water posed by the presence of PFAS in public water supplies by adopting new regulations. Similarly, EPA has recently revised its regulations concerning lead and copper in water systems.

**Q. PLEASE DESCRIBE THE REQUIREMENTS OF THE RECENTLY ADOPTED EPA REGULATIONS CONCERNING PFAS IN PUBLIC WATER SUPPLIES?**

A. The EPA has established maximum contaminant levels ("MCLs") at 4 parts per trillion ("ppt") for perfluorooctanoic acid and perfluorooctane sulfonate, individually. Pursuant to the SDWA, the final PFAS National Primary Drinking Water Regulation ("NPDWR") became effective as of June 25, 2024. The compliance date for the PFAS NPDWR, other than the MCLs, is April 26, 2027. All systems must comply with the MCLs by April 26, 2029. There are various reporting and notification requirements associated with the PFAS NPDWR.

**Q. HAVE REGULATORY REQUIREMENTS ALSO CHANGED WITH REGARD TO LEAD AND COPPER IN PUBLIC WATER SYSTEMS?**

A. Yes. Two recent and overlapping rules were promulgated that address lead and copper in public water systems. On December 16, 2021, EPA announced final revisions to the NPDWR for lead and copper under authority of the SDWA, titled the Lead and Cooper Rule Revisions ("LCRR"). The operational and capital costs associated with implementing these newer regulations are included in the current rate case revenue requirement.

The LCRR requires all public water systems to develop a lead service line ("LSL") inventory, make this inventory publicly available; develop a lead service line replacement ("LSLR") plan; sample public water systems serving schools and childcare facilities for lead and copper; strengthen treatment to comply with the new 10 microgram/liter ("µg/L") trigger level; and communicate with the public about the LCRR's requirements and the steps Aqua is taking to meet them.

On November 30, 2023, EPA announced the proposed Lead and Copper Rule Improvement ("LCRI"), and Aqua Texas is proceeding with replacements in accordance with the LCRI. The LCRI supplements the LCRR and contains the following new requirements: achieving 100% LSL (both customer and Company) replacement within 10 years; locating legacy LSLs and continuous updating of service line inventory; improving customer water tap sampling methods; lowering the Lead Action Level from 15 µg/L to 10 µg/L and associated actions; and strengthening protections to reduce exposure for systems with multiple lead action level exceedances.

**Q. PLEASE DESCRIBE THE ACTIVITIES REQUIRED TO KEEP AQUA'S WATER AND WASTEWATER SYSTEMS OPERATING PROPERLY AND IN COMPLIANCE WITH APPLICABLE LAWS AND REGULATIONS.**

A. The safe and reliable operation of Aqua's water and wastewater systems requires daily attention to a variety of systems and processes, each of which is designed to ensure that Aqua provides outstanding service to its customers and complies with all applicable laws and regulations. Activities critical to providing safe and adequate service include water sampling and testing, facility maintenance, improvements to technology, maintenance of security, the purchase of water, conservation, and attention to customer service.

**Q. PLEASE DESCRIBE HOW AQUA PERFORMS WATER TESTING AND SAMPLING TO CONTINUALLY EVALUATE THE SAFETY OF THE WATER IT PROVIDERS TO CUSTOMERS.**

A. Aqua ensures that its systems comply with regulatory standards and provide safe drinking water by regularly testing for contaminants such as bacteria, chemicals, and heavy metals. Aqua's sampling policy requires that public water systems are tested at least once a week or daily if they have more than 250 connections. Aqua's sampling and testing program ensures that the company identifies potential contaminants early, allowing for timely corrective actions to prevent health risks.

Aqua conducts comprehensive analysis of several thousand samples annually to ensure optimal operation and the safety of water provided to our customers, as well as the effective treatment of wastewater. This sampling is not only for regulatory compliance, but it also includes proactive process monitoring within our systems to identify potential issues before they impact water quality.

**Q. EARLIER YOU MENTIONED EPA'S NEW REQUIREMENTS RELATED TO PFAS. HOW DOES AQUA COMPLY WITH THESE NEW REQUIREMENTS?**

A. Aqua has identified six water systems that will require additional treatment capabilities, such as Ion Exchange resins, to comply with the new rule's requirements. Aqua is currently conducting small scale testing at the first location to gain TCEQ approval for the treatment method. All systems identified requiring action will be compliant before the EPA compliance deadline.

**Q. EARLIER YOU MENTIONED EPA'S CHANGES TO THE LEAD AND COPPER RULE. HOW WILL AQUA COMPLY WITH THESE NEW REQUIREMENTS?**

A. Aqua has already begun working to ensure compliance with the changes in the lead and copper rule. The initial service line inventory was completed in 2024 and to date we can report that no confirmed lead service lines have been identified. An extensive effort was undertaken to identify as many service line materials as possible with over 96% fully identified. The remaining service line materials will be fully identified by the end of 2026.

### C. Facility Maintenance

**Q. IS FACILITY MAINTENANCE ANOTHER DRIVER OF THE COMPANY'S O&M EXPENSE?**

A. Yes. Aqua conducts regular inspections and maintenance of facilities and equipment to ensure reliability and longevity of infrastructure and prevent unexpected breakdowns and service interruptions. This includes but is not limited to examining equipment such as pumps, valves, and motors for signs of wear and tear, corrosion, leaks, and other potential issues. Additionally, operators and contractors conduct various tests to assess performance and functionality, such as measuring flow rates and testing sensor accuracy; and performing routine tasks like cleaning, lubrication, and minor repairs.

**Q. HOW DOES THE COMPANY PRIORITIZE FACILITY MAINTENANCE PROJECTS?**

A. Aqua prioritizes facility maintenance projects through a systematic and data driven approach. Regular inspections and audits, performed by field supervisors, and maintenance of equipment, including pumps, tanks, motors, and wells are conducted to identify signs of wear, corrosion, and leaks. Performance and functionality tests, such as flow rate measurements and sensor accuracy checks, are performed routinely. Good housekeeping practices are maintained by ensuring fences are intact, electric panels are secure, and debris and vegetation are managed. Aqua leverages advanced technologies like SCADA systems, GIS asset tracking, and computerized maintenance systems to aggregate data and enhance operational efficiency. The implementation of SCADA systems across multiple sites enhances situational awareness and proactive maintenance, leading to improved reliability. This comprehensive strategy ensures the longevity of infrastructure and minimizes service interruptions.

**D. Emergency Response**

**Q. HOW DOES AQUA PREPARE FOR EMERGENCIES TO ENSURE SAFE AND RELIABLE SERVICE FOR ITS CUSTOMERS?**

A. Aqua takes several proactive measures to ensure it is well-prepared for emergencies, thereby maintaining safe, reliable, continuous, and adequate service for its customers. One of the key strategies involves the development and regular updating of Emergency Preparedness Plans ("EPP"). These plans are designed to comply with the statutory mandate that utilities demonstrate the ability to provide emergency operations during extended power outages lasting more than 24 hours. Among other things, Aqua's plans called for the installation of alternate power options to ensure that water pressure remains

at 20 pounds per square inch ("psi") throughout the distribution system during extended power outages. Aqua has also prioritized the purchasing of onsite generation equipment to ensure uninterrupted power supply during emergencies. This includes the acquisition of permanent generators and quick connects for portable generators, which are strategically placed at critical facilities. These investments have proven effective in maintaining continuous operations and minimizing service disruptions during power outages. The SCADA and AMI technologies I described earlier have also significantly improved emergency response capabilities.

The Company also collaborates with local emergency response teams, law enforcement, and fire departments to familiarize them with the layout of facilities, the properties of hazardous waste, and associated hazards. Aqua actively participates in community outreach programs like preparedness fairs to educate customers about emergency procedures and ensure they are informed and ready for potential disruptions. These efforts collectively contribute to Aqua's ability to provide safe and reliable water and wastewater services even during emergencies.

**Q. AS IT RELATES TO EMERGENCY RESPONSE, CAN YOU PROVIDE AN EXAMPLE OF RECENT EVENTS DURING WHICH AQUA ACTIVATED ITS EPPS?**

A. The effectiveness of these measures was demonstrated during Hurricane Beryl, which impacted 88 water systems and affected a total of 14,713 connections. To address this natural disaster, Aqua mobilized portable generators in strategic areas in accordance with its EPPs. Within 24 hours, national and regional partnerships were leveraged to secure more than 70 generators to meet the demand. By the morning following Hurricane Beryl's

landfall, outages were reduced to 54 systems without water, affecting 4,600 connections. As power was restored in certain areas, crews moved generators to systems still without power. Aqua restored water service to 87% of customers within 24 hours. Within approximately 55 hours, Aqua had restored service to nearly 90% of its impacted customers. The company achieved full service restoration within 72 hours. These steps highlight Aqua's commitment to emergency preparedness and its ability to respond effectively to crises, ensuring the safety and reliability of its water services for customers.

### E. Purchased Water

**Q. DOES PURCHASED WATER IMPACT THE COMPANY'S O&M EXPENSE?**

A. Yes. In Texas, where water is sometimes scarce, diversification of supply is key to ensuring a continuous and adequate supply of water for our customers. There are three main reasons why Aqua purchases water. First, in areas of subsidence concerns where using groundwater is not ideal, and new surface water rights may be expensive, it is often more economical to purchase treated surface water from a neighboring system. In regions with poor water quality, purchasing water may be less expensive than treating poor quality water. Finally, there are areas of the state that have limited groundwater available, either due to regional impact to an aquifer, drought, or other limitations. Aqua strives to balance quality of service with the cost of service when utilizing any water source. Additionally, Aqua strives to establish interconnections with neighboring systems when feasible for the benefit of all in the event emergency conditions arise.

**Q. HOW DOES THE COMPANY ENSURE THAT THE COSTS IT PAYS FOR PURCHASED WATER ARE REASONABLE?**

A. Each contract is reviewed and negotiated to ensure rates are based on cost of service, with suppliers required to provide cost of service studies supporting rate changes, which are

scrutinized for factual errors. The Company strives for long-term contracts to lock in pricing and maintain predictability for customers. To address limited negotiating leverage due to groundwater sources and single-source suppliers, the Company works to secure multiple supplies and interconnected systems to enhance negotiating power. These efforts can, however, be complicated by groundwater supply district rules that prohibit transferring water from one permitted area to another, even within the same aquifer and CCN.

**Q. DOES THE COMPANY WORK TO PROMOTE WATER CONSERVATION TO MINIMIZE CUSTOMER COSTS?**

A. Yes. Aqua promotes sustainable water use practices among its customers through a variety of initiatives. These include customer-friendly utility engagement portals that alert customers to high usage, leaks, and conservation periods. Moreover, Aqua encourages its customers to follow a voluntary lawn watering schedule year-round to build water smart habits while proactively protecting the water sources. Aqua is also committed to fixing leaks promptly. In addition, when mandatory watering restrictions are in effect, Aqua will enforce the measures outlined in its Drought Contingency Plan and install flow restrictors as a means of enforcement when necessary.

**Q. HOW DOES AQUA MANAGE ITS SYSTEMS DURING DROUGHT CONDITIONS?**

A. During periods of drought, Aqua communicates with customers in a variety of ways to relay important information about the requirements under mandatory water use restrictions and to share helpful best practices. Our modes of communication include direct mailings, the use of reverse 911 notifications for urgent issues, use of the Aqua Water Conservation Web Page, posting conservation advisories along with the requirements of the most current

water use restrictions or guidelines to our service disruption map internet tool, and by using social media. Each customer has access to an Aqua online portal that is linked to the Company's service disruption map and provides a notification if there is a conservation advisory in effect.

**Q. PLEASE ELABORATE ON THE ACTIVITIES AQUA UNDERTAKES TO ENFORCE DROUGHT CONTINGENCY PLANS AND DROUGHT RESTRICTIONS?**

A. Aqua has a progressive enforcement process dependent on the drought stage implemented. This process includes warning letters and notices of violation, both with the possibility of the installation of a flow restriction device to limit the rate of use. If violation of the restrictions continues after the installation of a flow restriction device, then termination of service for up to seven days is possible after written notice.

### F. Distressed and Aging Systems

**Q. HOW DOES AQUA'S OPERATION OF DISTRESSED AND AGING SYSTEMS IMPACT THE COMPANY'S O&M EXPENSE?**

Aqua faces several operational challenges that are different from those faced by other water and sewer utilities. These challenges are caused by the scale and complexity of managing so many water and sewer systems. One of the primary challenges is the logistical complexity of coordinating efforts across multiple locations. For example, ensuring compliance with federal, state, and local regulations across all systems requires planning, monitoring, and reporting. In addition, many of the systems Aqua has acquired have had regulatory compliance issues at the time of acquisition. To resolve these issues, Aqua has had to undertake operational improvement, as well as capital upgrades to bring these

systems into compliance and maintain compliance. Aqua Witness Gresehover expands on many of the unique characteristics associated with Aqua's water and wastewater systems.

## VI. RATE REQUEST OVERVIEW

**Q. PLEASE GENERALLY DESCRIBE THE COMPANY'S RATE FILING PACKAGE.**

A. The Company prepared the filing using actual test year books and records, adjusted for known and measurable changes, and using traditional and widely accepted ratemaking principles. The Company's filing is consistent with the requirements of the TWC, the Commission's Substantive and Procedural Rules, and the Class A Rate/Tariff Change Application. In addition to the Company's Application and Statement of Intent, the filing includes the sworn direct testimony of five internal and four external witnesses, direct testimony workpapers, proposed tariffs, required schedules, and schedule workpapers. The filing also includes the Company's proposed notice, proposed protective order, and other supporting materials, including invoices detailing the capital investment that the Company has made in its water and wastewater systems since the test year in the Company's last rate case.

**Q. WHEN WERE BASE RATES LAST ESTABLISHED FOR AQUA?**

A. The Company's last statewide consolidated water and wastewater base rate case was filed in 2004 with final rates becoming effective on January 1, 2009.

**Q. FROM THE COMPANY'S PERSPECTIVE, WHAT OPPORTUNITIES DOES THIS RATE FILING PRESENT?**

A. First, Aqua needs to increase rates to a level that allows it to recover reasonable operating costs and provide a fair return on the investments it has made to serve its customers. Aqua

is asking the Commission to approve a total annual revenue requirement for the water operations of approximately $87.7 million, which represents an annual increase of approximately $17.8 million over revenues collected under current rates. In addition, Aqua is seeking a revenue requirement for wastewater operations of approximately $35.8 million, which represents an increase of approximately $11.4 million over revenues collected under current rates. The specific elements of the revenue requirement and how it was derived are discussed in detail in the direct testimonies of Company witnesses Estep and Reginelli.

Second, Aqua seeks to adopt a uniform, statewide set of water and wastewater tariffs, including miscellaneous service charges and terms of service, to simplify its in-state operations and regulatory obligations. Statewide consolidation will not only provide efficiencies for Aqua and its regulators, but it also facilitates the rehabilitation of distressed systems and mitigates rate impacts for many of its customers.

Additionally, this filing presents the opportunity to:

- Secure a prudence finding regarding Aqua's rate base in the amount of $613.7 million;
- Establish the cost-of-service base lines required to use the provisions of 16 TAC § 24.76, relating to system improvement charges;
- Authorization for the opportunity to earn an overall 7.45% return on rate base, based on a 53.00% equity and 47.00% long-term debt capital structure, comprised of a 10.60% return on equity and a 3.90% cost of debt;
- Discontinue the monthly surcharge credit associated with the Tax Cuts and Jobs Act of 2017;

- Recover regulatory assets related to COVID-19, Winter Storm Uri, Hurricane Nicholas, and Fair Market Valuation costs for acquired systems included in this filing;
- Incorporate Aqua's acquisitions into its consolidated revenue requirement, base rates and fees; and,
- Recover reasonable and necessary rate case expenses for the instant filing and two previous System Improvement Charge ("SIC") proceedings.

**Q. DOES THE COMPANY'S RATE FILING PACKAGE ALSO CONTAIN ADDITIONAL INFORMATION IN COMPLIANCE WITH PRIOR COMMISSION ORDERS?**

A. Yes. The Company is providing a discussion of its Capitalization Policy in compliance with the Commission's Order in Docket No. 55577.[4] As explained in the direct testimony of Company witness Brian Gresehover, Aqua determines whether a project may be capitalized based on the National Association of Regulatory Utility Commissioners ("NARUC") standards for capitalization. Aqua's team members follow the Capitalization Policy when classifying projects as O&M or capital expenditures. Further, a team consisting of engineering, operations, and accounting personnel meet each month to review the projects that have been completed and placed in service. They also review what may be needed to book the assets to utility plant and if the project has been properly capitalized according to our capitalization policy.

[4] Docket No. 55577, *Application of Aqua Texas, Inc. to Amend its System Improvement Charges Under 16 TAC § 24.76*, Final Order at Ordering Para. 4 (Feb. 6, 2025).

**Q. WHAT HAS DRIVEN THE TIMING OF THIS RATE FILING?**

A. Aqua's current rates were set based on a cost of service that is more than 20 years old. Since then, the Company has invested over $693.8 million in water and wastewater utility infrastructure through the end of the historic test year ending December 31, 2024.

Additionally, in Docket No. 53428, Aqua agreed to file its next comprehensive rate case within two years from the date of the final order approving the SIC in that matter. Aqua would ordinarily need to file its future reconciling comprehensive rate case described in 16 TAC § 24.76(i) within four years from the date of the final order approving requested SIC pursuant to 16 TAC § 24.76(k)(1); however, the two-year filing requirement was a term of a joint settlement agreement approved by the Commission. The final order in Docket No. 53428 establishing Aqua's initial SIC was issued on September 28, 2023, and it includes an ordering paragraph that requires Aqua to file its next comprehensive rate case within two years following the date of that order (i.e., September 28, 2025).

**Q. ARE ANY OTHER FACTORS DRIVING AQUA'S NEED FOR RATE RELIEF?**

A. Yes. Aqua has experienced increases in its O&M expenses. Foremost, the substantial rates of inflation the country has seen the past several years have increased O&M expenses.

**Q. HAS THE COMPANY EXPERIENCED CUSTOMER GROWTH TO OFFSET THESE COST INCREASES?**

A. Yes. The Company has experienced organic growth via adding new water and sewer connections. However, that organic growth does not negate the need for the Company to timely recover the capital it has to spend on infrastructure investment and increased O&M expenses over time.

**A. Cost of Service Calculation**

**Q. WHAT TEST YEAR WAS USED FOR THIS RATE FILING?**

A. Aqua is using calendar year 2024 as its test year, reflecting all capital additions and operating expenses through December 31, 2024, except for those adjustments that are known and measurable for the 2025 calendar year. Company witness Trey V. Reginelli explains and supports the reasonableness of the test year used to prepare the Company's RFP in his direct testimony.

**Q. DOES AQUA PROVIDE WATER OR WASTEWATER UTILITY SERVICE TO CUSTOMERS INSIDE MUNICIPAL BOUNDARIES?**

A. Yes. Aqua serves the cities of Alvin, Austin, Beach City, Boerne, Brownsboro, Buda, Cedar Park, Celina, Coffee City, Conroe, Cove, Cut-N-Shoot, Dayton, Denton, Fort Worth, Elmendorf, Granbury, Granite Shoals, Haslet, Houston, Justin, Ingram, Kerrville, Kyle, Lakewood Village, Little Elm, Leander, Lewisville, Manvel, Nederland, New Fairview, Old River Win-Free, Palestine, Pearland, Port Arthur, Quinlan, Quitman, Rhome, Round Rock, Sanctuary, Shady Shores, Stagecoach, Stockton Bend (Formerly Brazos Bend), The Colony, Tomball, Valley Mills, Weston Lakes, Wimberley, and Woodcreek.

**Q. HAS THE COMPANY ALSO FILED ITS REQUESTED COST OF SERVICE WITH THE MUNICIPALITIES IN WHICH IT PROVIDES SERVICE?**

A. Yes. Aqua has filed concurrently for rate relief with all municipalities within its service territory.

**Q. HAS THE COMPANY RELIED ON COMMISSION RATEMAKING PRECEDENT TO DEVELOP ITS PROPOSED COST OF SERVICE IN THIS CASE?**

A. Yes. Witness Herbert discusses his proposal on cost of service in his direct testimony.

**Q. PLEASE PROVIDE AN OVERVIEW OF THE COMPANY'S RATE REQUEST.**

A. In this case, the Company is asking the Commission to recognize that the reasonable and necessary investment that has been made in Aqua's water systems, as well as the costs of operating these systems, requires an overall increase in revenues on a systemwide basis of approximately $17.8 million, or 25%. With regard to its wastewater systems, the Company is asking the Commission to recognize that the reasonable and necessary investment that has been made in Aqua's wastewater systems, as well as the costs of operating these systems, requires an overall increase in revenues on a systemwide basis of approximately $11.3 million, or 47%.

**Q. PLEASE SUMMARIZE AQUA'S REQUESTED RATE BASE.**

A. Aqua's requested combined water and wastewater rate base in this case is $613.7 million.

**Q. WHAT MATERIALS IS AQUA PROVIDING TO SUPPORT THE PRUDENCE OF ITS CAPITAL INVESTMENT?**

A. Aqua has developed a database that allows users to view invoices, records, receipts, and other supporting documents for each capital project for which the Company is seeking recovery. This database integrates financial information from two distinct financial systems spanning over twenty years, providing users with multiple methods to search and access the data. This integration ensures that users only need to search in one unified way, regardless of the financial system from which the data originated. Each project within the database includes detailed descriptions and outlines the community benefits associated with it. Additionally, we have structured the available records to comply with SIC order requirements, ensuring that the data is presented in the requested formats. Users can sort

and filter the information by various criteria, such as water or wastewater projects, as well as by regional rate districts, enhancing the usability and accessibility of the database.

**Q. WHAT COST OF CAPITAL DOES AQUA PROPOSE BE APPLIED TO ITS RATE BASE?**

A. Aqua requests the opportunity to earn an overall 7.45% return on rate base. This return is based on 53.00% equity and 47.00% long-term debt capital structure, a 10.60% return on equity and a 3.90% cost of debt. Mr. D'Ascendis discusses and supports the Company's cost of capital.

**Q. DOES AQUA SEEK TO ADOPT NEW DEPRECIATION RATES AND NEW TARIFFS AS PART OF ITS APPLICATION?**

A. Yes. Aqua retained Company witness John J. Spanos to prepare a depreciation study to determine the depreciation rates that Aqua should established for each class of assets in its rate base. Mr. Spanos discusses depreciation study analysis and supports the requested depreciation rates in his direct testimony. Company witness Trey V. Reginelli discusses the tariffs the Company seeks to adopt as part of this rate filing.

**Q. IS THE RELIEF REQUESTED IN THIS PROCEEDING NECESSARY FOR AQUA TO CONTINUE TO PROVIDE ADEQUATE AND RELIABLE SERVICE TO CUSTOMERS?**

A. Yes. As I mentioned earlier, the Company has water and wastewater systems that need repair and replacement of infrastructure. The rate relief requested in this proceeding will allow the Company to initiate timely recovery of costs related to the much-needed improvements and replacement of facilities and equipment for Aqua's water and wastewater systems. Considering the natural regulatory lag that the Company faces as a

result of using a historical test year to establish rates, it is imperative that the Company be allowed to recover the millions of net investments it has already made in its systems to support and incentivize the repair and replacement of aging systems in Texas.

**Q. ARE THE RATE INCREASES AQUA IS SEEKING REASONABLE AND NECESSARY?**

A. Yes.

**B. System Consolidation**

**Q. PLEASE SUMMARIZE AQUA'S CONSOLIDATION PROPOSAL.**

A. Aqua proposes to consolidate all of its regulated operations, consistent with the requirements of 16 TAC § 24.25(l) and (k), into one statewide water consolidated system and one statewide wastewater system. This is a critical component of the Company's request. As mentioned previously, there are 377 water and 66 wastewater systems currently within the Company's footprint, more than 500 water treatment facilities, 60 sewer treatment facilities, and more than 700 individual wells. Many systems only serve a handful of customers. In fact, twelve of these systems serve less than ten customers and almost a quarter of all Aqua systems serve less than 50 customers. Forty-five percent of the Company's systems serve less than 100 customers. Of the 377 water systems and 66 wastewater systems in the state, and only fifteen serve more than 1,000 customers. The Company cannot and does not operate each of the 377 water and 66 wastewater systems as an individual business unit with its own revenue requirement, books and records, and tariff. In fact, the Commission has already approved system consolidation into the three regions mentioned previously.

In this case, the Company is requesting that the Commission take the final step toward consolidation. For the systems included in this rate application, Aqua is seeking

the Commission's permission to: 1) consolidate the systems across the state into one water and one wastewater revenue requirement going forward; 2) consolidate its books and records so that the company is operated as one water division and one wastewater division; and 3) move toward a single tariff rate for water and wastewater. The first request is to have one revenue requirement (also referred to as single cost of service) for water going forward and one revenue requirement for wastewater going forward. This will allow Aqua to essentially operate as one water division and one wastewater division for ratemaking purposes.

**Q. IF APPROVED, WILL MULTIPLE SYSTEMS BE CONSOLIDATED UNDER A SINGLE WATER AND WASTEWATER TARIFF?**

A. Yes. Aqua has acquired many small and troubled systems over the past twenty years, and the Company has adopted the existing rates and charges, as well as the existing rules of service from the acquired utility upon acquisition. Aqua seeks to combine these systems into one statewide water revenue requirement and tariff structure and the same for wastewater, one statewide wastewater revenue requirement and tariff structure.

**Q. WHY IS AQUA PROPOSING THE STATEWIDE CONSOLIDATION OF ITS WATER AND WASTEWATER SYSTEMS?**

A. As noted, Aqua is already consolidated into three regional entities. Further consolidation for one revenue requirement and further consolidated rate structures will positively affect many aspects of Aqua’s business. First, this would allow Aqua to file just one rate case for water and one rate case for wastewater in the future, rather than in a piecemeal fashion, reducing overall rate case expenses. In addition, a consolidated revenue requirement (or single cost service) will treat Aqua's operations as one entity, instead of many separate

systems, providing efficiency in managing day-to-day operations and financials. Finally, consolidating smaller systems with the larger group promotes economies of scale and greater efficiency, helping to mitigate rate shock by spreading increased O&M and capital costs over a larger group of customers.

**Q. IS THE RATE RELIEF AND FURTHER CONSOLIDATION REQUESTED IN THIS PROCEEDING NECESSARY FOR AQUA TO CONTINUE TO PROVIDE ADEQUATE AND RELIABLE SERVICE TO ITS CUSTOMERS?**

A. Yes. The current consolidated rate structure spreads costs of capital projects over a larger base, making substantial improvements to the Company's systems more affordable to its customers. This policy has long been implemented in the electric, gas and telecommunications industry and has worked for Aqua thus far. Consolidation protects against significant rate shock going forward, addresses small system viability issues, and helps control administrative costs and rate case expense costs for the utility and agencies that regulate it. If a small, stand-alone system needs major capital improvements, further consolidation will spread these costs over an even larger customer base. Over the long term, a consolidated rate structure will strengthen Aqua's water and wastewater system as a whole. By being able to minimize rate shock to customers and spread the increasing costs of capital improvements, Aqua can shift capital as priorities for improvements among the varied systems.

**Q. WILL THE PROPOSED SYSTEM CONSOLIDATION INCLUDE SYSTEMS AQUA HAS ACQUIRED OVER THE YEARS?**

A. Yes. Aqua already has six consolidated revenue requirements, one water and one wastewater for each of the three operating regions in Texas. Within each of these three

regions, the Company has acquired many small, troubled systems over the years. Aqua proposes consolidating all of these smaller, and often troubled systems, as well as the three operating regions, into a single statewide water system and statewide wastewater system.

**Q. IS CONTINUED CONSOLIDATION REASONABLE AT THIS TIME?**

A. Yes. As I just mentioned, the bulk of Aqua systems are already consolidated, and the acquired systems represent a small percentage of the overall customer count in the state. Moreover, as explained by Company witness Gregory Herbert, the impact on customers of moving to statewide consolidation is insignificant while the benefit to customers is considerable. In addition, managing one set of books, exhibits, and schedules will streamline both the day-to-day operations of the utility as well as future regulatory filings.

**Q. HOW WILL STATEWIDE CONSOLIDATION BENEFIT CUSTOMERS WITHIN THE SMALL, DISTRESSED WATER AND WASTEWATER SYSTEMS THAT AQUA HAS ACQUIRED SINCE ITS LAST RATE CASE?**

A. Aqua has acquired many community water systems previously owned and operated by entities within the public and private (private investor-owned or homeowners' associations) sectors. Upon acquiring these systems, Aqua made immediate improvements in quality, supply, and customer service. At the same time, customers served by these systems have received the benefits of improved efficiency and the spreading of fixed costs over a larger customer base. Consequently, the consolidation of these systems into a single tariff mitigates rate impacts, promotes affordability, and will encourage the further acquisition of small, troubled water and wastewater systems by spreading costs to a larger customer base.

**Q. HOW WILL STATEWIDE CONSOLIDATED RATES BENEFIT CUSTOMERS OF LARGER SYSTEMS THAT ARE NOT CURRENTLY IN A DISTRESSED CONDITION?**

A. The addition of new customers anywhere within the consolidated division benefits customers even within the larger, less distressed system, because the new customers are also helping to offset capital costs investment and O&M expense associated with operating these systems. In addition, the development of a single set of tariffs for water and wastewater service provides for a heightened level of regulatory, administrative, and billing efficiency. In practice, tariff consolidation means that neither Aqua, the Commission, or the Company's customers will have to maintain familiarity with the differing rules of service and rates that are currently applicable. Instead, consolidated tariffs will provide a simplified approach to rates and rules, which is more consumer friendly. It is also worth noting that all of the Company's systems will eventually require large capital investments over the coming years. As a result, all systems will benefit from a consolidated customer base.

**Q. WILL CONSOLIDATION IMPACT THE TERMS AND CONDITIONS OF AQUA'S WATER AND WASTEWATER SERVICE?**

A. No. Aqua's proposal to consolidate into one water revenue requirement and one sewer revenue requirement will not impact our terms and conditions of water and wastewater service.

### C. Rates and Rate Design

**Q. IN ADDITION TO CONSOLIDATED RATES, IS THE COMPANY PROPOSING ANY OTHER CHANGES TO ITS RATES OR RATE STRUCTURE?**

A. Yes. Aqua is proposing a wastewater tariff that provides for a measured, volumetric sewer charge for customers using a uniform Customer Charge and Consumption Charge. The details are described in the narrative portion of the Cost of Service Study in the Tariff Design section. For those customers that do not have measured water service or are covered under an agreement, Aqua will rely on the water provider to provide water consumption data.

**Q. IS THE COMPANY PROPOSING TO ADOPT ANY NEW RATES OR SERVICES?**

A. The Company is proposing rate changes to existing tariffs to add a franchise tax and license tax pass through with the systems in which the four municipalities charge Aqua Texas these fees. The municipalities are Ingram, Granite Shoals, Woodcreek and Wimberley which are all in the Southwest region.

**Q. IS THE COMPANY PROPOSING ANY CHANGES TO ITS MISCELLANEOUS FEES?**

A. Yes. The miscellaneous fees currently listed in its tariff were either approved as part of Aqua's last rate case more than twenty years ago or adopted as part of the existing tariff structure in an acquisition since the last rate case. Accordingly, Aqua is proposing updated miscellaneous fees that reflect the true cost of service, detailed in more depth in the testimony of Company witness Gregory Herbert.

## VII. OVERVIEW OF AQUA WITNESS TESTIMONY

**Q. PLEASE BRIEFLY SUMMARIZE THE TESTIMONY OF THE OTHER AQUA WITNESSES IN THIS CASE.**

A. In addition to my testimony, the Company will present the direct testimony and exhibits of the following witnesses.

- **Mr. Trey V. Reginelli,** Controller II of Aqua Texas**,** in conjunction with Company witnesses Bobby D. Estep and Rasool Ahmadibeni, presents the Company's requested revenue requirements contained in the provided schedules and workpapers. Specifically, Mr. Reginelli provides a comparison of the final revenue requirements with the Company's adjusted test year revenues. Mr. Reginelli, in addition to Mr. Estep, also sponsors and supports the Company's affiliated expenses. Mr. Reginelli also supports the Company's recovery of certain of its regulatory asset amounts. In conjunction with Company witness Brian D. Gresehover, Mr. Reginelli explains and supports the Company's capitalization policy. Finally, Mr. Reginelli discusses and supports the Company's request for system consolidation and its overall requested water and sewer rates and proposed water and sewer tariffs.

- **Mr. Bobby D. Estep,** Regional Controller, Essential Utilities, Inc., identifies and supports the federal income tax and accumulated deferred income tax amounts included in the Company's RFP. Mr. Estep identifies the Company's requested return on invested capital, which makes up the Company's overall requested cost of service and final revenue requirements. Mr. Estep also supports the Company's requested recovery of affiliate expenses and demonstrates that these costs satisfy the applicable Commission requirements for cost recovery.

- **Mr. Rasool Ahmadibeni,** Manager Rates and Planning of Aqua Texas, identifies and supports the Company's request to recover certain regulatory asset and rate case expense amounts. Mr. Ahmadibeni also explains the Company's request to establish system improvement charge baseline amounts as part of this case.

- **Mr. Brian D. Gresehover**, Vice President – Engineering, describes Aqua's system and operations and identifies improvements and capital expenditures recently made and placed in service in the Company's water and wastewater systems to assure reliable, adequate, environmentally safe, and cost-efficient service to its customers. Mr. Gresehover supports the reasonableness and necessity of the capital investment included in this filing and the related capitalization policy used by the Company to determine whether a project is eligible for inclusion in rate base. He also addresses the requested prudence finding for capital investment. Finally, Mr. Gresehover sponsors the Affidavit of Patwardhan Gautam, a licensed Professional Engineer in Texas, who attests to the fact that all non-retired assets for which original costs are

claimed as a part of rate base in this proceeding are currently used and useful in providing utility service.

- **Mr. Harold Walker, III**, Manager – Financial Studies – Gannett Fleming Valuation and Rate Consultants, LLC, testifies to the appropriate level of cash working capital for Aqua to be used in this proceeding.

- **Mr. Dylan W. D'Ascendis**, Partner of ScottMadden, Inc. testifies concerning the appropriate cost of equity, capital structure, and overall rate of return to be set in this proceeding.

- **Mr. John J. Spanos**, President – Gannett Fleming Valuation and Rate Consultants, LLC, sponsors and supports the depreciation study conducted for the Company's water and wastewater assets, as well as the resulting depreciation rate changes proposed for adoption.

- **Mr. Gregory R. Herbert**, Associate Analyst – Gannett Fleming, Inc., provides testimony concerning class cost allocation and rate design. Mr. Herbert also sponsors the billing determinate analysis.

## VIII. RATE CASE EXPENSES

**Q. DOES AQUA PROPOSE TO RECOVER ITS RATE CASE EXPENSES AS PART OF THIS FILING?**

A. Yes. Pursuant to 16 TAC § 24.44, Aqua seeks to recover all reasonable and necessary rate case expenses that it incurs in connection with this and related proceedings, including Docket Nos. 53428 and 55577.[5] As required by 16 TAC § 24.44(b), Aqua is supporting its rate case expense request by providing the invoices Aqua has received in connection with Docket Nos. 53428 and 55577, as well as the invoices related to the preparation of this rate filing as part of the Company's confidential cost of service schedule workpapers. The required affidavit executed by Ann M. Coffin is provided as Exhibit DRC-3 to my direct testimony. Aqua reserves the right to supplement this testimony with evidence of additional

[5] Docket No. 53428, *Application of Aqua Texas, Inc. for System Improvement Charges* (Sept. 28, 2023); Docket No. 55577, *Application of Aqua Texas, Inc. to Amend its System Improvement Charges under 16 TAC § 24.76* (Feb. 6, 2025).

rate case expenses incurred as the case progresses. Aqua Witness Ahmadibeni will further elaborate on rate case expense.

**Q. HOW DOES THE COMPANY PROPOSE TO RECOVER THESE COSTS FROM CUSTOMERS?**

A. Aqua proposes to recover reasonable and necessary rate case expenses through a surcharge assessed over a 24-month period.

**Q. PLEASE DESCRIBE THE TYPES OF EXPENSES THAT WILL BE INCURRED BY THE COMPANY AS PART OF THIS PROCEEDING?**

A. Rate case expenses include costs incurred both internally and externally to prepare, process, and litigate this rate application as well as the SIC applications previously filed by Aqua with the Commission. Internal costs include "out-of-pocket" expenses, such as travel, postage, printing and copying. External costs include the costs incurred for expert witnesses and legal counsel, as well as the resources used to assist the Company with providing public notice of this rate filing.

**Q. WHAT FACTORS HAS THE COMMISSION ESTABLISHED FOR DETERMINING WHETHER RATE CASE EXPENSES ARE REASONABLE AND NECESSARY?**

A. Factors that must be considered are identified in 16 TAC § 24.44. Those factors include whether:

i. the fees paid, tasks performed, or time spent on a task were extreme or excessive;

ii. the expenses incurred for lodging, meals and beverages, transportation, or other services or materials were extreme or excessive;

iii. there was duplication of services or testimony;

iv. the utility's proposal on an issue in the rate case had no reasonable basis in law, policy, or fact and was not warranted by any reasonable argument for the extension, modification, or reversal of commission precedent;

v. rate-case expenses as a whole were disproportionate, excessive, or unwarranted in relation to the nature and scope of the rate case addressed by the evidence; or

vi. the utility failed to comply with the requirements for providing sufficient information.

**Q. WHAT ACTIONS HAS THE COMPANY TAKEN TO ASSURE THAT ITS RATE CASE EXPENSES ARE REASONABLE?**

A. I am responsible for tracking and reviewing costs for the overall preparation and presentation of the case, including management responsibility for outside consultants, attorneys, and in-house witnesses. Aqua has reviewed invoices from its attorneys and outside witnesses for the nature of work performed, appropriate billing rates, overall reasonableness and necessary supporting documentation. If an expense does not appear to directly relate to this case, it has been excluded from the Company's requested rate case expenses. As attested to by Ms. Coffin, the rate case expenses from outside attorneys and consultants were consistent with the difficulty of the work, were consistent with the time and labor performed in preparing this case, and the fees charged to Aqua were reasonable and consistent with the cases of similar scope and complexity. Additionally, Aqua has utilized fair market valuation of acquisitions and requested rates be applied to customers of acquired systems as part of the Sale, Transfer, Merger application. For example, in Aqua's acquisition of the Southern Oaks Water System from Forest Grove, Inc. (Docket No. 54431), Fair Market Valuation and Filed Rate Doctrine was utilized to consolidate Southern Oaks Water with the North Texas Consolidated Water Division. Additionally, Aqua has taken advantage of the SIC mechanism, which helps reduce regulatory lag on

invested capital in certain asset accounts and has, in part, allowed Aqua to delay filing a general rate case. All of these mechanisms help to allow Aqua to invest more dollars on valuable capital improvements and less on rate case litigation that results in costs passed on to customers.

**Q. ARE THESE RATE CASE EXPENSES REASONABLE AND NECESSARY?**

A. Yes. This case is significant to the Company in order to (1) establish a cost of service that adequately captures the Company's actual cost to operate and maintain its systems in compliance with applicable regulations; (2) provide an opportunity for a reasonable return on its investment so that the Company can continue to invest in its systems in order to ensure safe and reliable water and wastewater service and regulatory compliance; and (3) consolidate and thus simplify the Company's various water and wastewater rates. Nonetheless, the Company has minimized its reliance on outside consultants where possible by relying on in-house resources, has limited food and lodging costs where possible, has avoided duplication of services by relying on a small team of personnel and consultants, and has attempted to reduce the number of litigious issues in the case to avoid litigation expense. Based on these facts, the Company's requested rate case expenses comply with the Commission's rules.

**Q. WILL THE COMPANY SUPPLEMENT ITS APPLICATION WITH ADDITIONAL RATE CASE EXPENSES INCURRED AS A RESULT OF THIS PROCEEDING?**

A. Yes. The Company will supplement its filing with updated rate case expenses throughout this proceeding or, if rate case expenses are severed and addressed in a separate docket, will address them accordingly and as the Commission requires.

## IX. CONCLUSION

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY.**

A. Yes, however I reserve the right to supplement my Direct Testimony as needed during the progression of this case.

**STATE OF TEXAS** §

**COUNTY OF TRAVIS** §

**AFFIDAVIT OF DANIEL RAMIREZ-CISNEROS**

BEFORE ME, the undersigned authority, on this day personally appeared Daniel Ramirez-Cisneros who having been placed under oath by me did depose as follows:

1. "My name is Daniel Ramirez-Cisneros. I am of sound mind and capable of making this affidavit. The facts stated herein are true and correct based upon my personal knowledge. I am the Director of Operations at Aqua Texas, Inc.
2. I have prepared the foregoing Direct Testimony, and I swear or affirm that I have personal knowledge of the facts in the testimony, schedules, and attachments that I am sponsoring in this application, and that I am competent to testify to them.
3. I further swear or affirm that all of the statements and representations made in those parts of this application that I am sponsoring are true and correct to the best of knowledge."

Further affiant sayeth not.

Daniel Ramirez-Cisneros

**PUC DOCKET NO. 58124**

| | | |
|---|---|---|
| **APPLICATION OF AQUA TEXAS, INC. FOR AUTHORITY TO CHANGE RATES** | **§ § §** | **BEFORE THE PUBLIC UTILITY COMMISSION OF TEXAS** |

**AFFIDAVIT OF ANN M. COFFIN**

Before me, the undersigned authority, on this date personally appeared Ann M. Coffin, known to me to be the person whose name is subscribed below, and being by me first duly sworn, stated upon oath as follows:

1. "My name is Ann M. Coffin. I am over 18 years of age, of sound mind, and fully competent to make this affidavit. Each statement of fact herein is true and of my own personal knowledge.

2. I am a partner in the Austin, Texas law firm of Baker Botts LLP, and have practiced law in Travis County since 1993. My law practice encompasses a wide range of administrative areas, including the representation of water utilities, as well as electric utilities, telecommunications utilities, and natural gas distribution pipelines. I have extensive experience representing and defending clients before the Public Utility Commission of Texas ("Commission") and the Railroad Commission of Texas.

3. I was retained by Aqua Texas, Inc. ("Aqua Texas" or the "Company") to serve as counsel of record in PUC Docket No. 58124.

4. I am familiar with Texas Water Code § 13.185 and 16 Texas Administrative Code ("TAC") § 24.44, which govern recovery of rate case expenses. I am also familiar with 16 TAC § 24.76(j), which provides that rate case expenses incurred in connection with proceedings involving the establishment of a system improvement charge may be requested for recovery and, if requested, must be reviewed in the utility's next comprehensive base rate case.

5. In addition to seeking recovery of rate case expenses in connection with this comprehensive rate case filing, Aqua Texas also seeks to recover costs incurred in connection with two system improvement charge applications filed with the Commission, which were assigned Nos. 55577 and 53428.[1]

6. Attached to Schedule II-E-4.4 of the Company's Rate Filing Package are invoices supporting Aqua Texas's request to recover its reasonable and necessary rate case expenses. These invoices reflect work performed by outside legal counsel, as well as outside consultants and expert witnesses to prepare Aqua Texas's Application to Change Rates ("Rate Application") in this matter, as well as costs incurred in connection with Docket Nos. 55577 and 53428. Aqua Texas will supplement its rate case expense documentation at a later date to reflect reimbursable rate case expenses incurred by Aqua

[1] Docket No. 55577, *Application of Aqua Texas to Amend its System Improvement Charges under 16 Texas Administrative Code § 24.76*; Docket No. 53428, *Application of Aqua Texas, Inc. for System Improvement Charges*.

by Aqua Texas throughout subsequent stages of this docket, such as responding to discovery requests, attention to prehearing matters, attendance at the hearing and Commission meetings, and the drafting of pleadings throughout the proceeding.

7. In Docket No. 58124, my services, and the services of my firm, were associated with time and labor that were reasonable and necessary for the presentation and defense of Aqua Texas's Rate Application. The services performed in connection with the Company's Rate Application include, but are not limited to, the preparation of the Statement of Intent, testimony and exhibits, and preparation of the overall rate filing package.

8. In addition to reviewing the legal, consulting, and witness invoices related to Docket Nos. 53428, 55577, and 58124, I have also conferred with the Company regarding the support provided by outside consultants in connection with the aforementioned dockets to confirm that there was no duplication of services and no double billing of charges. The invoices of Baker Botts, LLP and Coffin Renner LLP also accurately reflect the time spent and expenditures incurred for legal services on Aqua Texas's behalf and none of the fees paid, tasks performed, expenses incurred, or time spent on a task were extreme or excessive. Based on my experience and review of the relevant invoices, I have reached a similar conclusion regarding the invoices submitted by the law firm of Terrill & Waldrop.

9. The charges and rates billed to Aqua Texas for outside legal services in connection with matters for which rate case expense recovery is requested are reasonable and consistent with those billed by others for similar work, and the legal rates charged are comparable to rates charged by other professionals with the same level of expertise and experience and commensurate with the complexity of the issues in this and the other proceedings. A review of the supporting invoices confirms that the law firms providing legal services to Aqua Texas relied on and employed associated attorneys, paralegals, and legal assistants to perform necessary tasks whenever possible to mitigate costs.

10. I have reviewed the consultant and expert witness fees and expenses and, based upon this review, as well as my experience and communications with the Company, I believe the consultant and expert witness fees and expenses are reasonable for the nature, extent, and difficulty of the work performed, the complexity of the issues presented, and as compared to similar work performed by other consultants. None of the fees paid, tasks performed, expenses incurred, or time spent on a task were extreme or excessive.

11. Consistent with 16 TAC § 24.44, the rate case expenses incurred by Aqua Texas are proportionate to the complexity and scope of the rate case. This filing represents Aqua Texas's first comprehensive rate case filing in more than two decades and is the first time the Commission will review the Company's requested revenue requirements. Moreover, Aqua Texas currently serves approximately 76,000 water and 25,300 wastewater customer connections across 56 counties throughout Texas and all customers are affected by this Statement of Intent. As part of this rate filing, Aqua Texas proposes to consolidate its 377 water systems under a single statewide water tariff and its 66 sewer systems under a single statewide wastewater tariff. Complex issues in this case include, but are not limited to, the consolidation of systems and rates, a prudence determination regarding Aqua Texas' rate base in the amount of $615.7 million, the establishment of new depreciation rates, and the requested recovery of regulatory asset amounts. The amount of work, attention, and

analysis needed to prepare a Rate Application to support the relief requested by the Company justifies the amount of rate case expenses included in the Rate Application.

12. Aqua Texas has not proposed treatment of any issue that has no reasonable basis in law, policy, or fact, or that was not warranted by any reasonable argument for the extension, modification, or reversal of commission precedent.

13. As of the signing of this affidavit, there have been no rate case expenses incurred as a result of discovery or a hearing in connection with Docket No. 58124. Aqua Texas will request recovery of those rate case expenses, if any, at a later time and will support its request through additional evidence verified by testimony or affidavit.

14. All rate case expenses incurred for lodging, meals and beverages, transportation, or other services were reasonable and necessary. No employees of Baker Botts LLP or any consultant or other law firm charged for luxury items, entertainment, or alcoholic beverages.

15. Based on my review of the Rate Application and the billings from Baker Botts LLP, other law firms, and all consultants, I did not identify any duplication of services or testimony.

Ann M. Coffin

# DIRECT TESTIMONY OF BRIAN S. GRESEHOVER

## I. INTRODUCTION AND BACKGROUND

**Q. WHAT IS YOUR NAME AND BUSINESS ADDRESS?**

A. My name is Brian S. Gresehover. My primary business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am employed as the Vice President, Engineering for Aqua Services, Inc. ("Aqua Services") the service company for the applicant for this proceeding, Aqua Texas, Inc. ("Aqua" or the "Company").

**Q. PLEASE DESCRIBE YOUR EDUCATION AND BUSINESS EXPERIENCE.**

A. I received a Bachelor of Science degree in mechanical engineering from University of Maryland in College Park, MD in 2004. I received a Master of Environmental Engineering from Johns Hopkins University in Baltimore, MD in 2011. I am a registered professional engineer in both Maryland and Pennsylvania. I have 20 years of engineering design, condition assessment, and planning experience serving large water and sewer utilities throughout North America. From 2005 until April 2013, I worked for Whitman, Requardt and Associates, LLP beginning as a consulting project engineer, culminating as engineer ("Engineer III") for the last 5 years of my employment. From April 2013 until September 2016, I was employed by Pure Technologies, Ltd. as a senior project manager. I was responsible for preparing inspection plans and overseeing the inspection of water and wastewater pipelines. From September 2016 until June 2022, I worked for Aqua Pennsylvania, Inc. as a senior project engineer. I oversaw a $150 million (typical) annual capital budget, focused on planning, management, design and renewal of the water distribution system. In July

2022, I was promoted to vice president of engineering for Aqua Services, which is the position I currently hold.

**Q. HAVE YOU PREVIOUSLY TESTIFIED IN REGULATORY PROCEEDINGS?**

A. Yes. I provided testimony in Docket No. 55577, which involved the Application of Aqua Texas to Amend its System Improvement Charges under 16 Texas Administrative Code ("TAC") § 24.76.

**Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?**

A. I am testifying on behalf of Aqua Texas.

**Q. WERE YOUR TESTIMONY AND EXHIBITS PREPARED BY YOU OR SOMEONE UNDER YOUR DIRECT SUPERVISION?**

A. Yes.

## II. PURPOSE OF TESTIMONY

**Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

A. My testimony, in combination with that of other Company witnesses, describes the capital investments that must be made in Aqua's water and wastewater systems for safe and reliable operations, to respond to system growth, and to comply with increasingly stringent regulatory requirements. My testimony explains how the Company manages its capital investments and supports the prudency of the Company's capital investment in its water and wastewater systems. My testimony also responds to the Commission's directive in Docket No. 55577 that Aqua explain and support the Company's capitalization policy in its next rate case filing.[1] As part of my testimony on this issue, I specifically address the capitalization of main breaks in the distribution system. My

[1] *See* Docket No. 55577, Final Order at Ordering Para. 4 (Feb. 6, 2025).

testimony also highlights the infrastructure challenges that Aqua faces in Texas and the Company's two-part approach to addressing necessary infrastructure investments in the short and long term.

## III. WATER AND WASTEWATER INFRASTRUCTURE CHALLENGES IN TEXAS

**Q. WHAT IS THE STATE OF WATER INFRASTRUCTURE IN TEXAS?**

A. The American Society of Civil Engineers ("ASCE") is the nation's oldest engineering society and is a leading advocate for infrastructure stewardship in the United States. As part of this advocacy, every four years since 1998, ASCE has prepared a comprehensive assessment of the nation's major infrastructure systems in its *Report Card for America's Infrastructure*.

On the national report card, Drinking Water gets a C- as the nation's water infrastructure is aging and 20% of installed mains have exceeded their useful lives and are underfunded. Water distribution and transmission rehabilitation costs account for 67% of the required future investment.[2] The ASCE Texas Report Card states that the Texas Drinking Water infrastructure grade is a D+. Funding safe and adequate drinking water supplies and networks is essential to continue fostering growth and prosperity and is imperative to the State's economy. The importance of planning for adequate water supplies is demonstrated by Texas' legislation requiring the Texas Water Development Board ("TWDB") to develop a State Water Plan ("SWP"). The SWP is updated every five years and incorporates sixteen regional water plans, which guide the state water policy. The state population is projected to grow from 32.9 million in 2030 to approximately 53.2 million by 2080. Additionally, the number of boil water

[2] *See* https://infrastructurereportcard.org/cat-item/drinking-water-infrastructure/

advisories in the State has doubled from 2020 to 2023, indicating a need to address aging infrastructure and for the associated required investments. Furthermore, the number of Public Water Systems ("PWS") with limited water use to avoid shortages has increased from 46 in 2019 to 571 systems in 2023, affecting approximately 6.4 million people in Texas.[3]

**Q. WHAT IS THE STATE OF WASTEWATER INFRASTRUCTURE IN TEXAS?**

A. The 2025 ASCE Report Card gives our national Wastewater a D+.[4] Based on ASCE, Texas Wastewater gets a D- grade. The wastewater sector in Texas is currently resource constrained, with limited funding from federal, state, or local agencies, personnel for operating and maintaining wastewater infrastructure, or science and engineering professionals needed to develop and deploy cost-effective and resilient solutions. The growing population is not only adding demand but also expanding and increasing decentralized systems permits by 30%. Furthermore, the funding available from federal and state sources falls short of meeting the demands for new infrastructure and rehabilitation.[5]

**Q. HOW DOES AQUA MANAGE ITS RURAL WATER INFRASTRUCTURE?**

A. Under the Safe Drinking Water Act ("SDWA"), small PWSs are broadly characterized as systems serving 10,000 or fewer customers. This category of systems represents more than 92% of the nation's 51,000 community water systems ("CWS"), and nearly all of the 100,000 non-community water systems. The SDWA further breaks down

[3] *See* ASCE's 2025 Infrastructure Report Card at: *https://infrastructurereportcard.org/wp-content/uploads/2025/03/2025-texas-report-card-full-report-compressed.pdf.*
[4] *See* ASCE's 2025 Infrastructure Report Card at: *https://infrastructurereportcard.org/cat-item/wastewater-infrastructure/*.
[5] *See* ASCE's 2025 Infrastructure Report Card at: *https://infrastructurereportcard.org/state-item/texas/*.

small systems into those serving 3,301 – 10,000 persons, those serving 501 – 3,300 persons, and those serving 500 persons or fewer.[6]

While Aqua is a Class A utility based on U.S. Environmental Protection Agency ("EPA") classifications of a total size greater than 10,000 connections, Aqua is made up of 377 water systems ranging in size from a population of 25 to 8,442 customers, representing over 8% of the 4,690 Texas CWSs. To effectively manage 377 small water systems and 66 small wastewater systems, Aqua utilizes a consolidated infrastructure asset management planning approach that can prioritize at a state level while also managing across three areas (Central, East and North) and 11 water and nine wastewater divisions geographically.

| Division | Population Very Small <500 | Small 501-3,300 | Medium 3,301-10,000 | Total |
|---|---|---|---|---|
| TX - Central - Austin | 6 | 11 | | 17 |
| TX - Central - Kerrville | 33 | 7 | 2 | 42 |
| TX - Central - Wimberley | 12 | 11 | | 23 |
| TX - East - Spring Northeast | 30 | 14 | 1 | 45 |
| TX - East - Spring Northwest | 12 | 13 | 1 | 26 |
| TX - East - Spring Southeast | 37 | 5 | 1 | 43 |
| TX - East - Spring Southwest | 18 | 13 | 1 | 32 |
| TX - North - Fort Worth | 55 | 16 | | 71 |
| TX - North - Granbury | 35 | 11 | | 46 |
| TX - North - Lake Palestine | 15 | 9 | | 24 |
| TX - North - Waco | 8 | 3 | | 11 |
| | **261** | **113** | **6** | **380** |

While each individual rural community system has its own investment needs, they can be managed from an enterprise-wide or consolidation renewal and replacement asset management program methodology. A consolidated management approach affords resources that are not otherwise available to small rural water and wastewater systems, including access to capital, subject matter experts, software,

[6] *See* https://www.epa.gov/sdwa/small-drinking-water-system-variances#definition

cybersecurity support, enterprise asset management and geographical information system ("GIS") support, and national contract pricing.

**Q. PLEASE DESCRIBE THE PARTICULAR CHALLENGES AND CONDITIONS THAT EXIST FOR RURAL COMMUNITY WATER SYSTEMS IN TEXAS.**

A. Rural community water systems in Texas, like those of Aqua Texas, face significant challenges. The Texas Rural Water Association ("TRWA") which represents about 870 retail public utilities that provide water and wastewater service to 3 million customers conducted an infrastructure needs survey with a direct focus on PWS water lines in 2022. The TRWA survey is attached as Exhibit BSG-1 to my direct testimony.

TRWA's findings included:

- PVC is the most prevalent water pipe ranging in diameter from 0.75" to 12".
- Soil conditions, pressure, and temperature are impacting the useful life of water lines with historically improper installation.
- 70% of the water lines in their system are over 20 years old and 57% of the water lines are over 40 years old. The average date of installation of the water systems surveyed is 1966.
- Distribution systems have a life expectancy of 35 years and water lines exceeding 30 years in use are more likely to break down and need repairs.
- About 13% of small CWSs have GIS.

Aqua's rural water systems' infrastructure characteristics are similar to those found in the survey.

**Q. PLEASE ELABORATE ON THE AGE AND LIFE EXPECTANCY OF THE WATER INFRASTRUCTURE AS DISCUSSED IN THE TRWA SURVEY AND THE SIMILARITIES TO AQUA'S INFRASTRUCTURE.**

A. The TRWA Survey explains the age and life expectancy of water infrastructure. Many factors impact the life expectancy of water lines.

> *One major conditional aspect impacting useful life of water lines are the soil conditions. The type of soil varies across the state from sand and clay to limestone and flint rock. Improper installation without consideration of the soil type can negatively impact the pipe integrity. Moisture content or lack of moisture in the soil can cause pipes to be put under stress and make them unable to move as the ground shifts when we experience seasons of drought. The type of soil also impacts the cost of replacing lines . . . .* TRWA Survey at 3.
>
> *The size of lines needing to be replaced or upgraded heavily impacts the overall cost of the project in regard to pipe cost, amount of bedding material needed, equipment needed to install, and labor costs.* TRWA Survey at 3.

In addition, the survey explains that small water system assets tend to have a lower average service life than larger water systems with installation practices being a key factor. Poor installation combined with poor soil conditions have gravely impacted rural Texas water assets. Many of the rural assets that Aqua Texas now operates reflect these characteristics due to poor installation resulting from developer-built systems combined with poor soil conditions. The chart below summarizes the typical life expectancy of water system equipment. Table BSG-1, below, is an excerpt from the TRWA Survey that lists the useful life for various water system components.

**Table BSG-1**

| How Long Will it Last? Typical Life Expectancies of Water System Equipment | | |
|---|---|---|
| Component | Worksheet | Useful Life |
| Wells and Springs | Drinking Water Source | 25 years |
| Intake Structures | | 35 years |
| Pumping Equipment | | 10 years |
| Disinfection Equipment | Treatment System | 5 years |
| Hydropneumatic Tanks | Tanks | 10 years |
| Concrete and Metal Storage Tanks | | 30 years |
| Transmission Structures (Pipes) | Distribution System | 35 years |
| Valves | Valves | 35 years |
| Mechanical Valves | | 15 years |
| Computer Equipment/Software | Electrical Systems | 5 years |
| Transformers/Switchgears/ Wiring | | 20 years |
| Motor Controls/Variable Frequency Drives | | 10 years |
| Sensors | | 7 years |
| Buildings | Buildings | 30 years |
| Service Lines | Service Lines | 30 years |
| Hydrants | Hydrants | 40 years |
| Note: These expected useful lives are drawn from a variety of sources. The estimates assume that assets have been properly maintained. The adjusted useful life of an asset will be equal to or less than typical useful life. | | |

Aqua Texas, with its 377 community water systems, mirrors the 2022 findings by the TRWA. Poor PVC pipe installations combined with poor soil conditions have triggered a perpetual renewal and replacement phase for each of Aqua's 377 water systems. Aqua's approach to address the challenges of aging water infrastructure renewal and replacement includes an enterprise-wide asset management program ("EAM"), which includes data gathering, analysis and prioritization, and capital planning.

**Q. PLEASE ELABORATE ON THE CHARACTERISTICS OF AQUA'S WATER DISTRIBUTION NETWORKS IN TEXAS.**

A. The material and age characteristics of Aqua's water distribution networks are summarized below and in Table BSG-2:

1. Material

The majority of Aqua's water distribution network is made up of PVC pipe. Aqua tracks 1,971 miles of water pipes with similar pipe diameter findings as the TRWA Study, with PVC representing nearly 97% of the pipe materials used. This includes over 14,755 water pipe assets tracked representing nearly 52,000 20-foot PVC pipe segments (sticks).

2. Age

Nearly 78% of the Aqua water pipes are over 20 years old and 57% of the water pipes are over 30 years old. This does not account for the 15% of the pipes that have an unknown age that are likely older than 30 years of age.

**Table BSG-2**

| Pipe Age Category (Years) | Total Pipe Length (Feet) |
|---|---|
| Unknown | 1,571,381.91 |
| 0 to 10 yrs | 218,946.33 |
| 11 to 20 yrs | 507,539.77 |
| 21 to 30 yrs | 2,180,604.56 |
| 31 to 40 yrs | 1,297,731.11 |
| 41 to 50 yrs | 2,776,459.74 |
| > 50 Years | 1,857,587.54 |
| Total | 10,410,250.95 |

| Pipe Age Category (Years) | Total Pipe Length (Feet) |
|---|---|
| Unknown | 15.09% |
| 0 to 10 yrs | 2.10% |
| 11 to 20 yrs | 4.88% |
| 21 to 30 yrs | 20.95% |
| 31 to 40 yrs | 12.47% |
| 41 to 50 yrs | 26.67% |
| > 50 Years | 17.84% |

**Q. IS IT REALISTIC TO EXPECT AQUA TO REPLACE ALL OF THIS AGING INFRASTRUCTURE AT ONE TIME?**

A. No. While the replacement of aging infrastructure is a priority for the Company, it is cost prohibitive and not operationally feasible to replace all aging infrastructure over a short time period. This does not, however, mean that the Company is not investing in improving the asset's useful life until it can be fully replaced. In fact, the Company undertakes activities to extend the useful life of these assets until they can be replaced as part of a cost effective and appropriately prioritized capital project in the future.

**Q. WHAT WOULD BE THE COST IMPACT OF FULL REPLACEMENT FOR ALL WATER PIPE OVER THE AGE OF 30 YEARS?**

A. Aqua estimates that it would cost approximately $190 per linear foot to replace water pipes over the age of 30. At that rate, to replace all water pipes over the age of 30 would cost over $1 billion dollars. It would likely lead to an over 100% rate increase. This would have a severe impact on customers. In addition, considering these 377 water systems lack any redundancy (i.e., second water tank) in both water source and delivery networks, it is impractical and disruptive to take full systems offline.

**Q. IS THE LACK OF REDUNDANCY A CHARACTERISTIC THAT IS UNIQUE TO AQUA'S WATER SYSTEMS?**

A. No. The characteristics associated with Aqua's systems are similar to those of systems described by TRWA. Because of their size, Aqua's water systems typically do not have any redundancy in water source and delivery. 38% of Aqua's systems' water source is a single well, 56% have multiple wells (usually 2), and 6% rely on purchased water.

| Water Source Type | Count | Percentage |
|---|---|---|
| Groundwater | 345 | 91% |
| Purchased Groundwater | 24 | 6% |
| Surface Water | 1 | 0% |
| Purchased Surface Water | 7 | 2% |
| GUDI | 3 | 1% |
| | 380 | 100% |

With very small rural water systems, there is a constant risk that a pipe leak or break could empty a water tank and reduce water pressure and supplies, creating a public health risk for the system's entire customer base. But the lack of redundancy means any large-scale main replacement must be planned and coordinated. To address this issue, Aqua is utilizing a two-part approach to infrastructure replacement, which includes addressing main breaks. This approach is discussed in Section IV(A) of my testimony.

## IV. AQUA'S CAPITAL INVESTMENT IS USED AND USEFUL IN THE PROVISION OF WATER AND WASTEWATER SERVICE AND HAS BEEN PRUDENTLY INCURRED

**Q. WHAT IS A CAPITAL INVESTMENT?**

A. Capital investments include direct costs (materials, supplies, direct labor, contractor charges, etc.) and indirect costs (transportation, services, studies, plans, surveys, engineering, supervision/inspection, insurance, security during construction, permits, legal fees, allowance for funds used during construction ("AFUDC"), overheads, etc.) used to install or replace fixed assets.

**Q. WHY ARE CAPITAL INVESTMENTS MADE IN AQUA'S WATER AND WASTEWATER SYSTEMS?**

A. Capital investments are made to ensure regulatory compliance, improve systems to meet new regulations, increase or restore operational capacity, serve new customers,

address end of life issues with aging facilities and systems and outdated technology, meet level of service, and ensure security, safety and reliability.

**Q. WHAT ARE THE PRIMARY DRIVERS OF THE INVESTMENT BEING MADE IN THE WATER AND WASTEWATER SYSTEMS OPERATED BY AQUA?**

A. Regulatory compliance is a primary driver of capital investment with documented existing violations and known potential violations being prioritized. Water availability and management and wastewater treatment capacity are also primary drivers of capital investment. Noncompliance and capacity violations in Aqua's systems have decreased over time due to investments in addressing these issues. Other existing asset characteristics and operational history and needs, such as aging infrastructure and chronic service disruptions, are also drivers of the investments being made and the associated prioritization process for renewal and replacement planning.

**Q. CAN YOU PROVIDE AN EXAMPLE OF HOW EVOLVING STATE AND FEDERAL REGULATORY REQUIREMENTS IMPACT THE COMPANY'S INVESTMENT DECISIONS?**

A. Yes. Specific examples of these evolving regulatory requirements that are impacting capital investment today are the new regulation for Per- and Polyfluoroalkyl ("PFAS") limits, including sampling and treatment requirements as well as the Revised Lead and Copper Rule for service line investigation and lead and galvanized service line replacement. For Aqua, sampling has identified seven systems potentially impacted by PFAS. Sampling is ongoing and designs are being developed to mitigate the known

issues and meet regulations by the 2028 deadline (2029 regulatory deadline preceded by 3 quarters of compliance monitoring).

**Q. DO THESE INVESTMENTS BENEFIT CUSTOMERS?**

A. Yes. These capital investments help ensure consistent water quality based on accepted health and safety standards. These capital investments also minimize the likelihood of potential water quality issues associated with known contaminants and contaminant leaching from lead pipes due to otherwise low risk water chemistry changes. Some examples of capital projects and the benefits include:

- Greenwood Water Treatment Plant, drinking water uranium removal;
- Bourdeaux Water Treatment Plant, drinking water arsenic removal;
- Lazy Bend Water Treatment Plant, drinking water nitrate removal;
- Barton Creek Surface Water Treatment Plant, source of supply and drought resiliency; and
- Wimberly Water System, advanced metering infrastructure to provide daily water usage rates to customers, leak detection, and non-revenue water reduction and conservation.

**Q. WHAT ARE SOME OF THE MOST SIGNIFICANT UPGRADES OR IMPROVEMENTS AQUA HAS MADE TO ITS WATER AND WASTEWATER SYSTEMS IN RECENT YEARS?**

A. Some of the most significant upgrades and improvements made to the Aqua water and wastewater systems in recent years are listed below. For context, the largest project on this list cost $7 million and the smallest project on this list cost $500,000. These are the

largest projects in the capital budget. Aqua has numerous (almost 500 in 2024) projects that are significantly smaller (less than $100,000) as well. Significant projects include:

- New wells in Old Egypt, Lake Palestine, Dove Hollow, Canyon Creek, Clear Lakes;
- Water treatment plant expansion and rehabilitation at The Commons, Hidden Forest, Black Oak;
- Water treatment improvements including arsenic removal at Lake Vista;
- Treatment plant expansion at Old Egypt wastewater treatment plant ("WWTP");
- Treatment plant rehabilitation, compliance, resiliency improvements at Cedar Point WWTP, Pine Trails WWTP, equalization basin at Greenfield Forest, Heron Lakes WWTP, Port Adventure WWTP; and
- Water main replacements in Woodcreek, North Fork Creek 2, Canyon Creek, Brazos River Acres, Plantation on Cotton Bayou.

**Q. HAS THE COMPANY ALSO MADE INVESTMENTS IN TECHNOLOGIES TO ENHANCE OPERATIONS AND THE QUALITY OF SERVICE?**

A. Yes. Aqua has invested in several projects listed above to treat challenging contaminants such as uranium, arsenic and nitrate in drinking water. Aqua is currently piloting anion exchange water treatment with the Texas Commission on Environmental Quality ("TCEQ") for the treatment of PFAS to comply with the latest regulations.

In addition to water treatment technology investments, Aqua has invested in supervisory control and data acquisition systems ("SCADA") at some of the larger water and wastewater plants to improve the efficiency of operations and help ensure a consistent level of service. Aqua has plans to ramp up this implementation through

consistent level of service. Aqua has plans to ramp up this implementation through 2040 to facilitate efficient operation, cost savings, and improved level of service.

Aqua's Asset Management – GIS, IT Corporate Services, and State Operations teams have also developed a customer service portal with a real time disruption map to keep customers informed of issues that may affect their water service and an estimate of when that service is expected to be returned to normal. This map also helps communicate service advisories and conservation advisories. These teams have also developed a service line reporting map available to the public via Aqua's website to view the service material of both the customer-side and Company-side services to each customer.

**Q. PLEASE SUMMARIZE THE CAPITAL INVESTMENT FOR WHICH AQUA IS SEEKING A PRUDENCE DETERMINATION?**

A. The last rate case involving Aqua was based on a test year ending December 31, 2003. The Company seeks a favorable prudence finding regarding its capital investment since that date as part of the relief requested in this proceeding.

**Q. DOES THE CAPITAL INVESTMENT THAT THE COMPANY SEEKS TO RECOVER IN THIS CASE REFLECT CERTAIN ADJUSTMENTS?**

A. Yes. Adjustments made to arrive at the capital amount the Company seeks to recover in this case are discussed in Company witness Trey V. Reginelli's direct testimony.

**Q. ARE ALL OF THE PLANT, PROPERTY, AND EQUIPMENT REFLECTED IN THE COMPANY'S PROPOSED RATES USED AND USEFUL FOR PURPOSES OF PROVIDING WATER AND WASTEWATER SERVICE?**

A. Yes. Included with Aqua's submission is the affidavit of Gautam Patwardhan, P.E. in the State of Texas, attesting to the used and useful nature of the plant, property, and equipment that Aqua Texas seeks to include in its rate base.

**Q. ARE ALL OF THE PLANT, PROPERTY, AND EQUIPMENT REFLECTED IN THE COMPANY'S PROPOSED RATES REASONABLE AND NECESSARY AND PRUDENT?**

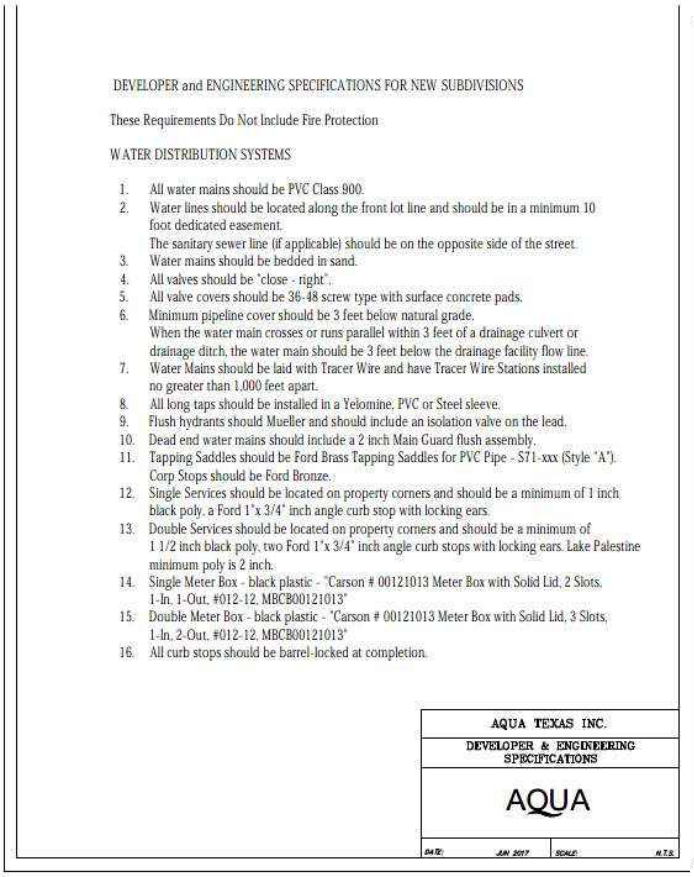
A. Yes. With the adjustment described by Mr. Reginelli, and as described above, the capital investments in this rate filing are necessary and prudent, and include investments to restore and maintain compliance, meet required level of service, and improve efficient operation, including tactical short-term and strategic long-term investment to address the challenges of poorly installed aging distribution network infrastructure while minimizing disruption and rate impact to customers.

### A. Aqua Texas Utilizes a Two-Part Approach to Prioritize Capital Investment Through Sound Asset Management

**Q. HOW DOES AQUA MANAGE ITS CAPITAL PROJECTS TO ENSURE THAT IT IS MAKING PRUDENT INVESTMENT DECISIONS?**

A. Aqua has a two-part approach to manage the infrastructure challenge that Aqua and other small rural water systems share. This approach is facilitated through a consolidated management approach that affords resources and efficiencies not typically otherwise available to small rural water and wastewater systems. These resources

include access to capital, subject matter experts, software, and cybersecurity support. These resources include the aforementioned EAM, GIS access and support, and national contract pricing. The first part of the two-part approach has focused on bringing assets up to code to meet Aqua standards, which are based on industry best practices, and extending the life of water pipe assets tactically during required repairs and restoration. These standards are set forth in a Company document called "Aqua Texas Standard Details for Developers and Engineers." Below is an example of standard specifications that Aqua utilizes for proper pipe installation and bedding.



DEVELOPER and ENGINEERING SPECIFICATIONS FOR NEW SUBDIVISIONS

These Requirements Do Not Include Fire Protection

WATER DISTRIBUTION SYSTEMS

1. All water mains should be PVC Class 900.
2. Water lines should be located along the front lot line and should be in a minimum 10 foot dedicated easement.
   The sanitary sewer line (if applicable) should be on the opposite side of the street.
3. Water mains should be bedded in sand.
4. All valves should be "close - right".
5. All valve covers should be 36-48 screw type with surface concrete pads.
6. Minimum pipeline cover should be 3 feet below natural grade.
   When the water main crosses or runs parallel within 3 feet of a drainage culvert or drainage ditch, the water main should be 3 feet below the drainage facility flow line.
7. Water Mains should be laid with Tracer Wire and have Tracer Wire Stations installed no greater than 1,000 feet apart.
8. All long taps should be installed in a Yelomine, PVC or Steel sleeve.
9. Flush hydrants should Mueller and should include an isolation valve on the lead.
10. Dead end water mains should include a 2 inch Main Guard flush assembly.
11. Tapping Saddles should be Ford Brass Tapping Saddles for PVC Pipe - S71-xxx (Style "A"). Corp Stops should be Ford Bronze.
12. Single Services should be located on property corners and should be a minimum of 1 inch black poly, a Ford 1"x 3/4" inch angle curb stop with locking ears.
13. Double Services should be located on property corners and should be a minimum of 1 1/2 inch black poly, two Ford 1"x 3/4" inch angle curb stops with locking ears. Lake Palestine minimum poly is 2 inch.
14. Single Meter Box - black plastic - "Carson # 00121013 Meter Box with Solid Lid, 2 Slots, 1-In, 1-Out, #012-12, MBCB00121013"
15. Double Meter Box - black plastic - "Carson # 00121013 Meter Box with Solid Lid, 3 Slots, 1-In, 2-Out, #012-12, MBCB00121013"
16. All curb stops should be barrel-locked at completion.

These repair and restoration activities not only address the underlying root cause of an issue (e.g., breaks, leaks, etc.), but also bring installations up to current code standards. Aqua recognizes that these activities may be small in scope and reactive in nature, such as putting a clamp on a break and correcting the installation by ensuring proper backfill and bedding. However, because of the characteristics of the underlying asset, which is typically poorly installed PVC pipe, these renewal activities are more than mere repairs. They extend the life of the asset. This approach is consistent with Aqua's capitalization policy.

**Q. PLEASE DESCRIBE THE SECOND PART OF THE TWO-PART APPROACH TO MANAGING AND ADDRESSING THE INVESTMENT CHALLENGES ASSOCIATED WITH AGING INFRASTRUCTURE.**

A. The tactical approach described above facilitates the second part of the two-part approach, allowing Aqua to execute a comprehensive rehabilitation program, applying asset management best practices to renew and replace pipes through cost effective and appropriately prioritized projects over time. This mitigates the rate impact and disruption to customers that would accompany executing an extensive replacement program in a short timeframe and helps ensure large capital projects are executed efficiently. Through this systematic approach Aqua can renew and replace its facilities in spite of the lack of redundancy.

**Q. HOW ARE INDIVIDUAL CAPITAL PROJECTS IDENTIFIED?**

A. Aqua identifies and funds capital projects as part of an annual budget planning process where our operations, compliance, engineering, and financial teams come together to review, prioritize and plan. This includes a review of any existing or potential compliance violations, review of current capacity and projected demands, and a tactical review of what infrastructure improvements, renewal, and replacement are needed and where. These planning meetings review level of service metrics, including metrics such as capacity, number of disruptions, number of water main breaks, non-revenue water, equipment failure / repair rates, documented notices of violation ("NOV"), inflow and infiltration, sanitary sewer overflows, water and wastewater treatment capacity, cybersecurity assessments, service line investigations, meter aging reports, and system and facility assessments.

**Q. DOES AQUA ALSO CONSIDER LONG-TERM STRATEGIES IN ITS PLANNING EFFORTS?**

A. Yes. Aqua utilizes GIS and EAM to manage, track and report asset data such as material, size, age where available; service history including breaks, leaks, repairs; replacement history; field operations including emergency response history and preventative maintenance history; and costs associated with materials and labor.

The GIS and EAM systems are key in planning and managing the second part of Aqua's two-part approach, renewal and replacement. These systems manage the information that enables Aqua to execute a comprehensive rehabilitation program in a planned manner to renew and replace pipes through a cost effective and prioritized strategy over time.

**Q. HOW DOES AQUA PRIORITIZE THE PROJECTS AND INVESTMENTS IN THE CAPITAL PLAN?**

A. Planned investments are captured and spending is tracked. In addition to near-term operational drivers, such as compliance and capacity expansion, Aqua's asset management and System Report and Improvement Plans are used to evaluate and prioritize work for the capital plan.

A system improvement plan consists of:

- System Overview
- Disruption Analysis
- Modeling Results
- Operational Modifications
- Capital Improvements
- Prioritization

Confidential Exhibit BSG-3 to my testimony provides an example of Aqua's system improvement plan for the Northwest Hills Kerrville system and demonstrates

that the Company relies on asset management analysis and field level modeling to develop a multi-year prioritized capital improvement plan over a long-term period. To effectuate these plans, Aqua must also extend the life of the assets in the short term to facilitate the long-term plan. This is achieved through the two-part renewal and replacement methodology that extends the asset's life through tactical repairs and improvements until the prioritized replacement plan can be scheduled and executed.

**Q. DOES AQUA KNOW IN ADVANCE ALL CAPITAL EXPENDITURES IT WILL NEED TO MAKE IN A YEAR?**

A. No. While Aqua uses the systems and processes described above, including EAM, GIS, compliance reporting and review, capacity planning and input from operations to develop a prudent and prioritized capital plan, it is inevitable that utility operations will require the Company to address unplanned issues that arise in response to events such as unplanned weather events or permitting delays.

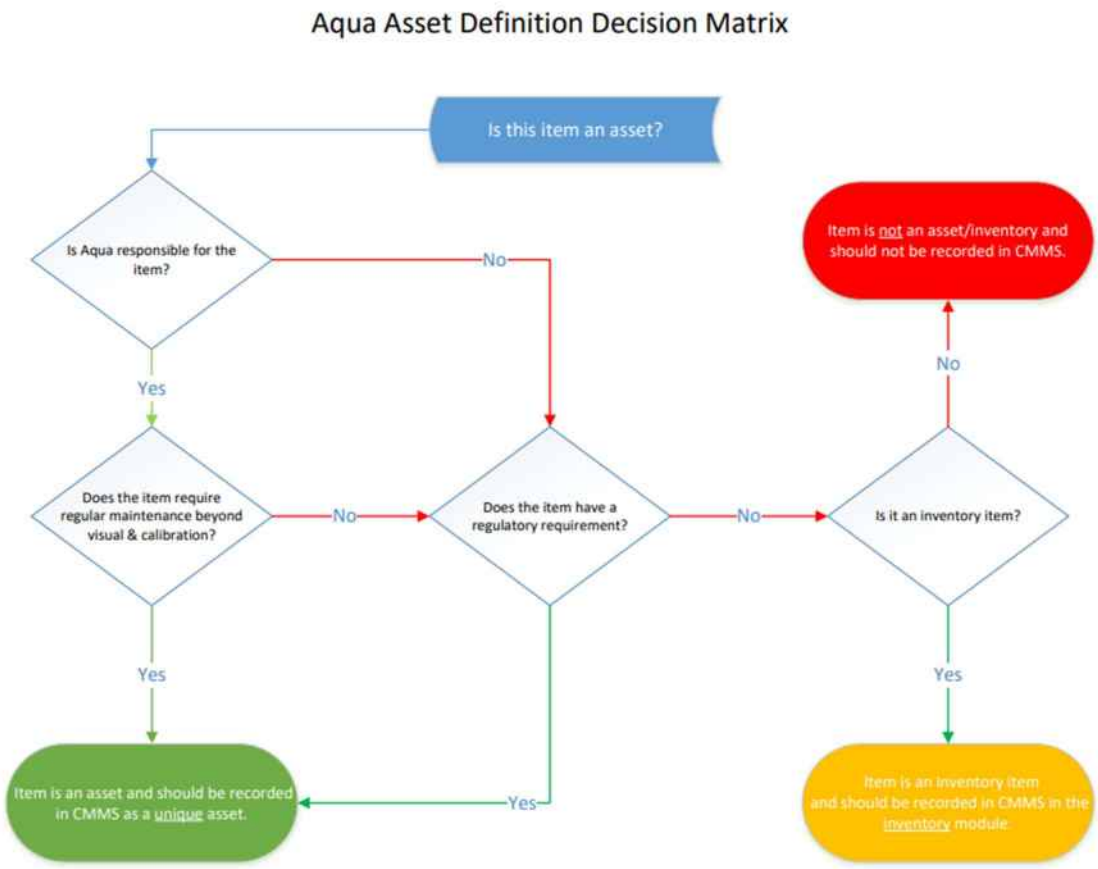
**Q. HOW DOES AQUA CLASSIFY ITS CAPITAL INVESTMENT?**

A. Aqua classifies capital investments into two main categories of planned and unplanned work. Capital investments are further classified into Work Order Groups, which is also consistent with the accounting practice of the Public Utility Commission of Texas. Most capital investment is in planned vertical facility work and linear distribution / collection network projects. Vertical facility work consists of source development such as new wells, well rehabilitation, such as pump and casing/piping replacement; water treatment improvements such as those required to meet emerging contaminant regulations; water treatment expansion; booster pumping improvements; water tank installation and replacement; wastewater treatment rehabilitation/replacement and

expansion to ensure adequate treatment capacity and compliance; and wastewater lift station replacement and rehabilitation to prevent sewage overflows. These projects help ensure water and wastewater services are in compliance and can meet capacity demands, as well as help ensure resiliency and redundancy for continuity in level of service. Linear network projects consist of main replacements and looping projects, including valve replacement and installation, hydrant replacement and installation, and service line replacement. As described above, linear work also consists of break repairs and pipe segment replacement, service line repair, and isolated valve repair and installation to minimize non-revenue water (leakage), expedite return to service where breaks create disruptions, and extend the useful life of the network until large-scale planned main replacement is feasible and cost-effective.

**Q. HOW DOES AQUA MANAGE ITS INFRASTRUCTURE ASSET DATA?**

A. Generally, systems or equipment that require maintenance are tracked formally as an asset. For example, a booster pump requires maintenance such as changing oil. This pump would be tracked as an asset. The decision matrix below further explains the determination process of whether an item is formally tracked as an asset.



Assets are categorized, recorded, and tracked in GIS and EAM systems to ensure proper management and depreciation. Each type of asset is treated differently based on its nature and purpose. This structured approach makes it easier to manage multiple assets across multiple systems. Assets are defined and assigned an asset class. An asset hierarchy is utilized to track and organize asset data for reporting purposes.

**Q. PLEASE EXPLAIN HOW AQUA'S EAM IS USED TO CREATE AND TRACK VARIOUS OPERATIONS.**

A. In 2022, the SAP based enterprise asset management system (EAM) was implemented. Work orders are created to track separate activities, allocate costs, link work to vendors and capture internal labor hours. Through the EAM, work orders are associated with an asset to analyze and inform maintenance strategies and renewal and replacement

planning for each asset. Work orders may be generated internally from planned operations and planned work or externally from customer service orders to address issues such as low pressure, discolored water, taste and odor, move-in/move-out, or other reported pressure issue or repair request. The work order type determines if the work is categorized as capital investment or operating expense. The connection between EAM and financial data and management is built into the system and processes.

**Q. PLEASE COMMENT ON HOW GIS AND EAM IS BEING USED TO ADDRESS AQUA'S SHORT-TERM INFRASTRUCTURE PLANNING PROCESS.**

A. For the short-term, part one of the two-part approach, Aqua utilizes GIS and EAM to collect and manage what assets are owned and the characteristics and actual condition of those assets based on the history of work performed on those assets. These systems track basic things like size, age, and material, but also provide a system to track short-term issues (breaks, leaks) and associated repair and improvements made. Further, EAM is a complementary system to our accounting ledger that is intended to facilitate predictive analytics. Take as an example a well that is managed in EAM. In addition to asset characteristics and condition data, the system also tracks the number of site visits from operators and whether they are routine or required by alarms or failures. The system tracks data for both asset attributes and condition and operational activities including costs over the entire asset life cycle and across all assets as defined above. This is a key component to the Company's overall plan and strategy to address aging and failing infrastructure in a timely and prudent fashion.

**Q. HOW WILL GIS AND EAM IMPACT AQUA'S LONG TERM PLAN?**

A. The operational data captured as part of the EAM application and execution of the short-term operation, part one of the two-part approach, is used in conjunction with the asset data to establish and prioritize planned capital investment to replace both major and minor components.

The information captured in GIS and EAM during day-to-day operation is used to plan the second part of the two-part approach, long-term strategic renewal and replacement. For example, where and when breaks occur are recorded in GIS and EAM and a concentration of breaks geographically and temporally can be used to inform and prioritize the replacement of systems or large portions thereof.

The Aqua GIS and EAM are based on an asset-centric management perspective as opposed to solely operations centered. These systems allow Aqua to direct resources to where they are most needed and are the central system for managing and reporting short-term work and the basis for long-term investment planning and support for those plans. Asset management can help identify and understand infrastructure challenges, leading to better decision making, and improved technical, managerial, and financial capacity.

**Q. WHAT WATER MAIN DATA IS USED FOR ASSET MANAGEMENT RENEWAL AND REPLACEMENT PLANNING?**

A. Aqua tracks water main location through the GIS as well as the following asset data: material, size (diameter), age where available, and service level (pressure zone). The EAM in SAP tracks operational history including leak and break date, break type,

depth, replacement / repair type, replacement / repair date, costs, and service line work, through operational work orders.

**Q. CAN YOU PROVIDE AN EXAMPLE OF USING ASSET MANAGEMENT AND IMPLEMENTING A LONG-TERM STRATEGY FOR A SPECIFIC SYSTEM?**

A. Asset management for small systems consists of the following six basic steps:[7]

1. Determine Level of Service
2. Develop an asset inventory
3. Prioritize assets
4. Develop an asset management plan
5. Implement asset management plan
6. Review and revise asset management plan

The work order data for water main historical breaks is used to analyze trends and problem areas. Main breaks and leaks are increasing as the systems age. In 2024, the total water main break count was 3,412. The 10-year average of 1,860 has increased to 2,769 for a 5-year average. The EAM system tracks these breaks by specific location and associates them with specific systems. These breaks can be associated with Systems, Management Divisions, and Operational Areas through the asset hierarchy. The breakdown of where these breaks are occurring by Management Division and Operational Area is summarized in the table below on a normalized basis per 100 miles of main.

The EAM system also tracks the asset attribute data, including length of pipe by System, Management Division and Operational Area. Through the EAM, the operational water main break data can be combined with the asset attribute data and

[7] Asset Management: A Handbook for Small Water Systems - EPA 816-R-03-016 - September 2003

analyzed. Trends are analyzed against industry standards such as the number of breaks per hundred miles of water pipe, summarized below.

| Breaks / 100 mi (2025) | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 |
| **TX-Central** | **46** | **70** | **49** | **64** | **59** | **141** | **142** | **70** | **356** | **240** |
| TX-Austin | 36 | 91 | 98 | 94 | 70 | 117 | 99 | 85 | 239 | 170 |
| TX-Kerrville | 69 | 102 | 53 | 75 | 83 | 155 | 132 | 75 | 261 | 193 |
| TX-Wimberley | 23 | 17 | 15 | 34 | 23 | 139 | 178 | 55 | 542 | 338 |
| **TX-East** | **22** | **13** | **7** | **31** | **48** | **108** | **128** | **61** | **168** | **99** |
| TX-Spring Northeast | 17 | 8 | 3 | 23 | 37 | 97 | 140 | 74 | 170 | 87 |
| TX-Spring Northwest | 42 | 22 | 11 | 34 | 78 | 145 | 149 | 90 | 246 | 187 |
| TX-Spring Southeast | 12 | 10 | 8 | 40 | 40 | 96 | 110 | 40 | 126 | 60 |
| TX-Spring Southwest | 19 | 14 | 10 | 31 | 47 | 101 | 106 | 29 | 128 | 73 |
| **TX-North** | **56** | **38** | **32** | **102** | **71** | **91** | **96** | **91** | **178** | **182** |
| TX-Fort Worth | 7 | 4 | 5 | 38 | 13 | 37 | 50 | 45 | 97 | 238 |
| TX-Granbury | 45 | 52 | 72 | 153 | 111 | 146 | 143 | 111 | 284 | 165 |
| TX-Lake Palestine | 48 | 31 | 26 | 40 | 43 | 60 | 67 | 81 | 89 | 113 |
| TX-Waco | 187 | 96 | 29 | 256 | 167 | 165 | 164 | 170 | 321 | 217 |
| **Grand Total** | **43** | **39** | **29** | **70** | **61** | **110** | **119** | **76** | **225** | **174** |
| **AWWA Benchmark** | 15 | 15 | 15 | 15 | 15 | 15 | 15 | 15 | 15 | 15 |

The 10-year average at 95 breaks per 100 miles has increase to a 5-year average of 141 breaks per 100 miles. The water main break data analysis on an Area, Division, and System basis indicates where additional capital investment can be prioritized to address the highest break rate Systems.

Based on the asset management data, along with other key indicators of system health (such as non-revenue water and higher risk pipe attributes such as high age or certain break prone materials), Aqua prioritizes systems for capital investment and develops corresponding 'System Report and Improvement Plans'.

**Q. PLEASE PROVIDE AN EXAMPLE OF HOW ASSET DATA MANAGEMENT AND IMPROVEMENT PLANS ARE USED BY AQUA.**

A. As shown above, the Kerrville Division has one of the highest break rates. To address this issue, four System Report and Improvement Plans were prepared in 2024 for systems in the Kerrville Division. An example of one of these Reports and

Improvement Plans for the Northwest Hills System in the Kerrville Division is included as Confidential Exhibit BSG-3.

**Q. WHAT EFFORTS DOES AQUA TAKE TO MONITOR AND CONTROL CAPITAL COSTS?**

A. Capital costs are monitored and any modifications to capital project makeup are reviewed. Aqua engages licensed professional engineers to evaluate options in planning and engineering studies and then develop the best alternatives for detailed engineering design considering compliance, existing operational needs, future community and operational needs, level of service, and value engineering. Aqua also utilizes competitive bidding practices, national contract pricing, and logistics support partnerships with material suppliers to ensure best pricing, avoidance of construction contract material markup, and quality control, all of which minimize costly construction delays.

**Q. ARE PROJECTS CONTINUALLY REVIEWED TO ENSURE THAT THEY ARE COMPLETED ON TIME AND THAT BEST PRACTICES ARE FOLLOWED DURING CONSTRUCTION?**

A. Yes. Aqua holds meetings of its Financial Operations team, during which the team conducts a Capital Status Review that considers adherence to planned schedules, estimated costs, and capital in-service amounts and dates. As discussed above, any modifications to the budget are reviewed. Aqua is also responsible for both direct oversight of project inspection and management of contracted construction inspection support as needed. Construction inspection practices include job site safety observation, inspection reporting, and review and documentation of changes to plans.

**B. Aqua's Capitalization Policy and Procedures are Reasonable**

**Q. PLEASE DESCRIBE THE CAPITALIZATION POLICIES AND PROCEDURES THAT ARE IN PLACE TO ENSURE THAT COSTS ARE PROPERLY CAPITALIZED.**

A. Aqua's Capitalization Policy defines criteria for determining which costs are or are not eligible to be capitalized based on the type of work being done. This document includes examples of what should and should not be capitalized. It also tries to anticipate and explain frequently asked questions based on Aqua's experience. It contains specific processes and procedures for how to create, track, and manage capital projects in Aqua's Financial Management Software, including the creation of Funding Project Numbers, and alignment with Work Order Groups as defined by the National Association of Regulatory Utility Commissioners ("NARUC").

**Q. DOES AQUA PROVIDE TRAINING TO ITS EMPLOYEES ON HOW TO PROPERLY APPLY THE COMPANY'S CAPITALIZATION POLICY?**

A. Yes. Aqua trains its employes on the application of its Capitalization Policy as part of the implementation of the Company's SAP-based enterprise asset management and financial management system.

**Q. ARE YOU AWARE OF ANY SPECIFIC REQUIREMENTS SET FORTH IN THE TEXAS WATER CODE OR THE COMMISSION'S RULES THAT GOVERN WHETHER A COST IS CAPITALIZED OR EXPENSED?**

A. No.

**Q. WHAT CRITERIA IS USED BY AQUA TO DETERMINE WHETHER A COST IS PROPERLY RECORDED AS CAPITAL?**

A. The criteria used to determine whether a cost is recorded as capital are explained in Aqua's Capitalization Criteria (Exhibit BSG-2). Capital investments include direct costs (materials, supplies, direct labor, contractor charges, etc.) and indirect costs (transportation, services, studies, plans, surveys, engineering, supervision/inspection, insurance, security during construction, permits, legal fees, AFUDC, overheads, etc.) used to install, improve or replace fixed assets.

**Q. PLEASE SUMMARIZE THE COMPANY'S CAPITALIZATION POLICY WITH RESPECT TO MAINS.**

A. The Capitalization Policy states that:

> *Mains - All expenditures, including acquisitions, for the installation and/or replacement of any transmission or distribution main which will require the installation and/or replacement of any length of main will be capitalized regardless of the total expenditure amount. All expenditures related to the installation and/or replacement of any* ***main accessories*** *[i.e. valves, valve boxes, sleeves, dressers, couplings, etc.] will also be capitalized regardless of the total expenditure amount.*
>
> *Repair work performed on an existing main which does not require the installation or replacement of main or any main accessories will be considered maintenance and charged to the appropriate expense account.*

Wastewater is worded the same with different account codes.

Based on this policy, and for the reasons provided previously, the Company capitalizes main break repair work, including the installation of new sections of pipe, as well as accessories such as dresser couplings, repair clamps, and the associated re-bedding and backfill to extend the asset life.

**Q. IS IT REASONABLE FOR AQUA TO CAPITALIZE THE INSTALLATION OF CLAMPS?**

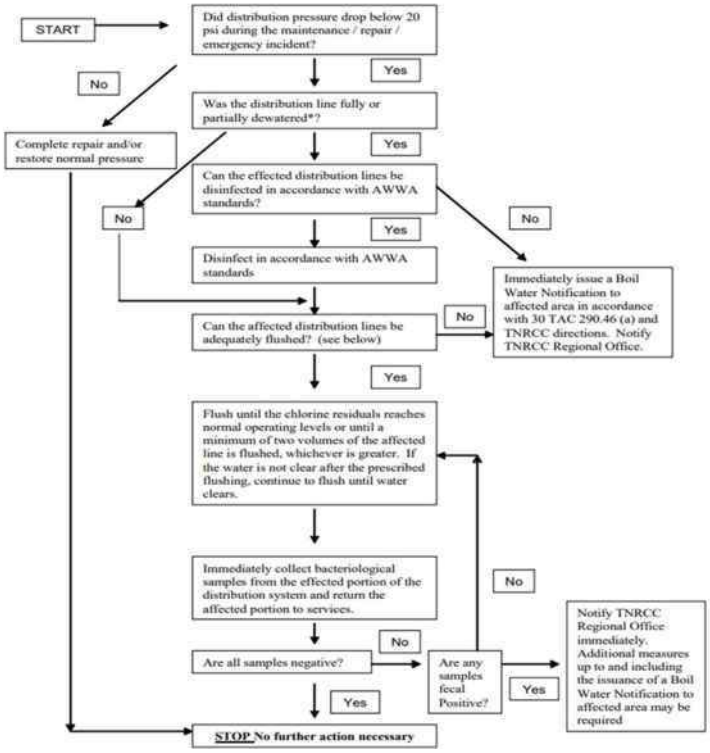
A. Yes. In the field, the installation of a clamp is capitalized as part of the overall main repair and improvement, re-bedding and backfilling. The TRWA Survey, described above, states that the majority of Texas rural "water line infrastructure for community water systems are at or near the end of their anticipated useful life and improper installation without consideration of the soil type can negatively impact the pipe integrity and pressure and temperature also impact the life expectancy of water lines." By installing clamps and correcting backfill and support, Aqua's experienced personnel and contractors bring assets up to industry standards, extending the life of the pipe.

The installation of a clamp also constitutes capital expense because:

1) a pipe clamp is considered an "accessory" as part of the capitalization policy;
2) the installation of a clamp protects the pipe from further impingement and thereby, improves the strength of that pipe section;
3) the clamp installation addresses the original poor installation issues and results in the pipe being upgraded to industry standards with proper bedding and backfilling;
4) repairs as part of a renewal and replacement program save water, and improve level of service, including service pressure;
5) information gathered during the work generates important asset data which provides for more cost effective and optimally prioritized planned replacement activities; and

6) pipe repair and pipe replacement activities follow the same public health safety procedures to prevent contamination as shown in the figure below developed by the Texas Natural Resource Conservation Commission on how a water utility should respond to a loss of pressure in the water distribution system.

The AWWARF report Practices *to Prevent Microbiological Contamination of Water Mains* (Pierson et al, 2001) provides examples of water main release-to-service data developed by individual utilities. Figure 1 shows guidance developed by the Texas Natural Resource Conservation Commission related to public water supplier response to loss of pressure to all or parts of the distribution system and release-to-service criteria.



Best practices and industry standards are practiced in the field as cited below:

The Contractor's Guide for Installation of Gasketed PVC Pipe For Water by the PVC PIPE Association (2019) states starting on page W118 Repairs:

When pipe has been damaged and repair is required, all damaged material may be replaced in kind or the pipe may be repaired using a repair clamp or other methods authorized by the engineer. Pipe with gouges or scratches should be addressed in accordance with AWWA C605. If the damaged area extends beyond a localized area, it is recommended that the damaged section of the pipe be cut out and replaced. If a repair clamp is to be used the full-circle type with opposed bolt-line flanges is recommended and should be installed in accordance with the manufacturer's' instructions. If

repair couplings are used, a replacement section of pipe is placed into the damaged area and two repairs couplings are used to join it to the existing pipe. If one of the ends of the existing pipe is a bell-end only one repair coupling is required. When cutting out the section to be repaired pipe should be cut back some distance from the actual break to ensure no damaged pipe remains. The following procedure outlines how to make a repair to PVC pipe:

1. *Determine the length of the replacement section.*
2. *Cut the pipe to the proper length.*
3. *Bevel the ends of the pipeline and the repair section.*
4. *Locate the reference marks on all ends.*
5. *Mount the couplings of the replacement section or on the pipeline ends. Do not push the couplings all the way onto the pipe.*
6. *Insert the replacement section into the pipeline and slide the couplings into position. The couplings should be centered over the gap and midway between the reference marks.*
7. *When using a section with an integral bell, additional pipe length may need to be exposed. This will enable the pipeline to be deflected to allow proper alignment of the replacement joint. When determining the length of the replacement pipe section, be sure to allow for the gap dimension on one end only. Complete the integral-bell joint first then slide the double-bell coupling into place.*

These best-practice repair procedures are consistent with procedures for large-scale main replacement work and putting new or replacement assets into service safely.

**Q. IS IT REASONABLE FOR AQUA TO CAPITALIZE PIPE REPAIR WORK?**

A. Yes. Aqua capitalizes pipe repair work because a pipe repair on aged, poorly installed PVC, regardless of size, extends the life of the asset, preventing a leak from turning into a break and preventing a break from propagating the entire length of the pipe segment and creating downline pressure issues or prolonged disruptions for the entire network. As noted above, the Company's two-part approach to pipe repair work tactically addresses pipe network issues in the short term while extending the asset's life to accommodate the strategic long-term replacement of the assets in an optimized

and reasonable manner that minimizes disruption and minimizes rate impact to the customer.

**Q. PLEASE EXPLAIN THE COMPANY'S INTERNAL PROCESS AND REVIEW THAT ENSURE ITEMS ARE EITHER PROPERLY EXPENSED OR CAPITALIZED.**

A. The figure below is taken from the training materials that Aqua used to train its employees during the initial SAP rollout.

In addition to the above process and referenced training, Aqua is providing refresher retraining on these materials, has a monthly review process, and included two accounting positions in this base rate case request to support this review process.

## V. CONCLUSION

**Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

A. Yes.

**STATE OF** New Jersey §
§
**COUNTY OF** Bergen §

**AFFIDAVIT OF BRIAN S. GRESEHOVER**

BEFORE ME, the undersigned authority, on this day personally appeared Brian S. Gresehover who having been placed under oath by me did depose as follows:

1. "My name is Brian S. Gresehover. I am of sound mind and capable of making this affidavit. The facts stated herein are true and correct based upon my personal knowledge. I am the Vice President of Engineering at Aqua America, Inc.
2. I have prepared the foregoing Direct Testimony, and I swear or affirm that I have personal knowledge of the facts in the testimony, schedules, and attachments that I am sponsoring in this application, and that I am competent to testify to them.
3. I further swear or affirm that all of the statements and representations made in those parts of this application that I am sponsoring are true and correct to the best of knowledge."

Further affiant sayeth not.

Brian Gresehover
Brian S. Gresehover

SUBSCRIBED AND SWORN TO BEFORE ME by BRIAN GRESEHOVER on this 13 day of June 2025.

TRWA
Texas Rural Water Association

# Water Line Infrastructure Survey

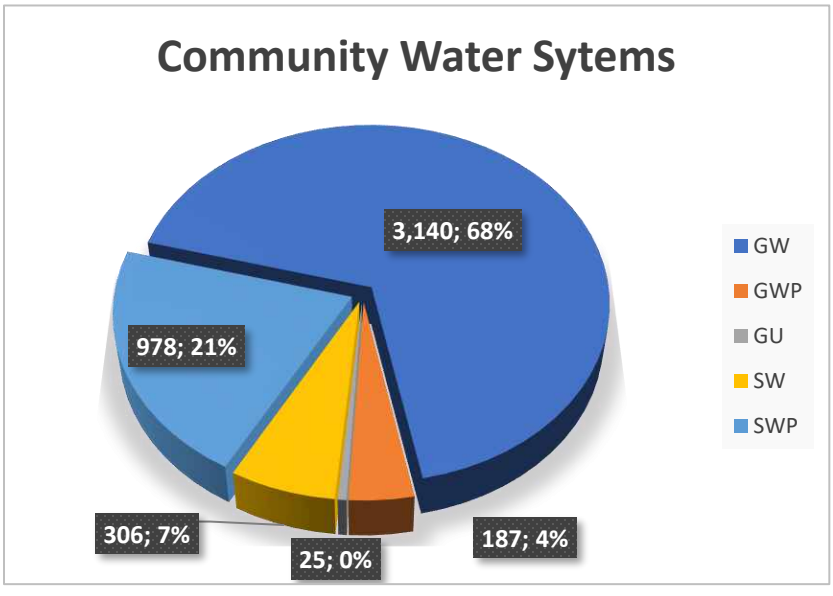
Texas Rural Water Association (TRWA) conducted an infrastructure needs survey with a direct focus on Public Water System (PWS) water lines. The demographic surveyed includes small to mid-sized rural water systems and small cities with a population of 50,000 or less. The survey included three primary factors; length, age, and type of material. This survey targeted Community Water Systems (CWS) across the state to capture a geographically representative sample set. The survey was conducted via direct phone contact, online survey, GIS information captured by TRWA projects, and information collected through the 2021 EPA Needs Survey for mid-size systems 3,000 to 50,000 in population.

The information captured through this project was intended to provide an estimated amount of water lines within the state that are currently in need of replacement or will need replacing within 20 years. This voluntary survey information was derived from best estimates from water system representatives. The analysis of the data was calculated based on industry professional cost estimates and online research of projected costs.

## Water System Types

Texas Commission on Environmental Quality (TCEQ) defines a community water system as a public water system which has a potential to serve at least 15 residential service connections on a year-round basis or serves at least 25 residents on a year-round basis [30 TAC §290.38(15)].

Community water systems (CWS) in Texas make up the largest footprint of water infrastructure networks in the state. The other two types of water systems labeled by TCEQ are nontransient noncommunity water system (NTNC) and transient noncommunity water system (TNC). These types are generally small networks of water lines and service facilities such as RV parks, hotels, commercial facilities, and fuel stations. Due to the smaller designs of NTNC and TNC water systems, community water systems were the target audience of the survey conducted by TRWA.



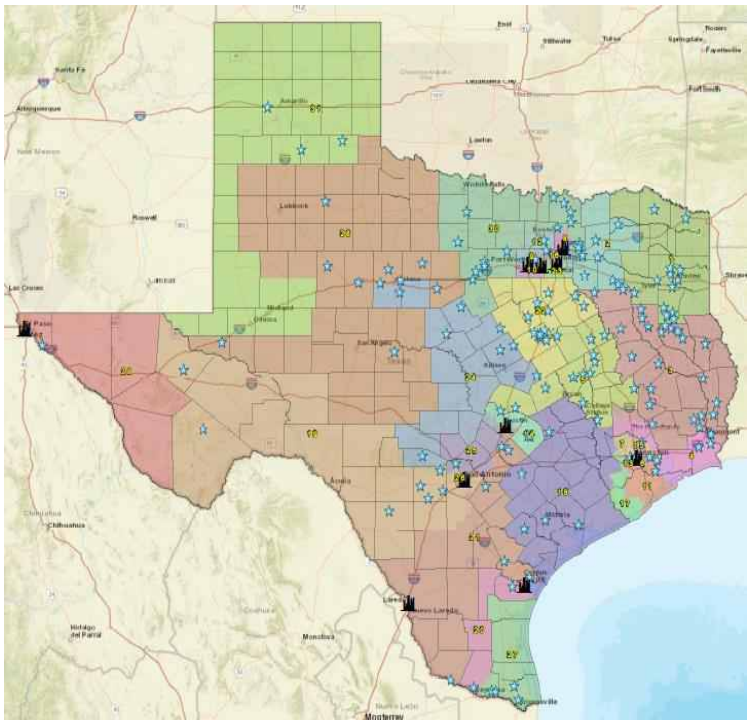
TCEQ's Drinking Water Watch database records a total of 4,717 CWS in the state as of March 2022. Due to the focus of the survey being on small to mid-sized water systems, TRWA

deducted the water systems larger than 50,000 and narrowed the scope to 4,642 community water systems.

Water line infrastructure integrity can vary depending on multiple factors including chemical makeup of the water, soil conditions, installation, and pipe material. Of the 4,642 rural CWS, 72% utilize groundwater as their source through either direct pumping or purchasing from a wholesale entity. Groundwater quality varies across the state with mineral conditions such as calcium, iron, and manganese that can impact the internal lining of the pipe. For materials subject to corrosion or oxidation such as galvanized and/or iron pipe, chlorine disinfectant and pH play a part in the longevity of the material. In addition, 28% of the state's CWS utilize surface water from reservoirs, lakes, streams, and rivers as the primary source of water. As with groundwater, surface water treatments and the varying organics from the supply can impact the water line infrastructure over time creating a variation in life expectancies of the pipe.

| SOURCE TYPE | LABEL | TOTAL |
|---|---|---|
| Groundwater | GW | 3,140 |
| Groundwater - Purchased | GWP | 187 |
| Groundwater Under the Influence of Surface Water | GU | 25 |
| Surface Water | SW | 306 |
| Surface Water - Purchased | SWP | 978 |

In the survey taken from February 21, 2022, through March 11, 2022, 116 responses were received with information on pipe length, age, and type. Information from 38 additional water systems were also integrated into the survey to create a larger amount of infrastructure information resulting in a total dataset of 154 community water systems. The map below illustrates a geographical representation of information received for this survey from around the state.



To provide our estimates and analysis, we used our sample data set to calculate the cost ranges for replacing water lines for the 4,642 community water systems in our population range. Our data set is 3.3% of that total number, and we used a multiplier of 30.1.

**Amount of Water Lines for Rural Water Systems**

Data recorded from the survey showed there are 147,140,305 feet of cumulative pipe for the 154 surveyed water systems. This equates to 27,867

miles of water line infrastructure used to transfer potable water to communities. Calculating to estimate the total amount of water lines, Texas has approximately 838,797 miles, or 4.4 billion feet, of water line owned and operated by community water systems in the state. This would make the overall length of the water infrastructure network in Texas more than 155,000 miles longer than the total amount of roadway miles in the state, according to information provided by SidmartinBio.org.

**Water Line material and size**

Each water system varied in responses to the known material type for their water lines. Most water systems currently have some form of PVC water lines throughout their system. Unless a more rigid material is required, we can assume that most of the future pipe replacements would be using PVC.

The water systems surveyed reported the following combinations of material types.

| Material | Total |
|---|---|
| *PVC* | 120 |
| *Ductile Iron* | 9 |
| *Cast Iron* | 26 |
| *Asbestos Concrete* | 42 |
| *Galvanized* | 7 |
| *Other* | 13 |
| *Unknown* | 30 |

Statistics on the pipe sizes of a water system proved more difficult to gather as most of that information was not readily available. Only 21 water systems answered "yes" to having a Geographic Information System (GIS) software in use that allows for quick, accurate breakdowns of water line data and mapping. This is an area of concern throughout the state as a workforce that has operated on experience and memory of pertinent information related to the system's water lines prepares to retire.

The average range of water lines in our rural water areas of the state range from 0.75" to 12" water mains. The size of lines needing to be replaced or upgraded heavily impacts the overall cost of the project in regard to pipe cost, amount of bedding material needed, equipment needed to install, and labor costs.

**Age and life expectancy of infrastructure**

Aside from the water quality, other factors impact the life expectancy of water lines. One major conditional aspect impacting useful life of water lines are the soil conditions. The type of soil varies across the state from sand and clay to limestone and flint rock. Improper installation without consideration of the soil type can negatively impact the pipe integrity. Moisture content or lack of moisture in the soil can cause pipes to be put under stress and make them unable to move as the ground shifts when we experience seasons of drought. The type of soil also impacts the cost of replacing lines as discussed on page 3.

Pressure and temperature also impact the life expectancy of water lines. Texas has various pockets of warm water that when pumped from the ground requires cooling towers. The topography in parts of the state can create excessive distribution pressures in the water distribution system. Both of these factors can limit the overall longevity of the water line to some degree.

From the survey, water systems reported that 70% of the water lines in their system are over 20 years old and 57% of the water lines are over 40 years old. The average date of installation of the water systems surveyed is 1966, making some of the infrastructure nearly 60 years old. Based on the chart provided to the right, Transmission Structures (pipes) in the distribution system have a life expectancy of 35 years. Comparing our survey data and estimates to the included life expectancy chart, 587,158 miles (70%) of water line infrastructure for community water systems are at or near the end of their anticipated useful life, with 478,114 miles (57%) currently exceeding it. Though there are factors to be considered such as the ones previously mentioned and varying expectancies depending on water line material, water lines exceeding 30 years in use tend to result in a higher probability of breakdown and needed repairs.

**How Long Will it Last?**

**Typical Life Expectancies of Water System Equipment**

| Component | Worksheet | Useful Life |
|---|---|---|
| Wells and Springs | Drinking Water Source | 25 years |
| Intake Structures | | 35 years |
| Pumping Equipment | | 10 years |
| Disinfection Equipment | Treatment System | 5 years |
| Hydropneumatic Tanks | Tanks | 10 years |
| Concrete and Metal Storage Tanks | | 30 years |
| Transmission Structures (Pipes) | Distribution System | 35 years |
| Valves | Valves | 35 years |
| Mechanical Valves | | 15 years |
| Computer Equipment/Software | Electrical Systems | 5 years |
| Transformers/Switchgears/ Wiring | | 20 years |
| Motor Controls/Variable Frequency Drives | | 10 years |
| Sensors | | 7 years |
| Buildings | Buildings | 30 years |
| Service Lines | Service Lines | 30 years |
| Hydrants | Hydrants | 40 years |

Note: These expected useful lives are drawn from a variety of sources. The estimates assume that assets have been properly maintained. The adjusted useful life of an asset will be equal to or less than typical useful life.

**Water Line replacement costs**

In addition to line size factors mentioned above, the cost for replacing water lines varies greatly from one geographic area of the state to the next due to the soil conditions or underlying material. For example, many parts of East Texas have sandy or clay soil, whereas Central Texas commonly has a rock base and requires more expensive equipment to excavate. The expense to install or replace water lines also depends on a variety of additional factors such as if the service is to a rural farm or subdivision, whether the area is paved or landscaped, the cost of obtaining easements, supply chain issues, labor availability, the size of components, upsizing for future population growth, and regulatory requirements.

Based on information provided by industry engineers and additional research, we can conservatively estimate the cost of water line installations at $75 per foot or more, depending on the conditional factors mentioned. While for some systems able to do it in-house the number may be cheaper, others who face additional factors like those mentioned above could find their costs significantly

higher. Utilizing this estimate, replacing all water line infrastructure that is in current need of replacement or will need replacement in the next 20 years is expected to cost approximately $332 billion.

Considering the survey responses for water lines over 40 years old, 57% of water systems in Texas are in dire need of replacement and upgrades. Even addressing only the water lines 40 years or older could still make a significant impact to our state's infrastructure needs. These would cost, conservatively, approximately $190 billion to replace the 480,000 miles of water line in our estimates.

We agree that now is the time to allocate funding to replace aging water lines in Texas. With the rapid rate of inflation of goods and services the industry is seeing today, the cost of these types of projects will continue to increase dramatically.

# ACCOUNTING POLICY AND PROCEDURE STATEMENT

EFFECTIVE DATE: 2/2016 APPROVAL LEVEL: P & P Committee

RESPONSIBILITY: TX CPR Accountant

TOPIC: Capitalization Criteria

PURPOSE: To document the criteria used to classify expenditures as either capital or expense.

DETAILED POLICY AND PROCEDURES:

General Description - Except as provided below for specific classes of utility plant, expenditures for any unit of property which have a useful life exceeding one year and a total cost in excess of $750 are considered capital expenditures (or multiple components of a property that when constructed together at the same timeframe that total $750). (For purposes of this statement, Capital expenditures are distinguished from expenditures for expense items that are deferred for accounting purposes in recognition of the long standing accounting principle of matching revenues and expenses. Such deferred charges are covered under a separate Accounting Policy & Procedure Statement). The vast majority of such expenditures are for the acquisition of assets used in the provision of water service and, as such, are recorded into one of the Utility Plant general ledger accounts 301000 through 398000 (see separate account description listing for specific account definitions).

The term "expenditure" as used in this policy statement shall include costs, whether paid or accrued, including materials, supplies, direct labor, transportation, services, studies, plans, surveys, engineering, supervision, contract work, insurance and security during construction, permits, legal fees, taxes, allowance for funds used during construction (AFUDC), overheads, and/or any other expenses which **contribute directly** to placing the utility plant or other asset into service. "Expenditures" chargeable to capital accounts shall **exclude** all incidental meal and entertainment expenditures except where necessary for the effective completion of the project. Examples of acceptable charges include travel and meal expenditures incurred for site visits or training related specifically to a capital project.

Costs incurred in making improvements to existing components of utility plant shall be capitalized where the expenditures meet all other requirements and the improvements either:

(1) Add to the usefulness or efficiency of the property,
(2) Extend the useful life of the property or
(3) Increase revenue or decrease expenses associated with the asset.

**Expenditures which** simply restore property to its original condition and allow it to **reach its** original life should be expensed.

DETAILED POLICY AND PROCEDURES: (continued)

Each project which is determined to be capital project will be assigned a Work Order # which will be used to track the expenditures of the project. The accounts payable expenditures for all additions will be posted to the general ledger account 105030 - Construction Work In Process (CWIP) while the project is under way. When the project is complete the costs will be transferred from CWIP to one of the accounts described below. Project completion comes at the point where the utility plant is placed into service or is otherwise made available for service.

All costs of removal (COR) and/or Salvage associated with retirements should be posted to general ledger account 184010 – 184060 Retirement Work In Process (RWIP) similar to the procedure for additions to CWIP. When the retirement project is complete the original cost of the property being retired and the COR is netted against any salvage which has been received as a result of the retirement and transferred to either the accumulated reserve or to gain /loss on disposal.

In addition to utility plant in service, capital expenditures may be made which are posted to the following accounts:

103000 -Utility Plant Held For Future Use
1140xx -Utility Plant Acquired
121000 - Other Physical Property
183010 - 183070 Preliminary Survey

The capitalization criteria for these accounts will be described later in this Policy and Procedure Statement.

DETAILED POLICY AND PROCEDURES: (continued)

Capitalization Criteria for Specific Classes of Water Utility Plant

1. Intangible Plant - All expenditures, regardless of dollar amount, made for the purchase of the following intangible plant, including acquisitions, will be classified as capital expenditures.

   301100 - Organization Cost
   302100 - Franchises & Consents

2. Land & Land Rights - All expenditures exceeding $750 made for the purchase of the following land, land rights and/or water rights, including acquisitions, will be classified as capital expenditures.

   303200 - Source of Supply & Pumping Equipment Land
   303300 - Treatment
   303400 - Transmission and Distribution Land and Rights of Way
   303500 – General Land & Land Rights

3. Structures - All expenditures exceeding $750 made for the purchase and/or construction of the following structures, including acquisitions, will be classified as capital expenditures.

   304200 - Source of Supply and Pumping Structures
   304300 - Treatment Buildings
   304400 - Transmission & Distribution Structures and Improvements
   304500 - General Structures
   305200 - Collecting and Impounding Reservoirs
   306200 - Lake, River and Other Intakes
   307200 - Wells and Springs
   308200 - Infiltration Galleries and Tunnels

4. Large Equipment - All expenditures exceeding $750, made for the purchase, construction and/or installation of the following large equipment, including acquisitions, will be classified as capital expenditures. In all instances where an existing piece of utility plant will be traded-in to purchase a replacement, the trade-in value will be recorded as salvage and the gross value of the new piece of equipment will be treated as the capitalized cost. In no instance will the trade-in value reduce the gross value capitalized for the new equipment.

   310200 - Source of Supply Power Generating Equipment
   311200 - Source of Supply Pumping Equipment
   311300 - Water Treatment Pumping Equipment
   311400 - T & D Pumping Equipment
   320300 - Water Treatment Equipment
   330400 - Distribution Reservoirs & Standpipe Equipment
   346500 - SCADA & Communication Equipment

DETAILED POLICY AND PROCEDURES: (continued)

5. Mains - All expenditures, including acquisitions, for the installation and/or replacement of any transmission or distribution main which will require the installation and/or replacement of any length of main will be capitalized regardless of the total expenditure amount. All expenditures related to the installation and/or replacement of any main accessories (ie. valves, valve boxes, sleeves, dressers, couplings, etc.) will also be capitalized regardless of the total expenditure amount. Repair work performed on an existing main which does not require the installation or replacement of main or any main accessories will be considered maintenance and charged to the appropriate expense account.

   309200 - Supply Mains and Accessories
   331400 - Transmission & Distribution Mains and Accessories

6. Services - All expenditures, including acquisitions, for the installation of all new service connections from the existing main to the curb will be capitalized regardless of the total expenditure amount. The four major components of a service connection are:
   1) the corporation, (which is the connection device to the water main)
   2) the run of pipe or service line from the corporation to the curb stop,
   3) the curb stop, and
   4) the curb box.

   If over 50% of the service line (item 2 above) is replaced on an existing service connection, it will be considered a service renewal, and should be capitalized. Similarly the unit(s) of property replaced must be retired.

   Work performed on an existing service connection which does not require the installation or replacement of at least 50% of the service line is considered maintenance and should be charged to the appropriate expense account.

   333400 - Services

7. Meters – All expenditures, including acquisitions, for the purchase, installation or replacement of meters, or the conversion of a conventional meter to a remote meter will be capitalized regardless of the total expenditure amount. The purchase of supplies which will be used for the installation of new meters or the conversion of standard meters to remote meters will also be capitalized. Work performed on an existing meter which does not require the replacement of the meter or result in the conversion of a conventional meter to a remote meter will be considered maintenance and charged to the appropriate expense account.

   334400 - Meters and Meter Installations

   This account shall not include meters for recording the output of a supply or treatment plant, or those located on mains. It includes only those meters used to record water delivered to customers.

DETAILED POLICY AND PROCEDURES: (continued)

8. Hydrants - All expenditures, including acquisitions, for the installation of all new fire hydrants where none previously existed will be capitalized regardless of the total expenditure amount. The four major components of a fire hydrant are:
   1) the fire hydrant,
   2) the run of pipe or lead,
   3) the valve and
   4) the valve box.

   If any one or more of these components are replaced on an existing fire hydrant, the work will be considered capital and all charges will be capitalized regardless of the total expenditure amount. Work performed on an existing hydrant which does not require the installation or replacement of at least one of the 4 components is considered maintenance and charged to the appropriate expense account. The extension of a lead with no replacement of the existing pipe will be considered maintenance and also charged to expense.

   335400 - Hydrants

9. Transportation Equipment - All expenditures exceeding $750 made for the purchase or customization of the following transportation equipment, including acquisitions, will be classified as capital expenditures. In all instances where an existing piece of transportation equipment will be traded-in to purchase a replacement, the trade-in value will be recorded as salvage and the gross value of the new piece of equipment will be treated as the capitalized cost. In no instance will the trade-in value reduce the gross value capitalized for the new equipment.

   341500 - Transportation Equipment
   345500 - Mechanical Equipment

DETAILED POLICY AND PROCEDURES: (continued)

10. Other Equipment - All expenditures exceeding $750, made for the purchase and/or installation of utility plant, including acquisitions, which do not fit the previously defined accounts, will be assigned to one of the accounts below. In cases where individual items will have a benefit to the Company lasting longer than one year at a per unit cost of less than $750, they shall be capitalized where they are acquired in conjunction with another (capitalizable) asset or where they are acquired in a sufficient quantity such that the total cost exceeds $750.

    In all instances where an existing piece of utility plant will be traded-in to purchase a replacement, the trade-in value will be recorded as salvage and the gross value of the new piece of equipment will be treated as the capitalized cost. In no instance will the trade-in value reduce the gross value capitalized for the new equipment.

    339100 - Other Intangible Plant & Misc Equipment
    339102 - NCWA Plant & Misc Equipment - North Channel Water Authority
    339200 - Other Source of Supply Plant & Misc Equipment
    339300 - Other Treatment Plant & Misc Equipment
    339400 - Other Transmission & Distribution Plant & Misc Equipment
    340500 - Office Furniture and Equipment
    342500 - Stores Equipment
    343500 - Shop, Tools and Work Equipment
    344500 - Laboratory Equipment
    347500 - Miscellaneous Equipment
    348500 - Other Tangible Equipment

DETAILED POLICY AND PROCEDURES: (continued)

Capitalization Criteria for Specific Classes of Wastewater Utility Plant

1. Intangible Plant - All expenditures, regardless of dollar amount, made for the purchase of the following intangible plant, including acquisitions, will be classified as capital expenditures.

   301100 - Organization Cost
   302100 - Franchises & Consents

2. Land & Land Rights - All expenditures exceeding $750 made for the purchase of the following land, land rights and/or water rights, including acquisitions, will be classified as capital expenditures.

   353200 - Collection Sewers Land and Rights of Way
   353300 - Pumping Equipment Land and Rights of Way
   353400 - Treatment and Disposal Plant Land and Rights of Way
   353500 - Reclaimed Water Treatment Land & Land Rights
   353600 - Reclaimed Water Distribution Land & Land Rights
   353700 - General Land & Land Rights

3. Structures - All expenditures exceeding $750 made for the purchase and/or construction of the following structures, including acquisitions, will be classified as capital expenditures.

   354200 - Collection Sewers Structures and Improvements
   354300 - Pumping Equipment Structures and Improvements
   354400 - Treatment and Disposal Plant Structures and Improvements
   354500 - Reclaimed Water Treatment Structures and Improvements
   354600 - Reclaimed Water Distribution Structures and Improvements
   354700 - General Structures and Improvements
   362200 - Special Collecting Structures
   370300 - Receiving Wells
   374500 - Reclaimed Water Distribution Reservoirs

DETAILED POLICY AND PROCEDURES: (continued)

4. Large Equipment - All expenditures exceeding $750, made for the purchase, construction and/or installation of the following large equipment, including acquisitions, will be classified as capital expenditures. In all instances where an existing piece of utility plant will be traded-in to purchase a replacement, the trade-in value will be recorded as salvage and the gross value of the new piece of equipment will be treated as the capitalized cost. In no instance will the trade-in value reduce the gross value capitalized for the new equipment.

   355200 - Collection Sewers Power Generating Equipment
   355300 - Pumping Equipment Power Generating Equipment
   355400 - Treatment & Disposal Power Generating Equipment
   355500 - Reclaimed Water Treatment Power Generating Equipment
   355600 - Reclaimed Water Distribution Power Generating Equipment
   371300 - Pumping Equipment
   371500 - Reclaimed Water Treatment Pumping Equipment
   371600 - Reclaimed Water Distribution Pumping Equipment
   380400 - Treatment & Disposal Equipment
   380500 - Reclaimed Water Treatment & Disposal Equipment
   396700 - SCADA & Communication Equipment

5. Mains - All expenditures, including acquisitions, for the installation and/or replacement of any transmission or distribution main which will require the installation and/or replacement of any length of main will be capitalized regardless of the total expenditure amount. All expenditures related to the installation and/or replacement of any main accessories (ie. valves, valve boxes, sleeves, dressers, couplings, etc.) will also be capitalized regardless of the total expenditure amount. Repair work performed on an existing main which does not require the installation or replacement of main or any main accessories will be considered maintenance and charged to the appropriate expense account.

   360200 - Collection Sewers - Force Mains
   360200 - Collection Sewers - Gravity Mains
   375600 - Reclaimed Water Transmission & Distribution Mains
   381400 - Treatment & Disposal Plant Sewers
   381500 - Reclaimed Water Plant Sewers
   382400 - Outfall Sewer Lines

DETAILED POLICY AND PROCEDURES: (continued)

6. Services - All expenditures, including acquisitions, for the installation of all new service connections from the existing main to the curb will be capitalized regardless of the total expenditure amount. The four major components of a service connection are:
   1) the corporation, (which is the connection device to the water main)
   2) the run of pipe or service line from the corporation to the curb stop,
   3) the curb stop, and
   4) the curb box.

   If over 50% of the service line (item 2 above) is replaced on an existing service connection, it will be considered a service renewal, and should be capitalized. Similarly the unit(s) of property replaced must be retired.

   Work performed on an existing service connection which does not require the installation or replacement of at least 50% of the service line is considered maintenance and should be charged to the appropriate expense account.

   363200 - Services to Customers
   363200 - Services to Customers

7. Flow Measuring Devices/Meters – All expenditures, including acquisitions, for the purchase, installation or replacement of meters, or the conversion of a conventional meter to a remote meter will be capitalized regardless of the total expenditure amount. The purchase of supplies which will be used for the installation of new meters or the conversion of standard meters to remote meters will also be capitalized. Work performed on an existing meter which does not require the replacement of the meter or result in the conversion of a conventional meter to a remote meter will be considered maintenance and charged to the appropriate expense account.

   364200 - Flow Measuring Devices
   365200 - Flow Measuring Installations
   367600 - Reclaimed Water Meters and Meter Installations

DETAILED POLICY AND PROCEDURES: (continued)

8. Transportation Equipment - All expenditures exceeding $750 made for the purchase or customization of the following transportation equipment, including acquisitions, will be classified as capital expenditures. In all instances where an existing piece of transportation equipment will be traded-in to purchase a replacement, the trade-in value will be recorded as salvage and the gross value of the new piece of equipment will be treated as the capitalized cost. In no instance will the trade-in value reduce the gross value capitalized for the new equipment.

   391700 - Transportation Equipment
   395700 - Mechanical Equipment

9. Other Equipment - All expenditures exceeding $750, made for the purchase and/or installation of utility plant, including acquisitions, which do not fit the previously defined accounts, will be assigned to one of the accounts below. In cases where individual items will have a benefit to the Company lasting longer than one year at a per unit cost of less than $750, they shall be capitalized where they are acquired in conjunction with another (capitalizable) asset or where they are acquired in a sufficient quantity such that the total cost exceeds $750.

   In all instances where an existing piece of utility plant will be traded-in to purchase a replacement, the trade-in value will be recorded as salvage (see separate procedures for recording COR and Salvage, Policy No. 5) and the gross value of the new piece of equipment will be treated as the capitalized cost. In no instance will the trade-in value reduce the gross value capitalized for the new equipment.

   389100 - Other Intangible Plant & Misc Equipment
   389200 - Other Collection Sewers & Misc Equipment
   389300 - Other Pumping & Misc Equipment
   389400 - Other Treatment & Disposal Plant & Misc Equipment
   389500 - Other Reclaimed Water Treatment Plant & Misc Equipment
   389600 - Other Reclaimed Water Distribution Plant & Misc Equipment
   390700 - Office Furniture and Equipment
   392700 - Stores Equipment
   393700 - Shop, Tools and Work Equipment
   394700 - Laboratory Equipment
   397700 - Miscellaneous Equipment
   398700 - Other Tangible Equipment

DETAILED POLICY AND PROCEDURES: (continued)

Specific Capitalization Criteria for Other Assets

103000 - Utility Plant Held for Future Use -

This account shall include the original cost of property owned and held for use in water service under a documented plan for such use. There shall be included herein property acquired but never used by the utility in water service, but held for such service in the future under a definite plan, and property previously used by the utility in water service, but retired from such service and held pending its reuse in the future, under a definite plan, in water service.

The property included in this account shall be classified according to the detailed accounts (301 to 335) for utility plant in service and the account shall be maintained in such manner and in such detail as though the property were in service.

NOTE. - Materials and supplies and meters held in reserve shall not be included in this account.

1040XX - Utility Plant Acquired -

This account shall include the cost of utility plant acquired by purchase, merger, consolidation, liquidation, or otherwise, pending the distribution thereof to the appropriate accounts.

121000 -Other Physical Property -

This account shall include the cost to the utility of land, structures and equipment owned by the utility, but not used in utility service and not properly includible in account 103000, Utility Plant Held for Future Use.

183010 - 183070 Preliminary Survey -

This account shall be charged with all expenditures for preliminary surveys, plans, investigations, etc., made for the purpose of determining the feasibility of projects under contemplation. If construction results, then this account shall be credited and the appropriate utility plant account charged. If the work is abandoned, the charge shall be made to the appropriate expense account(s).

The records supporting the entries to this account shall be so kept that the utility can furnish complete information as to the nature and the purpose of the survey, plans or investigations and the nature and respective amounts of the charges.

# DIRECT TESTIMONY OF TREY V. REGINELLI

## I. INTRODUCTION AND BACKGROUND

**Q. WHAT IS YOUR NAME AND BUSINESS ADDRESS?**

A. My name is Trey Reginelli. My business address is 1106 Clayton Lane, Suite 400W, Austin, Texas 78723.

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am employed as the Controller II of Aqua Texas, Inc. ("Aqua Texas" or the "Company").

**Q. PLEASE DESCRIBE YOUR EDUCATION AND BUSINESS EXPERIENCE.**

A. I hold a Bachelor of Business Administration degree from the University of Houston, which included 30 hours of upper-level accounting coursework. I am also a Certified Public Accountant licensed in Texas, certificate number 083478. My professional career of twenty-five years has been dedicated to accounting and management roles of increasing responsibility. Prior to my current position as Controller II at Aqua Texas, Inc., I have served as an accountant, financial analyst, and senior accounting manager in the waste, consulting, electronic discovery, and wholesale electronics industries.

**Q. WHAT ARE YOUR JOB RESPONSIBILITIES IN YOUR CURRENT POSITION?**

A. As the Controller of Aqua Texas, I am responsible for overseeing financial reporting, budgeting, forecasting, rate matters, and the supervision of all daily financial operations for the Company across the state of Texas.

**Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?**

A. I am testifying on behalf of Aqua Texas in support of its rate request in this proceeding.

## II. PURPOSE OF TESTIMONY

**Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

A. The purpose of my testimony is to present the Company's requested revenue requirements contained in the provided schedules and workpapers. Along with other witnesses identified in the direct testimony of Company witness Daniel Ramirez-Cisneros, I present and describe the Company's allowable expense amounts and the invested capital and related rate of return the Company is requesting, which makes up the Company's overall requested cost of service and final revenue requirements. I also provide a comparison of the final revenue requirements with the Company's adjusted test year revenues. In addition, I sponsor and support the Company's affiliated expenses and the Company's recovery of certain of its regulatory asset amounts. In conjunction with Company witness Brian Gresehover, I also explain and support the Company's capitalization policy. Finally, I discuss and support the Company's request for system consolidation and its overall requested water and sewer rates and proposed water and sewer tariffs.

**Q. HAVE YOU PREPARED ANY EXHIBITS, SCHEDULES, OR STUDIES IN CONNECTION WITH YOUR TESTIMONY?**

A. Yes. I sponsor or co-sponsor the following cost of service schedules and related schedule workpapers:

| Schedule | Description |
|---|---|
| II-A | Cost of Service Summary |
| II-A.1 | Cost of Service Summary - Other Gross Up for Revenue Increase |
| II-A-1 | Cost of Service by Water/Wastewater |
| II-A-2 | Statement of Income |
| II-A-2.1 | Statement of Income - Per Book |
| II-A-2.1(W) | Statement of Income - Water - Per Book |
| II-A-2.1(WW) | Per Book Statement of Income - Wastewater |
| II-A-2.2 | Statement of Income - Test Year Adjusted |
| II-A-2.2(W) | Statement of Income - Test Year Adjusted - Water |

| | |
|---|---|
| II-A-2.2(WW) | Statement of Income - Test Year Adjusted - Wastewater |
| II-A-2.3 | Test Year Affiliate Income |
| II-A-2.3(1) | Comparison Year 2023 Affiliate Income |
| II-A-2.4 | Rate of Return on Net Invested Capital |
| II-A-3 | Balance Sheet |
| II-A-3.1 | Comparative Balance Sheet (Book) |
| II-A-3.2 | Other Physical Property |
| II-A-3.3 | Special Cash Accounts |
| II-A-3.4 | Receivables |
| II-A-3.5 | Uncollectible Accounts |
| II-A-3.6 | Prepayments |
| II-A-3.7 | Significant Assets |
| II-A-3.8 | Deferred Asset Accounts |
| II-A-3.9 | Accounts Payable to Associated Companies |
| II-A-3.10 | Deferred Credits |
| II-A-3.11 | Funding of Reserves |
| II-A-3.12 | Unappropriated Retained Earnings |
| II-A-3.13 | Advances to/from Parent Corporation |
| II-B | Rate Base Summary |
| II-B(W) | Rate Base Summary - Water |
| II-B(WW) | Rate Base Summary - Wastewater |
| II-B-1 | Original Cost of Utility Plant - Total Company |
| II-B-1(W) | Original Cost of Utility Plant - Water Operations |
| II-B-1(WW) | Original Cost of Utility Plant - Wastewater Operations |
| II-B-1(C) | Original Cost of Utility Plant - Common Plant |
| II-B-1.1 | Original Cost of Utility Plant for Water/Wastewater |
| II-B-1.2(W) | Adjusted Test Year Plant - Water |
| II-B-1.2(WW) | Adjusted Test Year Plant - Wastewater |
| II-B-1.2(C) | Adjusted Test Year Plant - Common |
| II-B-1.3 | Assets Used for Purposes Other than Utility |
| II-B-1.4 | Assets not Currently in Use |
| II-B-2 | Construction Work in Progress - Total Company |
| II-B-2.1 | Cancelled Construction Projects |
| II-B-3(6) | Accumulated Depreciation - Affidavit |
| II-B-4 | Plant Held for Future Use |
| II-B-5 | Accumulated Provision Balances |
| II-B-6 | Materials and Supplies - 13-Month Average |
| II-B-6.a | Materials and Supplies - Inventory Valuation Method |
| II-D-1 | Summary of Adjusted Test Year O&M Expenses |
| II-D-1.1 | Historical and Per Book Test Year O&M Expense |
| II-D-1.2(W) | Adjustments to Test Year - Water |
| II-D-1.2(WW) | Adjustments to Test Year - Wastewater |
| II-D-1.2(C) | Adjustments to Test Year - Common |

| | |
|---|---|
| II-D-2 | Bad Debt Expense |
| II-D-3.1 | Advertising |
| II-D-3.2 | Contribution and Donation Expense |
| II-D-3.3 | Industry Organization Membership Dues |
| II-D-3.4 | Business/Economic Membership Dues |
| II-D-3.5 | Professional Membership Dues |
| II-D-3.6 | Social Organizations |
| II-D-4 | Summary of Outside Services Employed |
| II-D-5 | Summary of Research and Development Expenditures |
| II-D-6 | Rents and Leases |
| II-D-7(W) | Purchased Water |
| II-D-7(WW) | Purchased Wastewater |
| II-D-8 | Storm Damage |
| II-D-9 | Payroll - Capitalized vs. Expensed |
| II-D-9.1.a | Payroll Detail - Actual Payroll Expense |
| II-D-9.1.b | Actual Payroll Expense by Month |
| II-D-9.1.c | Payroll Detail - General Payroll Increases |
| II-D-9.1.d | Payroll Detail - Merit Increases and Management Salary Increases |
| II-D-9.1.e | Payroll Detail - Total Annual Payroll Increases |
| II-D-9.1.f | Payroll Detail - Test Year vs. Requested Reconciliation |
| II-D-9.1.g | Payroll Detail - Employee Benefits and Incentive Compensation |
| II-D-9.2.a | Pension and OPEB Benefits - Unfunded Costs |
| II-D-9.2.b | Pension and OPEB Benefits - Actuarial Studies |
| II-D-9.2.c | Pension and OPEB Benefits - Costs, Expense and Funding by NARUC Accounts |
| II-D-9.2.d | Pension and OPEB Benefits - Costs, Expense and Funding by NARUC Accounts (Updated) |

| VI-1.d | Compliance with TCEQ Rules - Discharge Violations |
| VI-2 | Customer Complaint Policy |
| VI-3 | Customer Complaint Records |
| VI-4 | Water Conservation |
| VI-5 | Meter Replacement Policy |
| Summary of NA Schedules | Summary of NA Schedules |

**Q. WHAT ARE THE SOURCES OF THE DATA AND INFORMATION IN THE TESTIMONY AND SCHEDULES YOU SPONSOR?**

A. All data and information used in preparation of the Rate Filing Package ("RFP") was provided from the books and records of Aqua Texas or developed by other witnesses as indicated in their respective testimonies.

**Q. WAS YOUR TESTIMONY AND THE SCHEDULES THAT YOU SPONSOR PREPARED BY YOU OR SOMEONE UNDER YOUR DIRECT SUPERVISION?**

A. Yes.

## III. REVENUE REQUIREMENTS MODEL

**Q. WHAT TEST YEAR IS AQUA TEXAS USING FOR THE CALCULATION OF ITS REVENUE REQUIREMENT?**

A. As required by Commission Rule 16 Tex. Admin. Code ("TAC") § 24.3(36), Aqua Texas's test year is the most recent 12-month period, beginning on the first day of a calendar or fiscal year quarter, for which operating data for a retail public utility are available, which in this case is the calendar year ending December 31, 2024. Aqua Texas has proposed certain annualization and known and measurable adjustments to its test year.

**Q. IS THE 2024 CALENDAR YEAR TEST YEAR APPROPRIATE FOR USE IN THIS FILING?**

A. Yes. Using a calendar year as the test year allows Aqua's test year to coincide with its annual report of operations filed with the Commission, as well as its fiscal year. Therefore, this is the most recent 12-month period that both begins on the first day of a calendar or fiscal year quarter for which operating data for Aqua is available.[1] Additionally, this rate filing is being submitted within six (6) months of the end of the test year, which is reasonable given the time that it takes to close the Company's books and prepare the necessary schedules and other required information that must be provided to support a Class A utility rate filing.

**Q. PLEASE ELABORATE ON THE TIME AND RESOURCES THAT HAVE BEEN DEVOTED TO THE PREPARATION OF THIS RATE FILING.**

A. This rate filing represents the Company's first statewide rate case filing in more than two decades, the previous instance being in May 2004. This is also the Company's first rate

[1] 16 TAC § 24.3(36).

case filing under the rules and requirements adopted by the Commission for Class A water and wastewater utilities. To prepare this rate filing and comply with the applicable regulatory requirements, Aqua Texas has built a new cost of service of model that reflects the costs of serving one hundred sixty-two systems, developed two statewide rate structures, one for statewide water and one for statewide that reflects the Company's request to consolidate all systems into a single water and single wastewater system, and prepared a public notice comprising 131 pages that has been mailed to the active customers served by the Company. The Company has also compiled and produced as part of this filing hundreds of thousands of invoices supporting the capital investment that has been made in its water and wastewater systems over the years. The production of this material, as well as the drafting and submission of witness testimony and the development of new depreciation rates, cash working capital, and class cost allocation studies, has required months of preparation and significant internal and external resources.

**Q. HOW WERE THE COST-OF-SERVICE SCHEDULES AND WORKPAPERS YOU SPONSOR PREPARED?**

A. As mentioned previously, the Company has utilized the Class A Investor-Owned Utilities Water and/or Sewer Rate Filing Package for Cost-of-Service Determination 2015 as approved by the Commission on September 17, 2015.

**Q. PLEASE DEFINE THE CALCULATION OF THE REVENUE REQUIREMENTS WITHIN THE COMPANY'S RFP.**

A. As previously stated, the Company's RFP is based on operations and costs incurred during the twelve-month period ending December 31, 2024 ("test year"), with adjustments made to both annualize costs and to adjust for known and measurable changes. The revenue

requirements presented within the filing were calculated in accordance with Commission rules and utilizing the Commission's RFP and instructions.

**Q. IS THE COMPANY'S TOTAL TEST YEAR REVENUE AMOUNT CALCULATED CONSISTENT WITH THE COMMISSION'S RULES AND REQUIREMENTS?**

A. Yes.

**Q. HAVE ANY ADJUSTMENTS BEEN PROPOSED WITH RESPECT TO HISTORICAL TEST YEAR OPERATING REVENUE?**

A. Yes, the Company has proposed adjustments to historical test year revenue. The primary adjustment involves the removal of $12,137,829 related to regional pass-through surcharges. This adjustment is necessary because the regional pass-through surcharge will remain a distinct charge on customers' monthly bills and should therefore be excluded from the revenue requirement. To accomplish this, the Company has removed the $12,137,829 in revenue recorded in account 400 and also eliminated the corresponding expenses of $4,836,548 in purchased water (account 610) and $7,301,281 in Pumping Fees (account 403.1).

**Q. ARE THE ADJUSTMENTS PROPOSED BY THE COMPANY CONSISTENT WITH COMMISSION RULES REGARDING KNOWN AND MEASURABLE CHANGES?**

A. Yes. All adjustments to revenues are consistent with known and measurable requirements per 16 TAC § 24.41 and are a sound ratemaking practice regularly recognized and approved by this Commission. The proposed adjustments are also consistent with the Commission's Class A RFP instructions related to known and measurable adjustments.

**Q. IS THE INFORMATION PROVIDED IN THE RFP TAKEN FROM AQUA TEXAS'S ANNUAL REPORTS AND FINANCIAL STATEMENTS, AS SUPPORTED BY AQUA TEXAS'S BOOKS AND RECORDS?**

A. Yes. The information provided in the RFP is derived from the Company's books and records as prescribed in the National Association of Regulatory Commissioners ("NARUC") chart of accounts. Aqua Texas does not have stand-alone audited financial statements but is part of the financial audit performed for Essential Utilities, Inc. (Aqua Texas' parent company). Additionally, a copy of the most current financial audits for Essential Utilities, Inc. is provided in the workpapers to the RFP.

**Q. PLEASE DESCRIBE THE CALCULATION OF THE COST OF SERVICE SHOWN ON SCHEDULE II-A-1 OF THE RATE FILING PACKAGE.**

A. The calculations on Schedule II-A-1 reflect total cost incurred by Aqua Texas to provide service to its customers. The costs on this schedule are listed by NARUC account and shows the detailed cost of providing water and sewer services together, and then separately for water and sewer.

**Q. PLEASE SUMMARIZE THE UTILITY'S PROPOSED REVENUE REQUIREMENT AND OVERALL REQUESTED INCREASE.**

A. In this filing, Aqua Texas is seeking a revenue requirement for its water operations of $87,675,070 and $35,776,130 for its wastewater operations. The components of Aqua Texas' requested revenue requirements are detailed in the Revenue Requirement Model included with the filing, and summarized in Schedule II-A. These revenue requirements are based on the 2024 historical cost of service, adjusted for normalization and known and measurable changes. The cost of service includes operating expenses, administrative and

general expenses, allocated corporate overhead, depreciation, taxes, and a return on rate base. If approved, these requests would mean an overall rate increase of about 25% for water bills and 47% for wastewater bills.

**Q. PLEASE DESCRIBE SCHEDULE II-A-2.1 – STATEMENT OF INCOME AND EXPLAIN WHETHER THERE ARE ANY MAJOR VARIANCES BETWEEN THE HISTORIC TEST YEAR AND THE PRECEDING YEAR.**

A. Schedule II-A-2.1 is Aqua Texas' comparative statement of income for the historic test year and the immediately preceding calendar year showing increases and decreases between the two periods. This schedule provides detailed explanation of the causes of the major (greater than 15%) variances between the historic test year and preceding year by detailed account number. Explanation of differences are limited to $5,000 or greater. Please see Schedules II-A-2.1, II-A-2.1(W) and II-A-2.1(WW) in the RFP for explanations.

**Q. DOES AQUA TEXAS HAVE ANY AFFILIATES PROVIDING WATER OR WASTEWATER SERVICE IN TEXAS?**

A. No. Aqua Texas is the regulated entity providing water and wastewater service to customers.

**Q. PLEASE DESCRIBE THE INFORMATION PROVIDED IN SCHEDULE II-A-3.1 – BALANCE SHEET.**

A. Schedule II-A-3.1 is a comparative balance sheet as of the end of the test year and the preceding calendar year-end.

**Q. HAS THE COMPANY INCLUDED ANY NON-REGULATED FUNCTIONS IN ITS RFP?**

A. No.

**Q. HOW HAS THE COMPANY ALLOCATED THE TOTAL COST OF SERVICE BETWEEN THE WATER AND WASTEWATER SERVICES? ?**

A. Below is a simplified version of the steps the Company used to allocate the total cost of service between water and wastewater services:

Identify all its costs associated with providing water and wastewater services. These costs can include:

- Operating and Maintenance (O&M) Expenses: Costs for labor, chemicals, energy, repairs, and other day-to-day operational needs for both water treatment/distribution and wastewater collection/treatment.
- Capital Costs: Depreciation on infrastructure (pipes, plants, equipment), interest payments on loans for capital projects, and a return on investment for the utility.
- Administrative and General (A&G) Expenses: Costs for management, billing, customer service, accounting, and other overhead activities that support both functions.

Once the total costs are identified, they are categorized into the specific functions of the utility:

- Water Function: Includes costs directly related to water supply, treatment, and distribution.
- Wastewater Function: Includes costs directly related to wastewater collection, treatment, and disposal.
- Shared Functions: Some costs benefit both water and wastewater services (e.g., general administration and customer billing). These need to be allocated appropriately.

Costs that can be directly attributed to either the water or wastewater function are assigned accordingly. For example:

- The cost of chemicals used solely in the water treatment plant is a direct cost to the water function.
- The electricity costs for operating the wastewater treatment plant are a direct cost to the wastewater function.
- Direct labor costs for employees are directly allocated to either the water or wastewater function.

Shared Costs are allocated between the water and wastewater functions based on customer count.

For more a more in-depth explanation on the allocation of the cost of service between water and wastewater services, please refer to the testimony of Company witness Gregory R. Herbert.

## A. ALLOWABLE EXPENSES

**Q. WHAT "ALLOWABLE EXPENSES" ARE INCLUDED IN THE COST OF SERVICE ON SCHEDULE II-A?**

A. The cost of service represents the total amount of revenue needed by the Company to recover its expenses and a earn a return on its investments. Allowable expenses included in the cost of service generally include the following: Operating and Maintenance Expenses, Depreciation, Amortization, Other Expenses, Taxes Other, and Federal Income Taxes. The Cost of Service calculation also includes a Return on Rate Base and a Gross Up for Revenue Increase.

**Q. HOW WERE THE LEVELS OF ALLOWABLE EXPENSES INCLUDED WITHIN THE COMPANY'S APPLICATION DETERMINED?**

A. All allowable expenses contained within the application were sourced from the Company's books and records and are further supported by the testimony supporting the application, along with the schedules and workpapers provided in the filing.

**1. O&M Expense and Adjustments**

**Q. PLEASE PROVIDE AN OVERVIEW OF THE O&M EXPENSES INCLUDED IN THE COMPANY'S APPLICATION.**

A. The Company's requested O&M expenses are summarized on Schedules II-A-2.2(W) and II-A-2.2(WW) and detailed in Schedule II-D-1, as well as within the supporting workpapers to the RFP. These O&M expenses were incurred to provide service to customers during the test year and as explained in the testimony of Company witness Mr. Ramirez-Cisneros, were reasonable and necessary. O&M expenses include, but are not limited to, power and chemical expense, materials, contract operations expense, plan maintenance, bad debt, insurance, regulatory expense, and other miscellaneous expenses including corporate overhead.

**Q. WHAT ADJUSTMENTS TO AQUA TEXAS'S TEST YEAR O&M EXPENSE ARE BEING PROPOSED?**

A. A list of test year normalization and known and measurable adjustments is included in Schedules II-D-1.2(W), II-D-1.2(WW), and II-D-1.2(C) of the rate filing package as well as in the table below.

## Table TVR-1 – Test Year Adjustments - Water

| | | | Water | |
|---|---|---|---|---|
| Account | Adjustment Number | Description | Normalization | Known & Measurable |
| (a) | (b) | (c) | (f) | (g) |
| | | | | |
| 601 | 101.1 | Labor | 474,360 | - |
| 604 | 102.1 | Benefits | 268,473 | - |
| 660 | 103.1 | Advertising | - | (3,237) |
| 675 | 104.1 | Lobbying - Organization Membership Dues | - | (8,099) |

| 408 | 401.2 | Taxes Other | 9,360 | - |
| | | **Total** | **256,705** | **271,717** |

**Table TVR-3 – Test Year Adjustments – Common**

| | | | Common | |
|---|---|---|---|---|
| Account | Adjustment Number | Description | Normalization | Known & Measurable |
| (a) | (b) | (c) | (f) | (g) |
| 408 | 404.1 | Taxes Other - Property Tax | (293,507) | - |
| | | **Total** | **(293,507)** | **-** |

**Q. WHAT ARE NORMALIZATION ADJUSTMENTS?**

A. A normalization adjustment refers to modifications made to a utility's historical test year data to reflect a more typical or sustainable level of costs and revenues for the purpose of

setting future rates. The goal is to remove distortions caused by unusual, non-recurring, or non-operating items.

**Q. WHAT ARE KNOWN AND MEASURABLE ADJUSTMENTS?**

A. A known and measurable adjustment refers to a change in a utility's costs or revenues that meets specific criteria for being included in the calculation of future rates. These adjustments are made to the historical test year data to reflect circumstances that are known with reasonable certainty and can be quantified with reasonable accuracy to occur within twelve months of the end of the historical test year.

**Q. ARE THE PROPOSED ADJUSTMENTS AND THE RESULTING PRO FORMA O&M EXPENSES REASONABLE AND NECESSARY FOR THE OPERATION OF AQUA TEXAS'S UTILITY SYSTEMS, AS REQUIRED BY COMMISSION RULES?**

A. Yes.

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR PURCHASED WATER AND PUMPING FEES EXPENSE?**

A. As previously mentioned, the Company has proposed adjustments to historical test year revenue. The primary adjustment involves the removal of $12,137,829 related to regional pass-through surcharges. This adjustment is necessary because the regional pass-through surcharge will remain a distinct charge on customers' monthly bills and should therefore be excluded from the revenue requirement. To accomplish this, we removed the $12,137,829 in revenue recorded in account 400 and also eliminated the corresponding expenses of $4,836,548 in purchased water (account 610) and $7,301,281 in Pumping Fees (account 403.1).

**Q. WERE ANY ADJUSTMENTS MADE TO AQUA TEXAS'S TEST YEAR PURCHASED WASTEWATER TREATMENT EXPENSE?**

A. No. The Company has proposed no changes to purchased wastewater treatment expense in the RFP.

**Q. IS THE COMPANY PROPOSING ADJUSTMENTS TO PURCHASE POWER AND FUEL FOR POWER PRODUCTION?**

A. Yes. The adjustment reflects the projected increase in these costs due to customer growth. This adjustment was determined by applying a three-year average customer growth rate to the historical test year expenditures. The growth rates utilized were 1.9% for water and 3.9% for wastewater, aligning with the growth assumptions embedded within the cost-of-service billing analysis.

**2. <u>Employee Labor, Office Salaries, and Management Salaries</u>**

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR SALARIES, WAGES AND INCENTIVE COMPENSATION?**

A. There are five adjustments applied to the historical test year salaries, wages and incentive compensation amounts. The adjustments made to the historical test year are necessary to present a fair and accurate representation of the Company's ongoing labor expenses. The first adjustment addresses the understaffing experienced during the test year. In 2024, the Company faced an average monthly shortfall of 10 employees compared to its planned workforce. To reflect a normalized operational state, an adjustment has been made to bring staffing levels up to this optimal complement, while also prudently accounting for six anticipated vacancies. The Company is actively recruiting to fill all vacant positions.

The second adjustment reflects the known and measurable change in employee compensation resulting from the April 2025 merit increase, ensuring that current wage rates are considered. A third adjustment was made to further improve the accuracy and efficiency of reviewing and managing the costs of our capital projects, particularly considering the comprehensive review process mandated in Texas water and wastewater rate proceedings. To address these regulatory requirements, Aqua Texas has added two Continuing Property Records (CPR) accountants to our employee complement. The requirement to provide detailed supporting documentation, including all invoices, for capital investments underscores the need for this enhanced accounting oversight. This investment in personnel directly supports our commitment to deploying the necessary capital for infrastructure improvements while navigating the unique regulatory demands placed on water and wastewater utilities in Texas, a level of scrutiny that appears less intense for gas and electric utilities. The fourth adjustment adds five new positions to the employee complement: one Senior Accountant to accommodate the increased size and complexity of accounting for Aqua Texas's operations growth, two Facility Operators to ensure adequate staffing at facilities, and two seasonal employees to assist with compliance-related administrative work at the Aqua Texas corporate office. Finally, the fifth adjustment accounts for the anticipated reduction in overtime costs directly attributable to achieving a fully staffed workforce. A separate adjustment proposing a decrease in outside service temporary labor costs will be discussed later.

**Q. WERE THESE ADJUSTMENTS KNOWN AND MEASURABLE AS OF THE END OF THE TEST YEAR?**

A. Yes. Consistent with this Commission's rules, these costs are verifiable on the record as to amount and certainty of effectuation and reasonably certain to occur within twelve months of the end of the Test Year.

**Q. ARE THE COMPANY'S COMPENSATION COSTS AS SET FORTH ON THE SCHEDULES YOU ARE SPONSORING REASONABLE?**

A. Yes. Aqua Texas's compensation philosophy is to maintain the competitiveness of its compensation plans and levels to ensure Aqua Texas can recruit, retain, and motivate the quality workforce and leadership needed to serve customers. The objective of this approach is to approximate the median (50th percentile) of the market for total compensation.

**Q. ARE AQUA TEXAS'S EMPLOYEE LABOR, OFFICE SALARIES, AND MANAGEMENT SALARIES REASONABLE?**

A. Yes. The Company reviews its salaries on a periodic basis to ensure they are reasonable and at a level to provide safe and reliable service to customers.

### 3. Employee Pensions & Benefits

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR EMPLOYEE PENSIONS & BENEFITS EXPENSE?**

A. The Company's historical test year employee benefits expenses have been adjusted to reflect normalized staffing levels and known, measurable cost changes. Specifically, these adjustments address the significant understaffing experienced during the test year, which averaged 10 fewer employees per month than planned. To normalize these expenses, we

have adjusted staffing levels to the optimal complement, while also prudently accounting for six expected vacancies. Furthermore, the presented expenses include an adjustment for the known and measurable increase in employee group insurance costs resulting from 2025 insurance premium adjustments.

**Q. PLEASE EXPLAIN THE ADJUSTMENTS TO FOR EMPLOYEE GROUP INSURANCE.**

A. Aqua Texas provides healthcare coverage to all its full-time employees. The adjustment utilizes the coverage level associated with the Company's present complement of authorized positions times the contract prices, less the employee co-pay, while also prudently accounts for six anticipated vacancies.

**4. <u>Contract Work</u>**

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR THIRD PARTY O&M COSTS ASSOCIATED WITH OUTSIDE SERVICES?**

A. In the Outside Services category, the Company proposes specific adjustments to historical test year expenses related to Temporary Labor, Aqua Customer Operations (ACO) and USIC locate charges. The adjustment for ACO is necessitated by projected customer growth and an anticipated increase in the actual expenses incurred for customer billing, collections, postage, and lockbox fees. The proposed adjustment for USIC locate charges addresses a known and measurable increase in the contracted service price and incorporates an allowance for customer growth. Notably, the growth rate applied to water related locate costs is 1.9%, and the rate applied to wastewater related costs is 3.9%. These growth rates are consistent with and directly derived from those utilized in the development of the Company's cost of service billing analysis, ensuring a cohesive and integrated approach to

forecasting these expenses. Furthermore, we propose a reduction to Temporary Labor expenses of $231,418. This normalization adjustment removes the elevated temporary labor costs incurred in the test year due to the previously discussed workforce shortfall in 2024. This adjustment, in conjunction with the proposed adjustments to direct labor costs, is essential for presenting a true and accurate reflection of the Company's ongoing labor, employee benefits, and outside service costs.

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR INSURANCE EXPENSE?**

A. The Company proposes adjustments to its commercial insurance expenses, including coverage for vehicles, general liability, workers' compensation, and other policies. The increase in these expenses is attributable to two key factors: (1) an increase in the renewal premiums charged by the Company's insurance providers, and (2) the expansion of insured property to include assets recently placed in service, thereby requiring adjustments to the coverage limits and associated costs.

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR CHEMICAL EXPENSE?**

A. The adjustment for chemical expense reflects the projected increase in these costs due to customer growth. This adjustment was determined by applying a three-year average customer growth rate to the historical test year expenditures. The growth rates utilized were 1.9% for water and 3.9% for wastewater, aligning with the growth assumptions embedded within the cost-of-service billing analysis.

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR MANAGEMENT FEE EXPENSE?**

A. The Company is requesting an adjustment to the Management Fees charged by Aqua Service Company. This adjustment is necessary to account for increases in the underlying costs of providing these services, specifically including payroll expenses, employee benefits, and other operational costs.

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR SLUDGE REMOVAL EXPENSE?**

A. The proposed adjustment to Account 711 for sludge removal expense reflects the projected incremental costs associated with serving new customers. This projection was determined through the application of a three-year average customer growth factor of 1.039 for wastewater to the historical test year expenditures. These growth factors are consistent with the growth assumptions used in the cost-of-service study.

**Q. WERE ANY ADJUSTMENTS MADE TO AQUA TEXAS'S TEST YEAR TAXES OTHER EXPENSE?**

A. Yes. The Company is proposing adjustments to three key expense categories: payroll taxes, property taxes, and pumping fees. The payroll tax adjustment directly corresponds to the revised labor expenses presented earlier in this testimony under Employee Labor, Office Salaries, and Management Salaries. This revision ensures payroll taxes are calculated based on normalized staffing levels, while also accounting for six anticipated vacancies. Regarding property taxes, we are requesting an adjustment to reflect the actual, known, and measurable property tax obligations for 2025. Finally, consistent with the Purchased Water and Pumping Fees adjustment discussed earlier, pumping fees have been

adjusted to remove the costs associated with the purchased water regional pass-through surcharges from the historical test year.

### 5. Bad Debt Expense

**Q. HOW DOES AQUA TEXAS RECORD BAD DEBT EXPENSE?**

A. Bad debt expense is recognized through two methods: directly writing off uncollectible customer accounts monthly and recording any subsequent recoveries of previously written-off amounts. Additionally, at the end of each month, the allowance for doubtful accounts is adjusted to the greater of the amount estimated as uncollectible (based on provided percentages or the average of the prior three years' net write-offs) with the corresponding adjustment charged to bad debt expense. The following information shows the Company's accounts receivable reserve for bad debt percentages by days outstanding:

Aqua Texas, Inc. Reserves According To These Percentages Of Accounts Receivable That Are Past Due:

0% Current

3% 31-60 days past due

8% 61-90 days past due

15% 91-120 days past due

40% 121-180 days past due

100% Over 180 days past due

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR RENTALS EXPENSE?**

A. The Company proposes normalizing historical test year rental expenses with known and measurable adjustments to reflect the current rates and contractual increases.

### 6. Regulatory Expense

**Q. WHAT ADJUSTMENTS WERE MADE TO AQUA TEXAS'S TEST YEAR REGULATORY EXPENSE?**

A. No adjustments were made to test year Regulatory Expense.

**Q. WERE THERE ANY NORMALIZATION ADJUSTMENTS MADE TO THE HISTORICAL TEST YEAR FOR THE REMOVAL OF INELIGIBLE COSTS?**

A. Yes. To ensure just and reasonable rates, we have removed expenses that do not directly benefit ratepayers. This includes advertising, lobbying, fines, penalties, and non-business purchasing card charges, as detailed in Schedules II-D-1.2(W) and II-D-1.2(WW) of the RFP.

**Q. DOES AQUA TEXAS'S RATE APPLICATION INCLUDE ANY RESEARCH AND DEVELOPMENT EXPENDITURES?**

A. No.

### 7. Depreciation and Amortization Expense

**Q. PLEASE DESCRIBE THE ALLOWABLE DEPRECIATION AND AMORTIZATION EXPENSE.**

A. Depreciation and amortization are significant non-cash expenses that are generally allowed to be recovered from ratepayers as part of the cost of service. These expenses reflect the consumption of the utility's assets over time and are crucial for ensuring the utility can recover its invested capital and fund future replacements.

**Q. IS AQUA TEXAS'S PROPOSED DEPRECIATION EXPENSE BASED ON AN UPDATED DEPRECIATION STUDY?**

A. Yes. For information on the depreciation study please see the direct testimony of Company witness John J. Spanos.

**Q. HAS AQUA TEXAS MADE ANY ADJUSTMENT TO THE ACCUMULATED RESERVE RELATED TO CHANGES IN DEPRECIATION RATES?**

A. Yes.

**Q. WHAT ADJUSTMENTS WERE MADE TO THE ACCUMULATED RESERVE?**

A. Two adjustments were made to the accumulated reserve. The first was a theoretical reserve adjustment of $11,424 based on the depreciation study sponsored by Mr. Spanos. The second, a $7,662,343 adjustment, also results from the depreciation study and represents a reclassification of retirements. These adjustments can be found on Schedule II-B in the RFP. This reclassification assigned retirements to more appropriate ages, which ultimately reduced the total retirement amount. This adjustment does not impact rate base because it offsets utility plant in service Account 333 Services.

**Q. DO THE DEPRECIATION STUDY AND ALL INFORMATION PROVIDED WITH REGARD TO THE CALCULATION OF DEPRECIATION AND RATE BASE MEET THE SPECIFIC REQUIREMENTS OF 16 TAC § 24.31(C)(2)?**

A. Yes.

**Q. ARE THE DEPRECIATION EXPENSES REASONABLE AND NECESSARY FOR THE OPERATION OF AQUA TEXAS'S UTILITY SYSTEMS, AS REQUIRED BY COMMISSION RULES?**

A. Yes.

## B. RATE BASE

**Q. PLEASE DESCRIBE RATE BASE.**

A. Rate base is the investment upon which a utility has an opportunity to earn a fair rate of return. The major components of Aqua Texas's rate base consist of its investment in property, plant, and equipment, Utility Plant in Service (UPIS), accumulated depreciation, working capital allowance, prepayments, and contributions in aid of construction.

**Q. WHAT ARE THE COMPONENTS OF RATE BASE TO WHICH THE REQUESTED RATE OF RETURN IS APPLIED?**

A. In adherence to established ratemaking principles in Texas, Aqua Texas' rate base calculation incorporates several key components including major accounts such as Gross Plant in Service less reserve for accumulated depreciation, Accumulated Deferred Federal Income Taxes (ADFIT), and the necessary Cash Working Capital. The Cash Working Capital of $858,202 was determined through a lead/lag study conducted for the test year, reflecting the operational cash needs of the utility. The amounts for ADFIT, totaling $29,022,080 and excess deferred taxes, amounting to $15,322,452, are presented and explained in the direct testimony of Bobby D. Estep. The components of rate base can be found on Schedules II-B, II-B(W) and II-B(WW) in the RFP.

**Q. PLEASE DESCRIBE UPIS.**

A. UPIS represents the total value of the assets that are used and necessary for providing water and wastewater services to customers. UPIS includes the original cost of acquired systems, additions and improvements necessary to provide safe and reliable water and wastewater service. UPIS in this filing includes asset values for all systems that have been acquired

since 2006 along with Grey Utilities. The total test year balances for UPIS for water and wastewater as of the end of the test year are shown in Schedules II-B in the RPF.

**Q. WHAT ELSE IS INCLUDED IN UPIS?**

A. Direct labor, Allowance for Funds Used During Construction (AFUDC), and Overheads are all essential components that contribute to the total cost of utility plant in service. Direct labor refers to the wages, salaries, and benefits paid to employees who are directly involved in the rehabilitation, construction or installation of the utility plant. AFUDC represents the cost of financing the construction project from the time the funds are invested until the plant is ready for service.

Overheads are included in utility plant in service capitalized costs to reflect the total cost of constructing or acquiring assets necessary for providing utility services. These costs, while not directly attributable to a specific asset, are essential for the overall operation and construction activities of the utility.

Overheads include, but not limited to:

- Indirect Labor: Salaries and wages of employees who support construction activities but are not directly involved in building specific assets such as supervisors, engineers, administrative staff.
- Employee Benefits: Costs associated with employee benefits for those involved in or supporting construction – (health insurance, retirement contributions, paid time off).
- Equipment Costs: Expenses for the use of equipment that supports construction projects.
- General and Administrative (G&A) Support: A portion of the utility's general operating costs that are allocable to construction activities (e.g., salaries, office rent, utilities).

Since overhead costs benefit multiple projects or activities, they need to be allocated to specific utility plant in service assets using systematic and rational methods.

**Q. WHAT ARE SOME OF THE COMMON OVERHEAD ALLOCATION METHODOLOGIES USED BY AQUA TEXAS?**

A. Aqua Texas uses eight overhead pools to collect and allocate costs. An overhead pool is used to collect, group and allocate indirect costs (overhead) to various cost objects such as orders. All costs are charged to an order and overheads are charged to all orders both expense orders and capital orders. Below is an example of how the overhead rate for the Payroll Tax Pool is calculated and how that rate is applied to each type of order – expense or capital.

The overhead percentage rate is calculated as follows: Total Overhead Cost / Total Costs (Base)in pool = Overhead Rate.

*Example - Payroll Tax Pool*

Pool Base = Total Straight Time and Overtime Labor and Bonus = 10,841,000
Overhead Cost = Payroll Taxes = $845,000
Overhead Rate = $845,000/$10,841,000 = 7.79%

This rate is then applied to all labor expensed and capitalized.

Example: Total labor for the month: $800,000
Expensed labor: $600,000
Capitalized Labor: $200,000

Total Payroll Taxes for the month: $62,355
Expensed Payroll Taxes: $600,000 * 7.79% = $46,767
Capitalized Payroll Taxes: $200,000 * 7.79% = $15.588

Below is a list of the eight overhead pools used by Aqua Texas, that shows the base, and the overhead cost used to calculate the overhead rate for each pool:

**Table TVR-4 – Overhead Rates**

| Overhead Pool | Account (Overhead Cost) | Base Costs |
|---|---|---|

The Capital A&G Pool works a little differently from the other cost pools in that the rate is applied to active capital work orders only.

Below is an example of how the overhead rate for the Capital A&G pool is calculated and how that rate is applied to the order.

*Example – Capital A&G Pool*

Pool Base = Total Projected Annual Capital Expenditures = $147,358,828.

Overhead Cost = Various (see chart above) = $3,759,817

Overhead Rate = $3,759,817 / $147,358,828 = 2.55%

This rate is then applied to all active capital work orders with activity during the month.

Example: Capital work order #1: $800,000 x 2.55% = $20,400

Capital work order #2: $100,000 x 2.55% = $2,550

All overhead rates are evaluated periodically throughout the year and adjusted as needed to ensure the overheads are not over or under applied.

**Q. WHY IS OVERHEAD CAPITALIZED?**

A. Capitalizing overheads aligns the cost of the asset with the revenue it will generate over its useful life. These costs are part of bringing the asset to its intended use. Including overheads ensures that the total cost of the utility plant is reflected in its value, which is important for determining depreciation expense and ultimately the rates customers pay. Customers pay for the infrastructure replacement through depreciation expense. In summary, overhead costs are an essential part of the total capitalized cost of utility plant in service. By identifying and allocating these indirect but necessary costs to construction projects we ensure accurate asset valuation and proper matching of expenses with the long-term benefits derived from these assets.

**1. <u>Return on Invested Capital</u>**

**Q. DOES THE COMMISSION HAVE GUIDELINES REGARDING RETURN ON INVESTED CAPITAL?**

A. Yes. 16 TAC § 24.41(c)(1) provides as follows:

> The commission will allow each utility a reasonable opportunity to earn a reasonable rate of return, which is expressed as a percentage of invested capital, and will fix the rate of return in accordance with the following principles. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.

**2. Invested Capital**

**Q. HAS THE COMPANY ACQUIRED ANY SYSTEMS SINCE ITS LAST RATE CASE?**

A. Yes.

**Q. HOW MANY SYSTEMS HAS THE COMPANY ACCUIRED SINCE ITS LAST RATE CASE?**

A. Aqua Texas has acquired 103 water and wastewater systems since its last rate case.

**Q. WHAT PROCESS HAS THE COMPANY USED TO CALCULATE THE BOOK VALUE OF THE SYSTEMS IT HAS ACQUIRED?**

A. The Company used three distinct approaches to establish the book value of acquired water and wastewater systems. For some acquisitions, an independent engineering study assessed the asset value, with any difference between this valuation and the purchase price recognized as either goodwill or negative Utility Plant Acquisition Adjustment (UPAA). The Texas American acquisition was recorded at its existing book value at the time of purchase. More recently, the Company has adopted the Commission-approved fair market value method for determining the book value of acquired systems.

**Q. PLEASE DESCRIBE THE FAIR MARKET VALUATION METHODOLOGY.**

A. Commission rule, 16 Texas Administrative Code (TAC) §24.238 outlines the methodology used to determine the fair market valuation of a retail public utility's assets or the entire utility in a voluntary, arm's length acquisition by a Class A or B utility (the acquiring utility) from a selling utility. This methodology can be used to establish the dollar value of the utility's "ratemaking rate base" as defined in Texas Water Code §13.305(a)(2) and 16 TAC § 24.238(b)(4). It does not apply to transactions between affiliates.

**Q. PLEASE SUMMARIZE THE SPECIFIC METHODOLOGY USED TO CALCULATE THE BOOK VALUE OF EACH OF THE SYSTEMS AQUA TEXAS HAS ACQUIRED SINCE ITS LAST RATE CASE.**

A. Below is a list of those acquisitions and the valuation methods used:

**Table TRV-5 - Systems Acquired by Aqua Texas Since Its Last Rate Case**

| TCEQ System Name | Acquisition Date | Valuation Method |

**Q. HAS AQUA TEXAS PROPOSED A POST-TEST YEAR ADJUSTMENT TO THE UTILITY PLANT IN SERVICE BEYOND DECEMBER 31, 2024?**

A. No.

**Q. IS AQUA TEXAS PROPOSING AN AMOUNT FOR CASH WORKING CAPITAL TO BE INCLUDED IN RATE BASE?**

A. Yes. Aqua Texas is proposing a working capital amount of $858,203 supported by the direct testimony and the Lead-Lag Study performed by Harold Walker, III.

**Q. IS THE AMOUNT PROPOSED FOR CASH WORKING CAPITAL REASONABLE AND NECESSARY?**

A. Yes, the amount is reasonable and necessary to fund the day-to-day operations of Aqua Texas. It is essential for Aqua Texas to function efficiently and reliably.

**Q. DOES AQUA TEXAS POSSESS A LARGE POSITIVE CASH WORKING CAPITAL BALANCE GREATER THAN ONE PERCENT OF THE REQUESTED REVENUE REQUIREMENT?**

A. No.

**Q. WHAT OTHER ADDITIONS OR ADJUSTMENTS HAS AQUA TEXAS INCLUDED IN ITS RATE BASE?**

A. See the table below for the proposed adjustments to rate base proposed by Aqua Texas. These adjustments will be discussed later in my testimony.

**Table TRV-6 - Proposed Rate Base Adjustments**

| Adj. No. | Description | Amount | Explanation |
|---|---|---|---|
| 1 | Original Cost of Utility Plant | 7,662,343 | Retirement reclassification |
| 1 | Less: Accumulated Depreciation | (7,662,343) | Retirement reclassification |
| 2 | Theoretical Reserve | (11,424) | Per Depreciation Study |
| 3 | Regulatory Assets | 3,296,652 | Schedule II-A-3.8 in RFP |
| 4 | Materials & Supplies | (9,186) | Normalization |
| 5 | Reclass of Capital Expenses | (2,640,662) | Reclass capitalized costs <=$750 to expense |
| 6 | Accumulated Deferred Income Taxes | 1,054,800 | Book vs. Tax Differences - Schedule II-E-3.5 |
| 7 | Accumulated LT Deferred Regulatory Asset - Excess Deferred | 4,073,057 | Remove tax gross-up portion of Reg. Liab |
| | **Total** | **5,763,237** | |

**Q. PLEASE BRIEFLY DESCRIBE THE ADJUSTMENTS BEING PROPOSED.**

A. Adjustment 1 was made to assign retirements to more appropriate ages, which ultimately reduced the total retirement amount. This adjustment does not impact the rate base as Utility Plant in Service was increased but an offsetting entry was made to accumulated depreciation. Adjustment 2 represents a theoretical adjustment to accumulated depreciation derived from the current depreciation study. Adjustment 3 represents the value of Regulatory Assets being requested in this case and is discussed later in my testimony. Adjustment 4 is a small normalization reduction to Materials and Supplies. Adjustment 5 is a proposed reduction to rate base for costs less than or equal to $750 that were previously capitalized. This adjustment is discussed in more detail later in my testimony. Adjustment 6 is an adjustment for Accumulated Deferred Income Taxes associated with AFUDC Equity treated as flow through that is non-rate base and ADIT associated with non-property book vs. tax differences where the underlying assets are not included in rate base. These differences are detailed on Schedule II-E-3.5, lines 3-8 col(h) of the RFP. Adjustment 7 this adjustment is to remove the tax gross-up portion of the Regulatory Liability for Excess Deferred FIT.

**Q. PLEASE DISCUSS ADJUSTMENT 5, THE REDUCTION TO RATE BASE IN MORE DETAIL.**

A. Following PUC Docket No. 55577,[2] wherein parties argued that costs less than or equal to $750 should not be included in UPIS, the Company undertook a review of all capital orders previously closed to UPIS with a total cost of $750 or less. To avoid controversy in this case, the Company has reduced its rate base by $2,640,662 to reflect the elimination of

[2] Docket No. 55577, *Application of Aqua Texas, Inc. to Amend its System Improvement Charges under 16 TAC § 24.76.*

these capitalized costs from its requested rate base. This reduction accounts for the original amounts recorded in UPIS, minus depreciation.

**Q. IS AQUA TEXAS PROPOSING ANY ADJUSTMENTS TO DEPRECIATION EXPENSE AND OPERATING EXPENSES AS A RESULT OF THIS REDUCTION TO RATE BASE?**

A. Yes. In addition to the rate base adjustment described above, to reflect this known and measurable change, Aqua Texas has adjusted its O&M costs to reflect this shift in how certain expenses are categorized. Because costs that are equal to or less than $750 will no longer be capitalized absent a justified exception and included as part of the Company's rate base, the Company has included a known and measurable adjustment to its test year O&M expense based on a three-year average of these expenses, which will now be treated as operating expenses. This adjustment, which totals $350,146 for water is shown on Schedule II-D-1.2(W). The $78,335 wastewater adjustment is shown on Schedule II-D-1.2(WW).

Below is a breakdown of how the adjustment was determined.

**Table TVR-7 – Proposed O&M Adjustments**

| Water | Cost | 3YR Avg | Wastewater | Cost | 3YR Avg | Total | 3YR Avg |
|---|---|---|---|---|---|---|---|
| 2022 | 195,076 | 65,025 | 2022 | 32,191 | 10,730 | 227,267 | 75,756 |
| 2023 | 93,760 | 31,253 | 2023 | 11,017 | 3,672 | 104,777 | 34,926 |
| 2024 | 1,003,469 | 334,490 | 2024 | 239,707 | 79,902 | 1,243,176 | 414,392 |
| **Water Total** | **1,292,305** | **430,768** | **Wastewater Total** | **282,915** | **94,305** | **1,575,220** | **525,073** |
| Deprec Exp | | (80,622) | | | (15,970) | | (96,592) |
| Net Exp Adj | | 350,146 | | | 78,335 | | 428,481 |

Aqua Texas is also requesting that the expense adjustment be allocated as follows:

**Table TVR-8 – Proposed O&M Adjustment Allocation**

| | Water | Wastewater | Total |
|---|---|---|---|
| Continuing Operations Prospective Recovery | 263,337 | 60,939 | 324,276 |
| Transition Cost Recovery Prior Costs 15 yr | 167,432 | 33,366 | 200,798 |
| **Total O&M Adjustment** | **430,769** | **94,305** | **525,074** |
| Depreciation Expense Reduction | (80,622) | (15,970) | (96,592) |
| **Net Expense Adjustment** | **350,147** | **78,335** | **428,482** |

**Q. PLEASE EXPLAIN HOW THE COMPANY PROPOSES TO RECOVER THE CAPITALIZED COSTS IT HAS REMOVED FROM RATE BASE AS A RESULT OF THIS CHANGE TO ITS CAPITALIZATION POLICY.**

A. As mentioned earlier in my testimony Aqua Texas is requesting an adjustment to its revenue requirement that reflects a reclassification of certain historically capitalized assets to ongoing operational expenses. To capture the known and measurable change in how these costs will now be recorded by Aqua Texas, the Company has adjusted its test year O&M expense by $525,074. This adjustment reflects the addition of known, on-going operational costs that will now be incurred because of the change in accounting for the once capitalized costs, based on a three-year historical average.

The Company also seeks to separately recover the $2,640,662 in unamortized book value of assets that were previously capitalized and removed from the requested rate base in this case over a period of fifteen years. Recovery of these costs is appropriate because they were prudently incurred to provide service to our customers and avoids penalizing the Company solely based on a change in how these costs are recognized. Stated differently, these costs, irrespective of being capitalized or expensed, are reasonable and necessary costs that were incurred to provide service to customers. Without this recovery, the Company would be forced to absorb the remaining investment in these assets, creating

"stranded costs" that would unfairly penalize shareholders for prudent past investments made under a different accounting framework.

**Q. DID AQUA TEXAS APPROPRIATELY DEDUCT CERTAIN ITEMS FROM RATE BASE AS REQUIRED BY COMMISSION RULES?**

A. Yes. 16 TAC § 24.41(c)(3) provides that certain items must be deducted from rate base, including accumulated depreciation reserve, ADFIT, customer deposits, CIAC, and certain unamortized investment tax credits. Aqua Texas's treatment of these deductions from rate base is appropriate and complies with Commission rules. All deductions from rate base are shown on Schedule II-B, II-B(W) and II-B(WW).

**Q. HAS AQUA TEXAS INCLUDED ANY AMOUNT RELATED TO CONSTRUCTION WORK IN PROGRESS IN ITS RFP?**

A. No.

**Q. HAS AQUA TEXAS INCLUDED ANY INVESTMENT TAX CREDITS IN ITS RFP.**

A. No. Aqua Texas does not have any investment tax credits.

**Q. WHAT IS THE TOTAL RATE BASE ON WHICH AQUA TEXAS IS REQUESTING TO BE ALLOWED TO EARN A FAIR RATE OF RETURN?**

A. The total rate base on which Aqua Texas is requesting to earn a reasonable return is approximately $613,747,657 which includes $440,892,210 for water and $172,855,446 for wastewater. The components of rate base can be found on Schedules II-B(W) and II-B(WW) in the RFP.

**Q. IS THIS AMOUNT REASONABLE AND NECESSARY AND PRUDENT?**

A. Yes. As explained in the direct testimony of Company witness Brian Gresehover, all of the capital investment, included in Aqua Texas's proposed rate base is used and useful,

prudently incurred, and reasonable and necessary to the provision of water and wastewater service.

## IV. ACCUMULATED DEFERRED FEDERAL INCOME TAX

**Q. HAS A REGULATORY LIABILITY BEEN RECORDED FOR THE BALANCE OF EXCESS DEFERRED INCOME TAXES AS A RESULT OF THE TCJA?**

A. Yes, we recorded a regulatory liability for the balance of the excess ADIT as a result of the federal income tax rate decrease from 35% to 21% in accordance with the order in Docket No. 48197. The balance of the regulatory liability before tax gross-up of $15,322,452 has been included as a reduction to rate base in Schedule II-B to provide customers the benefit of the zero cost capital.

## V. REGULATORY ASSETS

**Q. COMPANY WITNESS MR. AHMADIBENI IDENTIFIES THE REGULATORY ASSETS AQUA TEXAS IS SEEKING TO RECOVER IN THIS PROCEEDING IN HIS DIRECT TESTIMONY. WHICH OF THESE REGULATORY ASSETS WILL YOU ADDRESS IN YOUR TESTIMONY?**

A. I discuss and support the reasonableness of the Southern Oaks and The Commons acquisition costs, as well as the costs incurred for Winter Storm Uri, Hurricane Beryl, and Hurricane Nicholas.

**Q. DOES AQUA SEEK TO RECOVER THE COSTS ASSOCIATED WITH THESE REGULATORY ASSETS AS PART OF THE COMPANY'S REQUESTED RATE BASE?**

A. Yes. Aqua Texas is requesting that closing costs associated with acquisitions and unavoidable expenses resulting from hurricanes and storms be included in rate base. The table below summarizes the individual regulatory asset amounts included in this request.

**Table TRV-9 – Regulatory Assets for Inclusion in Rate Base**

| Account | Description | Reference | Balance @ 12/31/2024 | Comments |
|---|---|---|---|---|
| 186399 | Southern Oaks (5600D00002) | | 286,556 | Closing costs for Southern Oaks acquisition |
| 186399 | Hurricane Beryl (various) | | 2,079,139 | Costs related to Hurricane Beryl |
| 186520 | The Commons Acquisition (M93857) | | 187,568 | Closing costs for The Commons acquistition |
| 186520 | Winter Storm Uri (M93941) | | 701,188 | Costs related to winter storm Uri |
| 186520 | Hurricane Nicholas (M94046) | | 42,201 | Costs related to Hurricane Nicholas |
| | Total | | **$ 3,296,652** | Deferred Purchased Water and Pumping Fees |

**Q. ARE THESE COSTS APPROPRIATELY INCLUDED IN THE COMPANY'S RATE BASE?**

A. Yes. The expenses associated with closing on an acquisition should be included in rate base because these costs reflect investments that have been made to expand operations for the long-term benefit of our customers. Closing costs are essential for the successful completion of the acquisition. Without incurring these costs, Aqua Texas wouldn't be able to acquire the assets or operations that are now part of the rate base. The expenses resulting for storms or hurricanes should also be included in rate base because these costs are necessary and unavoidable expenses for maintaining reliable service and ensuring public safety. These costs were prudently incurred to restore service quickly and safely. Without these expenditures, Aqua Texas' ability to provide continuous and reliable service would be severely hampered, negatively impacting customers. These costs directly benefit customers by minimizing outage times, preventing further damage, and restoring essential

services. The ability to recover these costs incentivizes the utility to respond effectively to future natural disasters.

**Q. WHAT AMORTIZATION PERIOD IS AQUA TEXAS PROPOSING FOR THESE REGULATORY ASSETS?**

A. Twenty years.

**Q. PLEASE DESCRIBE WINTER STORM URI.**

A. On February 12, 2021, Governor Greg Abbott issued a Declaration of a State of Disaster for all counties in Texas as a result of power outages associated with the February 2021 storm. In response to this order, the Commission, in Docket No. 51812,[3] ordered that a public emergency and imperative public necessity existed that constituted a good cause for granting exceptions to Commission rules related to assessment of late fees on customers for delinquent bills, charging interest on a deferred payment plan, requirements for estimated bills, and disconnection of water or sewer service for nonpayment. The Commission terminated the suspension of late fees on March 5, 2021,[4] and the suspension of disconnections and interest charges on June 18, 2021.[5]

**Q. ARE THE COSTS RECORDED TO THE WINTER STORM URI REGULATORY ASSET REASONABLE?**

A. Yes. These costs are reasonable and were necessary to ensure safe and adequate service and to respond to Commission orders limiting disconnections and late fees.

[3] Project, No. 51812, *Issues Related to the State of Disaster for the February 2021 Winter Weather Event*, Order Directing Certain Actions and Granting Exceptions to Certain Rules (Feb. 21, 2021).
[4] *Id.* at Order Terminating Exceptions to Certain Rules (Mar. 5, 2021).
[5] *Id.* at Second Order Terminating Exceptions to Certain Rules and Extending Payment Plans (Jun. 15, 2021).

**Q. PLEASE DESCRIBE THE REGULATORY ASSETS AQUA TEXAS HAS RECORDED RELATED TO HURRICANE NICHOLAS AND HURRICANE BERYL.**

A. On September 13, 2021, acting Governor Dan Patrick issued a Declaration of a State of Disaster for forty counties and Governor Greg Abbott subsequently expanded the Declaration to sixty-seven counties in Texas as a result of power outages and wind damage associated with Hurricane Nicholas. In response to Hurricane Nicholas, Aqua Texas incurred costs, including fuel, repairs, and rent for generators, debris and tree removal, service line repairs, water tank repairs, fence repairs, lift station cleanouts, sludge disposal, customer communications to prepare for and respond to power outages and storm damage.

Similarly, on July 5, 2024, acting Texas Governor Dan Patrick issued a Declaration of a State of Disaster for forty counties and Governor Greg Abbott subsequently expanded the Declaration to sixty-seven counties in Texas as a result of power outages and wind damage associated with Hurricane Beryl. In response to Hurricane Beryl, Aqua Texas incurred costs, including fuel, repairs, and rent for generators, debris and tree removal, service line repairs, water tank repairs, fence repairs, lift station cleanouts, sludge disposal, reseeding wastewater plants, and overtime labor costs to prepare for and respond to power outages and storm damage.

**Q. ARE THE AMOUNTS RECORDED IN THESE REGULATORY ASSETS REASONABLE?**

A. Yes. In each event, the Commission issued orders directing utilities to take certain actions to ensure adequate service and to relieve customers of certain costs associated with each event. Aqua Texas incurred costs as a direct result of its response to each event and those

events were beyond its control. The costs recorded in these regulatory assets were reasonable and necessary to ensure safe and adequate service and to respond to Commission orders limiting disconnections and late fees.

## VI. SYSTEM CONSOLIDATION

**Q. PLEASE SUMMARIZE AQUA TEXAS'S PROPOSED CONSOLIDATION OF ITS WATER AND WASTEWATER SYSTEMS.**

A. As part of this Application, the Company is requesting to consolidate its existing three water and wastewater regions under a single statewide water tariff and under a single statewide wastewater tariff. As of the date of this filing, this Application includes 377 water systems and 66 wastewater systems. If approved, the Company will consolidate its books and records so that the company is operated as one water division and one wastewater division.

**Q. IS AQUA TEXAS'S CONSOLIDATION REQUEST REASONABLE?**

A. Yes. Consolidation is reasonable and in the public interest because it constitutes sound ratemaking policy, consistent with the Legislature's policy goals of encouraging private investment in small community-based water and wastewater systems. As explained in Company witness Mr. Ramirez-Cisneros's direct testimony, the systems operated by Aqua are small yet require significant capital investment to ensure safe water service and regulatory compliance. The cost of this investment spread over a small customer base could result in those customers paying significantly higher rates for facilities that produce the same quality of water service as other Aqua Texas customers that receive their service at lower rates. Consolidation will allow Aqua Texas to continue to make necessary improvements in these systems by spreading the impact of those investments over all

customers. Consolidation will also allow Aqua Texas to share operating resources and costs over a broader customer base and combining tariffs also provides for administrative efficiencies and significantly reduce the burden on the Commission and the Texas Commission on Environment Quality to regulate separate regions, as well as individual systems that are separate from the Company's existing regions.

**Q. DOES THE COMMISSION NEED TO CONSIDER WHETHER THE SYSTEMS ARE SUBSTANTIALLY SIMILAR IN ORDER TO APPROVE THE COMPANY'S CONSOLIDATION REQUEST?**

A. No, Section 13.145 of the Texas Water Code that previously conditioned a water or wastewater utility's ability to consolidate multiple systems under a single tariff by requiring the systems to be substantially similar in terms of facilities, quality of service, and cost of service, and the tariff had to promote regionalization was repealed in 2023 by House Bill 2373. Since that time, the Commission has looked favorably on water and wastewater utility requests to consolidate systems under a single rate structure streamline the rate setting process and align the treatment of water and wastewater utilities more closely with electric utilities for rate-setting purposes.[6]

## VII. RATE DESIGN

### A. WATER RATE DESIGN

**Q. PLEASE DESCRIBE THE COMPANY'S PROPOSED WATER RATE DESIGN.**

A. The rate design develops a state-wide single tariff rate structure, which consolidates 23 various water rate structures across the service territory to one rate structure. This is described in greater detail in the direct testimony of Company witness Gregory R. Herbert.

[6]

**Q. HOW DOES THIS RATE DESIGN COMPARE TO THE RATE DESIGN INCLUDED IN EXISTING RATES?**

A. The proposed rate design offers customers a streamlined, uniform set of rates that should be easier to understand than the Company's current rates. Currently, there is a mix of 23 rate structures that do not distinguish between residential and non-residential customers. This means that volumetric rates under the existing rate structure are the same for all customer classes. The existing rate structures are also inconsistent as some of the current rate structures include one volumetric rate tier, and some zones include multi-tiered volumetric rates. In addition, the current 23 tariff areas have various customer charges (base fixed charges), or monthly minimum charges and some tariff areas include minimum usage as part of its monthly minimum charges.

In contrast, the proposed rate structure develops residential volumetric rates and non-residential volumetric rates, which reflect a four-tier, inclining volumetric rate structure for the first 5,000 gallons, next 5,000 gallons, next 10,000 gallons, and over 20,000 gallons (inclining blocks promote water conservation). Minimum usage/minimum charges will be eliminated under the proposed rate structure and all customers will be charged the same base fixed charge per respective meter-size connection under proposed rates.

**Q. PLEASE EXPLAIN THE COMPANY'S OBJECTIVES IN MOVING TO SINGLE TARIFF PRICING FOR ITS WATER AND WASTEWATER SERVICES.**

A. The objective of single tariff pricing, also known as consolidated rates, is to promote a uniform rate-setting approach across all customers within a water or wastewater utility. NARUC views this method as a valuable policy tool, particularly for ensuring affordability

and stability in rates, especially for smaller systems where costs can be burdensome. By spreading expenses across a larger customer base, single tariff pricing mitigates rate shock and promotes equity. This pricing structure incentivizes regionalization, allowing larger utilities to absorb smaller, often struggling, systems and distribute the costs of essential upgrades and maintenance more broadly. This approach also addresses long-term investment needs across multiple systems, leveling out costs over time and preventing unsustainable rate hikes in individual communities. In fact, NARUC presents single tariff pricing as a best practice for state utility commissions to consider, especially for small water systems, to ensure safe, reliable service without imposing unsustainable costs on individual communities.

**Q. WHY IS AQUA TEXAS PROPOSING TO ADOPT RESIDENTIAL AND NON-RESIDENTIAL RATES?**

A. To develop a state-wide rate structure based on the results of the cost of service study, separate volumetric rates were required to be designed for the residential class and non-residential classes. This was done because maintaining the same volumetric rates for all classes, like how the present rate structure is set, results in the commercial class paying much more than its allocated cost of service.

**Q. IS THE ESTABLISHMENT OF RESIDENTIAL AND NON-RESIDENTIAL RATES REASONABLE?**

A. Yes. The rates are designed so that the residential and non-residential classes move to their respective cost allocations presented in the cost of service study.

**Q. WHAT PRINCIPLES DID THE COMPANY UTILIZE TO DEVELOP THE PROPOSED WATER RATES?**

A. As discussed in Company witness Gregory R. Herbert's direct testimony, Aqua Texas relied on well-established rate design principles and the objectives of Company management, which are to consolidate the Company's water and wastewater systems under a single water rate and single wastewater rate and realize the public interest benefits achieved through rate equalization.

**Q. HOW DID THE COMPANY DETERMINE IDENTIFY THE LEVEL OF REVENUE THAT SHOULD BE RECOVERED FROM THE FIXED MONTHLY CUSTOMER CHARGE?**

A. Schedule G of the cost of service study develops the appropriate customer charge. The preliminary cost of service study has calculated the appropriate charge to be $27.02 per month for a 5/8" meter connection. However, multiple tariff areas under current rates have customer charges in the $40 - $50 range. Therefore, the state-wide proposed customer charge for a 5/8"-meter was set at $35.25, to gradually shift towards the calculated customer charge from the cost of service study. The reduction of the customer charge allowed for greater increases to the volumetric rates, which promotes conservation, as there is more responsibility on the customer to reduce their monthly bills under the proposed rate structure.

**B. SEWER RATE DESIGN**

**Q. PLEASE DESCRIBE THE COMPANY'S PROPOSED SEWER RATE DESIGN.**

A. State-wide metered and unmetered rates were developed under the proposed rate design. Most systems have both water and wastewater provided by the Company, and usage is available for volumetric billing for most customers.

**Q. HOW DID THE COMPANY DETERMINE THE LEVEL OF REVENUE THAT SHOULD BE RECOVERED FROM THE FIXED MONTHLY CUSTOMER CHARGE FOR WASTEWATER SERVICE?**

A. The Company set the recovery of wastewater service revenue at 70% from fixed monthly customer charges and 30% from volumetric charges. This allocation is a deliberate shift from the previous model, where a substantial 96% of revenue was derived from customer charges and flat rates, and only 4% from volumetric charges. The primary rationale behind this change is to enhance revenue stability while simultaneously mitigating rate shock for customers transitioning from flat-rate billing to metered service. This gradual adjustment aligns with the company's approach to water customer charges, ensuring a smoother financial impact.

**Q. IS THE COMPANY PROPOSING A RATE FOR UNMETERED WASTEWATER SERVICE?**

A. Yes. Some systems are operated by the company as wastewater-only, and so volumetric data is not available for these systems. Therefore, the flat rate structure was maintained for these customers. The Company would need to obtain water usage records for these wastewater-only flat rate customers in order to move them to metered rates in the future. The proposed metered rates would be in place for these flat rate customers for transfer to.

**Q. HOW WAS THE RATE FOR UNMETERED WASTEWATER SERVICE DETERMINED?**

A. The proposed flat rate was designed based on the proposed wastewater metered rates and the monthly average water usage of a residential customer at 6,000 gallons. So, for a customer with a 5/8" meter connection, the flat rate is calculated by taking the metered, 5/8" customer charge of $65.31 + the 6,000 gallons * proposed wastewater volumetric rate of $5.27 per thousand gallons, which equals $96.93. The flat rates for customers with connections greater than 5/8" meter sizes were calculated based on the meter equivalent rations in the AWWA M1 manual.

**Q. DO THE PROPOSED RATE DESIGNS FOR BOTH WATER AND WASTEWATER SERVICES ENSURE THAT EACH CUSTOMER CLASS PAYS ITS FAIR SHARE OF THE COSTS IT IMPOSES IN THE SYSTEM? PLEASE EXPLAIN.**

A. Yes, the rates were designed to move the proposed revenues for each customer class towards their respective cost allocations (cost allocations are shown on columns 2 and 3 on Schedule A) of the cost of service studies.

## VIII. PROPOSED TARIFFS

**Q. WHY IS THE COMPANY SEEKING TO WITHDRAW ITS EXISTING TARIFFS AND ADOPT NEW TARIFFS AS PART OF THIS RATE FILING?**

A. The existing tariffs were compiled over more than twenty years of growth and acquisitions, with multiple and varied rate structures specific to the systems that were acquired. These existing rate structures were adopted upon acquisition. Aqua proposes to consolidate these systems, and the associated rates, under one comprehensive statewide tariff for water

service and one comprehensive statewide tariff for wastewater service. Accordingly, the Company determined that withdrawing all of the old tariffs and submitting new, comprehensive tariffs for water and for wastewater was the most efficient and transparent method for making the switch.

**Q. IS THE COMPANY PROPOSING TO ADOPT A UNIFORM SET OF RULES OF SERVICE FOR ALL OF ITS WATER AND WASTEWATER SYSTEMS?**

A. Yes. Aqua is withdrawing its existing rules of service and filing a statewide, uniform set of rules of service to cover all water and wastewater operations in the state.

**Q. DO THE PROPOSED RULES OF SERVICE REPRESENT A MATERIAL DEPARTURE FROM THE COMPANY'S CURRENT POLICIES?**

A. No. The Company is simply consolidating the various versions that have been adopted over the years into one set of comprehensive rules and updating them to include any changes in laws or regulatory requirements.

**Q. PLEASE DISCUSS THE COMPANY'S PROPOSED CHANGES TO MISCELLANEOUS FEES.**

A. The Company is proposing to standardize Miscellaneous Fees throughout Texas. The Company is proposing to set Miscellaneous Fees in accordance with current costs, which have largely not been updated since the last comprehensive rate case twenty years ago.

**Q. PLEASE DETAIL THE PASS-THROUGH PROVISIONS AQUA TEXAS IS PROPOSING FOR INCLUSION IN ITS WATER AND SEWER TARIFFS.**

A. Aqua Texas plans to keep pass-through charges for the cost of purchased water and wastewater as a distinct item on both water and wastewater tariffs as well on the customer

bills. Both the revenue and associated costs related to purchase water and wastewater have been excluded from the current revenue requirement request.

**Q. HAVE THE EXPENSES PROPOSED TO BE RECOVERED FROM THE PASS-THROUGH PROVISIONS BEEN REMOVED FROM BASE RATE REVENUE REQUIREMENTS?**

A. Yes

**Q. ARE THERE ANY OTHER TARIFF PROPOSALS THAT THE COMPANY SEEKS TO ADOPT AS PART OF THIS PROCEEDING?**

A. Yes. Aqua seeks to include in its tariffs certain fees contained within its municipal franchise agreements that provide for the inclusion of franchise fees and the recovery of such fees on behalf of the municipality. Aqua also seeks to establish designated amounts for water and sewer tap fees and other revisions to make the tariff internally consistent. Finally, Aqua proposes to adopt a surcharge to recover its rate case expenses over a proposed 24-month period.

## IX. CAPITALIZATION POLICY

**Q. WHAT ASPECT OF THE COMPANY'S CAPITALIZATION POLICY ARE YOU ADDRESSING IN YOUR TESTIMONY?**

A. I address the Company's capitalization policy from an accounting perspective and demonstrate that it is consistent with sound accounting practices. Mr. Gresehover explains and supports the policy from and engineering and operational perspective.

**Q. PLEASE PROVIDE AN OVERVIEW OF THE COMPANY'S CAPITALIZATION POLICY.**

A. Aqua's Capitalization Policy, which is included as an exhibit to Mr. Gresehover' s direct testimony, describes the general criteria for expenditures to be considered capital. The policy includes criteria and examples of items that qualify as capital expenditures, such as direct costs including materials, supplies, direct labor and contractor charges as well as indirect costs such as transportation, studies, plans, surveys, engineering, permits, and overheads. The policy also includes criteria and examples of items that do not qualify as capital expenditures, such as incidental meals or entertainment, surveys and investigations that do not result in capital construction or expenditures that restore an asset to its original condition, but do not extend the useful original life of the asset.

**Q. DOES AQUA TEXAS'S CAPITALIZATION POLICY COMPLY WITH UNIFORM ACCOUNTING RULES AND GUIDANCE THAT DICTATES WHETHER A COST IS CAPITALIZED OR EXPENSED?**

A. Yes. The Company's Capitalization Policy are based on uniform accounting rules and guidance. In particular, the Capitalization Policy adheres to the guidance provided by Uniform System of Accounts for Class A Water and Wastewater Utilities published by the National Association of Regulatory Utility Commissioners ("NARUC").

**Q. DOES AQUA TEXAS'S CAPITLIZATION POLICY APPLY TO BOTH ITS WATER AND WASTEWATER OPERATIONS?**

A. Yes, the Aqua Texas Capital Policy applies to both water and wastewater operations.

**Q. ARE COSTS INCURRED TO RESTORE, EXPAND OR ENHANCE THE USEFUL LIVES OF EXISTING ASSETS ELIGIBLE FOR CAPITALIZATION UNDER THE COMPANY'S POLICY?**

A. Yes. Costs that expand or enhance the useful life of an existing asset can be capitalized under the Company's policy, however, costs that simply restore an asset to its original condition and allow it to reach its original life are expensed under the Company's policy.

**Q. DOES THE AQUA TEXAS'S CAPITALIZATION POLICY HAVE DIFFERENT CRITERIA FOR DETERMING A RENEWAL CAPITAL EXPENDITURE OR EXPENSE BASED ON INFRASTRUCTURE TYPE?**

A. Yes, the Capitalization Policy documents the criteria used to classify expenditures as either capital or expense based on infrastructure type called "specific classes of utility plant."

**Q. PLEASE DESCIBE HOW THE CAPITALIZATION POLICY IS APPLIED TO DIFFERENT CLASSES OF UTILITY PLANT.**

A. The Capitalization Policy identifies two basic criteria as being "a useful life exceeding one year and a total cost in excess of $750" that is defined as an expenditure. Specifically, the Capitalization Policy provides as follows:

> General Description - Except as provided below for specific classes of utility plant, expenditures for any unit of property which have a useful life exceeding one year and a total cost in excess of $750 are considered capital expenditures (or multiple components of a property that when constructed together at the same timeframe that total $750).
>
> The term "expenditure" as used in this policy statement shall include costs, whether paid or accrued, including materials, supplies, direct labor, transportation, services, studies, plans, surveys, engineering, supervision, contract work, insurance and security during construction, permits, legal fees, taxes, allowance for funds used during construction (AFUDC), overheads, and/or any other expenses which contribute directly to placing the utility plant or other asset into service.

> Costs incurred in making improvements to existing components of utility plant shall be capitalized where the expenditures meet all other requirements and the improvements either:
>
> 1. Add to the usefulness or efficiency of the property,
> 2. Extend the useful life of the property or
> 3. Increase revenue or decrease expenses associated with the asset.
>
> Expenditures which simply restore property to its original condition and allow it to reach its original life should be expensed.

The Capitalization Policy also states that there are certain "exceptions" to the Capitalization Criteria for Specific Classes of Water Utility Plant and Wastewater Utility Plant that are detailed within the policy and these exceptions can differ based on a specific asset type and utility account code such as intangible plant, land & land rights, structures, and large equipment.

**Q. DOES AQUA TEXAS HAVE A PROCESS IN PLACE TO INPUT, TRACK, AND REVIEW COMPLIANCE WITH THE CAPITALIZATION POLICY?**

A. Yes. Aqua Texas has appropriate Work Order Types, Codes and Descriptions for the Capital Policy. Work order types and descriptions are provided below:

**Table TRV-10 – Capital Policy Work Order Types and Descriptions**

| Type | WO # | WO Type | WO Description |
|---|---|---|---|
| Planned Capital | Starts with a 3 | AQBH | Aqua Capital Const. Blanket Horizontal |
| | | AQBV | Aqua Capital Const. Blanket Vertical |
| | | AQCH | Aqua Capital Const. Unique Horizontal |
| | | AQCV | Aqua Capital Const. Unique Vertical |
| Corrective Capital | Starts with a 4 | AQCC | Aqua Corrective Capital |
| Expense | Starts with an 8 | AQCM | Corrective Maintenance |
| | | AQIN | Inspection |
| | | AQOP | Operational |
| | | AQPM | Preventative Maintenance |
| | | AQRV | Required Visit |
| | | AQSA | Sampling |
| | | AQSR | Service Request |

**Q. IS THE DOLLAR THRESSHOLD IN AQUA'S CAPITALIZATION POLICY REASONABLE?**

A. Yes. Aqua Texas has adopted this threshold amount to reduce the number of assets to track and report and minimize the reporting burden associated with tracking small value assets. Further, for very small systems, such as those of Aqua Texas, $750 can be an important beneficial capital investment. The $750.00 figure that is in Aqua's Capitalization Policy is also consistent with *The System of Accounts for Water and Wastewater Utilities – with 200 or More Connections: A Publication of the Public Utility Commission of Texas*, which cites on page 18, the NARUC Guidelines for Material Items stating that if a utilities revenue is $1,000,000 or more then the item is not "material" if its cost does not exceed the amount of $750.00.

**Q. ARE YOU AWARE OF ANY STATUTORY OR COMMISSION REQUIREMENT THAT PREVENTS AQUA TEXAS FROM RELYING ON A CAPITALIZATION THRESHOLD AMOUNT OF $750.00?**

A. No. It is my understanding that the Commission has adopted no rule that sets forth a prescribed dollar amount for a capitalization threshold.

## X. CONCLUSION

**Q. DOES THAT CONCLUDE YOUR DIRECT TESTIMONY AT THIS TIME?**

A. Yes.

**STATE OF TEXAS** §
§
**COUNTY OF TRAVIS** §

**AFFIDAVIT OF TREY V. REGINELLI**

BEFORE ME, the undersigned authority, on this day personally appeared Trey Reginelli who having been placed under oath by me did depose as follows:

1. "My name is Trey V. Reginelli. I am of sound mind and capable of making this affidavit. The facts stated herein are true and correct based upon my personal knowledge. I am the Controller at Aqua Texas, Inc.
2. I have prepared the foregoing Direct Testimony, and I swear or affirm that I have personal knowledge of the facts in the testimony, schedules, and attachments that I am sponsoring in this application, and that I am competent to testify to them.
3. I further swear or affirm that all of the statements and representations made in those parts of this application that I am sponsoring are true and correct to the best of knowledge."

Further affiant sayeth not.

Trey V. Reginelli

SUBSCRIBED AND SWORN TO BEFORE ME by Trey Reginelli on this 11th day of June 2025.

# DIRECT TESTIMONY OF BOBBY D. ESTEP

## I. INTRODUCTION AND BACKGROUND

**Q. WHAT IS YOUR NAME AND BUSINESS ADDRESS?**

A. My name is Bobby Estep. My business address is 14421 Illinois Road, Fort Wayne, Indiana 46814.

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am employed by Essential Utilities as Regional Controller.

**Q. PLEASE DESCRIBE YOUR EDUCATION AND BUSINESS EXPERIENCE.**

A. I hold a Bachelor of Business Administration degree from LaGrange College, which included 30 hours of upper-level accounting coursework. My professional career has been dedicated to accounting and management roles of increasing responsibility. Prior to my current position as Regional Controller at Essential Utilities, Inc., where I oversee financial operations for six states, including Aqua Texas, Inc. ("Aqua Texas" or the "Company"), I served as Controller III at Aqua Illinois, Inc. (July 2018 - October 2022) and as Controller I at Aqua Indiana, Inc. (March 2006 - June 2018). My responsibilities as Regional Controller include but are not limited to overseeing budgeting, forecasting, rate matters, and the supervision of daily financial operations across these six companies.

**Q. HAVE YOU PREVIOUSLY TESTIFIED IN REGULATORY PROCEEDINGS?**

A. Yes. I have provided testimony on regulatory accounting issues to the Illinois Commerce Commission for Aqua Illinois, Inc., and the Indiana Utility Regulatory Commission for Aqua Indiana Inc.

**Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?**

A. I am testifying on behalf of Aqua Texas.

## II. PURPOSE OF TESTIMONY

**Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

A. My testimony, in conjunction with Company witnesses Trey V. Reginelli and Rasool Ahmadibeni, present the Company's requested revenue requirements contained in the provided schedules and workpapers. My testimony identifies and supports the federal income tax and accumulated deferred income tax ("ADIT") amounts included in the Company's RFP. My testimony also identifies the Company's requested return on invested capital, which makes up the Company's overall requested cost of service and final revenue requirements. Company witness Dylan W. D'Ascendis sponsors the analysis supporting the Company's requested return on its invested capital. Finally, I identify the Company's requested recovery of affiliate expenses and demonstrate that these costs satisfy the applicable Commission requirements for cost recovery.

**Q. HAVE YOU PREPARED ANY EXHIBITS, SCHEDULES, OR STUDIES IN CONNECTION WITH YOUR TESTIMONY?**

A. Yes. I sponsor or co-sponsor the following cost of service schedules and any related schedule workpapers:

| Schedule | Description |
|---|---|
| II-C-3 | Preferred Stock |
| II-C-4 | Long Term Debt |
| II-C-5 | Weighted Average Cost of Short-Term Debt |
| II-C-6 | Amortization Schedules for all Short and Long-Term Debt |
| II-C-7 | Capital Requirements |
| II-C-8 | Financial Tests and Ratios |
| II-C-9.1 | Historical Growth In Earnings, Dividends and Book Value |
| II-E-3 | Federal Income Tax Calculation |
| II-E-3.1 | Federal Income Tax Reconciliation |
| II-E-3.2 | Federal Income Timing Differences Reconciliation |
| II-E-3.3 | Plant Adjustments |

| IV-14 | Affiliate Payroll |
| IV-14.1 | Affiliate Contracts |

**Q. WHAT ARE THE SOURCES OF THE DATA AND INFORMATION IN THE TESTIMONY, EXHIBITS AND SCHEDULES YOU SPONSOR?**

A. All data and information used in preparation of the Rate Filing Package ("RFP") was provided from the books and records of Aqua Texas or developed by other witnesses as indicated in their respective testimonies.

**Q. WAS YOUR TESTIMONY, EXHIBIT, AND THE SCHEDULES YOU SPONSOR PREPARED BY YOU OR SOMEONE UNDER YOUR DIRECT SUPERVISION?**

A. Yes.

## III. REVENUE REQUIREMENTS MODEL

### A. ALLOWABLE EXPENSES

#### 1. Federal Income Taxes

**Q. HOW WERE FEDERAL INCOME TAXES CALCULATED?**

A. Federal income taxes were calculated by first determining the utility's taxable income in accordance with the Internal Revenue Code, using a federal corporate income tax rate of 21%. For the differences between book and tax depreciation, we utilized a normalization method of accounting as required by the IRC. This means that the income tax expense included in the cost of service reflects the tax impact associated with the assets used to serve customers during the test year. The difference between the tax expense calculated for rate-making purposes and the actual taxes paid are recorded as ADIT), which is deducted from the rate base. This ensures that customers are not paying a return on capital funded by deferred tax liabilities. See the II-E-3: Income Taxes – schedules in the RFP.

**Q. HAVE ANY PROPOSED ADJUSTMENTS TO HISTORICAL TEST YEAR FEDERAL TAX EXPENSE BEEN INCLUDED IN THE COST OF SERVICE?**

A. Yes, please see Schedule II-E-3: Income Taxes, which is included in the Company's RFP.

**Q. HAVE THE EFFECTS OF THE FEDERAL INCOME TAX RATE REDUCTION BEEN INCLUDED IN THE COST OF SERVICE?**

A. Yes. In compliance with the Commission's Accounting Order in Project No. 47945, Proceeding to Investigate and Address the Effect of Tax Cuts and Jobs Act of 2017 (TCJA) on the Rates of Texas Investor-Owned Utility Companies (the "Order"), we included in the II-E-3 schedule a reduction in deferred tax expense for the flow-back of excess deferred ADIT to customers resulting from the TCJA tax rate reduction, which reduced the federal income tax rate from 35% to 21%. This flow-back is computed using the Average Rate Assumption Method ("ARAM").

## B. RATE BASE

### 1. Return on Invested Capital

**Q. DOES THE COMMISSION HAVE GUIDELINES REGARDING RETURN ON INVESTED CAPITAL?**

A. Yes. 16 TAC § 24.41(c)(1)(A) provides as follows:

> The commission will allow each utility a reasonable opportunity to earn a reasonable rate of return, which is expressed as a percentage of invested capital, and will fix the rate of return in accordance with the following principles. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.

**Q. WHAT RATE OF RETURN IS REQUESTED BY THE COMPANY WITHIN ITS APPLICATION?**

A. The Company is requesting an overall rate of return of 7.45%. This return is based on a capital structure comprised of 53.00% equity and 47.00% long-term debt, a 10.60% cost of equity and 3.90% cost of long-term debt. Company witness Dylan D'Ascendis explains the analysis supporting Company's request.

**Q. DOES THE COMPANY SEEK TO RECOVER INTEREST ON LONG-TERM DEBT?**

A. Yes. A calculation is made to synchronize the interest expense applicable to the long-term debt portion with the adjusted original cost rate base as of December 31, 2024. I have used the capital structure recommended by Mr. D'Ascendis for rate of return purposes. The recommended average weighted cost rate of long-term debt (for both water and wastewater) is 1.75%. The synchronized interest was used to adjust the interest expense recorded for the test year ended December 31, 2024, and the resulting adjustment carried forward to Schedule II-C-2 in the RFP.

## IV. AFFILIATED EXPENSES

**Q. DOES THE COMPANY'S APPLICATION INCLUDE COSTS FOR AFFILIATE TRANSACTIONS?**

A. Yes. The Company has included expenses which meet the definition of an affiliated transaction. These expenses are detailed in Schedule IV-12.1 of the RFP. These transactions represent expenses incurred at the parent company level, which are then allocated to Aqua Texas.

**Q. PLEASE DESCRIBE THE COMPANY'S AFFILIATE TRANSACTIONS.**

A. Essential Utilities employs two shared service entities, Essential Utilities Services Inc. ("Essential Services") and Aqua Services Inc. ("Aqua Services") to provide support to its subsidiary companies. Essential Services provides services to both the water/wastewater and gas segments, utilizing a four-prong allocation method to determine the cost assignment to the gas companies ("PNG Companies"). The remaining Essential Services costs are subsequently allocated to the water/wastewater subsidiaries. Aqua Services provides services solely to the water/wastewater entities.

Expenses incurred by both Essential Services and Aqua Services are categorized as either "Service" (employee-related) or "Sundry" (non-labor) and are either allocated to the subsidiaries based on customer count or directly charged. The detailed procedures governing these allocations and direct charges are documented within the Corporate Allocations Manual, which is provided as part of the RFP at Schedule IV-4.1.

**Q. PLEASE DESCRIBE THE SHARED SERVICE COMPANIES.**

A. Essential Services was formed in June 2021. Essential Services consists of officers and employees ("employees") who are familiar with water, wastewater, and gas utility businesses and have experience and expertise in management, financing, accounting, customer services, legal affairs, engineering, rates and regulatory matters, and the operation of water, wastewater, and gas utilities. The employees of Essential Services are qualified to aid, assist and advise the Water, Wastewater, and Gas Companies in their business. Essential Services includes Essential Services and Essential Customer Operations ("ECO").

Aqua Services was formed on January 1, 2004. Aqua Services consists of officers and employees who are familiar with the water and wastewater utility businesses and have experience and expertise in management, financing, accounting, customer services, legal affairs, engineering, rates and regulatory matters, and the operation of water and wastewater utilities.

**Q. WHAT SERVICES DOES AQUA RECEIVE FROM THE SERVICE COMPANIES?**

A. The services provided by Aqua Services include financial, managerial, technical, human resources, legal, and administrative services support. Aqua Services provides these services at cost on a contract basis for Aqua's operations. The service company also provides Information Technology support for the Company's tablets, SCADA technology, software deployment, and software upgrade requirements. Field operations training and development, including on-site and virtual trainings of operators, work order, and back-office assistance is also provided by the service company. In addition, Aqua Services provides a full customer service platform (Aqua Customer Operations) that handles customer registration, disruptions, billing inquiries, and other customer-related issues.

**Q. DO CUSTOMERS BENEFIT FROM THE SERVICES PROVIDED BY AQUA SERVICES AND ESSENTIAL UTILITIES SERVICES?**

A. Yes. Customers benefit from services provided to Aqua. Customers benefit from having a qualified and proficient staff of industry experts available to the Aqua team for a wide variety of purposes. The costs of these specialized resources are spread over the entire Essential footprint, providing Texas customers with staff, resources,

technology, and expertise. As an example, Aqua Services recently rolled out a new outage map to all Aqua Companies. This service allows customers to access information online or through their mobile app to get updates on water service within their system. This technology provides Texas customers with full functionality and accessibility to the outage map for a fraction of the cost of what it would have cost to implement locally here in Texas. The same is true for our customer service center, GIS capabilities, and many other areas where Aqua has implemented technology that could not have been introduced as efficiently on a local basis. If these services were not provided by the service companies, they would have to be obtained from outside firms or vendors, who provide those services at a profit. Aqua Services provides these services at cost, resulting in lower expenses for customers.

**Q. PLEASE DESCRIBE SERVICE EXPENSES AND HOW THEY ARE ALLOCATED.**

A. The Essential Service Companies' employees provide corporate management services, which are categorized as service expenses. Essential Services allocates its cost to Peoples Natural Gas Co. and Aqua Services. The percent allocation is calculated using the Four Prong Method. The Four Prong method is a four-factor formula which allocates costs to subsidiaries giving equal weight to customer count, rate base, number of employees, and non-labor operations and maintenance expenses and taxes other than income. An example of the Four Prong method calculation can be found in Appendix A – Four Prong Method in the Corporate Charges Allocations Manual. This allocation is reviewed annually, and the percentages will be updated based on the new calculation. All Aqua Services costs, including the percentage allocation from Essential Services,

are collected and allocated to the appropriate subsidiaries of Essential Utilities Essential Utilities through an allocation process to be described in this document.

Service expenses are defined as labor and overheads of employees of the Shared Service Companies. Labor is defined as actual base pay of employees of the Shared Service Companies. Overhead is defined as costs incurred by the company, in order to obtain the services of said employees. They include, but are not limited to, healthcare, employer payroll taxes, retirement benefits, office rent, and employee incentive compensation. These overhead costs exclude any employee related contributions and are recorded at cost without markup.

The employees of the Shared Service Companies can be categorized into the following types of services: Accounting & Financial, Administration, Customer Service, Customer Relations, Communications, Corporate Secretarial, Engineering, Human Resources, Information Services, Legal, Records Management, Purchasing, Fleet, Rates & Regulatory, and Water Quality.

**Q. DESCRIBE SUNDRY EXPENSES.**

A. Sundry expenses include all other costs which are not included in the service allocations and can also be categorized as listed above. They post to the general ledger and are typically departmental expenses. Sundry costs, like service costs, can be classified as direct or indirect charges.

**Q. DESCRIBE THE SETTLEMENT AND ALLOCATION METHODOLOGY FOR SERVICE AND SUNDRY EXPENSES.**

A. Each month, expenses are allocated out to the states based on the orders that are charged in the Service companies and the settlement rules behind those orders. Orders can be

allocated directly to one state or to multiple states. Most employee orders and sundry orders contain settlements to general capital. Direct allocations are charged 100% to the entity identified through the entity code on the order and the settlement rule. Indirect allocations are identified by the settlement rules on the order. The billing costs associated with these orders are allocated to the group of entities identified by the allocation code. The methodology method to determine appropriate allocation of these indirect allocations is customer count. The customer count is calculated by using year end customer totals of each subsidiary, as defined by Essential Utilities customer count policy, for the year immediately preceding the current year. Customer counts are not adjusted throughout the year unless there is a substantial acquisition during the year, at which time all allocations will be updated with the most current quarter end customer counts.

**Q. DO ESSENTIAL SERVICES OR AQUA SERVICES PROVIDE SERVICE TO ANY UNAFFILIATED PERSONS OR CORPORATIONS?**

A. No, they do not.

**Q. ARE THE AFFILIATE COSTS SHOWN ON SCHEDULE IV-12.1 OF THE RFP REASONABLE AND NECESSARY EXPENSES AND DO THESE COSTS SATISFY THE RECOVERY STANDARD SET FORTH IN TEXAS WATER CODE § 13.185(E)?**

A. Yes. The services provided by Essential Services and Aqua Services are essential to operating a safe and reliable water and wastewater system. As such, they are reasonable and necessary costs. In addition, the cost of these services is more economic for Aqua Texas to obtain via its affiliates than would be possible on the open market. Further,

the costs charged to Aqua Texas are no higher than the prices charged by Essential Services and Aqua Services to its other affiliates for the same services or items.

## V. ACCUMULATED DEFERRED FEDERAL INCOME TAX

**Q. PLEASE DESCRIBE ACCUMULATED DEFERRED FEDERAL INCOME TAXES.**

A. Accumulated Deferred Income Taxes ("ADIT") represent the cumulative difference between the income taxes a utility has paid or will pay to taxing authorities and the income taxes that have been recognized as an expense for financial reporting purposes. These differences arise primarily due to temporary differences in the timing of when certain revenues and expenses are recognized under tax laws versus generally accepted accounting principles (GAAP). We have included (as a reduction to rate base) an ADIT liability of $29,022,080 as shown on Schedule II-E-3.5.

**Q. HAS A REGULATORY LIABILITY BEEN RECORDED FOR THE BALANCE OF EXCESS DEFERRED INCOME TAXES AS A RESULT OF THE TCJA?**

A. Yes, we recorded a regulatory liability for the balance of the excess ADIT as a result of the federal income tax rate decrease from 35% to 21% in accordance with the Order. The balance of the regulatory liability before tax gross-up of $15,322,452 has been included as a reduction to rate base in the II-B schedule to provide customers the benefit of the zero cost capital.

## VI. CONCLUSION

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY AT THIS TIME?**

A. Yes.

# DIRECT TESTIMONY OF RASOOL AHMADIBENI

## I. INTRODUCTION AND BACKGROUND

**Q. WHAT IS YOUR NAME AND BUSINESS ADDRESS?**

A. My name is Rasool Ahmadibeni. My business address is 1106 Clayton Lane, Suite 400W, Austin, Texas 78723.

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am employed as the Manger, Rates and Planning of Aqua Texas, Inc. ("Aqua Texas" or the "Company").

**Q. PLEASE DESCRIBE YOUR EDUCATION AND BUSINESS EXPERIENCE.**

A. I have a Bachelor of Accounting degree with over 15 years of finance and accounting experience in auditing, accounting, cost accounting, and serving as a financial analyst, financial manager, and Controller in the manufacturing, water utility, and wastewater utility fields. I have held roles within the finance and accounting functions while at Aqua Texas. In this capacity, I have overseen the Company's finance and accounting functions, performed financial reporting, SOX compliance, budgeting, variance analysis, capital analysis, revenue analysis, and worked on regulatory filings. I have also authored and filed Annual Reports.

**Q. WHAT ARE YOUR JOB RESPONSIBILITIES IN YOUR CURRENT POSITION?**

A. As the Manager of Rates and Planning of Aqua Texas, I am responsible for the management of the Company's revenue and rates analysis. This responsibility includes all routine filings with the Public Utility Commission of Texas ("Commission"), such as the Annual Reports, as well as the analysis performed to prepare this rate filing, including revenues, expenses, budgeting matters, and accounts payable reviews and approvals.

**Q. HAVE YOU PREVIOUSLY TESTIFIED IN REGULATORY PROCEEDINGS?**

A. Yes. I previously provided testimony in Docket No. 55577, which involved the *Application of Aqua Texas to Amend its System Improvement Charges under 16 Texas Administrative Code ("TAC") § 24.76*.

**Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?**

A. I am testifying on behalf of Aqua Texas.

## II. PURPOSE OF TESTIMONY

**Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

A. My testimony identifies and supports the Company's request to recover certain regulatory asset and rate case expense amounts. I also explain the Company's request to establish system improvement charge baseline amounts as part of this case.

**Q. HAVE YOU PREPARED ANY SCHEDULES IN CONNECTION WITH YOUR TESTIMONY?**

A. Yes. I sponsor or co-sponsor the following cost of service schedules and any related schedule workpapers:

| Schedule | Description |
|---|---|
| II-B-8 | Prepayments |
| II-B-9 | Storm Damage and Extraordinary Property Loss |
| II-B-10 | Other Rate Base Items |
| II-B-11 | Regulatory Assets |
| II-D-10 | Regulatory Expenses |
| II-E-4 | Other Expenses |
| II-E-4.1 | Deferred Expenses from Prior Dockets |
| II-E-4.2 | Below the Line Expenses |
| II-E-4.3 | Nonrecurring or Extraordinary Expenses |
| II-E-4.4 | Rate Case Expenses |

**Q. WHAT ARE THE SOURCES OF THE DATA AND INFORMATION IN THE TESTIMONY AND SCHEDULES YOU SPONSOR?**

A. All data and information used in preparation of the Rate Filing Package ("RFP") was provided from the books and records of Aqua Texas or developed by other witnesses as indicated in their respective testimonies.

**Q. WAS YOUR TESTIMONY, EXHIBIT, AND THE SCHEDULES YOU SPONSOR PREPARED BY YOU OR SOMEONE UNDER YOUR DIRECT SUPERVISION?**

A. Yes.

## III. REGULATORY ASSETS

**Q. PLEASE IDENTIFY THE REGULATORY ASSETS AQUA TEXAS IS SEEKING TO RECOVER IN THIS PROCEEDING.**

A. The Regulatory Assets that Aqua Texas is seeking to recover in this proceeding are shown on Schedule II-A-3.8 in the RFP and in the table below:

| Account | Description | Adjusted TY Balance | Annual Amortization | Comments |
|---|---|---|---|---|
| 186100 | Deferred Rate Case Expenses | $ 4,492,813 | $ 1,497,604 | Deferred Rate Case Expense |
| 186330 | FAS 109 | - | - | Tax effect of the book vs. tax difference on AFUDC Equity & tax gross-up |
| 186399 | Redemption Premium | 3,332,478 | 215,004 | Redemption premium for refinanced pushdown debt from parent |
| 186399 | Southern Oaks (5600D00002) | 286,556 | 14,328 | Closing costs for Southern Oaks acquisition |
| 186399 | Hurricane Beryl (various) | 2,079,139 | 103,957 | Costs related to Hurricane Beryl |
| 186520 | The Commons Acquisition (M93857) | 187,568 | 9,378 | Closing costs for The Commons acquistition |
| 186520 | COVID-19 (M93777) | 296,508 | 98,836 | Costs related to COVID-19 |
| 186520 | Winter Storm Uri (M93941) | 701,188 | 35,059 | Costs related to winter storm Uri |
| 186520 | Hurricane Nicholas (M94046) | 42,201 | 2,110 | Costs related to Hurricane Nicholas |
| | Total | **$ 11,418,451** | **$ 1,976,277** | |

**Q. ARE YOU THE WITNESS WHO SUPPORTS THE REQUESTED RECOVERY OF THESE REGULATORY ASSET AMOUNTS?**

A. I support recovery of all the regulatory asset amounts with the exception of the regulatory assets related to the Company's acquisitions of Southern Oaks and The Commons and the amounts related to Winter Storm Uri, Hurricane Beryl, and Hurricane Nicholas. Company witness Trey V. Reginelli sponsors and supports the recovery of those

regulatory assets and explains why these amounts are appropriately recovered as part of the Company's rate base.

**Q. PLEASE DESCRIBE THE REGULATORY ASSET RELATING TO DEFERRED RATE CASE EXPENSES AND THE COMPANY'S PROPOSED RECOVERY OF THIS AMOUNT.**

A. Commission rule, 16 TAC § 24.76(j) provides that rate case expenses incurred in connection with proceedings involving the establishment of a system improvement charge may be requested for recovery and, if requested, must be reviewed in the utility's next comprehensive base rate case. Aqua Texas has filed two system improvement charge applications with the Commission, Docket No. 55577 and Docket No. 53428.[1] Aqua Texas is requesting recovery of those costs in this case. Aqua Texas also seeks to recover the costs associated with contracting for fair market valuations for certain acquisitions. In addition, as explained by Company witness Mr. Ramirez-Cisneros, Aqua Texas is requesting recovery of the rate case expenses that it incurs in connection with this case. The Company proposes to recover all these costs through a rate case expense surcharge over a two-year period. Current [and estimated] expenses are shown in Schedule II-E-4.4 Rate Case Expense. The Company reserves the right to supplement these amounts with any additional expense incurred throughout this proceeding, as necessary.

[1] Docket No. 55577, *Application of Aqua Texas to Amend its System Improvement Charges under 16 Texas Administrative Code ("TAC") § 24.76*; Docket No. 53428, *Application of Aqua Texas, Inc. for System Improvement Charges.*

**Q. ARE THE RATE CASE EXPENSES THAT THE COMPANY SEEKS TO RECOVER REASONABLE?**

A. Yes. In addition to myself, Company witness Daniel Ramirez-Cisneros explains and supports the reasonableness of the Company's rate case expense request. Mr. Ramirez-Cisneros's testimony, in conjunction with the Company's supporting documentation, establishes that the rate case expenses the Company seeks to recover were incurred as a result of rate-change applications filed pursuant to Texas Water Code §§ 13.187 and 13.1871 and satisfy all requirements set forth in 16 TAC § 24.44, relating to Rate Case Expenses.

**Q. WHAT AMOUNTS HAS AQUA TEXAS INCLUDED IN ITS REVENUE REQUIREMENT TO REFLECT THE AMORTIZATION OF THE REDEMPTION PREMIUM AND COVID-19 REGULATORY ASSETS?**

A. Aqua Texas is requesting an annual amortization expense of $215,004 related to the Redemption Premium on debt refinancing, which is being amortized over a twenty-year period and an annual amortization of the Deferred COVID-19 costs of $98,836 for three years.

**Q. PLEASE DESCRIBE THE CIRCUMSTANCES LEADING TO THE ESTABLISHMENT OF THE COVID-19 REGULATORY ASSET AND THE INCLUDED COSTS?**

A. On March 13, 2020, Governor Greg Abbott issued a Declaration of a state of Disaster for all counties in Texas as a result of the coronavirus disease (COVID-19). On March 16, 2020, in Docket No. 50664, the Commission responded to the Governor's emergency declaration by establishing a plan to assist water and sewer utility customer who were

experiencing economic hardship because of the pandemic.[2] Specifically, the Commission ordered water and sewer utilities to suspend disconnections for non-payment, assessment of late fees, and charging interest on deferred payment plans. The Commission also authorized water and sewer utilities to record as a regulatory asset expenses resulting from the effects of COVID-19, including non-payment of qualified customer bills, and indicated that in future proceedings it would consider the utility's request for recovery of the regulatory assets.[3] In response to this order, Aqua Texas ceased disconnecting customers for non-payment and ceased billing customers any late payment charges or interest charges on deferred payment plans. The costs associated with suspension of disconnections and late fees have been recorded in the COVID-19 regulatory asset.

**Q. ARE THESE COSTS RECORDED TO THE COVID-19 REGULATORY ASSET REASONABLE?**

A. Yes. These costs are reasonable and were necessary to ensure safe and adequate service and to respond to Commission orders limiting disconnections and late fees.

## IV. SYSTEM IMPROVEMENT CHARGE

**Q. IS AQUA TEXAS REQUESTING TO ESTABLISH SYSTEM IMPROVEMENT CHARGE BASELINES PURSUANT TO 16 TAC § 24.76 IN THIS CASE?**

A. Yes. Pursuant to 16 TAC § 24.76, Aqua Texas may elect to establish prior to its next comprehensive rate case a system improvement charge to ensure timely recovery of its additional incremental investments. The Commission's rule request Aqua Texas to use factors, including an established rate base, approved in its most recent comprehensive

[2] *Issues Related to the State of Disaster for the Coronavirus Disease 2019*, Project No. 50664, Order Directing Certain Actions and Granting Exceptions to Certain Rules (Mar. 26, 2020).

rate proceeding to calculate this charge. Consequently, Aqua Texas requests that the Commission establish, as part of its Final Order in this proceeding, appropriate cost of service baselines to use to calculate and establish a system improvement charge in the future.

## V. CONCLUSION

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY AT THIS TIME?**

A. Yes.

# DIRECT TESTIMONY OF HAROLD WALKER, III

## I. INTRODUCTION AND QUALIFICATIONS

**Q. STATE YOUR NAME AND ADDRESS.**

A. My name is Harold Walker, III. My business address is 1010 Adams Avenue, Audubon, Pennsylvania, 19403.

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC as Manager, Financial Studies.

**Q. PLEASE DESCRIBE YOUR QUALIFICATIONS AND YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE.**

A. My educational background, business experience and qualifications are attached hereto as Appendix A.

## II. SCOPE OF TESTIMONY

**Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?**

A. The purpose of my testimony is to recommend an appropriate cash working capital allowance that Aqua Texas, Inc. ("Aqua Texas" or "Company") should be afforded an opportunity to earn on as part of its rate base claim. My recommendation is based upon the results of two lead-lag studies that were performed under my direct supervision. The two studies are for Aqua Texas Water Operations ("Water Operations") and Aqua Texas Wastewater Operations ("Wastewater Operations").

**Q. HAVE YOU PREPARED AN EXHIBIT PRESENTING THE RESULTS OF YOUR STUDY?**

A. Yes. I have prepared Exhibit HW-1 which contains the 28 supporting schedules, identified as Schedule HW-1 through Schedule HW-28, summarizing the Company's cash working

capital requirement in these proceeding.

## III. PRINCIPLES OF CASH WORKING CAPITAL

**Q. WOULD YOU PLEASE EXPLAIN THE RATEMAKING PRINCIPLES CONCERNING THE INCLUSION OF WORKING CAPITAL AS AN ELEMENT OF RATE BASE?**

A. Yes. The working capital allowance is a component of rate base. A utility's need for working capital was first recognized in the noted United States Supreme Court case, Smyth v. Ames.1 Among the many benchmarks established in the case was the "property devoted to public use" doctrine as a basis for fixing rates. The case recognized that among the matters to be considered in determining the value of property used was "the sum required to meet operating expenses."2 Since that time, working capital has generally been recognized as a proper item to be included in the rate base on which a utility is entitled to earn a return.

**Q. WHAT IS CASH WORKING CAPITAL?**

A. Cash working capital is a component of working capital, representing the amount of funds necessary to finance the day-to-day operations of the Company. For ratemaking purposes, cash working capital is included as a component of a utility's rate base.

**Q. WHY IS CASH WORKING CAPITAL INCLUDED AS AN ELEMENT OF RATE BASE?**

A. Working capital is included in rate base to compensate investors for the use of their funds

---

1 *Smyth v. Ames*, 169 U.S. 466 (1898), overruled on other grounds by *Fed Power Comm'n v. Nat. Gas Pipeline Co. of Am.*, 315 U.S. 575, 586 (1942). Specifically, *Fed. Power Comm'n* departed from the holding in *Smyth* that fair market value in cost of service ratemaking must be used and instead concluded that "[t]he Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas."

2 *Id*. at 547.

over and above their investment in plant and to provide investors with a return on the funds required by the Company for daily operations. Cash working capital bridges the gap between the time when funds are provided to the Company by investors to allow the Company to provide service to customers and the time revenues are received from customers as reimbursement for these services.

## IV. OVERVIEW OF A LEAD-LAG STUDY

**Q. HOW WAS THE CASH WORKING CAPITAL REQUIREMENT DETERMINED?**

A. I conducted two lead-lag studies to determine the Company's cash working capital requirement. The lead-lag studies in this case measured the level of funding required to operate on a day-to-day basis in a sufficient amount to cover Aqua Texas's operating expenses (O&M, and Taxes). This was measured by calculating the net lag between: (1) the amount of time elapsed between the provision of the cost of service and the receipt of the revenue requirement from the Company's customers (known as the revenue lag); and (2) the amount of time elapsed between when the Company receives goods and services used by the Company to provide service and the payment by the Company for those operating expense items (known as the expense lead). The difference between these two elapsed periods of time is known as the "net lag." The net lag was multiplied by the average daily operating expenses (or revenue requirement) to determine the Company's cash working capital requirement.

**Q. PLEASE DESCRIBE THE COMPONENTS OF A CASH WORKING CAPITAL ANALYSIS.**

A. The two primary components of a cash working capital analysis are revenue lags and expense leads. The revenue lag is the elapsed time between when the delivery of a company's product, or provision of service, to its customers occurs and when a company

receives payment for the delivery of the product. Investor-provided funds are required to keep a company running during the revenue lag time period, when the revenue stream is temporarily insufficient to finance daily operational needs.

As mentioned above, the expense lead is the elapsed time between when a good or service is provided to a company and when a company pays its supplier, or vendor, for the good or service. During the expense lead time period, cash received from customers may temporarily exceed a company's payments to its suppliers for goods or services, and the excess may be used to repay investor-provided funds.

The net difference between the revenue lag and expense lead determines a company's cash working capital requirement. Additional details of the revenue lag and the expense lead calculations are provided below.

**Q. GENERALLY SPEAKING, HOW DID YOU CALCULATE THE REVENUE LAG?**

A. The revenue lag is the sum of three distinct components: the service period lag, the billing lag, and the collection lag.

**Q. WHAT IS THE SERVICE PERIOD LAG?**

A. The service period lag is the average time between meter readings. The average, or mid-point, between meter readings, based on monthly meter readings, is roughly 15 days. The mid-point service period lag is produced by dividing the service period of roughly 30 days by two.

**Q. WHAT IS THE BILLING LAG?**

A. The billing lag is the time from the meter reading date to the date the customer is billed. On the customer billing date, the bill is mailed to the customer, and the total billing amount for the cycle is recorded to Aqua Texas's accounts receivable. The bills are prepared and

mailed roughly two days after meters are read.

**Q. WHAT IS THE COLLECTION LAG?**

A. The collection lag is the average number of days from the date the bills are mailed to customers to the date payments are received by Aqua Texas. This was determined by summing the daily accounts receivable balance during the twelve months ended December 31, 2024, and dividing by the sum of the daily receipts for the same period.

**Q. GENERALLY SPEAKING, HOW DID YOU CALCULATE THE EXPENSE LEAD?**

A. In a lead-lag study, the cost of service, or expense, lead days are calculated for each invoice or account by subtracting the midpoints of the service periods (the service lead) from the date the Company paid the invoices or accounts (the payment lead) and then summing these two data points.

The service lead is the average time that a service or good was provided to the Company. If a service or good was provided for 20 days, the 20-day service period is divided by two to produce a midpoint of ten days for the service period lead.

The payment lead is the number of days from the midpoint of the service period to the payment date for the service or good. If payment for the service or good was provided on the 30th day and the midpoint of the service period was the 10th day, the payment lead is 20 days (30 days – ten days).

**Q. WHY ARE MIDPOINTS USED IN THE CASH WORKING CAPITAL ANALYSIS?**

A. Midpoints are used to determine the weighted average period during which a service or good is rendered or provided during the service period, or between meter reads. The midpoint assumes that, on average, service is provided evenly over the service period. For

example, if a service is provided over a 30-day period, then on average, 30 days of service was provided evenly for 15 days (30÷2) of the service period. Mathematically, the midpoint is the weighted average number of days that the full service period number of days (*e.g.,* 30 days) was provided.

## V. AQUA TEXAS'S LEAD-LAG STUDY

**Q. DID YOU CONSIDER AQUA TEXAS'S OVERALL COST OF SERVICE IN YOUR LEAD-LAG STUDY?**

A. No. I considered only a portion of Aqua Texas's cost of service items in my lead-lag study to be consistent with the lead-lag methodology used in Texas. In Texas, lead-lag studies do not include non-cash expense items.

A lead-lag study based on O&M and Taxes likely understates the full cash working capital requirement and affords the minimum cash working capital requirement. A lead-lag study based on the entire revenue requirement and cost of service provides a more accurate measure of the cash working capital requirement.

**Q. WHAT DATA SET DID YOU UTILIZE IN YOUR LEAD-LAG STUDY?**

A. The data sets were selected after developing an understanding of the Company's collections, payment policies, and procedures. To inform my understanding of these items, I requested representative data sets from the Company. Once the requested raw data had been provided, data validation was performed by comparing an actual invoice or a bill with data from the utility's systems to ensure accuracy.

The revenue lag data set for the Company was based on an accounts receivable analysis of the beginning balance, the daily charges to this balance as bills were processed and mailed, and the daily receipts for all the days of the year during the 12 months ended December 31, 2024. The revenue lag data set for the Company also included an analysis

of the cycle billing, the beginning and ending service dates (meter read dates), and the date bills were mailed (or posted).

The expense lead data set was based on information generated from the Company's central accounts payable system. The expense lead data sets for the 12 months ended December 31, 2024, were analyzed to develop the service beginning and ending dates, the amount purchased, and the date of payment.

**Q. WHAT TIME PERIOD DOES YOUR LEAD-LAG STUDY ENCOMPASS?**

A. The lead-lag study in this case analyzed the net revenues and the associated net cost of service during the 12 months ended December 31, 2024, to derive the lag (lead) days for the revenue requirement and the related cost of service line items.

**Q. HOW WERE THE REVENUE LAG DAYS AND EXPENSE LEAD DAYS USED TO CALCULATE AQUA TEXAS'S CASH WORKING CAPITAL REQUIREMENT?**

A. For each cost of service line item, the lead days (expense) were subtracted from the lag days (revenue) to determine the net lag days for that cost of service line item category (i.e., O&M and Taxes). Next, the net lag days for that cost of service line item category was multiplied by the average O&M and Taxes expense per day (expenses ÷ 365 days) line item to produce the cash working capital required for each cost of service line item category. This process was followed for each cost of service line item. Finally, the cash working capital requirement of each cost of service line item category were totaled (summed) to calculate Aqua Texas's total cash working capital requirement.

## VI. RESULTS OF THE LEAD-LAG STUDY

**Q. WHAT ARE THE RESULTS OF THE LEAD-LAG STUDY?**

A. The lead-lag schedules are set forth in Schedule HW-1 through Schedule HW-28 provided

in my Exhibit HW-1. Schedule HW-1 summarizes Aqua Texas's cash working capital requirements. As shown on page 1 of Schedule HW-1, I determine the Water Operations' cash working capital requirement is $ $697,683. Similarly, I determine the Wastewater Operations' cash working capital requirement is $160,520 (Schedule HW-1 page 2).

**Q. PLEASE DESCRIBE SCHEDULE HW-1.**

A. As shown on Schedule HW-1, the cash working capital requirement is based on the net lag days required to finance each cost of service line item category. The net lag day calculations are a result of subtracting their respective expense lead days from the revenue lag days to determine the appropriate net lag days, which was multiplied by the daily O&M and Taxes expense per day (expenses ÷ 365 days) line item. The lag days for the receipt of the revenue requirement is developed on Schedule HW-2. The lead days for the cost of service line items are developed on Schedules HW-4 through HW-28, and the schedule references for the lead days for the cost of service line items is shown on Schedule HW-3.

**Q. PLEASE EXPLAIN THE PROCEDURES USED TO DETERMINE AQUA TEXAS'S CASH WORKING CAPITAL REQUIREMENT SHOWN ON SCHEDULE HW-1.**

A. The process used to determine Aqua Texas's cash working capital requirement, shown on Schedule HW-1, is the same for each line item category shown. Because the process is the same, I will discuss the salaries and wages expense line item (first line item) as a means of explaining the methodology used for each line item (Schedule HW-1, page 1).

The salaries and wages expense line item amount of $6,758,384 (column C) was divided by 365 to determine the average daily amount, $18,516 (column D). This average daily amount was then multiplied by the 36.2 net lag days (column G) to produce the cash

working capital requirement of $670,284 (column H) for salaries and wages expense ($6,758,384 ÷ 365 days = $18,516 × 36.2 net lag days = $670,284). The 36.2-day net lag for salaries and wages expense was determined by subtracting the salaries and wages expense 9.0-day expense lead (column E) from the 45.2-day revenue lag (column F) (45.2 lag days – 9.0 lead days = 36.2 net lag days).

A similar process was followed for each cost-of-service line item. The cash working capital requirement of all sub-account line items categories (O&M and Taxes) line items were totaled (summed) to calculate the Water Operations' $697,683 total cash working capital requirement. A similar procedure was followed to calculate the Wastewater Operations' cash working capital requirement of $160,520 (Schedule HW-1, page 2).

**Q. PLEASE EXPLAIN THE PROCEDURES USED TO DETERMINE THE REVENUE LAG.**

A. Schedule HW-2 shows the development of the 45.2-day lag for the Water Operations and the 47.3-day lag for the Wastewater Operations. These revenue lags reflect the individual operations' billings and collections frequencies.

**Q. PLEASE EXPLAIN THE PROCEDURES USED TO DETERMINE THE SERVICE PERIOD AND THE BILLING LAG DAYS FOR CUSTOMER REVENUES.**

A. The lag days for the service period and the billing lag are developed on page 2 of Schedule HW-2. As mentioned previously, the service period lag was measured from the midpoint of the service period to the meter reading date, and the billing lag was measured from the meter reading date to the billing date.

The Water Operations' service period was divided by two to produce the average

service period lag of 15.3 days, as shown on page 2 of Schedule HW-2. The Water Operations' bills are prepared, mailed, and recorded to accounts receivable 2.0 days after meters are read. Adding the average service period lag to the billing lag produces a combined 17.3-day service period and billing lag (15.3 days + 2.0 days = 17.3 days) as shown on page 2 of Schedule HW-2. A similar 17.3-day service period and billing lag was determined for the Wastewater Operations. These combined service period and billing lags reflect the individual operations' billing frequency.

**Q. PLEASE DESCRIBE THE PROCEDURE USED TO CALCULATE THE COLLECTION LAG.**

A. As mentioned previously, the collection lag is the average number of days from the date the bills were mailed to the date payments are received and was determined by summing the daily accounts receivable balance during the test year and dividing by the sum of the daily test year receipts. This results in an average collection lag of 27.9 days for the Water Operations as shown on page 3 of Schedule HW-2. The collection lag for the Wastewater Operations was determined to be 30.0 lag days. These lags reflect the individual operations' accounts receivable balances (collection lag) and their collection frequencies.

**Q. PLEASE SUMMARIZE THE TOTAL REVENUE LAG.**

A. The total revenue lag of 45.2 lag days for the Water Operations includes a 17.3-day service period and billing lag and an average collection lag of 27.9 days. The Wastewater Operations' total revenue lag of 47.3 days includes a 17.3-day service period and billing lag and an average collection lag of 30.0 days. Each of these calculations is detailed on page 1 of Schedule HW-2.

**Q. PLEASE EXPLAIN THE CALCULATION OF LEAD DAYS FOR THE O&M AND TAX EXPENSES SHOWN ON SCHEDULE HW-1.**

A. For each O&M and Tax expense line item that is shown, the lead days were calculated for each invoice or account based on the midpoints of the service periods to the dates the Company paid the invoices or accounts. Schedule HW-3 shows the schedule references for the O&M and Tax expense lead days for the Company.

**Q. HOW WERE THE LEAD DAYS DETERMINED FOR THE O&M EXPENSES SUB-ACCOUNT LINE ITEMS SHOWN ON SCHEDULE HW-1?**

A. For the O&M expense sub-accounts line items shown, the lead days were determined for each invoice or account based on the midpoints of the service periods to the dates the Company paid the invoices or accounts. For example, the employee pensions and benefits expense is 36.4 days (see Schedule HW-5). The lead days for employee pensions and benefits expenses were calculated for each invoice examined based on the midpoints of the service periods to the dates the Company paid the invoices.

Similar analyses were conducted for salaries and wages (see Schedule HW-4), water purchased (see Schedule HW-6), wastewater purchased (see Schedule HW-7), sludge removal expense (see Schedule HW-8), electric power (see Schedule HW-9), chemicals (see Schedule HW-10), materials and supplies (see Schedule HW-11), contractual services - engineering (see Schedule HW-12), contractual services - accounting (see Schedule HW-13), contractual services - legal (see Schedule HW-14), management fee (see Schedule HW-15), contractual services - testing (see Schedule HW-16), contractual services - other (see Schedule HW-17), rental of building/real property (see Schedule HW-18), rental of equipment (see Schedule HW-19), transportation expenses

(see Schedule HW-20), insurance other than group (see Schedule HW-21), advertising expenses (see Schedule HW-22), and miscellaneous expenses (see Schedule HW-23).

**Q. HOW WERE THE LEAD DAYS DETERMINED FOR THE TAXES SUB-ACCOUNT LINE ITEMS SHOWN ON SCHEDULE HW-1?**

A. For the taxes sub-account line items, the lead days were calculated based on the midpoint of the tax service period to the payment date, weighted by the actual amount paid. The taxes sub-accounts include: property taxes (see Schedule HW-24), payroll taxes (see Schedule HW-25), pumping fees (see Schedule HW-26), Texas margins tax (see Schedule HW-27), and federal income tax (see Schedule HW-28).

## VII. CONCLUSION

**Q. WHAT ARE THE RESULTS OF THE LEAD-LAG STUDY?**

A. The results of the lead-lag study are shown on Schedule HW-1. The results of the lead-lag study shown on Schedule HW-1 show the required cash working capital to bridge the gap between the time when funds are provided to the Company by investors to allow the Company to provide service to customers, and the time revenues are received from customers as reimbursement for these services. As shown on page 1 of Schedule HW-1, the Water Operations' cash working capital requirement is $697,683. Similarly, the Wastewater Operations' cash working capital requirement is $160,520 (Schedule HW-1, page 2).

**Q. DO THE RESULTS OF THE LEAD-LAG STUDY REPRESENT AN ACCURATE ASSESSMENT OF AQUA TEXAS' CASH WORKING CAPITAL REQUIREMENT?**

A. Yes. The lead-lag study represents an accurate assessment of Aqua Texas' actual cash working capital needs during the test year.

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

A. Yes, it does.

## AFFIDAVIT OF HAROLD WALKER, III

BEFORE ME, the undersigned authority, on this day personally appeared Harold Walker, III who having been placed under oath by me did depose as follows:

1. "My name is Harold Walker, III. I am of sound mind and capable of making this affidavit. The facts stated herein are true and correct based upon my personal knowledge. I am a Manager, Financial Studies, at Gannett Fleming Valuation and Rate Consultants, LLC.

2. I have prepared the foregoing Direct Testimony and I swear or affirm that I have personal knowledge of the facts in the testimony, schedules, and exhibits that I am sponsoring in this application, that I am competent to testify to them, and that the statements and information that I am sponsoring are true and correct to the best of my knowledge."

Further affiant sayeth not.

Harold Walker, III

SUBSCRIBED AND SWORN TO BEFORE ME by Harold Walker, III on this 5th day of May 2025.

Notary Public in and for the State of New Jersey

ANDREW BRENZA
Notary Public, State of New Jersey
My Commission Expires Feb 26, 2029

# APPENDIX A

Professional Qualifications
of
Harold Walker, III
Manager, Financial Studies
Gannett Fleming Valuation and Rate Consultants, LLC.

## EDUCATION

Mr. Walker graduated from Pennsylvania State University in 1984 with a Bachelor of Science Degree in Finance. His studies concentrated on securities analysis and portfolio management with an emphasis on economics and quantitative business analysis. He has also completed the regulation and the rate-making process courses presented by the College of Business Administration and Economics Center for Public Utilities at New Mexico State University. Additionally, he has attended programs presented by The Institute of Chartered Financial Analysts (CFA).

Mr. Walker was awarded the professional designation "Certified Rate of Return Analyst" (CRRA) by the Society of Utility and Regulatory Financial Analysts. This designation is based upon education, experience, and the successful completion of a comprehensive examination. He is also a member of the Society of Utility and Regulatory Financial Analysts (SURFA) and has attended numerous financial forums sponsored by the Society. The SURFA forums are recognized by the Association for Investment Management and Research (AIMR) and the National Association of State Boards of Accountancy for continuing education credits.

Mr. Walker obtained a license as a Municipal Advisor Representative (Series 50) by Municipal Securities Rulemaking Board (MSRB) and Financial Industry Regulatory Authority (FINRA).

**BUSINESS EXPERIENCE**

Prior to joining Gannett Fleming Valuation and Rate Consultants, LLC., Mr. Walker was employed by AUS Consultants - Utility Services. He held various positions during his eleven years with AUS, concluding his employment there as a Vice President. His duties included providing and supervising financial and economic studies on behalf of investor owned and municipally owned water, wastewater, electric, natural gas distribution and transmission, oil pipeline and telephone utilities as well as resource recovery companies.

In 1996, Mr. Walker joined Gannett Fleming Valuation and Rate Consultants, LLC. In his capacity as Manager, Financial Studies and for the past twenty years, he has continuously studied rates of return requirements for regulated firms. In this regard, he supervised the preparation of rate of return studies in connection with his testimony and in the past, for other individuals. He also assisted and/or developed dividend policy studies, nuclear prudence studies, calculated fixed charge rates for avoided costs involving cogeneration projects, financial decision studies for capital budgeting purposes and developed financial models for determining future capital requirements and the effect of those requirements on investors and ratepayers, valued utility property and common stock for acquisition and divestiture, and assisted in the private placement of fixed capital securities for public utilities.

Head, Gannett Fleming GASB 34 Task Force responsible for developing Governmental Accounting Standards Board (GASB) 34 services and educating Gannett Fleming personnel and Gannett Fleming clients on GASB 34 and how it may affect them. The GASB 34 related services include inventory of assets, valuation of assets, salvage estimation, annual depreciation rate determination, estimation of depreciation reserve, asset service life determination, asset condition assessment, condition assessment documentation, maintenance estimate for asset preservation, establishment of condition level index, geographic information system (GIS) and data management services, management discussion and analysis (MD&A) reporting, required supplemental information (RSI) reporting, auditor interface, and GASB 34 compliance review.

In 2004, Mr. Walker was elected to serve on the Board of Directors of SURFA. Previously, he served as an ex officio directors as an advisor to SURFA's existing President. In 2000, Mr. Walker

was elected President of SURFA for the 2001-2002 term. Prior to that, he was elected to serve on the Board of Directors of SURFA during the period 1997-1998 and 1999-2000. He also previously served on the Pennsylvania Municipal Authorities Association, Electric Deregulation Committee.

**EXPERT TESTIMONY**

Mr. Walker has submitted testimony or been deposed on various topics before regulatory commissions and courts in 29 states including: Alaska, Arizona, California, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Indiana, Iowa, Kentucky, Maryland, Massachusetts, Michigan, Missouri, New Hampshire, Nevada, New Jersey, New York, North Carolina, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Vermont, Virginia, and West Virginia. His testimonies covered various subjects including lead-lag studies, fair rate of return, fair market value, the taking of natural resources, benchmarking, appropriate capital structure and fixed capital cost rates, depreciation, purchased water adjustments, synchronization of interest charges for income tax purposes, valuation, cash working capital, financial analyses of investment alternatives, and fair value. The following tabulation provides a listing of the electric power, natural gas distribution, telephone, wastewater, and water service utility cases in which he has been involved as a witness.

## DOCKET NO. 58124

## AQUA TEXAS, INC.

## Lead-Lag Schedules

**Schedule HW-1 Through Schedule HW-28**

## To Accompany the

## Direct Testimony of Harold Walker, III

## On Lead-Lag Study - Working Capital

AQUA TEXAS, INC.

CALCULATION OF CASH WORKING CAPITAL REQUIREMENTS
BASED ON LEAD-LAG STUDY FOR THE TWELVE MONTHS ENDED DECEMBER 31, 2024

INDEX TO SCHEDULES

| Schedules | Schedule Subject |
|---|---|
| Schedule HW-1 | Summary of Calculation of Cash Working Capital Requirements |
| Schedule HW-2, Page 1 | Summary of Total Revenue Lag Days |
| Schedule HW-2, Page 2 | Service Period Billing Lag Days |
| Schedule HW-2, Page 3 | Calculation of Collection Lag Days |
| Schedule HW-3 | Summary of Operating Expenses and Taxes Lead Days |
| Schedule HW-4 | Salaries And Wages Lead Days |
| Schedule HW-5 | Employee Pensions And Benefits Lead Days |
| Schedule HW-6 | Water Purchased Lead Days |
| Schedule HW-7 | Wastewater Purchased Lead Days |
| Schedule HW-8 | Sludge Removal Expense Lead Days |
| Schedule HW-9 | Electric Power Lead Days |
| Schedule HW-10 | Chemicals Lead Days |
| Schedule HW-11 | Materials And Supplies Lead Days |
| Schedule HW-12 | Contractual Services - Engineering Lead Days |
| Schedule HW-13 | Contractual Services - Accounting Lead Days |
| Schedule HW-14 | Contractual Services - Legal Lead Days |
| Schedule HW-15 | Management Fee Lead Days |
| Schedule HW-16 | Contractual Services - Testing Lead Days |
| Schedule HW-17 | Contractual Services - Other Lead Days |
| Schedule HW-18 | Rental Of Building/Real Property Lead Days |
| Schedule HW-19 | Rental Of Equipment Lead Days |
| Schedule HW-20 | Transportation Expenses Lead Days |
| Schedule HW-21 | Insurance Other Than Group Lead Days |
| Schedule HW-22 | Advertising Expenses Lead Days |
| Schedule HW-23 | Miscellaneous Expenses Lead Days |
| Schedule HW-24 | Property Taxes Lead Days |
| Schedule HW-25 | Payroll Taxes Lead Days |
| Schedule HW-26 | Pumping Fees Lead Days |
| Schedule HW-27 | Texas Margins Tax Lead Days |
| Schedule HW-28 | Federal Income Tax Lead Days |

**AQUA TEXAS, INC. - WATER**
SUMMARY OF CALCULATION OF CASH WORKING CAPITAL REQUIREMENTS
BASED ON LEAD-LAG STUDY FOR THE TWELVE MONTHS ENDED DECEMBER 31, 2024

| A | B | C | D | E | F | G | H |
|---|---|---|---|---|---|---|---|
| Ln # | Item | Amount | Pro-forma Expense Per Day [C ÷ 365] | Revenue Lag Days (1) | Expense Lead Days (2) | Net (Lead) Lag Days [E - F] | Cash Working Capital [D x G] |
| 1. | Expenses | | | | | | |
| 2. | Salaries and Wages | $6,758,384 | $18,516 | 45.2 | 9.0 | 36.2 | $670,284 |
| 3. | Employee Pensions and Benefits | 1,677,777 | 4,597 | 45.2 | 36.4 | 8.8 | 40,451 |
| 4. | Water Purchased | 0 | 0 | 45.2 | 55.8 | (10.6) | 0 |
| | Wastewater Purchased | 0 | 0 | 45.2 | 58.2 | (13.0) | 0 |
| | Sludge Removal Expense | 0 | 0 | 45.2 | 70.6 | (25.4) | 0 |
| 5. | Electric Power | 3,957,430 | 10,842 | 45.2 | 49.5 | (4.3) | (46,622) |
| 6. | Fuel for Power Production | | | | | | |
| 7. | Chemicals | 1,433,964 | 3,929 | 45.2 | 42.5 | 2.7 | 10,607 |

| All Texas employees are paid through 2 different pay cycles for the same # of days and subsequent pay date. | |
| All 8MC and HAR employees are paid for a two week period and midpoint is 7.5 days. (7.5 = (1 + 14 = 15 ÷ 2 = 7.5). | |
| Pay date is four days following the end of the payroll period (i.e., Day 18, where 18 = 14 + 4). | |
| Third party vendor, ADP, receives funds 1 to 2 days before paydays (i.e., Day 16.5, where 16.5 = 18 - 1.5). | |
| Salaries and Wages (4 days) | |
| LEAD [16.5 - 7.5 = 9.0; where 7.5 = (1 + 14 = 15 ÷ 2 = 7.5)] | 9.0 |
| Total Salaries And Wages | 9.0 |

| Pay Cycle | (Lead)/ Lag Days | Amount | Weighted Amount |
|---|---|---|---|
| (1) | (2) | (3) | (4) |
| 8MC bi-weekly | 9.0 | $7,191,276.73 | $64,721,490.57 |
| HAR bi-weekly | 9.0 | 144,289.96 | 1,298,609.64 |
| Total Salaries And Wages | 9.0 | $7,335,566.69 | $66,020,100.21 |

AQUA TEXAS, INC.

CALCULATION OF LEAD DAYS FOR PAYROLL TAXES

BASED ON LEAD-LAG STUDY FOR THE TWELVE MONTHS ENDED DECEMBER 31, 2024

| Facts | (Lead)/ Lag Days |
|---|---|
| (1) | (2) |
| All Texas employees are paid through 2 different pay cycles for the same # of days and subsequent pay date. | |
| All 8MC and HAR employees are paid for a two week period and midpoint is 7.5 days. (7.5 = (1 + 14 = 15 ÷ 2 = 7.5). | |
| Pay date is four days following the end of the payroll period (i.e., Day 18, where 18 = 14 + 4). | |
| Third party vendor, ADP, receives funds 1 to 2 days before paydays to pay payroll, FICA, and FUTA. (i.e., Day 16.5, where 16.5 = 18 - 1.5). | |
| Salaries and Wages (4 days) | |
| LEAD [16.5 - 7.5 = 9.0; where 7.5 = (1 + 14 = 15 ÷ 2 = 7.5)] | 9.0 |
| Total Payroll Taxes | 9.0 |

| Pay Cycle | (Lead)/ Lag Days | Amount | Weighted Amount |
|---|---|---|---|
| (1) | (2) | (3) | (4) |
| FICA | 9.0 | $1,549,423.24 | $13,944,809.16 |
| FUTA | 9.0 | 64,762.78 | 582,865.02 |
| Total Payroll Taxes | 9.0 | $1,614,186.02 | $14,527,674.18 |

Exhibit DWD -1

- Schedule DWD – 1 - Recommended Capital Structure and Cost of Capital Rates
- Schedule DWD – 2 - Financial Profile and Capital Structures of the Proxy Group

- Schedule DWD – 3 - Application of the Discounted Cash Flow Model (DCF) to the Proxy Group
- Schedule DWD – 4 - Application of the Risk Premium Model (RPM) to the Proxy Group
- Schedule DWD – 5 - Application of the Capital Asset Pricing Model (CAPM) to the Proxy Group
- Schedule DWD – 6 - Basis of Selection for the Non-Price Regulated Companies Comparable in Total Risk to the Proxy Group
- Schedule DWD – 7 - Cost of Common Equity Models Applied to the Non-Price Regulated Proxy Group
- Schedule DWD – 8 - Estimated Market Capitalization for Aqua Texas, Inc. and the Proxy Group
- Schedule DWD – 9 - Derivation of Flotation Cost Adjustment

# I. INTRODUCTION

## A. WITNESS IDENTIFICATION

**Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

A. My name is Dylan W. D'Ascendis. My business address is 1820 Chapel Avenue W, Suite 300, Cherry Hill, NJ 08003.

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am a Partner at ScottMadden, Inc.

## B. BACKGROUND AND QUALIFICATIONS

**Q. PLEASE SUMMARIZE YOUR PROFESSIONAL EXPERIENCE AND EDUCATIONAL BACKGROUND.**

A. I have offered expert testimony on behalf of investor-owned utilities in over 40 state regulatory commissions in the United States, the Federal Energy Regulatory Commission, the National Energy Regulator in Canada, the Alberta Utility Commission, one American Arbitration Association panel, and the Superior Court of Rhode Island on issues including, but not limited to, common equity cost rate, rate of return, valuation, capital structure, class cost of service, and rate design.

On behalf of the American Gas Association ("AGA"), I calculate the AGA Gas Index, which serves as the benchmark against which the performance of the American Gas Index Fund ("AGIF") is measured on a monthly basis. The AGA Gas Index and AGIF are a market capitalization-weighted index and mutual fund, respectively, comprised of the common stocks of the publicly traded corporate members of the AGA.

I am a member of the Society of Utility and Regulatory Financial Analysts ("SURFA"). In 2011, I was awarded the professional designation "Certified Rate of Return

Analyst" by SURFA, which is based on education, experience, and the successful completion of a comprehensive written examination.

I am also a member of the National Association of Certified Valuation Analysts ("NACVA") and was awarded the professional designation "Certified Valuation Analyst" by the NACVA in 2015.

I am a graduate of the University of Pennsylvania, where I received a Bachelor of Arts degree in Economic History. I have also received a Master of Business Administration with high honors and concentrations in Finance and International Business from Rutgers University.

The details of my educational background and expert witness appearances are included in Appendix A.

## II. PURPOSE OF TESTIMONY

**Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?**

A. The purpose of my Direct Testimony is to present evidence on behalf of Aqua Texas, Inc. ("Aqua Texas" or the "Company") about the appropriate capital structure and corresponding cost rates the Company should be given the opportunity to earn on its jurisdictional rate base.

**Q. HAVE YOU PREPARED ANY SCHEDULES IN SUPPORT OF YOUR RECOMMENDATION?**

A. Yes. I have prepared Schedules DWD-1 through DWD-9, which have been prepared by me or under my direct supervision.

**Q. WHAT IS YOUR RECOMMENDED COST OF CAPITAL FOR AQUA TEXAS?**
